ANNUAL CYCLOPÆDIA

AND

REGISTER OF IMPORTANT EVENTS

OF THE YEAR

1873.

EMBRACING POLITICAL, CIVIL, MILITARY, AND SOCIAL AFFAIRS; PUBLIC DOCUMENTS; BIOGRAPHY, STATISTICS, COMMERCE, FINANCE, LITERATURE, SCIENCE, AGRICULTURE, AND MECHANICAL INDUSTRY.

VOLUME XIII.

358771
22.12.38

NEW YORK:
D. APPLETON AND COMPANY,
549 & 551 BROADWAY.
1874.

Entered, according to Act of Congress, in the year 1874, by
D. APPLETON & COMPANY,
In the Office of the Librarian of Congress, at Washington.

P R E F A C E .

THE year 1873, although disturbed by no wars, if the comparatively insignificant conflicts in Africa, the East Indies, at Khiva in Asia, and with some Indians in Oregon, are excepted, was far from being a period of peace and tranquillity. The conflicts of men's opinions existed everywhere, in which dissimilar, incongruous, and contradictory principles struggled for ascendancy. In France, the civil power passed from more liberal and progressive to conservative hands. In Spain, the King, resigning his authority to the representatives of the people, retired; these soon divided into factions, each of which was in turn supplanted by one of the others. In Germany, the consolidation of the empire advanced in spite of every obstacle, and, as in Italy and in Switzerland, the struggle between the independence of the Church and the supremacy of the state was continued with irresistible energy on the part of the state. The same struggle also commenced in Austria. The other leading public questions, and the various relations arising through their influence on the governments and people, are here set forth with fullness and completeness.

The affairs in the United States, although more peaceful, were not of less interest than during previous years. The sway of the Federal Government has become everywhere mild and unobstructed. Wherever disturbances have taken place, they arose within the limits of States, and from the violence of excited passions in the contest for power. The public questions discussed have related to finance, to the cheap transportation of the crops from the West to the seaboard, and to all those subjects which exert an influence on the prosperity, the health, and the morals of society, and are herein fully presented.

The details of the affairs of the United States embrace the finances of the Federal Government; the modifications of its system of revenue and taxation, the banking system, the expansions and contractions of values, and financial crises; the commerce of the country, its manufactures and general prosperity; the finances of the States; their debts and resources; the various political con-

ventions assembled during the year, with their platforms; the movements to secure cheap freights on railroads, and the organizations of the Patrons of Industry; the results of elections; the proceedings of State Legislatures; the progress of educational and charitable institutions; the extension of railroads and telegraphs, and all those matters which exhibit the rapid advancement of the people, and are herein stated.

The diplomatic correspondence of the Federal Government, derived from the most authentic sources, is presented in these pages, and the existing relations with foreign nations.

The advance in the various branches of Astronomical and Chemical science, with new and valuable applications to various purposes, is extensively described.

Geographical Discoveries have been actively pushed forward in various quarters of the globe, with interesting results.

The record of Literature and Literary Progress is as interesting as during any previous year. The titles of the more important works of various classes are given, with remarks on the nature of their contents.

The condition of the religious denominations of the country, with their conventions, branches, membership, and progress of opinions, are here given from official sources, together with a summary of the proceedings of the Evangelical Alliance Convention in New York.

Biographical sketches of living public men noted during the year are given, and notices of deceased persons of distinction in every class of society.

All important documents, messages, orders, and letters from official persons, have been inserted entire.

THE ANNUAL CYCLOPÆDIA.

A

ABBOT, JOSEPH HALE, A. A. S., a distinguished scientist, philologist, and teacher, born at Wilton, N. H., September 26, 1802; died in Cambridge, Mass., April 7, 1873. He was descended in a collateral line from the same stock with Captain Nathan Hale, of Revolutionary memory. He graduated from Bowdoin College in 1822, was a tutor in that college from 1825 to 1827, and from 1827 to 1833 was Professor of Mathematics and teacher of modern languages in Phillips Academy, Exeter, N. H. For several years following he taught a school for young ladies in Boston, and subsequently was principal of the high-school in Beverly, Mass. He early became an active member, and was for several years recording secretary, of the American Academy of Arts and Sciences, to whose "Transactions" he contributed numerous papers of a scientific character; he paid much attention to the solving of pneumatic and hydraulic problems, and published several ingenious and original speculations on questions connected therewith. In the "Ether Controversy," he warmly espoused the claims of Dr. Charles T. Jackson, and wrote an eloquent and earnest defense of them. He also assisted Dr. Worcester in the preparation of his great English Dictionary, contributing many of the scientific definitions. During the last few months of his life he had suffered from paralysis.

ABD-EL-KADER, SIDI-EL-KADJI ULED MAHIDDIN, an Arab prophet, reformer, and military chieftain, born in 1807, in the suburbs of Mascara, in the territory of the Hashems, in what is now claimed as a part of the French province of Algeria; died in Egypt, in November, 1873. He was of noble birth, his father, Sidi-el-Mahiddin, being a venerable and venerated saint, or *marabout*, of the province of Oran, and a lineal descendant of the Arabian Prophet. Mahiddin added to his religious duties the instruction of promising youths in Arabic sci-

ence, and in the knowledge of the Koran, and in his father's *guetna*, or seminary, the young Abd-el-Kader, and his three brothers, were educated. The boy possessed remarkable intelligence and precocity of intellect, and even in early childhood could explain the most difficult passages of the Koran. As he grew up, he distinguished himself by his eloquence and his thorough knowledge of his nation's history, as well as by his fervor in all religious exercises, and at the dawn of manhood he was hailed by his fellow-countrymen as both *marabout* and *thaleb*, or saint and scholar. Meanwhile, he had not neglected those manly sports in which Arabian youths were wont to indulge, and in the whole province of Oran there was no more skillful horseman and no more adroit swordsman than Abd-el-Kader. These high qualities of character and attainment won him the envy and hatred of the Dey of Algiers, who sought to assassinate him. Apprised of his peril, he fled with his father to Egypt, where he was for the first time brought in contact with European civilization. Thence he made a pilgrimage to Mecca, and visited the tomb of his illustrious ancestor the Prophet. After some years of exile he returned, to find his old enemy deposed, the Turkish power overthrown, and the coast in the hands of the French. The Arabs of the province of Oran deemed this a good opportunity to reconquer their independence, and, under the lead of the venerated Mahiddin and his gallant son, now a youth of twenty-four years, they rose upon the Turks, expelled them from the province, and occupied Mascara, making it their capital. The grateful Arabs would have made Mahiddin their king, but, with a father's pride, he turned their choice to his son, who became thenceforth their chosen leader, and with each succeeding month extended his domain farther and farther toward the desert, till he had gathered under his banner all the

Arab and Berber tribes between the confines of Morocco and the Tunisian frontier, and reigning monarch from the narrow coast-line of the French to the border of the Great Desert. It was not until the year 1833 that he came in collision with the French troops. His previous prosperity and success had, perhaps, made him somewhat vain, and, with that fiery eloquence which rendered the Arabs so frantic in all his subsequent career, he began to preach a holy war, and led a force of 10,000 cavalry against Oran, at that time occupied by the French under General Boyer. The assault was fierce and bloody, and it was not till the third day that Abd-el-Kader decided to retreat with his broken and demoralized troops. Thereafter, for eleven years, he maintained a conflict, with varying fortunes, with the French troops. Twice he made treaties of peace with his foes, but they were soon broken. More than once he defeated them, and occasioned them very severe losses; but at length, hemmed in between the victorious French and the mountains, deserted by his allies, and his bravest warriors slain or prisoners, he was compelled to capitulate, on the condition that he should be allowed to go to Alexandria or St. Jean d'Acre. The French commander, Marshal Bugeaud, basely broke faith with him, and he was confined at first at Toulon, then in the fortress of Pau, in the Pyrenees, and finally in the Chateau d'Amboise, near Blois. After nine years of confinement, he was liberated by Napoleon III., in December, 1852, on the occasion of the proclamation of the Empire. He immediately embarked for Broussa, in Syria, where he resided until the earthquake of 1855 destroyed that city. He then removed to Constantinople, and in 1860 established himself at Damascus, and during the bloody riots of 1860 exhibited great kindness toward the Maronites and other Christians of Syria. For his honorable and generous course at this time, he received from the French Emperor the Grand Cross of the Legion of Honor. The French Government had paid him regularly an annual pension of 100,000 francs or \$200,000. One of his daughters became a Christian, and, although he himself died in the faith of Islam, yet there are evidences in his really profound and able work, "Philosophico-Religious Meditations," or "A Call to the Intelligent; Address to the Indifferent," that the influence of Christian thought on the mind of this reflecting and meditative scholar had produced some effect on his attitude toward Christianity. He had been living, since 1845, in Egypt, on a tract of land presented to him in 1864 by M. Ferdinand de Lesseps, where he had erected a fine chateau. He visited Mecca, and made a tour of Egypt in 1863-'64.

ABYSSINIA, a country in Eastern Africa; area, about 250,000 square miles; population, from three to four millions.* The anarchy into

which Abyssinia relapsed after the death of the Emperor Theodore, has for the present given place to the consolidation of the rule of the new Emperor Tekla Johannes, formerly Prince Kassa. The new ruler, who is of humble origin, became first known as a soldier in Theodore's army, where he gradually rose to the dignity of a *dedjas* (general), and governor of a province. During the latter part of Theodore's reign he was like most of the Abyssinian chiefs, a defiant rebel against the authority of the Emperor. According to some reports, he was for a time a vassal to Gobazye, the Prince of Lasta. But this relation to Gobazye, if it ever existed, had entirely ceased at the time of the English expedition. Kassa was at that time independent prince of Tigré, and regarded as such by the English. He was the only Abyssinian chief whose friendship was courted by the English, who haughtily rejected the offers of all the other chiefs, even those of Gobazye. When the victors departed from the country, he received rich presents, and, what is of special importance in Abyssinia, a large quantity of European firearms of which the natives have an almost superstitious fear. In the civil wars of Abyssinia, small bodies of troops supplied with firearms generally prove superior to armies even three times larger, if they are armed according to ancient custom. When, therefore, Theodore lost his throne and his life, Kassa found himself in a very favorable position. He was not the most powerful among the chiefs, for Gobazye, the Prince of Lasta, took possession of the whole of Amhara, the largest and most important among the three divisions of the country (Amhara, Tigré, and Shoa), and the possession of which had long been looked upon in Abyssinia as the sure road to the highest dignity. Gobazye, indeed, following the long established rule, assumed under the name of Tekla Girgia, the traditional title of the Abyssinian sovereigns, Atsye Negus Negussie (Emperor, King of kings). Kassa refused to recognize the claim of Gobazye to the imperial dignity, and as early as 1870 clearly showed that he himself aspired to the rule over all Abyssinia. Gobazye at this time commanded much larger resources than Kassa, and was more popular; but Kassa had the great advantage of having a considerable number of Europeans in his army, and of having kept his firearms in good order by European artisans. The decisive battle took place on July 11, 1871. Kassa had an intrenched camp on a small hill near Adowa, where he was encircled by the cavalry of Gobazye. At the fourth onset, Go-

* From a German translation of the recent history of Abyssinia, from the time of the last article in the *ANNUAL*

CYCLOPEDIA (1869, vol. 12.), is chiefly based on an article by Heinrich Freiherr von Maltzan, one of the best authorities on African affairs, in the *Kölnische Zeitung* (October, 1868). Maltzan quotes, as the chief source of his information, the letters of the noted German naturalist, Dr. Schimper, who has spent nearly a whole life in Abyssinia, and with Hivert Adowa; and those of Werner Munzinger, Egyptian Governor of Massowah and Suakin. The letters of the Englishman Kirkham, who is commander-in-chief of Kassa's troops, are regarded by him as less trustworthy.

bazy advanced as far as the middle of the camp, but there he was surrounded and captured, and his troops were partly taken prisoners and partly dispersed. The victory of Kassa was not expected by the Abyssinians. Even the Catholic missionaries who lived in the territory of Kassa, had looked upon the downfall of Kassa as certain, and a letter of the missionary bishop, found with Gobazy, showed that the missionaries had represented to Gobazy the occupation of Kassa's territory as an easy matter. In consequence of this discovery, Kassa at once expelled the missionaries, demolished their houses and churches, and persecuted the natives who had joined the Roman Catholic communion. After this victory Kassa was by far the most powerful chief in Abyssinia. At the beginning of 1872 he was crowned at Axum, as Emperor and King of kings of all Abyssinia. Many of the petty chiefs refused, however, to recognize his authority. The most powerful among them were Aba Kaisi, the son-in-law of Dr. Schimper, and Welde Jesus. The former, a robber-chief of great temerity, was conquered after three armies had been sent against him. Their combined operations drove him into the Bogos country, a district north of Abyssinia, and formerly connected with it, but which for about a hundred years had been independent. From there he was again expelled by the Egyptians, who annexed this country to their empire. Aba Kaisi was confined by the Egyptian Government in Massowah, but returned after a time to Abyssinia, in order to begin his robber-life anew. Soon, however, finding himself surrounded on all sides by enemies, he resolved to surrender voluntarily to his mortal enemy, Kassa, who kept him as a prisoner. The war against the second opponent of Kassa, Welde Jesus, was more difficult. He was the ruler of a district, had a small but well-drilled army at his disposal, and was experienced in guerrilla warfare and in the laying of ambushes. At one time Kassa himself had a narrow escape. Finally, he succeeded in defeating him, after having bribed most of his adherents. Welde Jesus fled to the Asoba Gallas, a tribe at that time independent of Kassa. Thus the latter crushed out the rebellion in his own province, Tigré, and now prepared for the subjection of the other provinces. In the winter of 1872-'73 he undertook an expedition against the Asoba Gallas, who at first hoped to conciliate him by killing his opponent and their guest, Welde Jesus, but soon found out that Kassa would not be satisfied with any thing short of the annexation of their country to his dominion. A most bloody war ensued. The Asoba Gallas castrated all the adherents of Kassa who fell into their hands, and, in return, Kassa, when he was victorious in a decisive battle, ordered all the prisoners, to the number of about 500, to be killed. Then the Asoba Gallas submitted to the king, and sent their chiefs with tributes and presents to Adowah.

Their total population is about 100,000, and they can muster 6,000 horsemen, well armed with lance, sabre, and shield.

Another tribe of the Gallas, the Wolla Gallas, who thus far had maintained some kind of independence under their princess Mestiata of Shoa, have been subjected by Menelek, King of Shoa. Menelek is descended from an ancient dynasty which derives its origin from Solomon and the Queen of Sheba. Until recently he was at least as powerful as Kassa, and for some time it was expected that he was his rival for the supreme power. Ras Woronya, who, after the capture of Gobazy, made himself ruler of Amhara, made the plan to crown Menelek as Emperor of Gondar, the ancient capital of the kingdom of Amhara, the possession of which is still looked upon as indispensable for an Abyssinian emperor. To thwart this plan, Kassa, at the beginning of the present year, undertook an expedition against Gondar, which Ras Woronya in union with Ataba Buru, a former general of Kassa, but now a rebel, in vain endeavored to obstruct. Kassa, without any serious encounter, reached and occupied Gondar, where Ras Woronya paid his homage to him. Another rebellion, which was attempted by Ras Woronya after a few days, was promptly defeated; Kassa spared, however, the life of the conquered enemy. Thus he had complete control of Tigré and Amhara. As the first Abyssinian ruler, he continued to reside in Tigré, although the Amharans are the predominant race which for about five hundred years has been in the ascendancy over the degenerate Semitic Tigré race, the descendants of the ancient Ethiopians.

In 1872, reports from Egypt represented a war between that country and Abyssinia as imminent, in consequence of the annexation of the Bogos country, which had formerly been a part of the Abyssinian dominions, to Egypt. These reports appear to have been gross exaggerations. At the beginning of 1873 the Catholic missionaries, who had obtained permission from Kassa to return to Abyssinia, endeavored to persuade the Khedive to abandon the possession of Bogos in favor of Kassa; the Khedive, however, preferred the advice of Munzinger, who hastened to Cairo to counteract the missionaries who were supported by the diplomatic influence of France. The Bogos country has since been organized by Munzinger, and no hostility whatever has taken place between Abyssinia and Egypt.

It is an interesting fact that, while Kassa is actually as well as by name the Emperor and the King of kings of Abyssinia, the chief of the ancient deposed dynasty is allowed to retain also the title of Atsye (Emperor). The present representative of this dynasty, Atsye Johannes, lives without means and without a party, at the ancient capital, Axum. He remains unmolested, and is looked upon as entirely harmless.

ACHEEN, a country in the island of Sumatra, which, in 1873, became prominently known by the war between its Sultan and the Government of the Netherlands. It occupies the northern portion of Sumatra, embracing an area of about 20,000 square miles. At the beginning of the seventeenth century it was a powerful state, extending southward as far as Benuean and Campar; Malacca was its dependency. The interior of the country is mountainous and partly volcanic. The people live mostly along the coast, which is densely covered with *campongs* (villages). The residence of the Sultan, Acheen, is situated about seven miles from the coast, on the river of the same name, and is defended by a triple wall and seven detached forts. Two forts built of stone, defend the entrance to the port. The population is estimated at 15,000. In general, the place is of no importance. The palace of the Sultan is described as a wretched building; near it is a mosque. The bay, in general good, is not protected from the northwest winds. The country exports gold dust, areca-nuts in large quantities, and pepper; rice and tobacco are only raised for home consumption. According to Junghuhn, one of the best writers on the archipelago, the population is estimated at 800,000. The inhabitants belong to three races, the Achinese proper, the Pedirese, and the Malay. The Achinese are scattered over the whole country, and are subdivided into three divisions or tribes, called, after the numbers of the communes (*mukims*, or *sagees*) which they contain, the twenty-two, twenty-five, and twenty-six *sagees*. The Pedirese are descended from the district Pedir, on the northern coast, which was formerly a powerful state; they have a darker color than the Achinese proper. The Malays have immigrated from the eastern coast districts of Sumatra, and they now constitute in the southwestern portion of Acheen the twelve and seven *mukats* (thousandths).

The supreme power is nominally in the hands of a sultan, but actually in those of the *Shahbandar*, who is appointed by the Sultan. Each of the three divisions of the Achinese has two chiefs, who have the title *Panglima* or *Tuwanku*, and whose dignity is hereditary. With these six chiefs, the Sultan must agree on every thing he undertakes, while they merely notify him of their actions. The six chiefs elect the new Sultan among the members of the reigning family, and they have the right to depose him in case he violates the customs of the country or does any thing that is injurious to the common welfare. Every *campong* has its own head, called *Panglima*, *Iskan*, or *Datu*, those of the larger *campongs* are sometimes called *Radjah*. The *Panglima* must consult the members of the commune on every thing, and notify the *Panglima* of whatever has been resolved upon. Among the *Pedirese* and *Malays* the *campongs* are more independent. The income of the

Sultan consists of five per cent. of the value of all goods imported into the capital, Acheen, and of the duties which are levied in the *sagees* upon imports, and the sale of pepper. In his turn he has to pay five *catties* of gold (of about \$480) to each of the *Panglimas*. The latter generally give to the Sultan, of the money raised in his name, only as much as they please, and the former consequently is always in need of money. In order to improve the state of his finances, the *Shahbandar* engages on his own account in commercial pursuits. All the inhabitants belong to the faith of Islam, which was introduced in 1215; there are, however, many customs which are irreconcilable with the precepts of the Koran.

After the Government of the Netherlands, on March 26, 1873, had declared war against the Sultan of Acheen, it issued an official statement, giving the history of the relations existing between the two powers, and of the causes which led to the present war. It appears, from this statement, that when England in 1816 and 1817 withdrew from the Eastern Archipelago, and restored to the Dutch their former possessions, the latter engaged to respect the independence of the native princes in the northern part of Sumatra, and at the same time to protect trade and navigation, and to suppress piracy as much as possible. The subjects of the Sultan of Acheen were active pirates, and the Sultan himself, and his vessels, took an active part in their operations. The foreign powers complained of these acts to the Dutch, who repeatedly, but in vain, remonstrated with the Sultan. A new treaty, concluded in 1850, in which the Sultan promised to suppress piracy, remained also without effect. When the Dutch in 1871 ceded their possessions on the coast of Guinea to the English, England withdrew her former reserves, regarding the extension of the Dutch rule in Sumatra, and consequently regarding the independence of Acheen. At that time the Achinese pirates were more defiant than ever, and repeatedly invaded Dutch territory. Twice a Dutch war-vessel was sent to Acheen, but nothing was obtained except vague promises which were not kept. The *Shahbandar* of the Sultan, with four dignitaries, went to see the Dutch governor of Riouw, who had announced his intention to visit Acheen, and asked him to postpone his visit, as the Sultan had applied to the Great Sultan of Constantinople, but had not yet received an answer. These ambassadors were sent home in a Dutch man-of-war, which stopped at Singapore. There the Dutch learned that the Sultan of Acheen, in January, 1873, had applied to France for help. The Achinese ambassadors also applied to the representatives of other powers, which are not mentioned by name in the official statement of the Dutch Government. Being thus convinced of the double dealing of the Achinese, the colonial authorities at Batavia resolved to

send an expedition, consisting of four men-of-war, against Acheen, in order to demand guarantees of a proper conduct, or to declare war.

The Achinese view of the difficulty is set forth in an Arabic newspaper published in Constantinople—the *Yusaib*. In 1516 the Mohammedan ruler of Acheen asked to be recognized as a vassal of the Ottoman Porte, and the petition was granted. In 1856 the ruler of Acheen, Ala-ed-din-Mansulab, again applied to the Porte and took the oath of a vassal, and in reply received from the Turkish Sultan, Abdul Medjid, an order set in diamonds, with an acknowledgment that he was regarded as a vassal of the Porte. Since that time Acheen has been under the protection of the Sublime Porte, and all Achinese vessels sail under the Turkish flag. In 1742, when Sultan Mustapha ruled in Turkey, a treaty of peace and friendship was concluded at Constantinople between Holland and Acheen, one article of which provided that the Dutch be admitted to commercial transactions in Acheen. With England a treaty was concluded, which remained in force until 1871. The Dutch in 1766 violated the treaty of 1742, as they took possession of several portions of Sumatra. In 1825 they attacked several districts belonging to Acheen, and, when the latter complained of these acts, they merely denied that they passed beyond their boundaries. In 1871 Holland demanded the cession of several islands belonging to Acheen, and permission to erect light-houses at several points upon Achinese territory. On the part of Acheen it was replied that no concessions could be made without the consent of the Ottoman Porte; as to the light-houses, the Sultan of Acheen would erect them at his own expense. The Dutch objected to this, uttered threats, and then prepared for an attack, evidently for the purpose of conquering Acheen. Under these circumstances the Sultan of Acheen sent his prime-minister, Abdul-Rahman Fahir Effendi to Constantinople, and, not until after he had set out on his voyage, did the Dutch begin the war.

After the declaration of war by the Netherlands, the government of Acheen once more endeavored to obtain another delay. New negotiations were opened, but soon broken off, as Acheen refused to give definite promises. The four men-of-war which had accompanied the Dutch commissary were then ordered to open hostilities. The troops, numbering about 4,000 men, arrived on April 5th, and were landed on April 8th and 9th. The resistance was much greater than the Dutch had expected, and the information which they had received of the military movements and preparations of the Achinese proved to be incorrect. A few redoubts were taken, but their losses were severe; the commander-in-chief, Major-General Kohler, was among the killed; a general discouragement spread among the troops, and, as the rainy season was near at hand, it was

believed impossible to obtain any lasting result before autumn. The warlike operations were therefore suspended, the troops from Acheen withdrawn on April 28th, and during the summer preparations were made for a second expedition on a larger scale, to be sent out toward the close of the year. The Dutch Chambers unanimously voted an extraordinary credit for the new expedition, and the Government appointed General Van Swieten as commander-in-chief. The number of the Achinese troops was estimated by the Dutch as high as 80,000 men. In November, a body of 9,000 Dutch troops effected a landing on the coast of Acheen, without meeting with any resistance. The Dutch Government had announced its intention to establish, if successful, a protectorate over Acheen. The best work published on Acheen is by the Dutch geographer, Prof. P. J. Veth, "*Atchin en zyne betrekkingen tot Nederland*" (Leiden, 1873). It contains a map, drawn by Col. W. F. Versteeg, which shows that the Dutch are well informed on the coast, but very little on the interior. (See also NETHERLANDS.)

ADALBERT, PRINCE HEINRICH WILHELM, of Prussia, Admiral and Inspector-General of the German Marine, grandson of Friedrich Wilhelm II. and cousin of the present Emperor of Germany, born at Berlin, October 29, 1811; died at Carlsbad in Bohemia, June 6, 1873. His father was the Prince Friedrich Wilhelm Karl, who died in 1851, and his mother the Princess Amelia Maria Anna of Hesse-Homburg. He entered the Prussian army at an early age, and was attached to the artillery corps. But, beyond most of the Hohenzollern family, he possessed a strong taste for travel, and desired to see foreign countries. In 1826 he visited Holland; in 1832, England and Scotland; in 1834, St. Petersburg and Moscow; in 1837, Central Russia, Turkey, Greece, and the Ionian Islands. In 1842 the King of Sardinia placed a frigate at his service, which enabled him to visit Genoa, Gibraltar, Tangiers, Madeira, and Teneriffe. He also crossed the ocean and explored the coasts of Brazil. On returning from this voyage he published an account of his journey under the title: "*Aus meinem Reisetagebuche*" in 1842-43. In 1848 Prince Adalbert was charged with the organization of the German national marine, and received the title of admiral. His labors in this capacity led him to publish the volume, "*Denkschrift über die Bildung einer deutschen Flotte*." In 1856 he undertook a new voyage in the Mediterranean and along the coast of Morocco. On this occasion he was attacked by pirates, and in the combat which ensued he received a slight wound. When the German navy over which he commanded ceased to exist, he was made commander of the marine of Prussia. He inspected the gun-boats which Prussia constructed in 1861, and, when the war with Denmark was begun, he received the title of admiral. The late war with France

afforded an especial opportunity for the Prussians to distinguish itself. But, when the war ceased to rage and the German Confederation was established, the marine of Prussia was transferred to the Federal Government. Prince Adalbert, who was continued as Inspector General of the Marine, has been very active in the efforts that have been made of late to create a navy corresponding to the power of the country which it represents. The personal appearance of the deceased admiral was very striking. He was below the medium stature, and was not particularly fastidious in his dress. He could be seen almost every afternoon walking through the streets of Berlin, in a smart jacket, and with his loose over his shoulders flapping ungraciously about his back. Although his dress was calculated to make him inconspicuous in appearance, he had a keen, deep-set eye and peculiar cast of countenance, which at once riveted attention. In personal intercourse this expression was transformed into one which better indicated his character. He was sharp-witted, occasionally satirical, and abounding in entertaining anecdotes. His wayfaring life appeared to have bred a disposition naturally inclined to be serious, and his subordinates were frequently attracted and captivated by his jovial frankness. In 1851 he contracted a morganatic marriage with Theresa Elller, sister of the celebrated Austrian ballet-dancer, Fanny Elller, and like her an actress. Mademoiselle Elller had, however, withdrawn from the stage some time before her marriage with Prince Adalbert, and had been ennobled by Friedrich Wilhelm IV. under the title of Baroness von Barnim. Prince Adalbert had one son, known as the Baron von Barnim, who was destined for the army, but his constitution was too feeble for a military life, and he died at an early age of a fever contracted on a journey to Egypt and Nubia.

ADVENTISTS. I. EVANGELICAL ADVENTISTS.—The Evangelical Adventists hold the doctrine of the speedy, personal, premillennial advent of Christ, the glorification of the Church at that epoch, the dissolution of the heavens and earth, by fire, their renewal as the everlasting habitation of the redeemed, and the establishment of the kingdom of God; and reject the doctrine of the unconscious state of the dead and extinction of being of the wicked.

The *American Evangelical Advent Conference* met at Hallowville, Mass., August 4th. Twenty-four permanent members were in attendance. The article of the constitution regulating the terms of membership was changed so as to read as follows:

The members of this Conference shall consist of pastors of, and evangelists acting in harmony with, and sanctioned by, Evangelical Advent churches; from conferences of such churches, and from isolated churches; and isolated brethren of unconnected churches, who hold the faith of the Bible in line with the objects of this Conference. Pastors, evangelists, and isolated brethren, shall

become *permanent members*, by being duly presented to, and elected by, said Conference, and shall thereafter be held responsible to this body for character and faith. Local conferences and isolated churches can become members of this Conference by application through duly-appointed delegates and the vote of the Conference; every such church shall be allowed two delegates, and those consisting of over fifty members shall be allowed an additional delegate for every fifty.

The Association determined to employ two general missionaries, and to pay them a stipulated salary.

The business of the Evangelical Advent Society is under the charge of the *American Millennial Association*. This Association met on August 7th. The sum of \$4,000 was needed immediately to pay its debts, which was promptly subscribed by members.

The treasurer of the Association reported that his receipts for the year had been \$6,266.41, and his expenditures \$6,024.44.

The meetings of these Associations were held in connection with the general camp-meeting of the denomination.

II. SEVENTH-DAY ADVENTISTS.—The *Seventh-Day Adventists*, as to the leading principles of their faith, agree in the main with the denominations of the Evangelical school, but they hold, as distinctive doctrines, a belief in the near coming of the Lord Jesus Christ, and the observance of the seventh day instead of the first day as the Sabbath. They have given especial attention of late years to the culture of health, or "health reform," as it is spoken of in their journals. The Health Institute at Battle Creek, which is regarded as a denominational concern, has been specifically recommended by the General Conference.

The eleventh General Conference met at Battle Creek, Michigan, March 11th. The following summary of the reports of the State conferences was presented:

CONFERENCES.	Ministers.	Licentiate.	Churches.	Number of Members.
Maine.....	1	2	9	178
New England Conferences.....	2	1	15	335
Vermont.....	5	5	14	323
New York and Pennsylvania.....	9	1	34	656
Ohio.....	1	4	9	185
Michigan.....	13	19	54	1,616
Indiana.....			5	150
Wisconsin.....	3	17	25	620
Illinois.....	3	7	13	240
Minnesota.....	3	7	13	400
Iowa and Nebraska.....	6	9	30	740
Kansas and Missouri.....	1	10	6	130
California.....	2	1	7	238
Swiss Mission.....	1		4	74
Total.....	61	83	229	5,875

The amount pledged to the Systematic Benevolence Fund was \$30,687.49.

These reports show an increase from the previous year of eleven ministers, thirty-seven licentiate, thirty-five churches, 1,074 members, and of \$4,731.07 in the Systematic Benevolence Fund.

A resolution was adopted declaring it "the

imperative duty of the Seventh-Day Adventists to take immediate steps for the formation of an Educational Society and the establishment of a denominational school." It is intended to give facilities in this school for the study of the languages of those countries to which the General Conference will send ministers.

III. ADVENT CHRISTIANS. — The *Advent Christians* believe the doctrines of the immediate personal coming and reign of Christ on the earth; holiness of heart; the unconscious state of the dead; their literal resurrection; and of the final destruction of the wicked. Their sixth national camp-meeting was held at Springfield, Mass., August 25th to August 31st. It was devoted to religious exercises. Their business is cared for by the *Advent Christian Association* and the *Advent Christian Publication Society*. They have also a missionary society. The *Advent Christian Association* is composed of one delegate from each church, "and one additional delegate for every body of fifty members." In the call for the meeting of 1873 it was specified that "any body of believers in Christ coöperating in the work and design of the Association will be accepted as a church, and every preacher coöperating is entitled to membership." The sixteenth annual meeting of the Association was held in connection with the national camp-meeting at Springfield, Mass., August 25th and 26th. It was attended by fifty-nine preachers, several of whom were women, and twenty-nine lay delegates. Its business consisted in listening to an address from the president, and receiving the minutes and reports of the Association, and of the *Advent Christian Publication Society*. The treasurer of the Publication Society reported that his receipts for the year had been \$21,448.55, and his expenditures \$20,707.18, leaving a balance in the treasury of \$741.37. The property of the society on hand, including this balance, was valued at \$10,401.21. The business agent reported the capital of the society to be \$18,501.21. About 1,100,000 pages of tracts had been published during the year. The sum of \$885.65 had been received on the tract fund, being \$329.27 more than were received during the previous year. The receipts of the *American Advent Missionary Society* for the year ending August 27, 1873, were \$5,532.62; its expenses were \$5,207.50.

IV. LIFE AND ADVENT UNION. — The *Life and Advent Union* is constituted of believers in the doctrines of "life only in Christ" (embracing that of the annihilation of the wicked), and of the personal proximate advent of our Lord Jesus. Its camp-meeting and business meetings were held at Springfield, Mass., commencing August 10th. The second anniversary of the *Life and Advent Missionary Society* was held at the camp-ground in Springfield, August 15th. The receipts of the society were reported to have been \$129.77, and its expenditures \$78.85.

AFRICA. The area of Africa (according to Behm and Wagner, *Die Bevölkerung der Erde*, Gotha, 1872) was estimated in 1872 at 11,456,000 square miles; the population at 192,520,000.*

The religious complexion of Africa has of late undergone great changes. Mohammedanism is steadily advancing in Central Africa, and is now once more becoming the leading religion. It spreads among the negro races the fanaticism and fatalism of Islam, but elevates many of them by the establishment of schools. The number of the Mohammedan population may now be estimated at 80,000,000. On the other hand, the important island of Madagascar may be regarded as fully secured for Protestant Christianity. The ruling classes have mostly joined the Church, and the Christianization of the whole island may be expected within a comparatively short period. When it shall be complete, Madagascar with its 5,000,000 will be the largest Christian state of Africa, and the Protestant population will be swollen to about 6,000,000, who with the 3,000,000 Abyssinians and 1,500,000 Catholics, would form a Christian population of about 10,500,000.

The steady and rapid growth of Egypt is attracting the attention of the civilized world. Werner Munzinger Bey, the learned Swiss geographer who has been appointed by the Egyptian Government Governor of Massowah and Suakin, has firmly established the Egyptian rule in the mountain-districts bordering upon Abyssinia; and Sir Samuel Baker, who, in June, 1873, returned from his expedition to the interior of Africa, claimed to have subjected to the rule of the Khedive all the country between the Albert Nyanza and the Victoria Nyanza down to the equator. If this country can be permanently secured for Egypt, its area would exceed 1,000,000 square miles, making it, next to Russia, China, the United States, the British Empire, and Brazil, the largest empire of the globe. The dependency of Egypt upon Turkey is thus becoming more and more nominal, and may at any time come to a sudden end. (*See EGYPT.*)

In Abyssinia, the rule of Prince Kassa, or, as he is now called, Emperor Johannes, has been greatly strengthened, and he was, in 1873, regarded as the actual ruler of all Amhara and Tigré. (*See ABYSSINIA.*)

The treaty concluded in 1871 between England and the Netherlands, by which the latter ceded all the Dutch possessions on the coast of Guinea to England, while England, on the other hand, withdrew her former opposition to the extension of Dutch rule on the island of Sumatra, has become for both treaty powers a source of serious difficulties. While the Netherlands have become involved in a war with the Sultan of Acheen, England had to

* For an account of the area and population of the divisions and subdivisions, see *AMERICAN ANNUAL CYCLOPEDIA* for 1872.

carry on a bloody and protracted war against the Ashantis, which at the end of the year had not been brought to a close. (See *ACHEMI* and *ASHANTEE*.)

In 1826, the English Government succeeded in coercing the Sultan of Zanzibar, in Eastern Africa, to conclude a treaty by which the slave-trade is forbidden. In the northern portion of Central Africa, a gradual suppression of the slave-trade, and subsequently of slavery, is expected from the extension of Egyptian rule. Sir Samuel Baker represented it as one of the chief objects of his expedition. (See *ZANZIBAR*.)

In South Africa, the diamond and gold fields were still worked by large crowds of diggers, but their operations have not had any lasting influence upon the political complexion of those countries. In the Orange Free State, President Brand, who has been at the head of this republic for ten years and enjoys a great popularity, has been unanimously reelected for a third term of five years.

Sultan Sidi Mohammed, of Morocco, who died on September 18th, was succeeded on the throne by his son. The report that a war of succession had broken out between the son and the brother of the deceased, proved to be untrue.

With the progress of geographical exploration. (See *GEOGRAPHICAL EXPLORATIONS*.)

AGASSIZ, LOUIS JEAN RODOLPHE, M. D., Ph. D., LL. D., F. R. S., Society of Natural Academy of Sciences, Corresponding Member of the French Academy of Science, etc., etc., the most eminent of modern scientists, born in the parish of Mottier, near Lake Neuchâtel, Switzerland, May 28, 1807; died in Cambridge, Mass., December 14, 1873. His father, like his paternal ancestors for six generations, was a Protestant clergyman, and pastor of the parish of St.-Imier. His mother, who was the daughter of a physician, superintended the early education of her son, till he entered the college at Lausanne. From Lausanne he went to the medical school of Zurich, and thence to the University of Heidelberg, where he prosecuted his medical and natural history studies, under the most eminent teachers of Germany. At the age of twenty he entered the University of Munich, and was associated with the naturalist Dollinger, under the instruction of Wagner, Oken, and Martins. Already he had begun to turn away from the practice of medicine, to which he had been destined by his mother, in order to give his whole attention to natural science, and had published several monographs on topics of natural history; but he did not give himself wholly to scientific pursuits, until he was called upon by Professor Martins to compile for publication the zoological portion of the report of the scientific expedition to Brazil, which had then recently returned to Germany. In 1831 he received the degree of M. D. from the University of Munich, and the same year the degree

of Ph. D. from the University of Erlangen. About this time also, Cotta, the German scientific publisher, furnished him the means to prepare his "Natural History of the Fresh-Water Fishes of Europe," which was not published till 1839-'40. This completed, he went to Vienna, and there, and in Paris, occupied the next seven years in the study of the fossil fishes of the Danube. In Paris, he became the friend as well as the favorite pupil of Cuvier and Humboldt, both of whom rendered him liberal aid in his studies; and he was also associated in his investigations with Owen, the English scientist, Milne-Edwards, a distinguished French zoologist, and Rudolph Wagner and Johannes Müller, German physiologists of great learning. Agassiz has been justly regarded as the founder of the science of fossil ichthyology; and its development was almost solely due to his great work on fossil fishes, which he was enabled to publish through the liberality of Baron von Humboldt. This work, published at Neuchâtel, 1834-'44, is in five volumes, 4to, with an atlas of nearly 400 folio plates, in which 1,000 species were wholly, and 700 more partially, figured and described. It was while engaged on this great work, and during his vacations, which were spent in the Alps, that he first formed that theory of the glaciers, which thirty-seven years of subsequent study and explorations only served more fully to expand and develop. This theory, after the most violent opposition, has finally come to be accepted by most geologists, not only as a scientific fact, but as the basis of further geological deductions of great importance. To show the thoroughness of his researches, before making his first publication on this subject, it may be remarked that, previous to 1837, when he published his first "*Etudes sur les Glaciers*," he had spent eight summers upon the glacier of the Aar, 8,000 feet above the level of the sea, and twelve miles from any human habitation. It was not till 1847 that he published his great work on this subject, the "*Système Glacière*," and his long journeys and voyages, circumnavigating the entire American Continent, have only confirmed more fully the positions maintained in that work. In 1832, at the age of twenty-five, he had been appointed Professor of Natural History at Neuchâtel, and he retained this professorship until 1846, though prosecuting in connection with it his studies on fossils and glaciers. Having completed his great work on fossil fishes, with the hearty assistance of his friends Desor and Vogt, who were also professors in the University of Neuchâtel, he turned his attention to the mollusca and the echinoderms, and published several important monographs in relation to the living and fossil species of their orders. At the age of thirty, he was a member of nearly every scientific society in Europe, and had received the degree of LL. D. from the Universities of Edinburgh and Dublin. In 1848 Prof. Agassiz came to the United

States, whither his great reputation had already preceded him, intending to study the natural history and geology of the country. He lectured on the animal kingdom and the glaciers in Boston, and then visited New York, Philadelphia, and Charleston, in order to compare the fishes and mollusks of the Southern with those of the Northern coasts. On his return to the North, in the early part of the summer of 1847, Prof. A. D. Bache, then at the head of the United States Coast Survey, offered him the opportunity of availing himself thenceforth freely of all the facilities of the Coast Survey for the prosecution of his investigations. This offer, so liberal and so important for the carrying forward of his scientific labors, decided Agassiz to make the United States his home thenceforward, and from that hour he became, in the noblest and largest sense, an American citizen, identifying himself with the best and highest welfare of the nation. He availed himself of the opportunity of making short excursions, which were marvelously fruitful in good results, on the Coast Survey steamers, and in this way made himself gradually familiar with the marine zoology of our entire coasts. In 1848 the Lawrence Scientific School was founded by the munificence of Hon. Abbott Lawrence, and a professorship of Zoology, and Geology offered to Prof. Agassiz, which he accepted, and thenceforward made Cambridge his home. At the close of the academical year in 1848, he visited Lake Superior with twelve of his pupils, and made a scientific exploration of its shores, the results of which were recorded in a volume entitled "Lake Superior; its Physical Character," etc. The preparations of a text-book of the "Principles of Zoology," in connection with Dr. A. A. Gould, also occupied some time during this year. For many years his vacations were devoted to these excursions to various sections of the country, from which he and his pupils always returned laden with large and rich collections of great importance to natural history. In 1852 he accepted a professorship of Comparative Anatomy during the winter months, in the Medical College of Charleston, S. C., and for the next two years spent considerable time in exploring the coasts of South Carolina, Georgia, and Florida, where he gathered rich spoils for his subsequent studies. At the close of the term of 1854-'55, he resigned his connection with the Charleston Medical College, the climate not agreeing with his health. He now proposed to utilize his vast natural history collections by the preparation of a series of volumes, largely and expensively illustrated, entitled "Contributions to the Natural History of the United States." Of these magnificent volumes, but four have yet been published. In 1861 he received the Copley Medal, for his original researches, from the Royal Society of London, of which he had been for some years a Fellow. He subsequently received the Monthyon Prize and the Currier Prize from

the French Academy; the Wollaston Prize from the Geological Society of London; and the Medal of Merit from the King of Prussia. In 1865 a liberal Boston merchant offered to pay the expenses of a voyage to and an exploration of Brazil, to be conducted by Prof. Agassiz and a corps of observers under his direction. This expedition penetrated that vast empire to the confines of Peru, and brought home a large collection of valuable specimens for the Museum of Comparative Zoology which Prof. Agassiz had founded at Cambridge, and added very largely to the world's knowledge of the zoology and natural history of that interesting empire. Mrs. Agassiz prepared a popular volume, entitled "A Journey in Brazil," on this expedition; and Prof. O. F. Hartt, who was a member of the expedition, gave other results of it in a volume published in 1870. In December, 1871, Prof. Agassiz and a number of his pupils embarked on the Coast Survey steamer Hassler, on another exploring expedition, along both the east and west coasts of the American Continent, from Boston *via* Cape Horn to San Francisco. The main discoveries of this expedition are recorded in the articles on Geographical Explorations and Progress in 1871 and 1872, in the eleventh and twelfth volumes of the ANNUAL CYCLOPEDIA. From this expedition there were brought home vast collections of fishes, reptiles, mollusks, etc., thousands of them of hitherto undescribed species. Over 3,500 gallons of alcohol were used in preserving these specimens. Thenceforward Prof. Agassiz had set himself the gigantic task of so far completing his Museum of Comparative Zoology as to make it the grandest and most perfect collection in the world. For this purpose he required large sums of money, and within the past few months they had flowed in from various sources for this object. His daughter and her husband had given \$100,000, his son \$30,000, the State \$50,000, etc. But he computed that about \$1,000,000 would be required within the next eight or ten years to complete his plans.

Another measure, on which his heart was set, made a happy and prosperous beginning during this year. He had always deprecated the study of natural history and natural science from books. Nature, he said, was the best text-book, and he had been very anxious to have a school for the instruction of teachers during the summer, on the sea-coast, where the teacher-pupils could study Nature from the living specimens. The munificent gift of Penikese Island, and of a sum of money for its endowment, by Mr. J. Anderson, of New York, enabled him to carry this cherished project into execution; while other gifts added greatly to its efficiency. This school, which seemed to be the realization of his loftiest ideal in the teaching of natural science, had been the subject of his constant thoughts, and he was maturing plans for its greater efficiency the coming year, when he

was so suddenly taken away. He had for many years accomplished a vast amount of intellectual labor. His courses of popular lectures, on scientific topics, were not designed for the amusement of an idle hour; though intensely interesting and fully informed with the earnest purpose and enthusiasm of the scholar, and the courtesy and refinement of the gentleman, they had for their main object the establishment of great truths, and the overthrow of what he regarded as error. To the Darwinian hypothesis, he was as determined a foe as it was possible for a man of his gentle nature to be, and the demonstrations in his course of lectures of 1878 have had a powerful effect in dislodging its plausible theories from their hold upon the public mind. He had hoped, if spared to an old age of quiet and learned leisure, to occupy himself more fully than he had hitherto been able to do, with the demolition of this theory, but this and the other plans he had made for further achievements in science, and greater services to it, are all laid in the grave with him. With a sweet and noble simplicity, a singleness of aim, a purity of soul, and earnestness of purpose, which never faltered, he pursued the even tenor of his way; and, now that he is gone, there is no one who may take up his mantle, and lead the eager hosts of truth-loving students, whom he had trained in part, to future victories over error, future discoveries in the arena of science, future triumphs over doubt, difficulty, and despair.

Besides the works we have already named, Prof. Agassiz has published: "Nomenclator Zoologicus," 1 vol., 4to; "Bibliographie Zoologique et Géologie," 3 vols., 8vo, 1848; "Twelve Lectures on Comparative Embryology," 8vo, 1849; "Methods of Study in Natural History;" "Geological Sketches;" "The Structure of Animal Life," 1862; "Life from the Egg, Twelve Lectures," 1878; and a great number of articles in American, British, French, and German scientific periodicals, and transactions of scientific societies.

AGRICULTURE. The year 1878 was in many respects a favorable one for the husbandman. The spring was late, in consequence of the heavy snows of the preceding winter, but there was the less danger of frosts, and, though the Atlantic coast from Maine to the Chesapeake Bay suffered from drought in the early summer, to such an extent as to diminish materially the hay and grain crops, yet there was no lack of rain in other sections, the Southern Atlantic States having an excess. The wheat belt yielded exceptionally large crops. Indian corn was behind the previous year, but the supply was not materially below the average, and most of the edible roots did well; but there was a very small crop, and most of the fruits except grapes were diminished in quantity, but of excellent quality. In the autumn there were violent storms, but these occurred after the crops had been housed, and were of limited extent. There were early frosts in

some sections, especially in the higher lands, but the autumn was as a whole very mild, and the ground not seriously frozen till the last of December.

Wheat.—Our estimate of the wheat-crop of 1872 in the ANNUAL CYCLOPEDIA for that year was singularly verified by the returns, varying but 8,000 bushels from the fact. For the year 1878, the crop seems to have been about four per cent. larger, and will, we think, amount to at least 260,000,000 bushels. The quality is about the same as last year. On the Pacific coast, the wheat districts of California did not yield quite as largely as in 1872, but Oregon and Washington produced larger and better crops.

Indian-Corn.—The corn-crop of 1872 was the largest for many years, and did not vary materially from 1,100,000,000 bushels. The crop of 1878 was about 23 per cent. below this in quantity, amounting to about 870,000,000 bushels. The quality is estimated at about 16 per cent. below that of last year.

Rye.—The crop of 1878 is about 2 per cent. below that of 1872, and will not vary much from 14,700,000 bushels.

Oats.—The final report on this important crop in 1872 was 271,747,000 bushels, or about 6,747,000 bushels higher than our estimate. This was an extraordinary yield. The crop of 1878 promises to be about 8 per cent. below it, or in round numbers 250,000,000 bushels. The quality averages a trifle better than in 1872.

Barley.—Our estimates of this crop in 1872 were slightly below the truth, the reported crop being 26,846,400 bushels. In 1878 there was a falling off estimated at 12 per cent. The crop will hardly exceed 24,000,000 bushels, but the quality is better than last year.

Buckwheat.—This is never a large crop, being grown scarcely at all in Rhode Island, or any of the cotton States except North Carolina and Tennessee, and but very sparingly in the Pacific States or the Territories. The crop last year amounted, as predicted, to a little more than 8,000,000 bushels. There is a reported reduction this year of about 5 per cent., making the probable crop about 7,600,000 bushels.

Potatoes (*Solanum tuberosum*).—This crop, reported in 1872 as 113,516,000 bushels, is said to have suffered in 1878 from both drought and rot, and to some extent also from the Colorado beetle, or ten-lined spearman, and from grasshoppers. The Agricultural Department estimates it in 1878 at 96,500,000 bushels, which we believe will prove an under-estimate, as the best varieties have been a drug in the New-York market at from 75 to 80 cents a bushel—which is materially below the price of 1872. We think it will be found that the crop did not fall below 100,000,000 bushels.

Sweet Potatoes (*Batatas edulis*). was about the same as last year, the falling off in some

of the States of smallest production being made good by the greater yield and the increased average in the Southern States. It was probably between 47,000,000 and 48,000,000 bushels.

Hay.—This great crop, whose money value exceeds that of any other grown in the country, is estimated at 500,000 tons less than in 1872, when it approximated 24,000,000 tons; but this deficiency is in a great measure compensated by the superior quality of the hay, which is estimated in some States at 20 per cent. better than that of 1872. The value of the hay-crop of 1873 is certainly not less than \$445,000,000.

Tobacco.—The crop of 1872 was remarkable in quantity, being considerably the largest raised since 1860, amounting to 342,304,000 pounds. That of 1873 is reported as about 321,765,760 pounds; but the late returns from California, where it has recently become a very important crop, are so favorable, both as to quality and quantity, that it will not be surprising if the aggregate crop reaches 330,000,000 pounds. By improved processes of curing, the California tobacco has recently

been produced of equal quality and delicacy with that grown in the *Vuelto Abajo* of Cuba. The quality of the New England, and especially of the Connecticut tobacco, which is largely used for cigars, is represented as 33 per cent. better than in 1872.

Cotton.—The actual cotton-crop of 1872 was 450,000 bales above the estimate of January 1, 1873, amounting to 3,920,000 bales, a heavier crop than any since the war, with possibly a single exception. The crop of 1873 is estimated at about 238,000 bales below this, but, owing to the epidemic of yellow fever and other causes, such as the severe frosts in October, may not reach 3,500,000 bales. The following table, taken with some additions from the December (1873) monthly report of the Agricultural Department, gives some interesting items concerning the comparative yield of different States and different years. It is to be observed that this table gives the yield only in what are known as the cotton States, while that grown in Southern Illinois, Missouri, the Indian Territory, and California—an aggregate of 25,000 to 30,000 bales or more—is not counted:

STATES.	Yield in 1869— Census.	Yield in 1872, by Reports.	Yield indicated by Nov. (1873) returns.	Number of Acres.	Pounds of Fibre, 1873.	Yield per Acre.
	Bales.	Bales.	Bales.			Pounds.
North Carolina.....	144,935	180,000	176,400	513,717	70,560,000	150
South Carolina.....	224,300	276,000	253,920	627,717	161,528,000	193
Georgia.....	473,934	506,000	577,150	1,455,577	231,820,000	184
Florida.....	39,789	47,000	45,590	167,584	18,236,000	125
Alabama.....	421,192	533,000	486,350	1,499,039	194,240,000	151
Mississippi.....	564,934	714,000	632,400	1,706,735	252,900,000	172
Louisiana.....	350,892	501,000	490,800	1,034,239	160,320,000	140
Texas.....	350,628	467,000	523,040	1,097,122	200,216,000	211
Arkansas.....	217,908	335,000	341,700	811,409	126,680,000	155
Tennessee.....	187,842	240,000	244,800	596,395	97,920,000	190
Total.....	3,008,846	3,920,000	3,682,850	9,500,524	1,473,060,000	

In this table one item which will excite surprise is the small average yield per acre, ranging from 126 pounds in the sandy lands of Florida to 221 in the rich and fertile soils of Texas. This it is to be understood is the average yield of the cotton-lands of these States. The minimum yield is not quite 70 pounds, and the maximum on new and rich lands, where unaffected by storms, caterpillars, boll-worms, or early frosts, is as high as 1,500 to 1,800 pounds per acre. At the ruling prices of cotton in the autumn and winter of 1873-'74, this low average yield would indicate that cotton was an unprofitable crop. Another point worthy of notice is the very large amount of land in the great cotton States devoted to this crop—from one million to one and a half million acres. It was reported late in the autumn of 1873 that in portions of Alabama and some of the other cotton States, where cotton had been the exclusive crop, and had failed from some one of the many causes which are always liable to affect it, the inhabitants were in a state bordering on starvation, the entire crop, such as it was, being insufficient to meet the advances made on it while it was growing, to pay for labor and subsistence, and, as it was

the only crop, nothing being left for the cotton-grower and his family to live on for the winter and spring months. It would certainly be wise to devote a part of the land, time, and labor, to raising crops which would afford food to the family if the cotton fails, as it so often does. Another lesson taught by this suffering is, that it would be far better if a part at least of the cotton-crop could be manufactured where it is grown, and thus a home market provided for the cotton-grower, where he will not be compelled to pay so large a tribute to the cotton-broker, and where there will be a market provided also for corn, grain, and vegetables, which will give an impulse to the cultivation of crops of these.

Sugar-Cane.—The crop is considerably short of last year's report. The whole production will not probably much exceed 112,000 hog-heads. In some portions of Texas, as well as in the lower counties of Georgia and Alabama and Western Florida, the average in this crop is largely increasing, but there has been a heavy falling off in Louisiana, which, after all, is the principal State concerned in this crop. The production of sugar and syrup from *sorghum* seems to be decreasing. The sugar-cane

was, according to the best returns, cultivated in twenty-two States in 1873, but the product was 11 per cent. less than in 1872, while the crop of that year was 8 per cent. less than that of 1871. Very little sugar is made, and the syrup does not probably exceed 15,500,000 gallons. The cultivation of the *sugar-beet* for sugar, is, on the other hand, increasing, though in the face of serious obstacles.

Only seventeen States report the cultivation of flax, and in some of them the crop was so large and of such excellent quality as to raise the whole crop to about 3 per cent. above the average. In Kansas it was 60 per cent. above last year, and in Iowa 89 per cent. above. The crop was probably not far from 27,000,000 pounds.

Beans and Peas were about an average crop. There are usually from 15,000,000 to 16,000,000 bushels of these legumes raised annually.

Of the *Rice* crop we have no satisfactory returns. It has been gradually increasing since 1869, the year of the census, when 73,635,021 pounds were raised.

Fruits.—The Grape crop was somewhat below the average, except in Delaware, Massachusetts, Rhode Island, and Connecticut. New York, Pennsylvania, and New Jersey, as well as California, showed a seriously diminished production. It was not an Apple year, except in Oregon. The quality was good, but the quantity was not more than one-half that of the previous year. Pears, on the contrary, were nearly up to the average, and in those States in which they are specially cultivated the crop was above the average. Peaches were not abundant nor of very good quality. On the whole the crops of the year were below the average in quantity, and some of them in quality, also, yet not to such an extent as to cause any considerable inconvenience or suffering, and not sufficiently so to account in any way for the severe financial panic which visited the country in the autumn of 1873.

On page 13 we give our usual table of the number and value of the domestic live-stock of the country in January, 1873, the latest report yet issued, and some notes of the increase and diminution of cattle, sheep, and swine, in different sections of the country:

The aggregate value of the live-stock of the country, according to this estimate, was \$1,684,431,692; and if we add to this the estimated value of ten of our principal crops in 1872, viz., Indian-corn, wheat, rye, oats, barley, buckwheat, potatoes, tobacco, hay, and cotton, which together amounted to \$1,661,503,043, we have a total value of live-stock and agricultural products of the year 1873 of \$3,345,934,735, or about 50 per cent. more than the national debt. This, it is to be remembered, is entirely outside of the value of farms, and farming implements and machinery, which, according to the census of 1870, amounted to \$9,599,642,290. We may therefore conclude safely that the agricultural in-

terest in the United States controls at least \$13,000,000,000 of the \$30,000,000,000 of true valuation of property in the United States, an amount more than double that invested in and produced by manufactures, mining, and the fisheries, taken together. This interest is constantly increasing, and is capable of almost indefinite increase in the near future. Hitherto the agricultural interest has suffered from the want of organization and concentrated action; but the wide-spread movement of the past two or three years (see GRANGES and PATRONS OF HUSBANDRY, in this volume) bids fair to supply this deficiency, and by increasing the intellectual and social culture of the farmers, and giving them the advantages of associated power and influence, it will place this great body of our people in the position which they should have in the nation.

There are a few other items of interest to be deduced from the table of live-stock. Illinois takes the lead in horses, both as to number and value. It also leads in the value, though not in the number, of oxen and other cattle. New York is second in the value, though fifth in the number, of its horses, and first, by a wide interval, both in the number and value of its milch-cows. Georgia is first in the value, and Alabama first in the number, of its mules. Texas, with more than twice the number, of oxen and other cattle, of Illinois, has only about two-thirds the value. Ohio is first in sheep, both in number and value, and Iowa has the same position in relation to its swine. It is a forcible commentary on the diversity of our agricultural operations, that no State is absolutely first on more than one kind of live-stock. Attention has been called during the past year to the great falling off in the yield of wheat per acre, even in our new States, where the soil has not been impoverished by long repetitions of the same crop. It seems incredible that in the rich and formerly productive wheat-fields of Genesee, Monroe, and Wyoming Counties, New York, the average yield should now be only 12½ bushels to the acre; that in Ohio is but 11.7. In Indiana, Illinois, Michigan, Iowa, and California, it is only 12 and a fraction; 14.3 in Wisconsin; 16.6 in Minnesota, and 18.2 in Oregon; and the very highest average, that of Nevada, and the Territories, does not exceed 25 bushels. There is something radically wrong in our wheat-growing. Wheat in good soil, properly manured, ought to yield anywhere in the United States not less than 25 bushels to the acre as the average of the State; and, on virgin soils or those in a high state of cultivation, the yield should not be less than 35 to 40 bushels per acre for a series of years. On this subject a series of very interesting experiments have been conducted for twenty-five years past by Mr. J. B. Lawes, of Rothamstead, England. He has planted, for that number of years, wheat every year on the same plots, one without any manure, one

with farm-yard manure, liberally applied, and three with artificial manures, viz., ammonia salts applied in the autumn, ammonia salts applied in the spring, and nitrate of soda applied in the spring. The year 1873 was the most unfavorable of the last eleven for wheat, but the average of eleven years was: for land not manured, and growing wheat continuously for twenty-two years, 13½ bushels, of 61 pounds to the bushel; of the plot manured with farm-yard manure, which had also grown wheat continuously for the same length of time, 36 bushels per acre; and for the three plots treated with artificial manures, 34 bushels, 39 bushels, and 41½ bushels per acre. The average of twenty-two years was, in the same order, 14½ bushels, 35½ bushels, 34½ bushels, 37½ bushels, and 37 bushels; and the mean average of the five plots which might be regarded as representing good and bad culture, for the twenty-two years, was 28½ bushels. If the present slovenly, careless, and imperfect cultivation of wheat is continued, it is easy to calculate the time, not far distant, when we shall not only have no wheat to export, but shall be ourselves compelled to import our grain from some country which better understands the laws of its production. Mr. Lawes's experiments seem to indicate that the nitrate of soda applied in the spring is the best and surest manure for this grain; that ammonia salts applied in the spring are next in value, and that ammonia salts applied in the fall are not quite so good in a moist climate like that of Great Britain, taking the average of twenty-two years, as farm-yard manure. The Japanese have grown cereals on the same lands for more than 2,000 years, and their yield per acre is to-day larger than ours! They have done this by feeding the soil constantly with ammoniacal salts.—The subject of forest-culture, and of the necessity of not stripping the soil of its forests, has received great attention during the year 1873. An international congress of land and forest culture was held in Vienna during the Exposition, and the whole subject discussed very thoroughly, in all its bearings. A "Trans-Missouri Forestry Convention" met at Denver, October 21st, and incidentally discussed the subject of forest-culture; and several papers were read upon the subject at the opening of the American Association for the Advancement of Science, in Portland, Me. Some eminent meteorologists are inclined to doubt whether the cutting off of the timber of a mountainous district leads to its becoming dry and barren; but the facts adduced at the Vienna Congress, and those observed in regard to our own country, seem to be conclusive on this point; and there can be no question that the encouragement of forest-growth by planting trees, and, if necessary, providing for their irrigation, must prove beneficial in many ways to the mountain states and bare hills of the trans-Missouri region. In this connection, a discov-

ery recently made is of considerable interest. The *Eucalyptus globulus*, an Australian tree of rapid growth, and which attains a great size, has been found to possess the remarkable property of absorbing and removing malaria from any district in which it grows. Planted in considerable numbers by the side of a swamp, even in semi-tropical regions, it drains the swamp in a short time, and renders the region perfectly healthy. The bark of the tree is said to be a good substitute for quinine. The tree is hardy, and will grow anywhere in the temperate zone, though it prefers wet situations.

A national association of swine-breeders, having in view the preparation of a registry of breeds of swine, with their origin, history, and characteristics, was organized in 1872, and has held two or three conventions since that time, and has done much for the furtherance of its purposes. At their convention in Indianapolis, reports were made in regard to the following American breeds (or, perhaps it would be more correct to say, foundation of future breeds), viz.: the *Poland-China* or *Magie*, the *Chester White*, *Victoria*, *Cheeshire*, *Jersey Red*, and *Duroc*. The first of these is the favorite hog of the best Western breeders, and is the result of numerous and judicious crossings of the *China* hog with the *Russian*, *Byfield*, *Berkshire*, and *Irish Grazier* breeds, and with half-breed animals from one or other of these stocks. There has been no new crossing attempted for the last thirty-seven or thirty-eight years; but, by selecting the best specimens to breed from, the breed has become established as possessing the most desirable points for making the best pork. The following description is said to embody the characteristics of the finer specimens of this breed: they have good length, short legs, broad, straight backs, deep sides flanking well down on the leg, very broad, full, square hams and shoulders, drooping ears, short heads, wide between the eyes, of spotted or dark color, are hardy, vigorous, and prolific, and when fat are perfect models all over, preeminently combining the excellences of both large and small breeds." The *Chester Whites* are a well-known breed, possessing many desirable points, fattening easily, and making very fine hams. They originated in Chester County, Pa. The *Victorias* are the result of crosses of the *Byfield* with the native hogs, and the progeny of these with the *Yorkshire* and *Suffolk*. They are pure white, and they have a thick coat of soft, fine hair. The ears are erect, and they have many excellent points, one of the best being the readiness with which they can be fattened. The *Cheeshires* originated in Jefferson County, New York. They cannot be traced to any distinct imported stock, but by careful and judicious selection and breeding have attained a very high reputation for excellence. They are pure white, with scanty hair and a pinkish skin. The flesh is very fine-grained, the

shoulders wide, and the hams full. The Jersey Reds originated in New Jersey, and are largely bred in the southern part of that State. They are large-framed, with a reddish coat, tall, with large lop ears, and vigorous constitution. They belong decidedly to the class of large hogs, and are capable of being fattened to almost any weight from 1,000 pounds down. Their flesh is rather coarse-grained. The *Durocs*, a breed originating in Saratoga County, N. Y., are reddish in color, and of large size, but of finer grain than the Jersey Reds, and equally hardy. Of the foreign breeds now naturalized here, those which attracted the greatest attention from the convention were the *Berkshires*, *Suffolks*, *Essex*, *Neapolitan*, *Yorkshires*, and *Lancashires*.

Much attention has been paid during the year to silk-culture, and, as the result of careful and extended investigation in all the silk-growing countries, it has been settled that the only successful method of producing silk is by what is called household culture; that it is impossible to carry it on upon an extensive scale, as the worms become diseased and die in large numbers, and the silk they produce is of poor quality. Sixty pounds of silk, the product of 50,000 worms, and worth, in cocoons, about \$180, is all that should be attempted at a time. In some climates two broods may be successfully raised in a single season, but generally it is better to be contented with a single crop. The care of these is light and pleasant work for children, and, during the thirty-five or thirty-eight days which it occupies, will give them sufficient employment. The leaves of the mulberry-trees or shrubs (and in California the white, the black, and the *multicaulis* are used indiscriminately) are not fit for food for the worms till the end of the second year of their growth. An acre of the plants, set in rows, at such distance from each other that there is ample room to pass between them for cultivation and picking, and for the sun to shine upon the leaves, the rows being ten feet apart, will be sufficient for feeding 50,000 worms and should furnish 5,000 to 6,000 pounds of leaves. Care must be taken that the leaves are not too soft and juicy. There are three kinds of silk-worms reared in California—annuals, bivoltins, and trivoltins—producing respectively one, two, and three broods a year. The annuals are preferred as healthier and more vigorous. Of these there are three varieties, the Japanese white and green, and the Chinese white. They are named from the color of their cocoons. About an ounce and a half of the eggs is required to produce the requisite number of worms, and these must be purchased in the first instance. The eggs should be kept at a temperature of about 40° Fahr. until the mulberries begin to put forth their leaves; they are then to be brought into the feeding-room and maintained at a temperature of 75°, gradually increasing to 83°, the floor of the feeding-room being moistened occasionally to enable

the worm to free itself from the shell. The feeding-season is about thirty-five days, and the life of the silk-worm from thirty-eight to fifty days. During the feeding-season it moults or casts off its skin about once in six or eight days. While moulting, the worm must not be disturbed in any way, not even by feeding. The worms hatch on successive days, and as those hatched on the same day moult at the same time, it is better to spread each day a covering of mosquito netting over the eggs and strew young, tender leaves of the mulberry upon it. The young worms will come through the netting for food and cannot go back. Removing this netting at night to a feeding-shelf, put another over the eggs with leaves, and so on till all the eggs are hatched. The worms are to be fed twice a day. In California the feeding-times are at 5 A. M. and 10 P. M. The feeding-shed must be kept as nearly as possible at a uniform temperature, and excessive heat or cold prevented. Before the first moulting, 15 pounds of leaves a day are enough for 50,000 worms; between the first and second moultings, 30 pounds; between the second and third, 60; between the third and fourth, 140; between the fourth and fifth, and after the fifth, 300 pounds per day, making altogether 5,070 pounds. The net is the best method for separating the worms, though some use mulberry-branches. After the fourth moulting, preparation must be made for their spinning, by putting twigs of willow, osier, etc., across each other, to which they may attach the cocoons. As soon as the spinning-sound in the cocoons ceases, the cocoons should be taken off, assorted, and those not intended for breeding-purposes should be plunged in boiling water or subjected to steam of the heat of 212°. Then after two months of careful drying they are ready for the market or for reeling. Silk-culture may be carried on in almost every State, but it will be most likely to be successful in California, the southern portions of Colorado, New Mexico, Kansas, Missouri, Arkansas, and those Southern States which are not liable to sudden and violent storms in the summer months. A severe thunder-storm occurring when the worms are moulting will often kill the entire brood. Over \$30,000,000 worth of silk goods are now manufactured in the United States, and our country should supply the silk for this purpose, instead of importing it from Europe, China and Japan.

ALABAMA. The Legislature of Alabama, which was to convene on November 18, 1872, did not complete its regular organization and commence proceedings in a harmonious manner until February. The terms of compromise proposed by the Attorney-General of the United States to the two legislative bodies assembled, one in the Court-House and the other in the Capitol at Montgomery, were ostensibly accepted, and the 18th of December, 1872, fixed as the day for the combined organization (see ANNUAL CYCLOPÆDIA, 1872, ALA-

RAMA), and on that day the Senate chamber was made vacant, and also the House of Representatives, and the persons holding certificates as provided in the terms of compromise assembled in each. It appeared that, by the proposition of the Attorney-General, the returns of the inspectors of election in the contested districts were to be counted, but, under the law of the State, these inspectors were required to count and return all votes without regard to their legality or illegality, to a county board of supervisors, whose duty it was to open, compare, and count the legal ballots cast, and declare the result. The returns of the inspectors, therefore, comprised all votes, but the statement of the Board of Supervisors declared the result after the illegal votes had been rejected. Now, the case was such that by casting out illegal and fraudulent votes, as required by the laws of Alabama, the Democrats would have been seated, and the Republicans forced to contest the election. But, by adopting the inspectors' count, the Republicans were seated as members, and the Democrats forced to contest the election.

In the Senate, the requirements of the Attorney-General's plan were fully satisfied, and it only remained to permanently organize that body thus reconstructed by the election of its subordinate officers, which organization was subsequently completed on the same day, and twenty days' time was given to the contesting members in which to commence said contest for the seats claimed by them. On the next day the Lieutenant-Governor, who presided in the Senate, ruled that, under the terms of the compromise agreed upon, no business could be done by the Senate before the contested seats had been decided. An appeal was taken from this decision by one of the Senators, but it was denied. Meanwhile the House of Representatives proceeded to effect its organization. On the 21st of December, the motion having been made proposing that the House should commemorate the fact of its organization to the Senate, Mr. Speaker Parsons decided that the House could not be declared permanently organized until it had been informed by the Senate that the contests in that body for seats had been decided, and the persons found entitled to the same duly seated. Resolutions were adopted in each House to take a recess until the 15th of January, 1873. In the resolution adopted by the House, it was decided that such action should not be construed as an admission, in any sense or degree, that the Senate was an organized body according to the laws of Alabama, or that there was a contemplated permanent organization of the General Assembly, under the plan proposed. During these proceedings, the Court-House committee, which was composed of Republicans, continued their sessions, passed bills, and maintained their organization. On December 25th this body passed an act to authorize the

government to complete the sale of the Alabama & Chattanooga Railroad; another act to authorize the Governor to sell \$2,000,000 of State bonds; and another to increase the rate of taxation 100 per cent. The Governor, in his message to this body assembled in the Court-House, says:

To meet these wants, I advise an issue of bonds maturing at some short time that your wisdom will suggest, not exceeding \$2,000,000, bearing eight per cent. interest, with authority to raise money on them by pledging the same, or by sale, at satisfactory rates, to meet the needs of our obligations.

But, to make this measure of relief successful, we must give the financial world a substantial guarantee that our income will not only meet our current expenses, but yield a surplus annually that will afford the certain means of retiring this temporary debt after discharging the usual claims of our State.

I therefore advise that our present tax-bill be increased 100 per cent. on the property, as taxed therein, and that, on your reassembling, the tax-bill be examined in detail, and such changes in the mean time of the same be perfected as the constant fluctuations in the annual state of such measures demand.

This change in our rate of taxation will alone give the State that substantial basis of credit which will enable her to regain her prestige in the financial world.

Meanwhile the Attorney-General addressed the following letter to one of the State Senators expressive of his views relative to the Court-House Assembly:

DEPARTMENT OF JUSTICE,
WASHINGTON, January 8, 1873. }

Hon. P. Hamilton, Mobile, Ala.

Sir: I have received your letter of the 2d inst., transmitting a paper signed by yourself and other members of the General Assembly of Alabama, purporting to be a statement of the action of that body upon a plan of compromise which I had the honor, some time since, to submit for its consideration, and also of the action of a part of the Assembly at the United States Court-Rooms, since its meeting, in accordance with the terms of such plan of compromise, and asking for such action thereon as my judgment may approve.

Apprehensive that my discussion of the facts presented by you might imply an assumption of authority which I wholly disclaim, I will only say that I have heard, with surprise and extreme regret, of those extraordinary proceedings at the United States Court-Rooms, to which the paper refers. I have instructed the United States Marshal not to allow these rooms to be used for any purpose connected with the legislative affairs of the State, and, if I had any other official control in the matter, I would exercise it in the same way.

I have further to say with respect to the future, that any attempt, upon any pretext whatever, to disturb the present organization of the General Assembly of Alabama will meet no countenance whatever from me.

I see no reason why that body, as now organized, may not proceed to legislate without further delay, and decide contested elections and other questions that may arise, as is usual in the Legislature of a State.

Very respectfully,

GEO. H. WILLIAMS, Attorney-General.

At the same time a case was brought before the Supreme Court, in which the Secretary of State refused to recognize as State printer the individual who had been elected by the Court-House Assembly. The Chief-Justice

(Peck) and an associate judge (Peters) coincided in the opinion that the Assembly was a legal body, and the election valid, but the other associate judge (Saffold) was of the opinion that the Court-House assemblage was not the General Assembly.

The Chief-Justice, in his remarks, said :

The Senate and House of Representatives, each, since their organization, under the proposal of the Attorney-General of the United States, made for that purpose, has declared that certain persons, who had one certificate of election, were elected by the people, and certain other persons, who had certificates of election, were not elected by the people; and the first-named persons have been declared and recognized as members of the respective Houses. This is conclusive upon us, and we have no power to review or revise what has thus been done. These persons, if elected by the qualified electors, were members of the General Assembly from the day of their election, and, being members, then the two bodies who convened and organized at the Court-House in Montgomery had a majority in both Houses, and, having such majority, when recognized by the Governor, were a constitutional General Assembly, and were competent to do any act, as a General Assembly, except such acts as can only be done by a majority of two-thirds of the members of each House. They could elect a public printer, or a Senator to the Congress of the United States.

Judge Saffold, on the contrary, held as follows:

Notwithstanding this inquest determined that the Court-House assemblage had a majority of each House, I insist it was not the General Assembly.

A Legislature, to be such, must of course have all the powers which it may exercise. Some of the powers require to be exercised by two-thirds of each House. Can a bare majority, in favor of such exercise in a particular instance, expel the minority opposed, or refuse to let them meet with them? May the majority, wherever congregated in the city of Montgomery, assume on the instant to be the Legislature and pass a law? These extreme cases suggest the right, both of the minority and of the people, to have their voice in the passage of laws, or the performance of other duties by the Legislature.

The rule I deduce for determining the right of the majority to hold a session of the Legislature, and the right of the minority to be present, without which the majority cannot legislate, is this: the minority must be absent either necessarily or willfully, without fault on the part of the majority, to enable the latter to hold such session. If they are sick, or unable from any cause to come, or if they are refractory and will not come, the majority may proceed without them. But if their absence proceeds from a reasonable belief that the body claiming their attendance has no right to do so, their objections ought to be removed through conference with them, or they should be placed in fault by such attempt, so that they may be brought in by compulsion. When a large number are absent, their attendance ought to be compelled, because the people have a right to the influence they may exert, and also to have all doubts about the validity of the Legislature removed.

The two Houses of the Legislature assembled on January 13th, and proceeded to examine the contested seats, and to transact such business as might be done without either recognizing the existence of the other. These cases were so concluded that the majority was thereby secured for the Republican side in each House, that is, there was a tie in the Senate, where

the Lieutenant-Governor had the casting vote, and a majority of the House. On February 1st the house sent a message to the Senate, informing that body that the House was duly organized, and ready to proceed to business, and that a joint resolution had been adopted, to appoint a committee to wait on the Governor, and inform him of the organization of the General Assembly. The Senate concurred in the message from the House, and appointed a committee in accordance with the message.

Among the acts passed at this session of the Legislature was one restraining the counties, except for certain special purposes, from levying more than one-half per cent. tax for any county expenditures. Another act provided for the acquisition by purchase of a portion of West Florida, for a million dollars. The provisional contract of sale of the Alabama & Chattanooga Railroad, its franchises and lands, made by the Governor with the New Orleans & Northeastern Company, was ratified. Another act authorized any railroad company, incorporated under the laws of Alabama, and which might be entitled to an indorsement by the State upon its first-mortgage bonds, to relinquish its claims for any further indorsement of its bonds, and to receive from the Governor, in lieu of such further indorsements, bonds of the State bearing seven per cent. interest in gold-coin, and having thirty years to run, to the amount of \$4,000 per mile upon the number of miles of its road, as completed from time to time, in sections of not less than five miles. For the first five years after the issue of any bonds to a company, it is required to pay into the State Treasury three-fourths of one per cent. of its gross earnings, and after five years it is required to pay five per cent. upon the gross earnings upon the line of its road, for the previous year.

This payment is to be continued annually thereafter until the bonds issued to that company shall be extinguished. At the time of the passage of this bill the State was indorser for all the railroads to the extent of \$17,028,327. It was stated at the time that this property, on which the State held a first-mortgage lien, was worth, for purposes of taxation, \$18,051,642. The Governor, in his message, previously estimated that the railroad property on which the State held a first-mortgage lien would secure her against ultimate loss. He added: "Were the roads sold to-day, under the mortgages and liens of the State, three-fourths of them would realize the amount of the indorsements, while the remaining one-fourth, embracing only about seventy-five miles, would realize little less than the amount of indorsement. This is the opinion, too, of persons of experience and matured judgment in railroad matters. The security being equal to her liability, it is false and injurious to include, in the estimate of the State indebtedness, the amount of railroad indorsement."

Under the act above mentioned, the railroad

companies were required to return to the Treasury about eight millions of indorsed bonds, falling due many years hence, and in return authorized them to receive the same amount in straight bonds. The companies also retained about nine millions of indorsed bonds, and the State gave up its first-mortgage lien upon the railroad property which it held as security for its loan of seventeen millions of indorsed bonds. Thus the State gave up the undoubted security which she held, in the shape of first mortgage on all the railroad property, and took in lieu of it an agreement to pay upon the terms above stipulated.

The election law was also modified by the Legislature, but without making any material change in it. A bill also passed the Senate, known as the Civil Rights Bill, which established by law the intermixture of whites and blacks, on railroads, steamboats, and all public traveling conveyances, and in inns and eating houses on the lines of the railroads in the State. This bill failed to pass in the Lower House. A large number of other acts, chiefly of a local nature, were passed, and the Legislature adjourned on the 23d of April.

Among the acts passed by the body which assembled in the Court-House, as heretofore, was one authorizing the issue of State bonds to the amount of \$3,000,000. The same body elected Geo. E. Spencer to represent the State in the Senate of the United States. At the same time the body assembled in the Capitol elected a citizen by the name of — Sykes. Each election was held on a day previous to the one designated by the act of Congress. When the day thus designated arrived, the majority in the new legislative body adjourned over without taking any steps to hold an election. Those who were opposed to the issue of the bonds, and to the election of Spencer, took the position that both acts were null and void, because the Court-House body was not a legal and constitutional legislative House; the question was brought before the Supreme Court of the State, and decided in favor of the legality of the Court-House body, as above stated. This decision gave a validity to its acts. The bonds were subsequently sold in New York. When Spencer appeared to take his seat in the United States Senate, Sykes also appeared to contest his right thereto. But the Senate gave the seat to Spencer.

The financial condition of the State became very embarrassing during the latter part of the year. The State Treasury was comparatively empty, and there had been a failure to meet the interest due on many of the bonds of the State. The debt of the State was stated with great uncertainty, according as the direct and indirect obligations were estimated. The views of the Governor, David P. Lewis, were thus expressed, in his address to the Legislature on November 17th:

The subject of the State finances demands your most serious and thoughtful consideration. The

embarrassment surrounding our pecuniary engagements and the means of complying with them, though serious before, are of course enhanced by the crisis in money circles. We are still suffering from the crisis commenced over two years since, in our experiment of constructing important lines of railroads, mainly by State credit. The theory that a railroad, while in progress of construction, could pay the interest on the bonds issued to build it, has been shown to be false; and this failure of the railroads to pay interest on the bonds, indorsed by the State, devolves on the State a debt, the means for paying which has not been provided for in her assessment of taxes. The State has been in default in the payment of interest on some of these indorsed bonds since January, 1870.

The immediate effect, to the injury of the State, of this failure to pay the interest on these indorsed bonds, was to impair the market value of all her securities, to render loans impracticable except at great sacrifice, and eventually to render her bonds unsalable at rates that could be entertained.

It was hoped by this Department that the prompt payment of the interest on the bonds of the State, negotiated for its own loans, would keep that line of securities on a footing of recognized value, and afford the means of paying the past-due coupons on the indorsed bonds, until a better day would dawn on the railroads themselves, and thus tide over our difficulties. But Wall Street refused to recognize a compliance by the State with her financial obligations as long as any coupon of an indorsed bond of the State was not provided for on maturity.

The whole of the last issue of State bonds could have been sold for eighty-five cents on the dollar, to parties interested in the indorsed bonds of the railroads, provided all past-due coupons were paid. But the State did not have a sufficiency of bonds to discharge all these coupons, and pay the interest on the direct bonds of the State. If the act of the Legislature entitled "An act to maintain the credit of Alabama," approved February 25, 1878, had authorized the issue of two millions of bonds, there would have been a sufficiency of funds at the command of this Department to have paid off all the interest past due and accruing on both the direct and indorsed bonds of the State, during the financial year just closed. But, the Legislature having authorized the issue of an amount inadequate to meet all the interest debt of the State, no sale could be made of the bonds authorized to be issued. This Department has been unable to sell for money any of the State bonds, during the present administration, being forced to follow in the footsteps of its predecessor, in raising money by the hypothecation of the securities of the State, as it best could.

In order to redeem the bonds of the State already hypothecated, the Governor recommended a new issue, redeemable at the pleasure of the State, within ten years, and bearing interest at eight per cent., the coupons to be receivable in all dues to the State, in sums of one hundred dollars or more. He further suggested that all trustees should be authorized to invest fiduciary funds in these bonds, and that auditors' warrants should no longer be received in payment of taxes, and that the past-due coupons of the Alabama & Chattanooga road, together with the approaching January interest, should be funded in bonds of the State, together with the passage of all such acts as might be necessary to accomplish the adjustment of the outstanding interest.

It was urged that an increase in the rate of taxation was necessary to meet the wants of the Treasury. Two years have elapsed since

the State has been able to sell her bonds on satisfactory terms; and most of the railroads whose bonds have been indorsed by the State have failed to pay the interest thereon. Indeed, this failure was regarded as the cause of all the troubles in credit and finance which embarrassed the Treasury. The sale of the Alabama & Chattanooga road, as authorized by the previous Legislature, had not been made, and that work had passed into the hands of a receiver. All the railroads entitled to the benefit of the act for the substitution of State bonds to the amount of \$4,000 per mile in lieu of State indorsement of their bonds, gave notice, during the year, of their intention to accept of the provisions of the law, except the East Alabama & Cincinnati road. The Selma & Gulf Railroad, which was advertised to be sold under a mortgage to the State for \$40,000, did not obtain a purchaser, but went into the hands of receivers appointed by the Court of Chancery. The effort was then made to subject it to a lien of certificates to be issued and disbursed by the receivers, which would be paramount to the lien of the first-mortgage bonds of the State. It was apprehended that the success of this effort would result in a destruction, partial or total, of the first-mortgage lien of the State on railroads without any compensating benefit to either the State or the roads.

The system of common-school education adopted by the State has been in operation long enough for a test. It appears to be too expensive for the benefits received. This is ascribed to the sparseness of the population, to the absorption of the revenues of some of the higher schools by a useless multiplication of unnecessary professorships and salaried officers, and the complication of the machinery.

The statistics of the penitentiary show an increased number of convicts as compared with former years. The agricultural branch of industry connected with the institution is expected soon to be remunerative. Meanwhile, the convicts within the walls are engaged in manufacturing, under contract, articles which command a ready sale wherever needed.

The general elections in the State are biennial, and none were held during the year.

A colored Labor State Convention was held at Montgomery on November 18th.

The Committee on the Condition of the Colored People reported that the colored people of the State were deprived of the free enjoyment of all their rights as citizens, and recommended the passage of Mr. Sumner's Civil Rights Bill by Congress, and a similar bill by the Alabama Legislature.

The Committee on Local Organizations, in obedience to a resolution of instructions, reported a plan of organization for labor councils for each county. The plan provided for the election of an agent for the State at large, and one for each congressional district, and

for the appointment of an agent for each county by the president of the convention, to organize councils in each county.

The report of the committee was adopted.

The Committee on Memorials reported a memorial to the President of the United States, setting forth the destitute condition of the laboring people of Alabama, owing to the failure of the cotton-crop, and asking the President, as the head of the Government, to supply them with bread and meat, which memorial was adopted.

The following is an extract from the report:

Therefore your committee do urge upon the delegates to this convention the adoption of the memorial herewith presented. Your committee would respectfully inform the convention that, without the adoption of the memorial, many of us, in all portions of the State, will be left in a starving condition, which will necessarily compel many of us to emigrate to other States, which would leave many of our friends in the hands and control of their political enemies, for the reason of their inability to emigrate from county to county, much less from State to State. Knowing the members of this convention to be the people's representatives from all parts of the State, knowing the wishes of the people, your committee hope the following memorial will be unanimously adopted by this convention, and properly signed and forwarded to the Executive Department at Washington.

The Committee on Homesteads reported resolutions recommending that the Labor Union of Alabama petition the General Assembly to pass a law exempting all homesteads within the State from taxation, provided that the principal crops grown thereon consist of corn, peas, and potatoes, and in lieu thereof that the taxes be increased on all lands within the State held by monopolists and speculators.

The report and resolutions were adopted.

The Committee on Labor and Wages made a report recommending: 1. That the system of working for a share of the crop raised be dispensed with so far as the same is practicable; 2. That the interests of the laboring masses will be best subserved by their working for a fixed amount of wages per annum, payable monthly in money; 3. A uniform system of written contracts, equally reciprocal toward employer and employé; 4. That wages should be secured by a lien upon real or personal estate of the employer, as the laborer is not responsible for any failure of crops; and, 5. That separate contracts be made by each laborer, and that the "squad" system be abolished; and that, wherever it is possible, laborers should purchase small tracts of land on long time, securing the same by mortgage.

After considerable discussion, the report of the committee was adopted.

AMERICA. In the States of North America the year 1873 was one of peaceful prosperity. Except a contest with a small band of Modoc Indians, no hostile acts were committed in the United States. The relations of that country with Spain were somewhat disturbed in consequence of the capture by the

Spanish naval ship, *Tornado*, on the 31st of October, of the steamer *Virginius*, conveying a force from the United States to the island of Cuba with a hostile intent. This affair was subsequently adjusted between the two Governments. The award of \$15,500,000, decided by the convention at Geneva to be paid by Great Britain to the United States, was duly settled according to the terms. In Louisiana much feeling existed against the State government as if it were not legally constituted, and the presence of Federal troops in New Orleans alone prevented a conflict among the citizens. The rapid organization of "Granges" in some of the Western and Southern States has been remarkable. These are associations composed chiefly of agriculturists, who thus combine, avowedly, to obtain relief from the embarrassments which attend the transportation of agricultural products to an Eastern market. Political evils are also made the subject of protest by them. The number of these associations reached during the year nearly 10,000, and their political influence was felt and seen at the elections in several States. The yellow fever visited with great fatality the cities of Nashville, Memphis, and Shreveport.

Among the Central and South American states, there is scarcely one that has not to chronicle its revolutions. Political turmoils have almost incessantly disturbed the public peace in Guatemala and Honduras. The old and vexed question of boundaries has been discussed with no little warmth by the Governments of Nicaragua and Costa Rica. The Colombian States of Panama, Magdalena, Bolivar, Tolima, and Cauca, have been the scenes of grave disturbances. Shortly before the commencement of the year, a conspiracy against the life of President Sarmiento was discovered in time to be frustrated; and in the course of the year several rebellions were suppressed. The rebel chief, Jordan, has returned to Entre-Rios, in the Argentine Republic; and that and some of the other provinces were declared by the President to be in a state of siege. The condition of things in Paraguay appears still to be gloomy in the extreme. A revolution, headed by one Caballero, deduced all the powers of the Government to suppress it; and the latter, it was affirmed, contemplated appealing for a Brazilian protectorate.

In spite, however, of the petty disorders which would appear to be inevitable under the still existing social and political systems of South America, a general and steady march onward is distinctly observable in the various republics and in Brazil. In the matter of national credit, for example, a comparison of South American indebtedness to Great Britain with that of some of the European nations clearly results in favor of the former, and is of a nature to calm the apprehensions of the most timid capitalists. Among those countries

where securities have yielded handsome returns upon investments may be enumerated Brazil, the Argentine Republic, Chili, Peru, and Uruguay, all of which meet their obligations with a punctuality beyond reproach. Some of the minor states have had to struggle against formidable currents of political and financial difficulty; but few have failed to sustain their credit, and not one has absolutely repudiated its liabilities. As a natural result of the moderation in expenditure just alluded to, South American states are free to apply their means to the development of their natural resources; railways are rapidly multiplying in every direction; the grand rivers are thrown open to navigation by steam, and untiring energy is exerted in making new highways in districts where the introduction of the locomotive would be impossible, or would at all events be attended with an enormous outlay of capital. Social reform is everywhere visible; religious independence and liberty, and individual security, are now no longer mere matters of speculation in many of the countries; and in all of them the cause of public instruction is the object of special efforts on the part of the Government. In Brazil and in many of the Spanish-American states has been agitated the all-important question of separation of Church and state, and the problem has been definitively resolved in Mexico in the course of the year. Two other reforms have been accomplished in the republic just mentioned: the abolition of peonage has at last been obtained, and individual freedom is now secured to all classes of the community.

Several of the countries were visited by epidemics of various kinds; yellow fever was especially prevalent in Brazil from January to May; and the number of deaths was unusually great at Rio Janeiro. The character of the disease was also remarkably malignant at the port of Vera Cruz, in Mexico. The appearance at Buenos Ayres of a distemper somewhat resembling yellow fever alarmed the citizens, and filled them with apprehensions of the return of the terrible malady which spread so much desolation in their midst in 1871. The small-pox raged in Peru; in Chili, where it had been particularly fatal the year before, and attended with hæmorrhagic complications, it gradually disappeared, giving place to erysipelas, the latter having prevailed in an endemic form through the months of April, May, June, July, and August.

By virtue of a treaty of limitation concluded between the Argentine and Paraguayan Governments, the Rio Pilcomayo is fixed as the boundary of the two republics in the Gran Chaco. This arrangement secured to the Argentines the lower portion of the Chaco—much coveted by them; to the Paraguayans it gives the northern bank from the Pilcomayo up to 22° south; and finally to Bolivia it facilitates access to the rivers. Negotiations be-

tween the Argentine and Chilean Republics concerning the claims of both to Patagonia had not yet been brought to a termination. Extradition treaties were concluded between some of the South American and European states, notably one between Brazil and Belgium. Peru sent an embassy to Japan and China, partly with a view to treaties of amity, commerce, and navigation, but especially to settle the coolie question. Determined steps were taken in the same republic to promote European immigration, and gradually put an end to the introduction of coolies. Energetic movements were on foot in some of the Central American states toward the final establishment of the Central American Confederation. The question of boundaries between Chili and Bolivia has been settled, and the northern limit of Chili fixed 24° south. Early in January the town of San Vicente in San Salvador, with 10,000 inhabitants, was destroyed by an earthquake, and the city of San Salvador was laid in ruins by another earthquake, on the 19th of March. The loss of life and property was considerable; and a number of persons became insane by reason of the disaster.

AMES, OAKES, a Massachusetts manufacturer, railroad-builder, member of Congress, and financial operator, born in Easton, Mass., in 1804; died in North Easton, formerly a part of the same town, May 8, 1873. He was the elder son of Oliver Ames, a blacksmith of the town of Easton, who founded the Ames manufactory of shovels and picks, to which were subsequently added ploughs and other agricultural implements. Oakes obtained his education in the public schools, and then entered his father's workshops, and, having made himself practically familiar with every step of the manufacture, was taken into partnership by his father, as was his brother Oliver a few years later. Oakes Ames had a speculative disposition, and was willing to run risks with the prospect of large gains. When gold was discovered in California, he sold largely to California merchants and adventurers, and took risks in the prospective yield of the mines. Eventually the losses of the firm by the failure of California merchants and dealers were about \$1,000,000; but the house of Oliver Ames & Sons was so strong that they were not crippled by this heavy loss, and their great trade in Australia a few years later more than made good their previous losses. At the beginning of the late civil war the firm were worth about \$4,000,000, and the vast demand for their wares for the use of the army soon doubled their wealth. In 1861 Oakes Ames was called into the Executive Council of the State by Governor Andrew. It was the first public office he had ever held. In the autumn of 1862 he was elected to Congress from the second Massachusetts district, and reelected in 1864, 1866, 1868, and 1870, each time with a large majority. He rarely made a speech in

Congress; was not on important committees; but his large wealth, his great business experience, and his sturdy common-sense, made him a valuable working representative. He and his brother early took a large interest in the Union Pacific Railroad, and Oliver took a contract for the building of the greater part of the Eastern section of the road, which contract he transferred to a corporation called the "Credit Mobilier of America," of which Oakes Ames was one of the largest stockholders. The history of this corporation is elsewhere related, and need not be recapitulated here. Suffice it to say that in the sale of its stock by Oakes Ames, with the implied compact for favorable legislation when needed, on the part of those who were the recipients of a portion of its enormous profits, and the subsequent exposure of these transactions in the last session of the Forty-second Congress, many hitherto unblemished reputations were sadly blighted. Mr. Ames and Mr. James Brooks, of New York, were censured by the vote of the House of Representatives. The Ames brothers failed in 1870, their liabilities being about \$3,500,000, but a satisfactory settlement was made with their creditors, and at his death Oakes Ames was said to be worth between \$5,000,000 and \$6,000,000.

ANGLICAN CHURCHES.* The Anglican Churches embraced in 1872 the following number of dioceses:

According to the official census of 1871, the population connected with the "Church of Ireland" was 683,295, against 693,357 in 1861. It was divided among the four provinces as follows: Connaught, 86,345; Munster, 77,366; Leinster, 170,879; Ulster, 398,705. In England and Scotland no religious census was taken in 1871; if the estimates made by Ravenstein ("Denominational Statistics of England and Wales," London, 1870), for 1866, are correct, the population connected with the Anglican Church in 1871 was 17,781,000 in England, and 73,000 in Scotland. T. Martin, in the "Statesmen's Year-book for 1873," estimated the population of England and Wales, claiming membership with the Established Church, as only about 12,700,000. It appears, however, from a careful enumeration made in 1872, that,

* See PROTESTANT EPISCOPAL CHURCH.

as far as the places of worship and number of sittings are concerned, the Church of England has in the towns with upward of 20,000 inhabitants only a minority of the places of worship and the number of sittings. The fol-

lowing tables, published in the *Nonconformist* (October 23, November 6, and December 4, 1872), show the relation of the Established Church to the non-established Churches in three different groups of towns:

	Total Population.	Total Places of Worship.	Total Sittings.	Established Church.	
				Places of Worship.	Sittings.
14 towns, with more than 100,000 inhabitants	2,905,400	1,760	1,087,859	540	444,926
36 towns, with more than 50,000 and under 100,000	1,439,816	1,152	681,893	313	227,143
30 towns, with more than 20,000 and under 50,000	1,055,507	1,155	631,543	410	231,626
Total	5,400,723	4,067	2,301,295	1,263	1,307,695

The population connected, in 1871, with the Anglican Church in the Australian colony of New South Wales was 169,958 (45.6 per cent. of the total population); in Victoria, 257,885; in South Australia, 50,849; in West Australia, 14,619; in Tasmania, 50,047.*

THE CHURCH OF ENGLAND.—The subject of the *Athanasian Creed* was a prominent topic of discussion in the Convocations of Canterbury and York in the earlier part of the year. The committee that had been appointed in the Convocation at Canterbury in 1872, to consider this subject, recommended a synodal declaration of the object of the creed, and of the sense in which it was intended to be used in the service. The declaration was adopted by the Lower House of the Convocation, in the following form:

For the Removal of Doubts and of Disquietude in the Use of the Athanasian Creed, this Synod doth solemnly declare:

That the Confession of our Christian Faith, commonly called the Creed of St. Athanasius, sets forth the two fundamental doctrines of the Catholic Faith, viz., That of the Holy Trinity, and that of the Incarnation of our Lord Jesus Christ, in the form of an exposition.

That the said Confession does not make any addition to the Christian Faith as contained in the Apostles' and Nicene Creeds, but is a safeguard against errors which, from time to time, have arisen in the Church of Christ.

That, whereas, Holy Scripture, while promising life to the faithful, asserts in divers passages the condemnation of the unbelieving, so also does the Church, while declaring the necessity of holding the Christian Faith for all who would be in a state of salvation, express, in sundry clauses of this Confession, the terrible consequences of a willful rejection of that Faith, and declare the necessity of holding fast the same for all who would be in a state of salvation. Nevertheless, the Church therein passes no censure upon particular persons, the Great Judge of all being alone able to discern who those persons are that are guilty of such willful rejection. Furthermore, we must receive God's threatenings, even as he promises, in such wise as they are generally set forth in the Holy Scriptures.

The Convocation of York adopted a similar declaration, as follows:

For the Removal of Doubts and Disquietude in the Use of the Athanasian Creed, this House doth solemnly declare:

1. That the Confession of our Christian faith, commonly called the Creed of St. Athanasius, doth not

* For further statistical information on the Anglican Church in the Australian colonies, see AUSTRALIA.

make any addition to the faith as contained in Holy Scripture, but warneth against errors which from time to time have arisen in the Church of Christ.

2. That inasmuch as Holy Scripture in divers places doth promise life to them that believe, and declare the condemnation of them that believe not, so doth the Church in sundry clauses of this confession declare the necessity of holding fast the Christian faith, and the great peril of rejecting the same. Nevertheless the Church doth not therein pronounce judgment upon particular persons, the Great Judge of all alone being able to discern who they are that in this matter are guilty before Him.

Furthermore, the warnings in this Confession of Faith are to be understood no otherwise than the like warnings in Holy Scripture.

The Convocation of York sits as one house, and the declaration was voted upon by such members of the body as correspond to those who constitute the Lower House of the Convocation of Canterbury. Therefore the bishops did not vote upon this question as it then stood.

The Convocation of Canterbury met again in May, when the prolocutor laid before the Lower House the declaration on the Athanasian Creed which had been agreed to by the bishops.

The House agreed upon some amendments to the declaration, and readopted it, in the following form:

For the Removal of Doubts, and to prevent Disquietude in the Use of the Creed commonly called the Creed of St. Athanasius, this Synod doth declare:

1. That the Confession of our Faith, commonly called the Creed of St. Athanasius, doth not make any addition to the faith contained in Holy Scripture, but warneth against errors which from time to time have arisen in the Church of Christ.

2. That as the Holy Scripture, in divers places, doth promise life to them that believe, and declare the condemnation of them that believe not, so doth the Church in this confession declare the necessity, for all, who would be in a state of salvation, of holding fast the Catholic Faith, and the great peril of rejecting the same. Wherefore the warnings in this Confession of Faith are to be understood no otherwise than the like warnings of Holy Scripture. Moreover, the Church doth not pronounce judgment upon particular persons, God alone being the judge.

The declaration in this form was sent up to the Upper House, which adopted it after making two slight verbal alterations.

A petition was presented in the Upper House of the Convocation of Canterbury on the 9th of May, from four hundred and eighty-three

clergymen of the Church of England, asking for a recognition of the practice of *confession*, and particularly that the House consider the advisability of providing for the licensing of "duly-qualified confessors, in accordance with the provisions of the canon law." This petition also recited that the Prayer Book made no provision for processions, for the presentation of pastoral staves to bishops, for the use of processional crosses, banners, credence-tables, colored altar-cloths, and other Catholic usages extensively promoted by or under Episcopal patronage. Instead of altering the Prayer Book in an un-Catholic direction, the petitioners desired to see certain additions made which would tend to the more distinct enunciation of the real presence, of adoration, and of sacrifice.

The object of the petition was severely condemned by most of the speakers in the debate which followed its presentation. The subject was referred to a committee of the whole House, who at the next meeting of the Convocation, July 23d, presented the following report:

In the matter of confession the Church of England holds fast those principles which are set forth in Holy Scripture, which were professed by the Primitive Church, and which were reaffirmed at the English Reformation.

The Church of England, in the 25th Article, affirms that penance is not to be counted for a sacrament of the Gospel; and, as judged by her formularies, knows no such word as "sacramental confession."

Grounding her doctrine on Holy Scripture, she distinctly declares the full and entire forgiveness of sins, through the blood of Jesus Christ, to those who bewail their own sinfulness, confess themselves to Almighty God, with full purpose of amendment of life, and turn with true faith unto Him.

It is the desire of the Church that by this way and means all her children should find peace. In this spirit the forms of confession and absolution are set forth in her public services. Yet, for the relief of troubled consciences, she has made special provision in two exceptional cases.

1. In the case of those who cannot quiet their own consciences previous to receiving the Holy Communion, but require further comfort or counsel, the minister is directed to say: "Let him come to me, or to some other discreet and learned minister of God's Word, and open his grief; by the ministry of God's Holy Word he may receive the benefit of absolution, together with ghostly counsel and advice." Nevertheless, it is to be noted that for such a case no form of absolution has been prescribed in the Book of Common Prayer; and further, that the rubric in the first Prayer Book of 1549, which sanctions a particular form of absolution, has been withdrawn from all subsequent editions of the said book.

2. In the order for the visitation of the sick it is directed that the sick man be moved to make a special confession of his sins if he find his conscience troubled with any weighty matter; but in such case absolution is only to be given when the sick man shall humbly and heartily desire it. The special provision, however, does not authorize the ministers of the Church to require from any who may repair to them to open their grief in particular, or detailed examination of all their sins, or to require private confession as a condition previous to receiving the Holy Communion, or to enjoin, or even encourage, any practice of habitual confession to a priest, or to teach that such practice of habitual con-

fession, or the being subject to what has been termed the direction of a priest, is a condition of attaining to the highest spiritual life.

The discussion of the rubrics proposed by the commissioners for the *revision of the Ritual* was continued in the Lower House of the Convocation of Canterbury during its sessions in May and July. A new table of psalms was adopted for the days of Advent, Circumcision, Epiphany, Annunciation, Maundy Thursday, Easter Even, Trinity Sunday, St. Michael and All Angels, and All Saints. Greater liberty in the use of hymns was given by the adoption of a rubric, to the effect that "in all churches and chapels such hymns may be used as shall not be disallowed by the Ordinary." The question respecting the attendance of non-communicants at the administration of the Sacrament excited considerable discussion. It was settled by the adoption of the following rubric: "At the time of the celebration of the Holy Communion, a pause having been made to allow those who desire to withdraw, and the communicants being conveniently placed for the receiving of the Holy Sacrament, the priest shall say this exhortation." The following additional rubric to the burial-service was adopted: "If the person to be buried, having been baptized, have died in the actual commission of some open and notorious sin, it shall be lawful for the minister, when they come to the grave, to read only the thirty-sixth Psalm, a lesson taken from St. Matthew, xxiv. 35-43, and the four sentences appointed to be said while the corpse is made ready to be laid into the earth, concluding with the words, 'Lord, have mercy,' etc., the Lord's Prayer, and 'The grace of,' etc., at the end of the Office."

On the 5th of May a deputation representing the Church Association waited upon the Archbishops of Canterbury and York, at Lambeth Palace, to present to them a memorial designated as "against Romish teaching in the Church of England." It urged the archbishops to take steps to enforce the decrees which the Association had been the means of obtaining in the courts of law, and particularly that they would use their influence to secure the entire suppression of all those ceremonies and practices in the churches which had been in those decisions judged illegal. The petition was signed by 60,200 laymen. It was stated that among the signers were "fourteen noble lords, seventeen baronets, seventeen knights, five honorables, eleven members of Parliament, fifteen mayors, two hundred and sixty-eight justices of the peace, and three hundred and twenty-eight church-wardens, besides army officers and other persons of influence and importance in society." Several members of the deputation addressed the archbishops, saying that they had been contending against the danger of the illegal practices becoming privileged through exemption from censure. The archbishops stated that they were prepared to do every thing possible to

enforce the law, and promised to give a written reply to the memorial. This reply was made on the 16th of June. The following passages express the views of the archbishops on the subject:

There can be no doubt that the danger you apprehend of a *concomitant* minority, both of clergy and laity, among us desiring to subvert the principles of the Reformation is real, and it is not unusual that you should appeal to us for counsel and support. Since we had the honor of receiving your deputation, our attention has been directed to a position presented by upward of four hundred clergymen to the Convocation of the Province of Canterbury in favor of what they designate as sacramental confession. We believe that, among the systems of the confessional, great evil has been wrought in the Church of Rome, and that our Reformers acted wisely in allowing it no place in our Reformed Church, and we take this opportunity of expressing our entire disapproval of any such innovation, and our firm determination to do all in our power to discourage it. We feel justified in appealing to all reasonable men to consider whether the very existence of our national institutions for the maintenance of religion is not imperiled by the evils of which you complain.

In your memorial, you ask us: 1. Whether we are ready "to exercise all the authority vested in us for the entire suppression of ceremonies and practices adjudged to be illegal; and, in the event of that authority proving insufficient, to afford all other needful facilities for the due enforcement of the law." We answer, "that we can have no doubt that it is our bounden duty to use our best endeavors to see that the law is obeyed, and to afford all needful facilities for an enforcement, when we are duly called upon so to do."

2. You appeal to us "to take especial care to guard against such architectural arrangements and ornaments in our churches as may facilitate the introduction of superstitious practices and erroneous doctrines." We answer that, in the administration of our dioceses, we have ever been watchful on this point.

3. You ask us, in the admission of candidates for holy orders, and in other ways, to be careful lest persons be intrusted with the ministerial office who teach doctrines subversive of those "truths to which our Protestant Church, as keeper and witness of Holy Writ, has ever borne its faithful testimony." We answer that we consider ourselves bound to the duty by our consecration vows.

While, however, we return these answers, we declare that there shall be no misapprehension as to our meaning, and we wish to state to you that we do not intend to be the cause of the bishops to undertake judicial proceedings upon every complaint of a violation of the rubrics, or upon every charge of unsound doctrine that may be laid before them; obviously, it cannot be desirable that the Church should be harassed by the bishops being dragged into an unlimited number of judicial investigations founded upon charges and counter-charges made by contending theological parties against their opponents, on the ground of alleged excess or defect in conforming to the ritual and preaching the doctrine of the Church.

In the House of Commons, on the 14th of June, Lord Oranmore and Browne read the reply of the archbishops to the memorial of the Church Association, and moved that a committee be appointed to consider what legislation was needed to check the tendency of the Church of England toward Roman Catholicism. He supported his motion in a speech, in the course of which he read passages from

the petition of the four hundred and eighty-three clergymen for the appointment of confessors, and asked by what casuistry English clergymen holding such doctrines retained their positions in the Established Church.

The Archbishop of Canterbury approved the tenor of the remarks of Lord Oranmore and Browne, thought there was good cause for alarm, and suggested that the power of the bishops to remedy abuses should be increased.

The Bishop of Salisbury declared the positions taken by Lord Oranmore and Browne to be unassailable, but thought that the motion was inopportune. He regarded the confessional as so contrary to British feeling, that the attempt to introduce it could only be considered wild and visionary.

The Archbishop of York opposed the motion, on the ground that, whatever was done in the matter, should come from the Church rather than from the Legislature; but declared that he would make every exertion to prevent the Prayer Book from becoming Romanized. The motion was lost.

The bill which was passed by the British Parliament in July, in relation to the organization of a Supreme Court of Judicature, made a material change in the constitution of the final court of appeal for the hearing of ecclesiastical cases. By the terms of this bill, the consideration of such cases is taken from the Judiciary Committee of the Privy Council, with whom it has heretofore rested, and is given to the Supreme Court of Appeal, which is wholly composed of lay judges. It is especially provided, however, that, in the hearing of appeals in ecclesiastical cases, the court may be assisted by archbishops or bishops of the Church of England, sitting as assessors. Such assessors are to be appointed or selected from among the archbishops and bishops under the operation of general rules, which are to be prepared by her Majesty, the judges of the Court of Appeal, and the archbishops and bishops, who are members of the Privy Council, and approved by the two Houses of Parliament.

The subject of appointing and consecrating a bishop for Madagascar was considered in several meetings of the Society for the Propagation of the Gospel in Foreign Parts. On the 15th of February, the bishops resolved to apply to Lord Granville for a license to consecrate a bishop for Madagascar, and further resolved that, if their application was refused, they would take steps to have such a bishop consecrated in Scotland, Ireland, or South Africa. Lord Granville formally declined to accede to the request of the bishops and the Society. Upon this refusal being communicated to them, the Society, on the 16th of May, requested the Archbishop of Canterbury to take counsel with their standing committee as to the steps which should be adopted for obtaining a bishop for the Church in Madagascar through the bishops of the Province of South Africa, or otherwise. The archbishop de-

clined to assume the responsibility of consecrating a bishop without the royal license.

The *Church Congress* met at Bath, October 7th, and closed October 10th. It was more largely attended than any previous Congress, and its proceedings were regarded with unusual attention. The bishop of the diocese (Bath and Wells) presided at the Congress. Papers were read as follows: On "The Church's Duty in regard to Strikes and Labor," the Bishop of Oxford and the Rev. Llewellyn Davis; "Lay Agency," the Rev. W. Cudman and the Rev. N. D. Nihill; "Christian Almsgiving in Relation to Pauperism and the Existing State of Society," Earl Nelson and the Rev. Dr. Hannah; "Foreign Missions," Sir Bartle Frere and the Rev. E. O. Stuart; "The Supply and Preparation of Candidates for Orders," Dean Hornell, Canon King, Canon Ashley, and Prebendary Church; "The Union of Church and State," the Dean of Exeter and Sir Stafford Northcote; "The Duty of the Church in regard to the Temperance Movement," Canon Ellison; "The Present Need and the Best Means of quickening Interest in Theological Thought," the Rev. P. J. Medd and Canon Lightfoot; "The increase of the Episcopacy and Church Organization in Synods, Conferences, and Parochial Councils," the Rev. J. F. Griffith and Mr. F. H. Dickinson; "The Appropriation of Seats as affecting a National Church," the Rev. Archer Gurney and the Rev. R. O. Billing; "Church Endowments with special reference to Recent Legislation," the Archdeacon of Lindisfarne and Prebendary Fagan; "Cathedrals and Chapters: their Proper Work and Influence," Canon Selwyn and Mr. E. A. Freeman; "The Means of bringing the Influence of the Church to bear upon the Mass of the People," Bishop Ryan and the Rev. W. D. Madagan; "The Life of Godliness; intellectual, elevational, practical," the Rev. E. Garbette and the Rev. R. M. Benson; "The Religious Wants and Claims of Children, and the Methods of providing for them before and after Confirmation," the Rev. R. W. Randall and Mr. Eugene Stock; "Church Music," Mr. J. Barnby. The readings of the several papers were followed by informal discussions of the topics to which they respectively related.

The one hundred and seventy-second anniversary of the *Society for the Propagation of the Gospel in Foreign Parts* was held on the 29th of April. The Archbishop of Canterbury presided. The report represented the receipts of the Society for the year to have been £113,123, and stated that they were the largest the Society had ever had in a single year. The Society had supported during the year, wholly or in part, 418 ordained clergymen, of whom 35 were natives; 855 catechists; and about 300 students in various foreign colleges.

The seventy-fourth anniversary of the *Church Missionary Society* was held on the

6th of May. The receipts from associations during the year were £125,580, this being the highest amount yet attained, and an advance of £12,088 on the like receipts of the previous year. The total receipts of the Society for the year were £159,280, and the expenditures £167,394. The following is a summary of the statistics of all the missions:

Stations.....	154
Clergymen, European.....	204
Clergymen, native and country born.....	143
Total of clergymen.....	347
European laymen, school-masters, lay agents, printers, etc.....	14
European female teachers (exclusive of missionaries' wives).....	12
Native and country born Christian catechists, and teachers of all classes, not sent from home.....	1,928
Number of communicants (1872).....	21,043

Complete returns from several of the missions had not been received at the time of making the report. The Society had withdrawn from 77 stations, which had been chiefly added to parochial establishments in the West Indies, or transferred to the native Church in Sierra Leone. These statistics contained 10 native clergy, 4,356 communicants, and 12,866 scholars.

II. THE CHURCH OF IRELAND.—The General Synod of the *Church of Ireland* met in Dublin April 16th. The Bishop of Kildare presided. One of the first subjects of discussion related to the condition of the Divinity School in the event that Mr. Fawcett's bill for the abolition of religious tests in the universities should become a law. Resolutions were passed declaring "that the continuance of the Divinity School, which is at present connected with Trinity College and the University of Dublin, with proper securities for the orthodoxy of its teaching, is essential to the welfare of the Church of Ireland," and "that in this view it is necessary that the divinity professorships be exempted from the proposed abolition of all religious tests in Trinity College and the University of Dublin until due provision shall be made for the separation and adequate endowment of the Divinity School." A proposition was agreed to for the insertion before the communion service of the parenthetical words, "those who do not intend to communicate having had an opportunity of withdrawing." The Synod agreed to the insertion, after the words preceding the exhortation in the communion service, of a note to the effect that the exhortation might be omitted with the consent of the ordinary, provided it were read once in the month at least, and upon all great festivals; but refused to omit from the second warning exhortation the words which state that it is to be used when the minister sees the people go negligently to the communion. A rubric was adopted allowing the words of administration to be said to a whole raiulf at once in case there are great numbers of communicants; but it was provided that any communicant may require the

words to be said separately to him. Of the amendments to the communion service which were adopted, the one which was regarded as the most important was the one known as No. 93 in the report of the revision committee. It directed "that immediately after the declaration at the end of the communion service, beginning 'whereas it is ordained,' etc., there be added the following declaration: "

Whereas, Questions have been raised as to the meaning and intention of the preceding declaration, and it hath been taught by some that by virtue of consecration there is in or under the form of the elements a presence of Christ or of Christ's flesh and blood, unto which adoration may or ought to be done, it is hereby declared that such teaching is not permitted by the Church of Ireland.

The vote on the adoption of this resolution was: yeas, clergy, 120; laymen, 185; nays, clergy, 53; laymen, 36. The Bishop of Killaloe moved to amend the prayer in the consecration of the elements so that it should read: "Grant that we, receiving there thy creatures of bread and wine, according to thy Son our Saviour Jesus Christ's holy institution, may be partakers of his most blessed body and blood." The motion was lost.

The propositions to change the phraseology of the baptismal service failed to receive the approval of the Synod; but the following additional rubric to that service was adopted:

Whereas, The language used in the formularies of the Church to describe the grace of baptism has been variously interpreted, it is hereby declared that, so far as such language doth denote admission to the visible Church of Christ, and a visible signing and sealing of the promises of God, subject to the conditions of the Christian covenant, it is to be understood as expressing the privilege and responsibility of all who receive that sacrament; but, in so far as such language denoteth a further grace, the Church of Ireland doth not require her members to interpret it as denoting, either in the case of those in infancy, or in the case of those baptized in later years, that such grace is received by all who receive baptism, or that they who receive such grace do, of necessity, receive it at the time of the administration of that holy ordinance.

During the consideration of the service for the ordination of priests, a sharp debate took place on the subject of confession. A change in this service was proposed, to the effect "that for the form of ordination beginning, 'Receive the Holy Ghost,' the following be substituted: 'Almighty God, our heavenly Father, grant unto thee the gift of the Holy Ghost for the office and work of a priest in the Church of God now committed unto thee by the imposition of our hands, and be thou a faithful dispenser of the word of God and of his Holy Sacraments, in the name of the Father, and of the Son, and of the Holy Ghost. Amen.'" The opponents of this change argued that the new form would destroy the "power of absolution," which is involved in the imposition of priests' orders in the Anglican Church. The proposition was lost, on a division of the orders, by the vote of the clergy. The vote was as follows: For the

change, clergy, 44; laymen, 103; against it, clergy, 80; laymen, 37.

On the 31st of December, 1872, 2,052 clergymen of the Irish Church had availed themselves of the provisions for commutation embodied in the Irish Church act, leaving only 89 who had not commuted. The total amount of commutation capital handed over to the representative church body at that date was £5,451,221. But several of the aged clergy, or clergy leaving the country, had "compounded" by receiving a round sum in lieu of their annuities, so that the total amount remaining, and invested at £4 7s. 9d. per cent., was £4,658,221. This sum, if it were allowed to remain intact, would produce a handsome yearly revenue for church purposes; but it was bound to be burdened with annuities amounting to £380,626, so that by the time these are extinguished a great part of the capital will have been absorbed unless some measures are devised to supplement the yearly interest. Another fund in the hands of the representative body, called the "Private Endowment Fund," amounts to about £580,000. This, however, is burdened with payments to certain trusts, and is therefore not available as a general sustentation fund. Of the private subscriptions of individuals and parishes, the greater part are allocated by the donors to the parishes in which they are interested, so that the fund available to really poor parishes is very small.

III. FREE CHURCH OF ENGLAND. — The eleventh annual convention of the *Free Church of England* was held on the 23d and 24th of June. It was more numerously attended than any previous meeting. A resolution was adopted in favor of a closer union between this body and the Countess of Huntingdon's Connection. To this end, a recommendation was passed, to the effect "that the ministers and members of either body should be received as ministers and members of the other on signing (if Free Churchmen) the fifteen articles of the connection, and (if members of the Connection) the declaration of compliance with the doctrine and worship of the Free Church," and that their meetings should be held unitedly at one and the same time and place. A resolution was passed to expunge from the 28th article the words "given, taken, and," on the ground that the members of the Free Church disclaim the belief that the body of Christ is "given" by the minister or "taken" by the recipient in any manner. Seven new places of worship had been erected during the year.

ARGENTINE REPUBLIC (REPÚBLICA ARGENTINA), an independent state of South America, extending from 23° to 41° south; and from 53° to 71° 71' west; and bounded north by Bolivia; east by Paraguay, the Brazilian Empire, Uruguay, and the Atlantic; south by the same ocean and Patagonia; and west by the Republic of Chili. The question of ownership of the Patagonian territory, from

the Rio Negro to Cape Horn, is still disputed by the Chilean and Argentine Governments. Paraguay is at last likely to yield her claim to that part of the Chaco south of the Rio Pilcomayo. A boundary question with Bolivia still remains unsettled. The area of the republic is 561,000 square miles.

The population of the fourteen provinces, according to the last census, taken in 1869, was 1,827,544; to which figures may safely be added 10 per cent. for the total number of inhabitants at the present time.* The population of Buenos Ayres, the capital city, was 177,787, in 1869; it may now be set down at 200,000.

Next to the United States, the Argentine Republic receives the greatest number of European emigrants. Emigration to the Platine region dates from 1825, having commenced shortly after the emancipation of the country from colonial rule—when Rivadavia, then President of Buenos Ayres, made the first attempt to settle colonists in that region. The influx of foreigners was very inconsiderable until 1856; in that year the Board of Emigration was organized; and since then the current of immigration has been uninterrupted, and ever on the increase. The total number of arrivals in 1856 was 4,000; that for the first eight months of 1873 was 40,000. The nationalities represented by the immigrants of the last five years are, states the secretary of the board, in the following proportions: Italians, 50 per cent.; French and Spanish, each 17; English, 3; Swiss, 2; German, 1; all others, 3, or over 80 per cent. of the Latin race to 10 per cent. of the Saxon. Indeed, the Government makes little effort to encourage emigration from Northern Europe; and even the English Emigration Association grant the preference to Italians, Swiss, and Germans, rather than to British subjects. A large proportion of the Italians return to their native land as soon as they have amassed a moderate fortune; 42,000 Italians arrived in 1872, and 2,000 left; 5,000 of these for Naples. In some of the colonies in the provinces of Buenos Ayres the predominance of the male over the female sex is remarkable, the proportion of the former being 80 per cent. to 20 per cent. of the latter. To this circumstance some attribute the alarming development of prostitution in the capital.

The reports from all the colonies are most satisfactory, with the exception of those in Buenos Aires, which have suffered considerably since the outbreak of the rebellion.

The President of the Republic is Domingo Faustino Sarmiento, elected October 12, 1868, for a term of six years; Vice-President, Dr. A. Alvarez, Minister of the Interior, Dr. H. Frias (June, 1872), of Foreign Affairs, Dr. C. Tejedor; of Finance, L. L. Dominguez; of Justice, Public Worship, and Public Instruction, N. Avellaneda; of War, Colonel M. de Gainza. *Chargé*

d'Affaires of the Argentine Republic to the United States, Sr. Don Carlos Carranza, at New York. The governors, etc., of the fourteen provinces, in 1873, were as follows:

Buenos Ayres.....	Dr. M. Acosta (May, 1872), for three years.
Minister of the Interior.....	Dr. A. Alcega.
Minister of Finance.....	L. Basalvaseo.
Catamarca.....	O. Alvarro.
Chubut.....	J. A. Alvarez.
Corrientes.....	M. V. Gelabert.
Entre-Rios.....	L. Echagüe.
Jujuy.....	S. Bustamante.
Mendoza.....	A. Villanueva.
La Rioja.....	P. Gordillo.
Salta.....	P. Saravia.
San Juan.....	M. Gómez.
San Luis.....	J. A. Ortiz Estrada.

Santiago del Estero.....	L. Frias.
Tucuman.....	F. Helguera.

The army of the republic, exclusive of the National Guard, is 6,482 strong, comprising 2,300 foot, 2,861 horse, and 712 artillery. There are 29 generals, 273 commandants, and 632 subaltern officers. The navy is composed of 7 war-vessels, one of which mounts 12 guns.

The public revenue, says President Sarmiento, estimated at \$16,160,000, yielded \$18,172,879, showing an increase of \$5,490,224. The expenditure estimated in the budget was \$26,462,785, and the disbursements amounted to but \$23,992,975. The deficit was covered by treasury bills. Of \$19,500,000 appropriated for public works and war expenses, only \$2,600,000 have been disbursed; and the cash movement of the nation showed \$136,179,181.

The following tables show at once the sources from which the revenue is derived, and the various items of expenditure, the whole forming the estimated budget for 1874, in which will be observed a reduction of two millions in the outlay as compared with 1873, and of five and a quarter millions as compared with 1872:

REVENUE.

Import duties.....	\$15,750,000
Export duties.....	2,700,000
Warehouse fees.....	600,000
Stamp duties.....	350,000
Post-Office.....	180,000
Telegraphs.....	100,000
Light-houses, etc.....	100,000
Interest on Varela loan fund.....	420,000
Interest on Central Argentine Railway shares.....	292,000
	\$20,432,000

EXPENDITURE.

Interest on public debt.....	\$7,801,602
Floating debt.....	3,500,000
Customs officials.....	1,452,215
President and cabinet.....	210,369
Congress.....	490,088
Army.....	5,178,515
Navy.....	208,437
Indian subsidies.....	223,556
Legations abroad.....	158,148
Federal court.....	160,000
Ecclesiastical grant.....	192,688
Schools and libraries.....	1,500,519
Finance offices.....	376,816
Railways.....	119,070
Immigration.....	226,225
Post-Office.....	852,320
Telegraphs.....	222,060
Subsidies to provinces.....	225,000
Public works, etc.....	629,358
	\$23,421,392

Deficit..... **\$4,989,392**

* For complete details concerning limits, census, etc., see THE ARGENTINE REPUBLIC for 1872.

The Minister of Finance endeavored to meet this deficit by \$3,000,000 raised on Treasury bills, which in that event would be added to the floating debt; yet the latter would be no greater at the end of 1874 than at the beginning, as there would be paid off an amount equal to the accretion. The interest and sinking fund on the national funded debt, home and foreign, are equal to one-third of the revenue. The appropriations for immigration are more and more generous, and not inferior to those of some of the Australian colonies. The customs receipts for the first five months of 1873 tend to confirm the minister's estimate of the resources at his disposal. They were, in—

January.....	\$1,473,121
February.....	1,227,146
March.....	1,900,826
April.....	1,756,137
May.....	2,162,191
Total.....	\$8,519,421

But for the rebellion in Entre-Rios the minister would have reduced the duty on wine to 20 per cent., instead of 25 per cent. He estimates that, if those troubles did not exist, \$1,500,000 could be saved, and the revenue increased to \$22,000,000.

The export duties were, however, to be lowered to 4 per cent.

About $\frac{2}{3}$ of imported goods pay 25 per cent. duty; $\frac{1}{3}$ pay 20 per cent.; and $\frac{1}{10}$ pays 10 per cent.; $\frac{1}{10}$ is duty free; and a small proportion pays 8 per cent. Toward the end of April a monetary crisis broke out at Buenos Ayres, caused, it is said, by undue speculation, not in local securities alone, but also in real estate, to an extent that could not fail to hamper in an extraordinary degree the financial resources of the Argentine capital. Unremitting commercial prosperity during a series of years, due

in a great measure to the high price of wool and other animal products, has had for its natural result a belief that it would continue; but a heavy fall in the value of those staples, both in the republic and in European markets, brought about a change as disastrous as it was unexpected; and, worst of all, leaves but little hope of an early revival. Government in the mean time went on multiplying railway and other costly enterprises, for the expenses of which provision was of course to be made in England, and the interest on existing loans was likewise accumulating; all which circumstances caused a financial pressure, to be met only by shipments of gold, the supply of which must soon be exhausted in the country. Holders of produce were of course reluctant to accept the reduced prices.

In June a bill was presented to Congress for the reduction of export duties by 50 per cent. Although the measure met with general approbation, and would tend to stimulate native industry, it was objected, on the other hand, that so large a reduction would be hurtful to the national revenue. To meet this objection, it was suggested that deficits resulting from the proposed reform could be made up by the taxation of such imported luxuries as silks, wines, etc.

On the 10th of June the news of two hundred failures in Vienna produced almost a panic, and national bonds fell $1\frac{1}{2}$ per cent. A bill was introduced to empower the Government to increase the circulating medium to the extent of fifteen millions of hard dollars. Mortgage banks were multiplying in various parts of the country, especially in the province of Santa Fé. Up to November the state of the financial affairs of the province continued unsatisfactory.

CITY OF BUENOS AYRES, FROM A PHOTOGRAPH PRESENTED BY C. CARRAUZA, ESQ., ARGENTINE CHARGÉ D'AFFAIRES TO THE UNITED STATES.

In spite of the financial difficulties in Buenos Ayres, commerce is in a most flourishing condition. The imports are fast increasing; but, as a natural result of the ever-swelling tide of immigration, the exports for 1872, as compared

with those of 1870, had almost doubled. In effect, the balance of trade was, in

1870, imports to exports, as	9 to 5
1871, " "	5 to 3
1872, " "	4 to 3

It is, however, assumed that, with the continued influx of foreign population, the production of the republic will soon reverse the balance of trade.

The export returns for 1872 embrace 69 distinct items, 32 of which are subject to duty, while the remaining 37 are free. The following table presents a comprehensive view of all:

ARTICLES.	Quantities.	Value.
Wool	303,610,000 pounds.*	\$16,332,122
Sheep and skins	72,270,000 "	4,158,393
Hides	3,121,758 "	10,571,710
Jerked beef	916,791 quintals.	2,110,914
Tallow	1,182,240 "	7,427,401
Horned cattle	162,428 head.	1,680,649
Other animals	58,265 "	285,799
Meat	13,540 quintals.	310,179
Beast skins, horns		2,715,205
Tobacco, flour, etc		156,888
Total		\$45,743,192

It is here seen that nearly half the value of the exports is made up by the single articles of wool and sheepskins, which together equal the proceeds of the hides, tallow, and jerked beef.

Among other proofs of the lack of hands for the perfect development of the national industries may be cited the fact that, of every 200 lbs. of wool exported, only 1 lb. is washed; if washed wool were exempt from export duty, the industry would be encouraged, and the freight on 60,000,000 lbs. of grease and dirt saved annually.

The amount of wool sent out of the republic doubles every five years, as shown below: In 1862, 58,158,575 lbs.; 1866, 110,494,970 lbs.; 1872, 208,610,900 lbs.

After the wool and sheepskins in the first general list of exports, all the other articles are of comparative insignificance, except the item of cattle, these being mostly fattened for the Chilean market.

Although Mr. Suarez, in a series of able and interesting articles published recently by him in the *Anales Rurales*, estimates the number of sheep in the republic at 58,000,000 head, the export of wool and sheepskins would show that the number must be at least 70,000,000. The average annual increase of these animals, over and above the slaughter, is fully 10,000,000.

The number of horned cattle is computed to be 15,000,000 head. The export of hides has increased 50 per cent within the four years from 1868 to 1872; and that of jerked beef doubled:

	Hides.	Beef.
1868	2,142,643	676,088 quintals.
1869	2,569,301	647,529 "
1872	3,121,758	933,290 "

The chief customer for wool is Belgium, to which is sent one-half; a quarter goes to France, and the remainder is usually divided between Great Britain and the United States. The latter country takes one-third of the dry hides, the other two-thirds going to France, Italy, and England. To this last is shipped

the greater portion of the tallow; while between it and France the sheepskins are nearly equally divided.

The imports consist of wines, woollens, cottons, sugar, groceries, clothing, fancy goods, railway materials, iron, lumber, silks, yerba mate, grain, tobacco, oil, etc. Imports from England were \$17,000,000, standing for 20 per cent. over 1870. In return, was sent produce to the value of \$9,000,000. Thus the gross trade with England was \$26,000,000 against \$9,500,000 in 1863. Imports from France were nearly \$14,000,000 (the same as in 1870), and that country took \$8,500,000 of produce. The gross trade with France has also more than doubled since 1863. Belgium, Holland, and Germany, may be treated in a group as the third customer, representing \$6,000,000 in imports, and \$13,500,000 in exports. The former increased 50 per cent. since 1870, the exports being doubled. Compared with 1863, the gross trade has trebled. The United States sent \$3,500,000 of the imports, and took in exchange \$4,500,000 of produce, showing little or no increase of trade over the returns of 1863 or of 1870. Brazil figures in the import table for \$3,000,000, and takes \$1,000,000 in produce, such as jerked beef; the latter is double what it was in 1870, and four times as much as in 1863. Spain stands for a gross trade of \$4,500,000, an increase of 50 per cent. over 1870, two-thirds imports. Italy stands for \$4,000,000, of which two-thirds are imports. The trade with that country has also increased over 50 per cent. since 1870.

The total value of the imports for 1873 was \$59,599,143. "Of this sum, fully one-third might," says Mr. Suarez, "be saved to the country if the latter had an adequate number of hands and the requisite carrying facilities to bring to market the national produce, especially sugar, wines, tobacco, lumber, etc., which articles now figure in the imports as follows: "

Sugar	\$4,373,592
Wines	9,301,708
Lumber	1,321,907
Tobacco	1,263,788
Fruits, cheese, cereals	2,545,143

Total

All these are produced in great abundance in the upper provinces; and, with the inward flow of immigrants, the importation of such commodities must naturally diminish from year to year. But ten years ago American flour was consumed in the republic; now flour has become a staple of export. In a word, while the aggregate trade of the country only doubles every ten years, the exports are quadrupled in the same period.

More than one-half of the commerce of the republic is now carried on in steamers, the aggregate tonnage of which is 1,110,496, out of a total of 2,151,640 tons. Government offers an annual subvention of \$40,000 to any line of monthly steamers between the republic and the United States.

The unremitting efforts of President Sar-

* 1,000,000 (washed) went to the United States.

miento in the cause of public education have been fruitful of most surprising results. According to the President's own statement, there were, in May last, 1,645* public schools, attended by 97,549 pupils, 32,000 of whom in Buenos Ayres alone; and, if to these figures be added those of the universities and other schools, there will be shown an aggregate number of 103,000 Argentines having received instruction in 1873.

The military school gives much satisfaction; the corps of professors, versed in the most approved European systems, was completed by the arrival of a Prussian captain of artillery.

A naval school was established, and the various courses of instruction commenced in the first quarter of the year.

The public libraries opened in various parts of the republic have already been productive of happy results; 112 have so far been founded, and the Government promises to extend their number as may be required.

The National Observatory in Córdoba has already rendered important service to science.

Despite all other influences, the mind of President Sarmiento was still occupied with the important question of colonization, as will be seen from the following synopsis of a bill proposed by him, enacted by the Legislature, and containing provisions of unexampled liberality, with a view to attract the laboring classes of the Old World to the Argentine shores. The leading provisions were as follows:

Maps to be made representing systematic surveys of 625 farm-lots of 266 acres each, in Misiones, the Chaco, Pampas, and Patagonia, to be hung up in public and conspicuous places. The maps to be divided into squares, as on a chess-board, the black squares of which corresponding to land to be retained by the Government, and the white for colonists.

A premium was to be given of fifty hard dollars each, on the first 100,000 immigrants settling in the above territories, payable eighteen months after their arrival.

The Government may contract with any company offering at least one hundred and sixty families toward colonizing a section.

No contract will be admitted by the Government unless the company stipulate to give the settlers a house, farm implements, seeds, and food for twelve months.

At the expiration of two years the Government will give the colonist his title-deeds to 266 acres.

Settlers who have come out at their own expense may elect their farm-lots at the National Land-Office, and will receive, after eighteen months, the premium of \$50 per head for each of the family between twelve and forty-five years of age.

Ship-captains, brokers, etc., shall be entitled to a like premium for every able-bodied immigrant they introduce.

This premium shall be in bonds bearing eight per cent. interest, for which Congress hereby authorizes the gradual emission up to the total of five million hard dollars.

After reserving forests and rivers, the Government will mark out sites for towns, etc., giving the first one hundred settlers in each section a town-lot gratis.

The black lots in each section, belonging to Government, shall in due time be offered by auction at an upset price of \$100 per farm-lot, payable one-fifth cash, the rest in four annual payments.

Speculators who may wish to buy lands in the desert, not marked out for colonization, will have the option of taking lots of 1,000 acres each for \$400, payable as above, the Government reserving alternate lots of 1,000 acres; the buyers must stock or cultivate such lands.

All colonists established on the sections marked out by virtue of this law shall be free from taxes for ten years, besides being allowed to bring in seeds, implements, arms, and baggage, duty free.

The colonies established on the Patagonian coast south of the peninsula of San José are to be free ports until 1880 for all articles imported, and for all produce exported, besides any coal or iron that may be found.

Wherever fifteen families are settled, they shall be entitled to ask for a commissary and ten policemen. The colonists shall elect their own justice of the peace and five municipal councillors.

Each section may demand a gift of 100 rifles from the Government.

As soon as any territory counts five settled sections, the President will name a governor, with the same attributes as in the Gran Chaco.

A land-office will be formed, with a superintendent and seven assistants, to carry out the provisions of this bill.

As far as possible, each colony shall be composed of various nationalities, with five per cent. of natives.

Parties holding national lands at present must have their titles revised within three months.

Freedom of worship and instruction, with civil marriage, in all the colonies.

The Government will provide means of communication, public defense, and education.

This law to be freely circulated in English, German, French, and Italian, throughout Europe, for general promulgation, by means of consular agents.

Such a system clearly signifies the utter annihilation of emigration to Brazil and other South American states, leaving them either to rely solely upon their own resources for their development, or to adopt the policy of a competition of favors with their far-seeing neighbor.

The immigration returns show 84,000 arrivals for the first half of the year. In one day 1,500 were chronicled. The average annual number is 84,000.

In pursuance of a new land-law passed by the provincial Legislature of Buenos Ayres, settlers will be enabled to purchase frontier land at the rate of twenty-five cents per acre, payable by installments extending over a term of nine years. Lands so acquired, however, must be occupied; and the smallest lots will be of 13,320 acres.

An area of 650,000 acres in the Gran Chaco was purchased by a private company for the nominal price of \$15,000, and requiring the establishment of 1,000 immigrant families on the lands within five years, in default of which the property will revert to the Government, with forfeiture of the purchase-money. One hundred families must be settled before a year has elapsed after the measurement of the

* So great an increase, as compared with the number given in the ANNUAL CYCLOPEDIA for 1872, namely, 1,407, which latter was copied from the official census, is altogether incommensurate with the previous annual increase. It is probable that the President's statement has been reported inaccurately.

ground, and the approval of the survey by the Government.

The republic now counts thirty-eight railways, nine of which are in operation, the uniform gauge being 5½ feet; twenty-nine are in course of construction or conceded, all of either 5½ feet or 4½ gauge, except five, which are narrow-gauge lines.

The passenger and freight traffic per mile, of the nine lines already working, is as follows:

	Passenger.	Freight.
Northern	30,000	900
Southern	2,000	500
Western	8,000	1,500
Lobos	1,000	300

The running expenses of the Northern and Southern amount to very little over one-half the gross receipts.

The total length of the lines in operation is 679½ miles, at an average cost of \$46,000 per mile; the maximum cost being \$90,000, and the minimum \$21,000.

One of the narrow-gauge lines, the Transandino, by Uspallata or Los Patos Pass, is to be 160 miles in length, and the cost per mile is estimated at \$10,625.

In addition to the foregoing, surveys have been made for eleven other lines, for which, however, no concessions have as yet been granted.

The works on the Tucuman Railway were in course of prosecution, and one section of the road was completed before May; the first section of the Eastern Argentine was to be finished by August; the building the Port Campana Railway was commenced early in the year; but nothing has as yet been done in the matter of the projected line from San Juan into Chili (at an estimated cost of £12,000 per mile).

The first section of the Belgrano tramway has been opened to public traffic, and promises to prove remunerative.

The gross receipts of the Western Railway (the property of the Government) for 1872 were \$29,036,044; the working expenses amounted to 66 per cent.; leaving a net income of \$9,849,297, equivalent to 6½ per cent. on the capital. This decrease, as compared with the year before, is owing rather to the opening of unremunerative extensions than to a decline of traffic on the main line. The Lobos line is reported as showing a dead loss.

A prosperous short line is that of Ensenada, open, so far, from Buenos Ayres to that point, a distance of 35 miles. The traffic for the month of April last was as follows: number of passengers, 54,075; amount, \$13,224.25. The Government has decreed the expropriation of this line.

From a report of the Central Argentine Railway Company, presented July 25th, it appears that the directors proposed to declare an interim dividend of 3 per cent., but that it might be necessary (in order to a further expenditure of \$1,000,000, in addition to the \$500,000 provided for the preceding year) to

raise the capital to \$10,000,000, or \$1,500,000 above the sum originally estimated and guaranteed by the Government. The report gives no information respecting the relations between the company and the Central Government in the matter of the 7 per cent. guarantee. The directors contemplated taking powers for borrowing on debentures the additional sum above referred to.

All the telegraph-lines left unfinished at the end of 1872 have been completed in the past year, and there are 4,000 miles of wires in active operation in the republic, where four years ago there were not 400 miles. These lines have not proved remunerative so far, owing to the low tariff adopted with a view to accustom the people to telegraphy. Governmental correspondence is, in as far as possible, transmitted by telegraph. Concessions for additional lines in the provinces were solicited; but the Central Government refused to grant them, on the ground that, to increase their number at present, would be hurtful to public interests.

The 660 miles of the Transandino Telegraph have a subsidy from Government.

The uniform rate for telegrams is 25 cents for ten words, to points within the republic. The relation between postal and telegraphic communication, in 1872, was one of the former to ten of the latter.

Telegraphic communication already exists between Buenos Ayres and Montevideo, whence a cable will be laid by the Montevideo and Brazilian Telegraph Company, *via* Maldonado, and reaching to the Brazilian frontier. From that point another cable to Pará, *via* Rio de Janeiro and other large intermediate ports, will establish communication along the whole eastern coast of the continent; and, lastly, a cable from Pará to St. Thomas will open up hourly intercourse between New York and Buenos Ayres, and give a new stimulus to the commercial relations between the two countries, hitherto trammelled by a tardy exchange of advices by mail once every five or six weeks.

The mining interests of the country have commanded an extensive share of attention during the second half of the year. It is asserted, on the faith of recent explorers, that the province of Córdoba is likely to prove as rich in auriferous formations as California or Australia, and the gold-field of San Luis is supposed to comprise 100 square leagues.

Among the more important papers laid before the Government, on the opening of Congress, was one, prepared by order of the Minister of Finance, concerning the material development of the province of Córdoba, next to Buenos Ayres one of the most interesting in the republic, having an extremely advantageous geographical position, and forming, as it does, the centre of the Confederation, and destined to become the chief mart and commercial highway of the interior. Next in importance after the capital of this province,

comes the town of Rio Cuarto, with its 10,000 inhabitants, and which, now that the railway is completed, having been opened to public traffic July 17th, is destined to be a place of much note in a very short time. The public schools of Cordoba are among the most prosperous in the country, although of recent establishment. The state of agriculture, quality of the soil, its varied vegetation, and valuable natural productions, are justly praised; among these last, many precious dyes and medicinal plants are indigenous: indigo, the cactus on which the cochineal feeds, the tobacco-plant, maní, and many others, are in great abundance; the apples and walnuts are not, it is assured, surpassed by those of any other country; while peaches, grapes, pumpkins, melons, etc., are yielded in great plenty; and the potato is as fine as the best of Europe. The province is particularly favorable for grazing, as, even in seasons of drought, excellent grass is to be found on the elevated table-lands of the Córdoba Sierra, and black-cattle and sheep thrive admirably. A thorough system of irrigation having been introduced, an abundance of lucern is to be had for feed during the winter. Manufacturing industry is, however, at a low point, and is confined to the branches of brick-making, lime-burning, and the weaving of a few woollen tissues, such as blankets and coarse cloths. The numerous mines are not worked, for want of capital and experienced engineers; if these elements were found, the mines would be remarkably productive, labor being very cheap, and transport exceedingly commodious, being by rail to Rosario, and thence by steamboats to Buenos Ayres. As a mark of the commercial importance of the province, it may be mentioned that it has no less than three banks. There is one railway complete, and two others in course of construction from the capital, and a number of telegraph-lines.

Two hundred square leagues of fiscal lands have been destined for the reception of immigrants, and the Government has been authorized to spend 100 hard dollars in the purchase of seeds and implements for each family arriving in the province and resolved to devote itself to agricultural pursuits, on the sole condition of paying a tax of \$5 on receipt of the title-deeds of the land.

The product of this tax is to be employed in promoting the education of the children of the settlers, the latter being exempt from all other provincial imposts for the term of five years.

The Argentine Congress was opened on the 11th of May by President Sarmiento, with the usual message, in which he said:

The past year has been one of tranquillity for all nations, and particularly for ours; and the blessings of peace are manifested in the increased wealth, and the extraordinary value of land; the accumulation of capital, development and extension of industry, and large revenues; and we may, without exaggeration, state that our country shows for the term greater material progress than any other.

Our relations with foreign governments are of the most friendly nature. Several treaties have already been concluded; and others now await your vote. All our troubles with Brazil, arising out of the Triple Alliance, have been terminated by a special envoy, and nothing has since occurred to disturb our cordial relations with that empire. With Chili the question of the straits is still pending; but the Government of that republic and our own have agreed to leave it to arbitration, following therein the example of two of the most powerful nations in the world. To Paraguay a special minister has been sent for the arrangement of a treaty which, despite the disturbance in that country, will, we believe, be concluded. Nothing has as yet been done with Bolivia, and it would be well to send an Argentine minister there. With Uruguay we are now treating in regard to custom-house and quarantine rules. The postal treaty with the United States is in full force, as is likewise the extradition treaty with Brazil; but the postal convention with the latter country, as well as the treaty of amity and commerce with Sweden and Norway, is still pending. The inundations caused much damage in the provinces, four of which have received assistance from Government.

The death of the Governor of San Juan has called for national intervention in that province, which has already had four interventions in the course of the year. New elections have been ordered; the party has refused to vote; and the Government has refused its approbation of the election by a single faction. Telegraph and railway lines, though already numerous, are still on the increase, especially the latter; as it has been found expedient not to grant any new concessions for the former at present, the Government being apprehensive that a further extension of such lines might be hurtful to public interests. Immigration, especially from France, Spain, and Italy, is rapidly increasing, and with it our commerce with these countries.

Many are the improvements proposed for the city of Buenos Ayres, but none more needed than the two following, which, it is to be hoped, for the sanitary and commercial welfare of the capital, will be promptly carried into effect, namely, a perfect system of drainage and water-works, and a good port for shipping. The vital interests of the denizens are hourly menaced by the lack of the former; and the urgent need of the latter is apparent to all who are aware that the entire river Plate offers nothing more than an open roadstead for the ever-increasing maritime traffic, which has nearly doubled within the last two years, and is now over 1,500,000 tons.

The attention of the political world has been and continues to be chiefly engrossed by the probable issue of the presidential election. The two most popular candidates are Dr. Alsina, the present Vice-President, regarded as another Rosas aiming at dictatorial power and gaucho supremacy; and General Mitre, the representative of a conservative and progressive republic. Dr. Avellaneda, Minister of Public Instruction, is a formidable rival of both, but this popularity seems to be confined to the cities of the interior. Riots took place in several localities, and at Chivilcoy ten persons were killed by the mob.

An attempt was made to assassinate President Sarmiento, who was shot at by an Italian.

The latter, in company with an accomplice, was immediately arrested and placed in custody.

Inasmuch as several questions were still awaiting the deliberation of Congress at the beginning of October, the President issued a decree prolonging the session.

The elections for deputies to Congress resulted, in Buenos Ayres, in favor of the candidature of Dr. Alsina for President of the republic. Although there were reports of abuses, and of the Government having taken sides against the majority, there was fortunately no disturbance of a serious character either in the city or the province. Not so in Tucuman, however; there the elections were attended with bloodshed, and grave disorders occurred in San Juan on the occasion of the nomination of electors for provincial Governor. Horrible assassinations were committed in Entre-Rios a few weeks earlier, among others that of the military commissary, a lieutenant, and some soldiers, by one Celestino Mendez, who immediately after the atrocities set out for Gualeguay at the head of a band of fifty desperadoes. These crimes were supposed to have been instigated by the Jordanists, who had again invaded the province. In fact, assassinations were for a long time the order of the day throughout the whole of Entre-Rios, which was scourged in every direction by the murderers, those spreading fear and terror wherever they went.

The Brazilian Government, apprehensive that in certain secret sessions of the Congress in the course of October an alliance hostile to the empire might have been discussed, ordered the legation at Buenos Ayres to inquire into the subject of deliberation in those sessions. A note from the Argentine Minister of Foreign Relations protested that no war with the empire was contemplated, nor any alliance that might import a rupture of peace between the two countries.

The cloud of civil war again, after a year's intermission, reappeared on the horizon early in the year. Jordan and his band once more troubled the public peace in Entre-Rios, paralyzing for a time and permanently injuring the legitimate commerce and industry of that and the adjacent provinces of Corrientes and Santa Fé. The rebels at first threatened Gualeguaychú, of which place it was apprehended they might succeed in taking possession, notwithstanding the opposition of the national troops, and the reported imperfect armament of the insurgents. This seems to have been an elaborately prepared outbreak, and it accompanied such proportions as led the Central Government to declare the above-mentioned provinces in a state of siege. The inefficacy of the measures taken to suppress the rebellion and effectually prevent the recurrence of factional outbreaks in the interior, would seem to point to a weakness in the Argentine provincial system, and a want of power to subdue

disturbances of a nature to jeopardize the central authority.

In June it was decided to withdraw the regular troops from the frontiers, and to replace them by national guards. The result of an engagement between the rebels and the regulars in the same month was the taking possession of the town by the latter, while Jordan's forces remained masters of the country districts. It was reported that agents of the rebel chief were endeavoring to effect a loan in England, on the ostensible but unsubstantial guarantee of the provinces of Corrientes and Entre-Rios.

As the rebellion was likely to last indefinitely if an adequate resistance were not opposed to it, the Buenos Ayres Government called for the combined energy of the other provinces to put it down.

About the beginning of August an encounter took place between the rebels and the Government troops, resulting in favor of the latter. It is asserted that, after the engagement, several of Jordan's officers with many of his men had abandoned the rebel cause, and placed their services at the disposal of the legitimate authorities.

ARKANSAS. The regular biennial session of the Arkansas Legislature began at Little Rock on the 6th of January. One of its first duties was the canvass of the votes cast at the preceding election. From this it appeared that Elisha Baxter received 41,784 votes for Governor and Joseph E. Brooks 38,673, and Mr. Baxter was accordingly declared elected. It had been alleged that this result was reached by frauds perpetrated at the election, and in counting the votes. There had been on the 4th of January, at Little Rock, a convention of the supporters of Mr. Brooks, calling themselves "Reformers," the purpose of which was to consider the expediency of an attempt to secure the inauguration of their own candidate and the organization of a Legislature composed in part of members whom they declared to have been illegally defeated at the polls. Those whose election was undisputed refused to coöperate in this movement, and it was thought to be useless to contest the election of the executive officers before the Legislature as constituted. A committee was appointed to prepare an address to the people, setting forth the claims of Mr. Brooks's supporters. In this address, "in order that Congress and the whole country" might "see and know the outrageous frauds which have been committed in the late canvass and since," they proceeded "to show the specific frauds in each county, and show the true vote as actually cast." According to this showing, Brooks received 43,992 votes, and Baxter 42,394. "We are prepared," say the committee, "with proof beyond any cavil or doubt, to sustain the above statement, and only ask that we may be permitted to establish the same before a committee of the Congress of the United States;

for it is only before this tribunal that we can expect justice, and the only power that can afford a plundered and oppressed people redress of the grievous wrongs they have suffered."

In conclusion they say: "We submit that the solemn and important issue now before you is not whether you will form a new party or not, or whether you are still willing to continue the contest for reform, or whether Mr. Baxter will make a good Governor, but whether we are really living under a republican form of government, and whether the 'will of the people of Arkansas, as expressed at the ballot-box,' shall be respected and obeyed, or whether a small band of usurpers here at the capital, encouraged by Bourbon Democrats, shall appoint your rulers—whether we are freemen or slaves.

"In this contest it involves our lives and liberties and privileges, and the lives and liberties and property of our children after us. For, if a few desperate and unscrupulous men at the capital, who have control of the machinery of the government, can by fraud and force overrule the votes and wishes of seventy-five thousand freemen of Arkansas, then the sooner we abolish the farce of election the better, and hereafter substitute an humble petition to Powell Clayton to grant us the right to live on the lands we have bought and paid for, and the homes of our wives and children, on condition that we will be 'hewers of wood and drawers of water' for him and his satellites for the remainder of our lives."

All this had no practical result. A feeble attempt was made toward the close of the session of the Legislature to secure an investigation of Mr. Baxter's election, but the Senate refused to receive the petition offered for that purpose. Vague threats appear to have been made, on behalf of Mr. Brooks, that he would take possession of the executive office as the legally-elected Governor, but Mr. Baxter prepared for such a contingency by reorganizing the militia, and having it ready for service. The movement, however, if it was ever intended, was speedily abandoned, and Mr. Brooks applied to the Circuit Court for an injunction, forbidding Mr. Baxter to exercise the functions of the Executive. Failing in this, an application was made to the Supreme Court, on his petition for a writ of *quo warranto*. This was denied after elaborate arguments had been heard on both sides, the court holding that it had no jurisdiction in the case. In the written opinion, which was rendered on the 24th of September, the judges said, after discussing the principles involved at some length: "Under this constitution the determination of the question as to whether a person exercising the office of Governor has been duly elected or not, is vested exclusively in the General Assembly of the State, and neither this nor any other State court has jurisdiction to try a suit in relation to such contest, be the mode or form what it may; whether at the suit of the Attor-

ney-General, or on the relation of a claimant through him, or by an individual alone claiming a right to the office. Such issue should be made before the General Assembly. It is their duty to decide, and no other tribunal can determine that question. We are of the opinion that this court has no jurisdiction to hear and determine a writ of *quo warranto* for the purpose of rendering a judgment of *ouster* against the chief Executive of this State, and the right to file an information and issue a writ for that purpose is denied."

Five days after this decision was rendered, the Governor issued a general order, mustering the militia out of service, "the exigencies for their muster-in having passed, and the President of the United States having given the commander-in-chief emphatic assurances of the assistance of the Government of the United States, should it be necessary in order to maintain the present government of the State of Arkansas."

His reasons for having called the force into service, and for dispensing with it now, are thus stated:

1. The peace of the State having been threatened by a combination of reckless and bad men, having for its purpose the violent and illegal overthrow of the State government, it was deemed wise to prepare to meet such threatened revolutionary action by an organized force, sufficient to maintain order, and enforce the law against all opposition thereto, and for that purpose alone the commander-in-chief directed the enrollment and muster-in of the militia of the State.

2. By the solemn judgment of the Supreme Court of the State, the legality of the present State government is now fully recognized, and the effort made to overthrow it, through the forms of law, declared illegal and unauthorized.

3. This judgment of the Supreme Court puts the Executive of the State in an attitude to appeal to the executive power of the nation to suppress any illegal, violent, or revolutionary action that may be attempted to overthrow the State government or any of its departments; and the Executive of the State has assurances that such an appeal will meet with a prompt response from the President, should occasion to make the appeal occur, which it is believed will not be the case.

No further attempt was made to oust Governor Baxter from office, but the "Reformers" began an agitation for a convention to revise the constitution, by issuing the following circular:

Whereas, It is the general belief that enormous frauds were perpetrated in the late State election; and—

Whereas, By recent legislation a number of unnecessary offices have been created, and the already burdensome taxes have been largely increased; and—

Whereas, It is an admitted fact that a large number of offices are filled by persons not legally elected; and—

Whereas, It is universally conceded that the resources of Arkansas are not being developed as they should be; that her scrip and bonds have depreciated; that immigration to her borders has almost ceased; that the taxes have continued to increase until they are equivalent to confiscation; and that all business is paralyzed; and—

Whereas, We believe that the shortest and most effectual way out of these difficulties is through a constitutional convention: therefore—

We, the undersigned, members of the Reform Central Convention, meeting at Little Rock, earnestly and respectfully appeal to the people throughout the State, of their own strength and rightful capacity, to hold meetings in all the counties, demanding of those in authority an immediate call of a State Constitutional Convention.

One of the earliest acts of the Legislature was to provide for submitting to a vote of the people, at a special election to be held on the 3d of March, the amendment to the constitution which was first proposed in 1871. It was so submitted, and was ratified by a large majority, and now the eighth article of the organic law of the State reads as follows:

SECTION 1. The following class of persons shall not be permitted to register, vote, or hold office in this State: Persons who may have been convicted before any court of this State, or of the United States, or of any other State, of any crime punishable by law with death or confinement in the penitentiary; *Provided*, That any person disfranchised under this section who may be pardoned or his sentence commuted, such pardon or commutation of sentence shall remove all disabilities imposed by this section; paupers, idiots, and insane persons.

Sec. 2. Every male person who has attained the age of twenty-one years, and who is a citizen of the United States, or who has legally declared his intention to become a citizen thereof, who shall have resided in this State six months, and in the county in which he is to vote ten days next preceding the election, shall be deemed a qualified elector, and entitled to vote, if registered, unless disqualified by some one of the clauses of section 1 of this article.

Sec. 3. In all elections by the people, the electors shall vote by ballot. The secrecy of the ballot shall be preserved inviolate, and the General Assembly shall provide suitable laws for that purpose. On the day of an election held by the people, no elector shall be subject to arrest on any civil process. The General Assembly shall pass adequate laws to prevent the sale of intoxicating liquors on the day on which any election by the people may be held.

It was stated that 20,000 persons, disfranchised by the constitution as it stood before, were restored to the rights of citizenship, by this amendment.

The general legislation of the session was comparatively unimportant. Several days were spent in electing a United States Senator, and the choice finally fell on Colonel Stephen W. Dorsey, whose term will end March, 1879. Nine new counties were formed, and the boundaries of several others were changed. The offices of the ten circuit school superintendents were abolished, and county superintendents substituted. A new revenue law was passed, which empowers the Governor to appoint an assessor in each county to serve until 1876, when the assessors shall be elected for a term of four years. There is to be an assessment of real estate in 1876 and every fourth year thereafter. The Senate is made a board of equalization. The aggregate of county taxes is limited to two per cent. on the valuation, city and town taxes to seven and a half mills, and State taxes to ten mills, for general purposes, in 1873, and seven mills thereafter, and two and a half mills to pay interest on the public debt. An insurance bureau in the Au-

ditor's office was created, the commissioners to be appointed by the Auditor; \$50,000 was appropriated to establish an Insane Asylum at Little Rock, and \$25,000 for a Normal College for colored teachers. The State was redistricted for congressional representation, being divided into four districts. The Governor was authorized to appoint a State geologist, at a salary of \$2,500.

An act was passed providing that no railroad shall charge for the transportation of any person or persons a greater price than five cents per mile for first-class passengers, and three cents per mile for second-class passengers; for heavy articles by freight not more than fifty cents per hundred pounds, and ten cents per cubic foot on articles of measurement for every hundred miles, and in like proportion for a shorter distance. Should any railroad charge greater rates than allowed by this act, the company shall be liable to pay to the party injured, or consignees, double the amount of the freight so overcharged, to be recovered by an action at law.

An act for the benefit and protection of married women allows a married woman, with the assent of her husband, to have his life insured for a period, or the term of natural life, for her benefit. Property, both real and personal, belonging to a woman on her marriage, shall continue to be her own separate property, and shall not be subject to the interference of her husband, agent, or children. She may assign, bargain, and sell her separate property, and the earnings from her trade or business shall be her sole or personal property. She may alone sue and be sued in the courts of this State. No contract, sale, etc., made by a married woman, shall be binding on her husband. In any suit brought by a woman, the property of her husband shall not be liable for damages. No man shall apprentice or create any testamentary guardian for a child without the assent of the mother. Any married woman may be sued, and, when judgment is recovered against her, it may be enforced by execution against her sole and separate property. Before any married woman shall be entitled to the privileges of this act in respect to real estate, she shall cause the same to be recorded in her name in the county where she lives or has her residence.

A measure which gave rise to much discussion was entitled "an act to protect all persons in their civil rights, and to furnish means for their vindication." This act makes it unlawful for any person or persons owning, managing, operating, or representing as agent any railroad, stage-coach, steamboat, or other conveyance, to refuse or neglect to provide for and furnish any person applying for the same with the same accommodations as are furnished other persons on tendering the same amount of money. It makes it a misdemeanor to violate this provision, and subjects the offender to a fine of not less than \$200 nor

more than \$1,000, or confinement in jail not less than three, nor more than twelve months, or both, at the discretion of the court. It also makes it unlawful for any owner, lessee, keeper, manager or *attaché* of any public house of entertainment, inn, hotel, or restaurant, to refuse admittance to any person on account of race or color, and subjects the offender on conviction to a fine in any sum not less than \$50 nor more than \$500. It makes it a misdemeanor for any owner, keeper or *attaché* of any licensed saloon, grocery, dram-shop or other place where ardent, malt, vinous, or spirituous liquors are sold, to refuse to sell to any person on account of race or color a drink of any kind of liquor, and subjects any violator of the act to a fine of not less than \$5 nor more than \$100. It makes it a misdemeanor for any owner, lessee, keeper, manager, or *attaché* of any licensed place of public amusement to refuse to admit any person on account of race or color, and provides for fining the offender in any sum not less than \$75 nor more than \$100. It makes it unlawful for any superintendent, commissioner, trustee, or any other officer or board of officers, whomsoever, who are authorized, charged, empowered, directed, or compelled by law to provide for the organization, support, or maintenance of any public school, or benevolent institution, to refuse to admit each and every youth of school age, regardless of color, and provides for fining offenders in any sum not less than \$100 nor more than \$500. It provides for fining any person, aiding or abetting to avoid the provisions of this act, any sum not less than \$50 nor more than \$500. It makes any person violating the provisions of this act, in addition to the punishment provided in the act, liable to a civil action for damages by the aggrieved person or persons. It makes it the duty of circuit and criminal judges to especially give in charge to the grand-jury, at every term of their respective courts, the various sections of the act.

A resolution, adopted by the Senate, early in the session, directing the Committee on the Militia to inquire into the state of affairs in Pope County, brought out two reports. A majority of the committee reported that the county of Pope was in a "state of insurrection and rebellion," and that for several months "bodies of armed men numbering from 50 to 200 have been in the habit of riding about the county, defying the civil or military authorities of the State to disperse them." They further stated that it was "a notorious fact that every Republican sheriff and clerk of Pope County since the war has died at the hands of bloody assassins." The last outrage was the killing, on the 19th of February, at Dover, of Captain George P. Herriott, and on the 20th, at Parry Station, of Sheriff Dodson. This report was adopted together with the following resolution:

Resolved, That it is the sense of the General Assembly of the State of Arkansas, that the Governor should declare martial law in the county of Pope, and that ample reward should be offered and paid for the arrest and conviction of all persons connected with the assassination of Sheriff Dodson and Captain George P. Herriott, and that said county of Pope should not be released from the operations of martial law until such time as the people of said county, by their acts, show a desire to arrest and punish assassins that are to-day treated as boon companions.

A special committee of the Lower House on the same subject reported against martial law, and recommended that the Governor appoint good, honest officials to fill vacant offices in the county, and the grand-jury to be instructed to thoroughly investigate all cases of murder since the war. There appears to have been no further trouble in Pope County during the year.

Bills providing for funding the outstanding evidences of debt in bonds, for releasing railroads from paying bonds issued to aid in their construction, and for the registration of voters and the management of elections, occupied much time, but finally failed to become laws. The session came to a close on the 25th of April.

A decision of the Supreme Court in January declared that State scrip was not receivable for county taxes, that question having been brought before the court on an appeal from a circuit court which had refused to issue a *mandamus*, compelling the collector of Drew County to accept "treasury certificates" in payment of county taxes. The judges, in their decision, said:

State scrip, as it is sometimes called, is not money—that is, it will not pay a debt existing between individuals—that it is not at par, or worth to the holders what it calls for on its face, this court has had more than one reason to believe within the past year. It is insisted by the appellant that, when a county takes State scrip, it is but the State taking her own paper. We presume such an assumption arises out of the fact that the State created the counties, and that a payment to an offspring is a payment to the parent. Such is not the law. The counties incur debts and obligations which they are bound to discharge in money. State scrip is not money, and the Legislature cannot make it so. If counties or school districts are compelled to receive treasurers' certificates and auditors' warrants for county taxes proper, or in payment of the taxes authorized to be levied by the county court, or school districts, or county authorities, they would be unable to pay the creditors of the county or districts, or to carry into effect the objects for which the taxes were levied. The funds raised for various purposes by taxation would be virtually invested in "State scrip," and the creditors of the counties and other bodies deprived of money specially raised to pay them. The State has no power or authority to require the different organizations or counties of the State to invest taxes collected in certificates of indebtedness, and this would be the result and effect of such a law.

There was no general political election in the State during this year; the only elections were to fill vacancies in the General Assembly. These took place on the 4th of November, and were marked by no unusual incidents. Nine

Senators and 41 Representatives were chosen. There was general tranquillity at the close of the year, and every indication of returning prosperity. There being no session of the Legislature in 1878, no official reports covering the transactions of the government for the year have been made.

ARMITAGE, RIGHT REV. WILLIAM EDMOND, D. D., Bishop of the Protestant Episcopal Diocese of Wisconsin, born in New York City, 1830; died at St. Luke's Hospital, New York, December 7, 1879. Dr. Armitage received his collegiate education in Columbia College, graduating in 1849; he studied theology in the General Theological Seminary, and was admitted to deacon's orders by Bishop Chase in 1852; was ordained priest the same year, and, after spending the first seven years of his ministry in New Hampshire and Maine, was called to become Rector of St. John's Church, Detroit, Michigan, in 1859, where he was greatly beloved and esteemed. In December, 1866, he was consecrated Assistant Bishop of Wisconsin, the feeble health of Bishop Kemper rendering such aid necessary. In May, 1870, the death of the venerable bishop caused his elevation to the vacant see; and no bishop in the Northwest has since that time surpassed him in devotion to the Episcopal work, or in the multiplicity and beneficence of his labors. He had suffered for several years from a tumor at the base of the spinal column, and during the six months previous to his death the disease had become so serious and painful that the physicians in Milwaukee had advised him to come to New York and submit to an operation, as the only chance of saving his life. He arrived in New York December 4th, and, on examination by eminent surgeons, they declared it impossible for him to survive more than a week without an operation; at the same time they told him frankly that, if it should prove unsuccessful, his system would receive such a shock that he would not probably live more than a few hours. The operation was performed on Friday, and he lived till 8 A. M. of Sunday, being conscious and perfectly calm till his death.

ARMY OF THE UNITED STATES. The regular military force of the United States is limited by law to 80,000 men. The actual strength of the Army on the 7th of November was 35,535 enlisted men, of cavalry, artillery, and infantry, and 4,970 non-combatants, or 39,505 in all. Of these, full twenty-five per cent. of those belonging to active regiments were sick or on details, leaving the actual force for military service 19,652 men. The number of regimental non-commissioned officers was 1,582.

The American military establishment is under the charge of General William W. Belknap, Secretary of War. The actual command of the entire army is in the hands of General William T. Sherman, whose headquarters are at Washington. There are four military di-

visions: the Military Division of the Atlantic, under the command of Major-General Winfield S. Hancock, headquarters at New York; the Military Division of the Missouri, under the command of Lieutenant-General Philip H. Sheridan, headquarters at Chicago, Ill.; the Military Division of the South, under the command of Major-General Irwin McDowell, headquarters at Louisville, Kentucky; and the Military Division of the Pacific, under the command of Major-General J. M. Schofield, headquarters at San Francisco, California. The Division of the Atlantic constitutes but one department. In the Division of the Missouri there are the Department of Dakota, under Brigadier-General Alfred H. Terry, headquarters at St. Paul, Minnesota; the Department of the Missouri, under Brigadier-General John Pope, headquarters at Fort Leavenworth; the Department of the Platte, under Brigadier-General E. O. C. Ord, headquarters at Omaha, Nebraska; and the Department of Texas, under Brigadier-General O. O. Auger, headquarters at San Antonio, Texas. The Division of the South includes the Department of the South, under the immediate command of General McDowell, and the Department of the Gulf, under Colonel W. H. Emory, whose headquarters are at Mississippi City, Mississippi. The Division of the Pacific consists of the Department of California, under General Schofield; the Department of the Columbia, under Colonel Jefferson C. Davis, with his headquarters at Portland, Oregon; and the Department of Arizona, under Brigadier-General George Crook, whose headquarters are at Prescott, Arizona.

The amount appropriated for the maintenance of the Army for the year ending June 30, 1874, is \$32,917,971.87. The estimates for the year ending June 30, 1875, are \$34,410,722.60, in addition to which special estimates have been submitted of \$1,449,550 for the armament of forts, and \$20,459,596 for engineering-work.

During the year five inspectors-general have been engaged in inspecting the various departments, and have made voluminous reports, which show the Army to be in excellent condition.

Of the fifty railroads which at the close of the war purchased material of the War Department to an appraised value of \$7,500,000, thirty have been paid in full; the amount, including interest and expenses, being \$5,116,605.53. There is still due from twenty railroads the sum of \$4,658,924.07.

An act of Congress of March 3d appropriates \$1,000,000 to furnish head-stones for the graves of deceased soldiers in the national cemeteries. Bids have been received, but no contract has as yet been made for the stones. A small slab four inches thick has been prescribed for the known, and a block six inches square for the unknown dead. Of the former 148,000 will be required, and of the latter 105,000.

The first part of the "Medical and Surgical History of the War," prepared under the supervision of the War Department, has been printed and the second part is in press.

The system of money-deposits for soldiers, established under an act of Congress of May 15, 1872, has proved of great benefit to the men. The average amount of deposits per company made by enlisted men for the fiscal year was \$482.26, the largest deposits being made in the Departments of the Columbia and of Arizona, where there was the most active service.

The corps of cadets of the Military Academy at West Point has been increased from 293 to 342 under the operation of the law increasing congressional representation at the examinations the first year. Of the candidates examined 110 were admitted and 87 rejected; only 13 being rejected on account of physical incapacity.

Except in the Departments of Arizona and the Columbia, the operations of the Army have been of a peaceful nature. The Engineer Corps has been busily engaged on the coast defenses, and river and harbor improvements. Much has been done in this way, though no work calling for special mention has been begun or completed during the year. The survey of the lakes has been continued. That of Lake Michigan has been nearly completed, and that of the St. Lawrence River has been extended to Lake Ontario. Geological and geographical surveys and explorations have been prosecuted with vigor and success in Nevada, Utah, Colorado, New Mexico, and Arizona. There have also been important special surveys by the officers of the Engineer Corps on detached duty at the headquarters of general officers, especially in the Lava Beds and on the Yellowstone River in the Department of the Columbia and about the head-waters of the Rio Grande in the Department of Arizona. A complete set of maps and reports of the Engineer Department, with sets of photographs of remarkable features of the Western country and models of important engineering work, was prepared and sent to the Vienna Exposition, to be presented at the close of the exhibition to the Engineer Department of the Austrian Army.

The Springfield breech-loading system of fire-arms has been adopted for the military service, and the calibre of all small-arms has been fixed at .45 of an inch. Heavy rifled guns are in course of manufacture for the purpose of being tested under the act of June 6, 1872.

Systematic and continuous instruction in signaling and telegraphy is carried on at Fort Whipple, Virginia. The operations of the Signal Corps in making weather reports have been attended with success. The whole number of stations from which reports are received is 92, of which 78 are in the United States, 11 in Canada, and 3 in the West Indies. Regular telegraphic reports from Havana began on

August 6th, from Kingston, Jamaica, September 18th, and from Santiago de Cuba September 29th. Three other points, in Porto Rico, Guadeloupe, and Barbadoes, are to be equipped at once. Steps have been taken for the establishment of signal-stations at light-houses and life-saving-stations on the Atlantic coast, to give warning of approaching storms. Arrangements have been made with the meteorological officers of Russia, England, and Turkey, to commence on the 1st of January, 1874, an exchange of daily reports taken simultaneously at the different stations in the Russian and Turkish Empires, the British Isles, and the United States.

The operations of the troops in Arizona have been confined mainly to protecting the lives and property of the settlers from the depredations of Indians. They have been chiefly of a desultory character, marked by no event of special importance.

In the Department of the Columbia the only noteworthy operations were the continuation of the war upon the Modoc Indians in the Lava Beds near Fort Klamath, which had begun in the latter part of 1872. The savages, under their chief, Captain Jack, kept concealed in the caverns of the Lava Beds, and it was with great difficulty that they could be forced into action. They were finally drawn from their stronghold and several small fights occurred, in which a few persons were killed. Finally General E. R. S. Canby, at that time commander of the department, together with peace commissioners Thomas and A. B. Meacham, attempted to carry on negotiations looking to a peaceful settlement of the difficulty, and the removal of the Modocs to a reservation. On the 11th of April, Captain Jack with several of his warriors met General Canby and the commissioners under a flag of truce, on the pretense of peaceful negotiations, and treacherously fired upon them, killing General Canby, and Commissioner Thomas, and seriously wounding Mr. Meacham. They then fled, and placed themselves in a hostile attitude. Colonel Jefferson C. Davis was immediately assigned to the command of the department and entered upon a vigorous campaign against the Indians, which resulted in the capture of the remnant of the tribe, including Captain Jack and his associates in the assassination, about the 1st of June. In accordance with the recommendation of the Attorney-General of the United States, Captain Jack, Sconchin, Hooker Jim, Black Jim, Bogus Charley, Boston Charley, and Steamboat Frank, were tried by military commission under the direction of General Davis at Fort Klamath, and found guilty of participating in the murder. On the 3d of October, Captain Jack, Sconchin, and Black Jim, were hanged for the crime. The others were respited, and, with the rest of the tribe, were transported to a reservation in Dakota.

ASHANTEE, the most notable among the negro kingdoms on the western coast of Africa, which in 1873 was again involved in a bloody

war with England. According to Dupuis's "Journal of a Residence in Ashantee" (London, 1837), the country at his time consisted of forty-seven states united by conquest, some of which have since cut loose from the kingdom, while others have been added. The frontier line is constantly undergoing changes. In 1873 it extended from the Assinieh River (Tando) in the west to the Volta in the east; northward it extended to the so-called Kong Mountains; in the south Ashantee demanded the coast of the ocean as frontier, but the English were only willing to concede to them the land as far south as the Busempra River. Within the borders mentioned the kingdom has an area of about 65,000 square miles, with a population estimated at from 2,000,000 to 3,000,000. The country, on the whole, is level; only in the east and northeast, especially in the districts of Aquapim, Akim, and Aquamo, it has a mountainous character. The larger portion of the plain is covered by an impenetrable forest with extensive marshes, in which the traveller is confined to the unimportant foot-paths of the natives, or the trails of wild animals. It is one of the most luxuriant specimens of African primitive forests. Wagons are entirely unknown, as our domestic animals, horses and cattle, cannot exist in this destructive climate. The capital, Coomassie, is situated in latitude 6° 51' north, and longitude 1° 23' west, on the slope of a large rock of iron-ore, and is surrounded by an extensive marsh. According to Bowditch ("Mission to Ashantee," London, 1819), the town had in 1819 a circumference of four English miles, and a settled population of about 15,000; later estimates of missionaries give to it about 100,000 inhabitants. Eight larger roads, which, however, during the rainy season are impassable, converge here and make the town the commercial centre of the country. The rule of the king, though despotic, is in some respects controlled by the aristocracy, and still more by the customs of the country, to which all have to bow. The king, according to an ancient custom, has 8,888 wives, but the throne is not inherited by any of his children, but by a brother, or a son of his sister; for as the women are supposed to be generally unfaithful, this law of succession, it is thought, will keep the royal family on the throne. The efforts of missionaries, especially German, to introduce Christianity, have been unsuccessful; while on the other hand it seems that Mohammedanism, which is steadily advancing from the north, will soon become the predominant religion of this, as it is of many other negro countries. It already has a number of large congregations; as it admits polygamy, and demands little more than the recognition of Allah, the negroes readily accept it, and it is more and more gaining a firm footing in Ashantee. At least six dialects are spoken; the language is euphonic, in consequence of the large number of vowels and the rarity of

aspirants. The chief industrial products of the country are woven cotton stuffs, which are often interwoven with silk. Among the articles of export, gold is prominent. It is not only found in the rivers but in the hills, and the gold-mines of Gaman (in Northwestern Ashantee) are classed among the richest of Africa. Gold is in so common use that even slaves wear it as an ornament. Gold-dust is used as money. The Ashantees, who, until the commencement of the present century, were unknown to the Europeans, were repeatedly involved in war with the English—in 1807, in 1816, in 1824, and again in 1863-64. At no time were the English successful. In 1863 they undertook to advance in to the country, and for this purpose sent a large number of troops from the West Indies to Western Africa; but, before one warrior of the Ashantees had been seen, the frightful mortality among the troops compelled the English Government, in May, 1864, to discontinue the hostilities, which had cost them more than £100,000.

The war of 1878 arose from the sale of the Dutch colonies on the western coast of Africa to England, by the treaty of February 25, 1871. The King of Ashantee claims the Fantee negroes, who live near the coast in the former Dutch possessions, as tributary, and the Dutch had recognized his claims by paying him an annual tribute. They had, moreover, it appears, bought from him his prisoners of war, in order to employ them as soldiers in their Indian colonies. No mention had been made of this relation by the Dutch while concluding their treaty with England. The latter, therefore, when taking possession of the country, altogether ignored the claims of the King of Ashantee, who on that account took to arms and surprised the Fantees who were living near the coast under British protection. The Fantees, unable to cope with the braver and more numerous Ashantees, withdrew nearer to the coast, and the same was done by other native tribes friendly to the English. Gradually the advancing Ashantees crowded their opponents into a narrow circle around the two forts of Cape Coast Castle and Elmina. On June 4th a hot battle was fought between the Ashantees and the Fantees near Donquah, the most important place of the Denkeria country, and about 18 miles from Cape Coast Castle. After a contest lasting two days the Fantees were dislodged from all their positions and driven back to Cape Coast Castle. On June 10th Colonel Festing and Captain Freemantle in a gun-boat sailed from Cape Coast to Elmina, which fort was besieged by the Ashantees, but they returned on the same day to Cape Coast. Colonel Festing, at the head of his marines and a strong detachment of Housa police, now undertook a forced march to Elmina. As he learned that the inhabitants had openly shown their sympathy with the Ashantees and supplied them with arms and am-

munition, he set fire to the town, on June 14th, and burned it to the ground. Previously, all peaceable inhabitants who were willing to take the oath of loyalty to the English, were offered a refuge in Cape Coast Castle. Thus a town of about 10,000 inhabitants, which England expected to make the centre of its commerce and its power on the Gold Coast, was turned into a heap of ruins. Cape Coast was soon flooded with Fantees, the number of refugees amounting to over 80,000, who greatly suffered from scarcity of food and water.

The whole of the surrounding country was occupied by the Ashantees, the king, Calcalli, establishing his headquarters in the village Afutu, 18 miles from Cape Coast. For several months no change took place in the situation, the English having only control of the forts on the coast, and the Ashantees of all the surrounding country. On October 2d the new commander-in-chief, Sir Garnet Wolseley, arrived from England at Cape Coast, and on the next day he had an interview with the friendly chiefs of the Fantees, whom he promised

£10 a month for every 10,000 men whom they could bring into the field. The construction of a railroad from Cape Coast to Coomassie, the capital of the Ashantees, was begun. As it was found out that several chiefs who professed to be friendly to the English were secretly sympathizing with and aiding the Ashantees, four villages, Essaman, Anpuana, Aikimfoo, and Ampuine, were on October 21st burned by the English. On October 24th, Sir Garnet Wolseley issued a proclamation "to all the tribes and inhabitants of the Gold Coast," in which he notified them that certain chieftains had harbored Ashantees and other enemies of the British allies, and when summoned to appear before him had refused to come, but had taken counsel with the hostile Ashantees who were stationed in Mampou; that there-

fore their villages had been destroyed by fire, and that a similar fate would befall all who may prove faithless to their obligations toward her British majesty. Among the works which contain a full account of the country of the Ashantees, we mention, besides those of Bowditch and Dupuis, already referred to, McQueen, "Geographical Survey of Africa" (London, 1840); Cruikshank, "Eighteen Years on the Gold Coast" (London, 1853); Wilson, "Western Africa" (London, 1856).

ASIA. The territorial division of Asia underwent, in 1873, another change, in consequence of the successful campaign of Russia against Khiva. The treaty of peace considerably increased the area of the Russian territory, and, at the same time, so strengthened the influence of Russia in Central Asia, that

any further resistance of the khانات of Toorkistan is now highly improbable. Another result of this campaign was the extinction of slavery in Khiva, on which Russia insisted as a condition of peace (*see* KUIVA and TOON-KISTAN).

By no means so successful as the expedition of the Russians against Khiva was that of the Dutch against the Sultan of Acheen, upon the island of Sumatra. As England, by the treaty of 1871, had withdrawn her former opposition to the extension of Dutch rule over the whole island of Sumatra, the Netherlands believed the time to have come when they might establish their ascendancy over the districts which thus far have maintained their independence, and among which the sultanate of Acheen is by far the most powerful. The first campaign, in April, 1873, was a total failure; a second campaign began toward the close of the year, on a much larger scale, and the Dutch avowed their intention of establishing, if successful, a protectorate over Acheen.

The area and population of the political divisions of Asia were, in 1873, as follows:

COUNTRIES.	Square Miles.	Population.
Russian Territory	5,944,628	10,780,000
Chinese Sea	178,871	
Arab Sea	97,005	
Turkey in Asia	672,518	16,463,000
ANNAH (1871)	1,000,000	4,000,000
Persia	682,900	5,000,000
Afghanistan and Herat	251,165	4,000,000
British Indian	106,767	2,000,000
Nepal	19,057	3,000,000
China	54,394	1,500,000
Japan	70,340	2,500,000
Korea	30,018	800,000
Taiwan	144,179	770,000
Other Kingdoms and Territories of Toorkistan	134,543	2,000,000
East Toorkistan (Empire of Yakoob Kuchbegi).....	500,000	500,000
Chinese Empire	3,745,894	446,500,000
Japan	149,499	30,785,321
Hindustan, with British Burmah	1,528,747	236,523,512
China	21,705	2,400,287
Persian India	722,066	21,008,002
East India Islands	730,359	34,600,000
Total	16,924,000	894,500,000

At the beginning of the year 1873 the Chinese Government succeeded in putting an end to the independent empire which the Panthays, or Mohammedan rebels, had established in the southwestern province of Yunnan. The capital, Talifu, was captured, a terrible massacre made among the Mohammedan population, and the Sultan, Soleiman, himself killed. On the other hand, it does not appear that any progress has been made by China in recovering the large territories which she has lost in the northwest. The empire of Yakoob Kuchbegi, who now rules over what was formerly called Chinese Toorkistan, appears to be consolidated, and begins to enter into commercial and diplomatic relations with the Russian and English authorities in Asia (*see* CHINA).

The journey of the Shah of Persia to all the courts of Europe, in order to become person-

ally acquainted with the aspects of European civilization, has produced an immense sensation in his empire, as it was the first time in the history of this country that its ruler had left its borders for such a purpose, as the most desperate opposition of the Mohammedan priests had to be overcome. The Shah appears to be fully determined to introduce a number of reforms; but a convention concluded with Baron Renter, of London, for the purpose of giving to Persia a net-work of railroads, was, toward the close of the year, annulled (*see* PERSIA).

The most progressive among the native states in Asia is Japan. The zeal displayed by the government, in obtaining an accurate knowledge of the political, social, and literary condition of all the countries of the globe, and in introducing sweeping reforms, in order to elevate the country to a level with the most advanced nations, is without parallel in modern history. Though this sudden transition of a large country to an entirely different form of society could not be expected to be free from disturbances, it has thus far advanced without interruption, and its main results appear to be fully secured (*see* JAPAN).

British India, as the census of 1871 shows, is rapidly increasing in population, and the progress of commerce and general prosperity is keeping pace with that of population. The census shows that the most dangerous element of the native population, the Mohammedans, are more numerous than has heretofore been supposed; the year 1873 has, however, been unusually free from fanatical outbreaks. In the difficulty between Persia and Afghanistan, English arbitration was accepted (*see* INDIA).

The Imam of Muscat, in Arabia, yielded, like his brother, the Sultan of Zanzibar (*see* AFRICA), to the pressure brought upon him by English diplomacy, and promised the abolition of the slave-trade.

ASTRONOMICAL PHENOMENA AND PROGRESS. *Photography of Southern Star Clusters.*—Prof. C. S. Sellack, of the University of Cordova, South America, reports to the *American Journal of Science* the interesting result of his efforts in the photographing of southern star-clusters, employing the method of Mr. Rutherford, of New York. This method is as follows: After an exposure of the photographic plate for some minutes, the telescope, which is driven by a good clock-work, is moved to another position by the star motion, and a second exposure is made; then the telescope is stopped and an exposure made so that the image of the central star, while moving out of the field, leaves a trail. The images of the stars being double, the recognition and discrimination from specks produced by imposition of the plate are much facilitated; the trail seems to fix a direction for the angles of position on the plate. Prof. Sellack used for the work a photographic refractor of about

0.280" aperture. After many trials, he succeeded in obtaining, by short exposures, a well-defined, nearly circular photographic image of stars of the first and second magnitudes. With exposures of eight minutes, stars as low as the ninth magnitude, when white, give a photographic impression. He says that the greatest difficulty in stellar photography is to make the image stationary on the plate during a long exposure. The steadiness is absolutely necessary for the production of circular images; the images must be circular, because in elliptically lengthened images the eye cannot fix the centre with the sharpness required for the measurements. Employing even the most perfect clock-work, the steadiness of the image is affected by the effect of other atmospheric representations, by the variations in the refractions caused by atmospheric disturbances, and by the increase of refraction dependent on the zenith-distance. The photographic image of stars is circularly spread by prolongation of exposure; this is principally the effect of the scintillating motion of the image, not of want of definition, as its amount depends on the state of the atmosphere. When the state of the atmosphere produces a strong scintillating motion, the images of bright stars become very large by long exposures, and faint stars do not produce any impression. In great zenith-distances, another obstacle, the strong absorption of chemical rays by the atmosphere, combines with the increased scintillation. Prof. Sellack found that the favorable time for taking photographs is, for north culminating stars, near culmination; for stars culminating near the zenith, at some distance from culmination; and for south culminating stars, near culmination. He has photographed some twenty star-clusters, most of them in the constellation Argo, and some in Canis Major and Scorpio. The cluster near Carinæ Argus gave 123 stars on the photograph in the most favorable night. Other groups yielded from forty to sixty stars; and the total product of twenty-seven clusters was 800 stars. This is not disappointing. The Pleiades, the richest Northern group, gives to Mr. Rutherford's photograph only forty-five stars.

Scintillation of the Stars.—In a note to *Nature* Mr. George F. Burder records an interesting observation on this subject. He remarks that when a person selects two stars of suitable size and distance apart, and looks steadfastly at one, the other being at the same time within the range of vision, the star which is not looked at will become alternately visible and invisible. On a favorable evening, and the scintillation of the stars being very marked, he made this experiment on the stars Epsilon and Zeta of Ursa Major. Looking steadily at one, he noticed that the other became every now and then totally invisible, for a period of some duration. On one occasion he counted thirty in the interval of disappearance, and this he afterward found to corre-

spond to five seconds. More frequently the star would be invisible for one or two seconds, then flash into full brilliancy, and, after a variable interval, vanish as suddenly again. He also tried two of the bright stars in Orion, and in that case the apparent extinction of one of them, from time to time, produced an effect almost startling. The author does not suggest any explanation of this. It is, in fact, a common optical phenomenon, which may be seen by trial upon two gas-lamps at the proper distance apart.

Mapping the Southern Heavens.—Dr. B. A. Gould, director of the Cordova Observatory, in a letter to the *American Journal of Science*, dated August 5, 1873, records the continued success of his labors there: Notwithstanding the unfavorable weather with which he had to contend during the greater part of the time, he had mapped 879 zones, containing about 50,000 stars, of which less than one-fifth are duplicates. From present means of judging, he expects to find about 65,000 stars in the 500 zones lying between the parallel of 28° and 80° southern declination. The southern circumpolar list of six stars which Dr. Gould proposed for the Coast Survey about fifteen years ago, affords him now an ample series of stars for determining the azimuth at any desired time, and obviates the necessity of too long an interval for the observation of determining stars between the zones. The work upon which Dr. Gould is now especially engaged will require for its completion the greater part of another year.

Recent Estimates of Solar Temperature.—Mr. James Dewar, in a paper read before the Royal Society of Edinburgh, groups all the known methods of arriving at a knowledge of high temperatures, under eight different processes. He then goes on to show how it is possible, from the luminous intensity of the sun, to devise a new estimate of solar temperature. This calculation is based on a definite law, viz., that the total luminous intensity is a parabolic function of the temperature, above that temperature where all kinds of luminous rays occur. The temperature of the oxyhydrogen-flame does not exceed 2,400° C., and sunlight, according to Fiseau and Foucault's experiments, has 150 times the luminous intensity of the lime-light; so that it is only necessary to calculate at what temperature this intensity is reached, in order to get the solar temperature. This temperature is 16,000° C. in round numbers. Enormously high temperatures are not required to produce great luminous intensities, and the temperature of the sun does not at least exceed the above estimate. Mr. Dewar cites the opinion of Sir Wm. Thomson, who says: "It is almost certain that the sun's mean temperature is even now as high as 14,000° C.," an estimate which agrees well with the luminous intensity calculated.

Spectrum of the Sun.—In a paper contrib-

uted to the *Philosophical Magazine*, of February, Mr. J. Norman Lockyer refers to the evidence obtained by Dr. Frankland and himself, as to the thickening and thinning of spectral lines by pressure, and the disappearance of certain lines, where the method employed by them since 1869 is used. This method consists of throwing an image of the light-source to be examined on the slit of the spectroscope. The application of this method enables the phenomena to be better studied, the metallic spectrum being already separated from the spectrum of the gaseous medium, through which the electric spark passes. Photographs of the sparks taken in air, between zinc and cadmium, and zinc and tin, accompany the paper, showing that when spectra of the vapors, given off by electrodes, are studied in this manner, the vapors close to the electrode give lines which disappear from the spectrum of the vapor at a greater distance from the electrode, so that there appear to be long and short lines in the spectrum. In some cases the spectra of the metals, inclosed in tubes, and subjected to a continually decreasing pressure, have been observed: and it is noticed that the lines gradually disappear as the pressure is reduced, the shortest lines disappearing first, and the longest lines remaining last visible. Mr. Lockyer explains at some length how these observations apply to the solar spectrum, and deduces from them the presence of zinc and aluminium (and possibly strontium) in the sun.

The Coronal Atmosphere of the Sun.—At the Bordeaux meeting of the French Association for the Advancement of Science, M. Jannsen gave in full his views of this subject, obtained from his observations of the total eclipse on December 12, 1871, seen from Shooter, Hindostan. He concludes that the coronal medium is self-lighted, in great part at least, and that it contains incandescent hydrogen, but that it also exhibits the presence of reflected solar light. The two analyses, spectral and polariscopic, agree as to this double origin of the coronal light, and all observations unite in demonstrating the existence of this circumstellar medium. This medium is distinguished, by its temperature and its density, from the chromosphere, of which the limit, moreover, is perfectly distinct. He proposes first, the name of "coronal envelope," or "coronal atmosphere," to remind us that the luminous phenomena of the corona owe to it their origin. M. Jannsen concludes his paper as follows:

The density of the coronal atmosphere must be excessively rare. In fact, it is known that the spectrum of the chromosphere, in its superior parts, is that of a hydrogen medium successively rarefied; but, as the coronal medium, according to the indications of the spectrum, ought to be even infinitely less dense, we see how rare this medium must be. This conclusion is further corroborated by astronomical observations. Science has recorded the passage of comets as only some minutes' distance from the surface of the sun; these bodies must have

traversed the coronal atmosphere, and yet, notwithstanding the lightness of their mass, they did not fall into the sun.

I shall add here, as to the constitution of the coronal atmosphere, a few ideas which do not rigorously flow from my observations, but which appear to me very probable, but upon which the future must pronounce.

I said, *à propos* of the observations in the telescope, that the corona was shown at Shooter with a form almost square, and that it was distinguished by gigantic dahlia-like petals. It is a fact that in each eclipse the figure of the corona has often varied; it has exhibited the most eccentric appearance. I have no hesitation in saying that this medium, now incontestably recognized, and which I propose to name the "coronal atmosphere," very probably does not represent the whole of the aureole which is seen during total eclipses. It is quite credible that portions of the rings or trains of the cosmical matter then become visible, and thus tend to complicate the figure of the corona. It belongs to future eclipses to instruct us on this point. But, with regard to the coronal medium itself, there is no doubt that it presents singular forms, which convey but little idea of an atmosphere in equilibrium. Moreover, I am inclined to admit that these appearances are produced by trains of very luminous and dense matter from the superior layers plunging this troubled medium. The protuberant jets, which carry the hydrogen to such great heights, must have a peculiar influence upon this coronal medium, whose density is quite comparable to that of the cometary media.

It is, then, very probable that the coronal atmosphere, like the chromosphere, is very much agitated, and that it changes its shape very rapidly, which will explain how it presents different appearances every time it has been observed.

To repeat: I have been able to establish at Shooter, by trustworthy and consistent observations, that the solar corona presents the optical characteristics of incandescent hydrogen gas, that this very rare medium extends to very variable distances from the sun, from half a radius of the sun to about double that at certain points; but I give these figures only as results of an observation, not as definitive. It is quite certain, moreover, that the height of the corona must be necessarily variable.

Variation in the Diameter of the Sun.—

Father Secchi has reduced a series of observations on the diameter of the sun, extending from January 12, 1871, to January 21, 1872, made by his assistant P. Rosa. Chronographic transits of the sun were taken over nineteen fixed threads and one movable thread, thus giving twenty transits for each limb of the sun. The probable error of an observation deduced from the twenty threads was $0''.31$ and the minimum error was $0''.5$. He thus obtained 187 trustworthy determinations, which were rendered comparable by having been first reduced to the mean solar distance. These observations corresponded to heliographic latitudes comprised between 0 and 26 degrees. While the probable error never exceeded $0''.5$ of an arc, the isolated determinations often differed by 3, 4 or even 5 seconds. Secchi thinks that this difference cannot be attributed to accidental errors, for they existed during several consecutive days, and passed insensibly from one value to another; also, the comparison of these measures with analogous ones made at Palermo shows variations sufficiently corresponding to those found at Rome, to

prove the reality of these variations in the solar diameter.

From an examination of the curves of these variations, Secchi deduced that the diameter had minima values when the numbers of spots and protuberances were at the maxima. This result shows that there is a physical relation which merits a special study. The region between 20 and 28 degrees of heliographic latitudes affords the smallest diameters, and this is exactly the zone where the solar activity is the greatest, as resulted from the comparisons and extent of the protuberances and spots. Secchi thus provisionally accounts for the above relation. The border of the sun is not perfectly defined, the want of definition in its contour being, probably, due to the light of the chromosphere, which, very bright at its base, fuses to some extent with the photosphere. The ordinary diameter of the sun is composed of the diameter of the photosphere augmented by this brighter inferior layer, whose height equals 4 seconds, which his measurers assign as the difference between the semi-diameter observed and that of the ephemeridis. If this explanation be true, knowing that the chromosphere is sometimes more and sometimes less brilliant, it results that the solar diameter, thus augmented, will be found to diminish and to increase with the brilliancy of the chromosphere.

Spörer's Observations on the Sun.—Prof. Spörer has contributed to the Berlin Academy of Science full reports of his recent observations on the sun. He gives interesting comparisons of spots, showing the difference between the two hemispheres of the sun in respect to the frequency of spots, and the mean heliographic latitudes. As to the frequency of spots, it appears that the southern hemisphere exceeds the northern both in maximum and minimum. The curves also show distinctly the rapid passage from minimum to maximum, and the slow decrease of the maximum.

The mean heliographic latitudes are obtained through assigning to each group of spots a factor of value. The union of five-rotation periods gave a point of the curve for the northern as well as for the southern hemisphere. Carrington had obtained from his observations the striking result, that the spots at the time of the minimum approach the equator, thereafter veered off to higher latitudes, and that then the more numerous spotted zones gradually approach the equator. Spörer, by his observations since 1861, has confirmed this result.

Spörer adheres to his division of protuberances into two classes. Secchi, in his work on the sun, has distinguished four classes of protuberances, but afterward accepted Spörer's twofold division. Both observers are at one in this, that the protuberances, which Spörer has named "flame" and Secchi "ray" protuberances, give different spectral lines, and

stand in intimate connection with the spots. But with regard to the proper hydrogen protuberances, Secchi says they are not in the condition to give rise to a spot, against which Spörer adduces examples of their influence in neighboring spot-formation, especially prominent in the intervals between considerable protuberances of hydrogen.

Solar Observations made easy.—Mr. R. Langdon describes in *Nature* his successful attempts to see the red flames on the sun's limb without waiting for a total solar eclipse, and by the use of a common telescope. He says:

I cut out several circular disks of thin brass (blackened on both sides), leaving three arms projecting from the periphery of each, of such length that when the ends were bent they should slide into the tube of the eye-piece. I placed one such disk in the eye-tube as near to the field lens as possible to avoid its getting hot; but here a difficulty presented itself which I had not foreseen—the disk was a trifle too large, and it shut out the sun altogether. I put in a smaller one which admitted too much of the sun's light. I afterward tried several, and it required a considerable amount of filing and scraping to produce one just the right size to cover the sun's disk and no more; especially as the least jarring or vibration of the telescope would cause the edge of the sun to be seen first on one side and then on the other. After several trials at different times I succeeded on January 16, 1872, in seeing on the southwestern limb a red flame. It appeared rather wider at the top than the bottom, with a smaller one growing out from the bottom or root close to the sun's limb. There was another tongue of flame a little to the right, which appeared to be detached from the larger flame and also from the sun's limb.

On September 20, 1872, I saw a red flame which went up a little distance from the sun's limb and then divided in three. Close to this, on the edge of the sun's disk, was a group of nine small spots, and a large space was covered with faculæ. The flame—which was of a deep-red color—did not appear to be projected against the sky, but upon a very delicate purple background.

No colored glass was used in either of these observations, but a sheet of letter-paper was held between the eye and the telescope, which was removed the instant the sun was brought into the centre of the field of view.

The Zodiacal Light.—Mr. Maxwell Hall describes in *Nature* the appearance of the zodiacal light, as seen in November, 1872, from Jamaica. The light reached a point between the Pleiades and the Hyades, so that the central portion traced out the course of the ecliptic with wonderful precision; it was brightest in the central part of the band, and gradually faded off toward the edges; its illuminative parts were greater than that of the Milky-Way, but became fainter as it proceeded along the ecliptic; as late as midnight a faint glare could be seen above the horizon. The breadth of the light was 40° at a distance of 34° from the sun, and 10° at a distance of 139° from the sun, and the light faded out at the distance of about 177° from the sun. It seemed perfectly fixed in the horizon, and there was no sign of its displacement such as might be caused by parallax combined with the earth's rotation, and, where the brighter part had set, and was far below the horizon,

the band across the zenith was quite as distinct as before. Mr. Hall thus comments upon the facts:

Now, these few facts go a long way toward explaining the nature of the zodiacal light, and a few more observations at different times of the year may be all that are necessary to do so satisfactorily; but as the light was so vivid here, it must have been seen in other parts of the world, and a comparison of the different accounts may bring about the desired result; hence these notes, and the following rough explanation.

The zodiacal light has generally been supposed to be a luminous ring, surrounding the sun, and situated between the orbits of Venus and Mars; the fact that the light has often been seen in both the east and west at the same place and time does not affect the probability of this explanation, as we have only to suppose the earth to be just within the ring; but there are many difficulties to encounter, and the explanation never seemed satisfactory. The instant, however, that I saw the prolonged ray, I felt sure that the zodiacal light was similar in its nature to the rays issued from a comet toward the sun, which, drifting over the nucleus, are then forced backward and form the tail; and that, in the case of the earth, the light is generated in those regions to which the sun is vertical, and, passing round the earth, the light is swept back in a direct line from the sun, thus forming a train which always tends toward a point in the heavens 180° from the sun, and which is therefore stationary with regard to the earth's axial rotation.

Lunar Radiation.—The Earl of Roese has presented to the Royal Society the results of his latest observations to determine the amount of heat radiated from the moon. An abstract of the paper is given as follows: "The observations were first corrected for change of the moon's distance from the place of observation, and change of phase during the continuance of each night's work, and thus a curve, whose ordinates represented the scale-readings (corrected) and whose abscissæ represented the corresponding altitudes, was obtained for each night's work. By combining all these, a single curve and table for reducing all the observations to the same zenith-distance was obtained, which proved to be nearly, but not quite, the same as that found by Prof. Seidel for the light of the stars. By employing the table thus deduced, and also reducing the heat-determinations obtained on the various nights for change of distance of the sun, a more accurate phase curve was deduced, indicating a more rapid increase of the radiant heat on approaching full moon than was given by the formula previously employed, but still not so much as Prof. Zollner's gives for the moon's light. By employing Laplace's formula for the extinction of light in our atmosphere, the heat effect in terms of the scale-readings was deduced, and an approximation to the height of the atmosphere attempted.

"From a series of simultaneous measurements of the moon's heat and light at intervals during the partial eclipse of November 14, 1872, when clouds did not interfere, it was found that the heat and light diminish nearly if not quite proportionally; the minimum for both occurring at or very near the middle of

the eclipse, when they were reduced to about half their amounts before and after contact with the penumbra."

Biela's Comet.—Prof. Oppolzer has investigated the probabilities that the comet observed by Pogson at Madras, December 2 and 3, 1872, was one of the fragments of Biela's comet, and is convinced by his computations that the likeness of the elements he obtained to those of Biela could not be the result of chance. The comet seen by Pogson, it will be remembered, was twelve weeks behind the computed places of Biela. He made but two observations of it, at about twenty-four-hour intervals, and more places are needed to give the orbit of the comet. Prof. H. A. Newton, of Cambridge, Mass., in reviewing the evidence, deems it highly improbable that the fragments of Biela's comet have lost twelve weeks, as there have been apparently no longer doubtful perturbations through the last ninety years. Jupiter has kept at a considerable distance from them, and his influence has been allowed for. The natural deduction is, as stated by Mr. Proctor, that what Mr. Pogson saw was a meteoric aggregation traveling in the track of the comet, but far behind it. In fact, it seems to be a third piece of Biela's original comet, separated from the main body, perhaps, long ago. The size of the nucleus seen by Mr. Pogson was comparable to that of the moon, allowing for the probable distance of the comet. It took over six hours to cross the dense part of the meteor-stream on the 27th of November, 1872; and, had its thickness been equal to that of the moon's diameter, the shower on that occasion would have lasted ten minutes. Prof. Newton conjectures that the meteors seen on the evening of November 27th belonged to still another stream of fragments from Biela's comet, since they were not seen in so great numbers on the evening of the 25th. Possibly the Pogson comet belonged to that stream.

Mr. Daniel Kirkwood, of Bloomington, Ind., is of the opinion that several comets, moving in nearly the same orbit as that of Biela, probably entered the solar system as a group, and that, after making their first perihelion passage in close proximity to each other, they were, when receding from the sun, thrown into their present orbits by the disturbing influence of Jupiter. He thus presents the case:

1. *Was the comet of 1772 identical with that of Biela?*—The mean of the seven consecutive periods between January 2, 1806, and September 22, 1852, is 2,427.7 days. Counting five periods of the same mean length from February 17, 1772, brings us to July 2, 1805—six months before the perihelion passage of 1806. In other words, the mean period between 1772 and 1806 was greater by about thirty-seven days than that between 1806 and 1852. The perturbations during the half-century succeeding the apparition of 1772 have not been computed. It seems very unlikely, however, that the difference of periods could thus be accounted for. We conclude, therefore, that the comet of 1772 was not that of Biela.

2. The first comet of 1818 is regarded by Dr. Weiss as a probable member of the Biela group. This body, discovered by Pons, was visible only four days. Its elements, as computed by Pogson, have a striking resemblance to those of Biela's comet. The longitudes of the ascending nodes differing by only 1° . There can be little doubt that it was connected, in its origin, with the comet of Biela.

3. The companion of Biela, observed in 1846 and 1852, is another comet of the same cluster. The fact that several cometary masses move in orbits almost identical, may afford a plausible explanation of the division of Biela's comet. Was one member of the group overtaken by another as they were approaching perihelion in 1845, and was their separation after imperfect collision the phenomenon observed at that epoch?

4. The comet detected by Pogson, at Madras, on December 2 and 3, 1872, may have been another member of the same family. Its perihelion passage occurred nearly three months after the time computed for that of Biela. Prof. Newton has remarked that so great a lengthening of the period could not probably be explained by planetary perturbation.

M. Hoek has shown that certain comets have been associated in groups before entering the solar domain. When the members of such cometary systems are widely separated, they may pass round the sun in very different orbits. The comets, however, which constitute the Biela cluster must have entered our system at small distances from each other, since their orbits are nearly coincident. These orbits, between longitude 255° and 265° , pass within no great distance of that of Jupiter. The group had perhaps made its first perihelion passage in a parabolic orbit. Receding from the sun, it fell under the controlling influence of Jupiter; the comets had various positions in relation to the planet, and hence the orbits resulting from the attraction of the latter were slightly different.

We might regard the comet of 1772 the companion of Biela, and Pogson's comet of 1872 as probably identical, but for the small increase of distance between the two Biela-comets in the interval from 1846 to 1852. The period would be about 2,456 days.

The author argues that the comets of this cluster have been moving in their present orbits but a comparatively short time—this being rendered probable by the fact that no two members hitherto detected have become widely separated, and that, notwithstanding the frequency of the return to perihelion, the meteoric debris is much less diffused than in the case of other known streams.

Encke's Comet.—Reports of Profs. Hall and Harkness on observations of Encke's comet, during its return in 1871, are published as an appendix to a volume from the United States Naval Observatory. Prof. Harkness gives his views of the spectrum of the comet, followed by discussions of the probable mass of the comet, and the density of the supposed resisting medium of space. The following are his general conclusions:

1. Encke's comet gives a carbon-spectrum.

2. From November 18th to December 2d the wave-length of the brightest part of the second band of the comet's spectrum was continually increasing.

3. No polarization was detected in the light of the comet.

4. The mass of Encke's comet is certainly not less than that of an asteroid.

5. The density of the supposed resisting medium in space, as computed from the observed retardation of Encke's comet, is such that it would support a column of mercury somewhere between $\frac{220}{10^{\text{in}}}$ and $\frac{285}{10^{\text{in}}}$ of an inch high.

6. There is some probability that the electric currents which give rise to auroras are propagated in a medium which pervades all space, and that the spectrum of the aurora is, in reality, the spectrum in that medium.

7. It is not improbable that the tails of all large comets will be found to give spectra similar to that of the aurora, although additional lines may be present.

Other Comets.—On the 3d of April, M. Stephan, at Marseilles, found the comet of 1867, originally discovered by Tempel, a comet of short period. It had been close to the planet Jupiter, and its time of perihelion passage altered thereby nearly two months. July 3d, M. Tempel, at Milan, discovered a comet of short period, the elements of which have been calculated by Dr. Schulhof. M. Borelly, of Marseilles, discovered another comet, August 20th; and on the 23d M. Paul Henry, at Paris, reported still another. These were all faint telescopic objects. M. Stephan obtained an observation of Faye's comet, September 3d; it was still exceedingly small and faint, and only about $9''$ from its computed place. Dr. Vogel, of Bothkamp, has observed the spectra of Borelly's and Henry's comets. The spectrum of the first named consisted of three bands in the yellow, green, and blue. The relative intensity of the bands in order from the red was indicated by the numbers 8, 7, and 2. Each of the bands shaded off very markedly from toward the violet, the greatest intensity being toward the red. Only one observation was made, and then the comet was near the horizon. The spectrum of the other comet consisted of three ordinary bright lines, which were, however, sharper than usual toward the red. Some of the bands bear a clear resemblance to the carbon-spectra.

Telescopic Observation of Meteors.—Dr. Galle, of Breslau, maintains the theory that multiple meteors enter our atmosphere in flights, and do not owe their separation into discrete bodies to the effect of explosion. Recently, Dr. Reimann observed with the Königsberg heliometer three small meteors traversing the field, separated from each other by small dark spaces. The two in front were smaller than the third, and the three presented the appearance of an isosceles triangle. These bodies moved so slowly that they could be conveniently watched. The slow motion implies great distances; yet they were as bright as stars of the fourth magnitude. The bodies showed no trains.

In another case Dr. Reimann observed a small meteor, and a fainter meteor following, about a quarter of a degree distant. Another

striking instance of a double meteor was that seen by Schmidt at Athens. The naked eye could see only one object; but in the telescope two large meteors could be seen traveling in front of a number of small fireballs, each of which was followed by a train. Dr. Galle refers to these and other instances to support his view. He considers that his researches into the phenomena presented by the meteors which fell at Pultusk on January 30, 1868, as a rain of stones, demonstrate that the meteors were separate long before they reached the place of so-called explosion, and that this place is only the spot where a complete resistance to the planetary velocity and a partial rebound from the impressed air take place, and whence the meteor falls with a velocity corresponding to the law of terrestrial gravity. Haidinger, from certain physical features of fallen meteors, had already inferred the necessity of the theory that the separate meteors had followed distinct paths through the air. Dr. Galle considers that at present it may be regarded as still an open question, whether meteorites enter our atmosphere, from outer space, already separated so as to form a swarm, or whether, shortly after entering and during their passage through the air, they are reduced through the effects of heat into smaller fragments, which the more or less freshly broken appearance of many fragments, as distinguished from the full or partial over-crusting of others, seems to indicate. He notes as unusual, in the first observation by Dr. Reimann, the circumstance that the two meteors traveling in front were smaller than the one which followed them.

The Transit of Venus.—In March, 1873, Congress appropriated the remaining \$100,000 of the estimated \$150,000, for expenses in observing the transit of Venus, December 8, 1874. The following official notice of the work in this connection, thus far done by the United States Government, appears in a memoir published by the Naval Observatory during the year:

Preparatory measures for this object were early taken by the Observatory. At the request of the Superintendent, Congress appropriated, in 1871, the sum of \$2,000 for experiments to be made on the best forms of instruments to be used in these observations. By section 2 of the naval bill making this appropriation, a commission in reference to this transit was made to consist of the Superintendent of the Observatory, the President of the National Academy of Sciences, the Superintendent of the United States Coast Survey, and two Professors of Mathematics of the Observatory. Prof. Simon Newcomb, U. S. N., and Prof. William Harkness, U. S. N., were detailed as members of the Commission. In March, 1872, the Navy Department was addressed by the Superintendent on the advisability of making national provision for the observation of the transit, the expedition for which would also render important service in determining the position of points in the Pacific Ocean. The estimate of the Commission, of \$160,000 for the expedition in three annual installments) was submitted in this letter to the Superintendent, transmitted by the Secretary of the Navy, Hon. G. M. Robeson, and responded to by Congress in the grant of the first installment of \$50,000 for the purchase of

instruments, June 10, 1873. This cordial response in Congress was secured by the support of the Senate Committee on Education, an able report from which was presented by the Hon. Mr. Sawyer; and by the influence in the House of Representatives of the chairman of the Committee of Appropriations, Hon. Mr. Garfield, with that of other Representatives. Among those who memorialized Congress for this object were the Connecticut Academy of Sciences, the California Academy, the American Philosophical Society of Philadelphia, the Chamber of Commerce of San Francisco, and the University of California. Under the appropriation already made, the Commission have contracted for most of the necessary instruments, and are carrying forward the previously-required experimental work for observing this rare and most important event. They have issued the first two papers of a series upon this subject:

No. I., comprising a correspondence with Mr. L. M. Rutherford, of New York, and a paper on the Application of Photography, by Prof. Newcomb.

No. II.—Charts and Tables for facilitating Predictions of the several Phases of the Transit; prepared by Mr. G. W. Hill, Assistant in the Nautical Almanac Office, under the direction of Prof. J. H. C. Coffin, Superintendent of the Almanac.

In reply to inquiries in regard to the plans of the Commission, Prof. Newcomb, as their secretary, has replied in substance: That the principal reliance during the observations of the transit will be on photography; and that arrangements are being made for equipping eight photographic stations—four in the Northern Hemisphere in China, Japan, and probably in the adjacent islands; and four in the Southern Hemisphere in New Zealand, Chatham Island, Tasmania, and probably Kerguelen Island. Each station will be provided with an astronomer, an assistant-astronomer, and photographic assistants. The record of the work of the Observatory offered in the preceding memoir closes with this reference to the transit of Venus and to the natural relation to it held by the Institution. It purposes to fulfill that share in the observations and in the results to be deduced from them which the astronomical world justly expects of it. The daily-increasing interest in this phenomenon and its astronomical importance may be yet more appreciated by the general reader by attention to the following recent statement of a distinguished writer on Astronomy, Prof. R. Grant, Director of the Royal Observatory, Edinburgh: "The approaching transits of Venus in 1874 and 1882 are looked forward to by astronomers with intense interest. Steps have already been taken by the principal nations of Europe to observe the transit of 1874 with the aid of all the appliances of modern science. The transit of 1882 will be eminently favorable for observation in America. Between those two important phenomena there will occur one of those oppositions of the planet Mars which are peculiarly favorable for the same purpose. We have thus three phenomena—the transit of Venus in 1874, the opposition of Mars in 1877, and the transit of Venus in 1882—all favorable for obtaining a fresh determination of the value of the solar parallax; and it cannot be doubted that the various efforts which they will call forth on the part of astronomers will lead to a value of the important element still more trustworthy than any yet arrived at."

It is proposed to hold a meeting, of all persons who will take part in the work, at Washington, in the spring of 1874. An artificial Venus will be provided making a transit over an artificial sun, at a distance of two miles, and the instruments intended for observation of the real transit will be used on that occasion.

The Great Telescope at Washington.—In November, 1873, Mr. Alvan Clark & Sons completed the mounting of the great refractor

constructed by them for the Naval Observatory, Washington. Four years were allowed for its manufacture, the contract having been made in 1870; but every part of the work was completed earlier than agreed upon. Chance & Brother, of Birmingham, cast the object-glass, which was ground and polished by the Messrs. Clark. It has a clear aperture of 26 inches. The metallic base and the instrument itself weigh about six tons, and the focal length is nearly 82 feet. The new telescope is poised on a dome 40 feet high and 41 feet in diameter. The instrument cost \$50,000, appropriated by Congress. It was placed in position without the least accident. No official report has yet been made of its working. The Messrs. Clark have received an order from Mr. McCormick for another telescope of the same size as that at the Capitol, designed as a gift, it is reported, to Washington and Lee University, Virginia.

The Lulande Medal.—Prof. James C. Watson, of the University of Michigan, who has been highly successful in the discovery of asteroids, has received a valuable gold medal, awarded him by the Institute of France. The *Ann Arbor Register* says:

The medal was awarded to Prof. Watson by the Institute of France, in July, 1870, but, on account of the war, its completion and transmission were delayed. It was made at the French Mint, and accompanying it was the certificate of the director of the mint, as to its fineness and weight, as well as 225 francs in bills of the Bank of France, being the unexpended balance of the sum appropriated by the Institute for the medal. It is exquisitely wrought, and has on one side a bust of Minerva in half relief, surrounded by the words: "Institut Impérial de France, Constit., Art. lxxviii." The other side has inclosed in a massive wreath the following words: "Académie des Sciences, Prix d'Astronomie, fondation Lulande, James Craig Watson, 1869."

AURORA BOREALIS. A very brilliant aurora was seen, April 18th, over a large part of England, and scientific observers communicated many interesting facts with regard to it to the press. Mr. A. S. Herschel enjoyed a good view of the phenomenon at Carlisle, and records his impressions of it at length. The first manifestation of the aurora took place at 9 P. M., in a clear sky, in the form of a bright, white arch, divided into low streamers. From this presently arose tall but faint shafts of light, which, later on, changed to a deep rose-color, and from that to rich crimson, some of them having the intensity of fire. The light at one time was so great that Mr. Herschel could read his watch and correct his notebook by it. The spectrum of the red streamers, like that of the white, he examined with a small pocket spectroscope, and found in it only the usual bright greenish line which was very vivid in every phase of the display. The author thus describes the spectacle at its height, and thence to the close:

Both the arches and streamers were stationary, and presented no sensible tendency to motion, however slow, while they were visible. At this time the

brightening streamers began to flicker in their light. Waves of light, rising from the north, succeeded each other rapidly, and appeared to flow swiftly over them toward the zenith. Arch after arch was visible as the waves passed over them, and fitful gleams among the auroral masses overhead shot to and fro there, like flashes of summer lightning. The rays and wisps of the corona, and belts or fragments of the aurora overhead were rendered especially luminous by these discharges. Farther from the zenith, in the north, the waves rose smoothly and steadily, with a motion that was indeed very swift, but it was yet quite distinctly discernible, and more easily distinguishable there than in their passage overhead. The arches or belts of the streamers appeared to be lighted up instantaneously, as they were reached. Although their intermixture in the north made it very difficult to decide this clearly, yet the upward progress of the waves there was very evident, while no such ascending movements could be distinguished in the east and west quarters of the sky. The belts and arches stretching toward those parts of the horizon, through the zenith, and past, or through the corona, forming the termination of the aurora toward the south, were constantly lighted up by momentary flashes, extending almost simultaneously along their whole lengths. The brightness of the flashes in those parts of the aurora which included the corona, and arches or lateral branches extending from it toward the magnetic east and west points, is easily accounted for by the belts and clusters of streamers in those positions being seen "on edge," or "end on," extremely foreshortened by perspective, so that the increase of light along their whole heights appeared to be concentrated, when the waves overtook them, to a single flash. The motion of the waves must be extremely swift, as they scarcely occupied more than a second in passing from an altitude of about 45° to the zenith. Supposing that (as the best observations of them have frequently agreed in showing) the heights of auroral arches, and of the bases of auroral streamers, are usually about 100 miles above the earth's surface, the velocity of propagation of these waves of electrical disturbance from north to south cannot have been much less than 100 miles per second. Such a prodigious velocity cannot possibly be ascribed to waves in the upper atmosphere driven by winds among its rarefied strata, to which the sweeping motion of the light waves, apparently wafted by gusts among the streamers, otherwise bore a very singular resemblance.

At 9^h 34^m some of the strongest waves passing across the corona lighted up a faint white arch in the south, extending from Arcturus across the northern part of Virgo to the head of Leo, several degrees in width. At 9^h 37^m, when the wave-disturbance, after continuing in full activity for about ten minutes, ceased as rapidly as it began, this arch and the corona still remained faintly visible; but, together with all the other arches and streamers of any altitude lately lighted up by the waves, they soon vanished, and the whole appearance of the sky at 9^h 40^m was about the same as when the aurora was first seen. At 9^h 48^m, however, the northern sky was again crowded in every part with thin, white streamers scattered indiscriminately over it, like groves of slender fir-trees on a hill-side, among which one very sharp and bright ray shone for a few seconds, springing from the horizon to a considerable altitude in the west. At 9^h 55^m all conspicuous streamers had disappeared, leaving only a general glow, among the brighter parts of which the wave-disturbance began again, and with less intensity than before, but with the same regularly ascending motions; the undulations succeeded each other without intermission until 10^h 5^m; they then ceased, and the faint appearances of the aurora, which were visible after this time, were, so far as I could observe them, until half-past eleven o'clock, of a very insignificant and inconspicuous character.

The Aurora and Sun-spots.—In a long and elaborate paper published in the *American Journal of Science*, Prof. Elias Loomis follows up his previous important contribution to our knowledge of the relation between sun-spots and auroral displays. The conclusions at which Prof. Loomis had formerly arrived were these: that auroras, at least in the middle latitudes of Europe and America, are subject to a law of periodicity; that their grandest exhibitions are repeated at intervals of about sixty years; and that there are also fluctuations less distinctly marked, which succeed each other at an average interval of ten or eleven years, the times of maxima coinciding quite remarkably with the maxima of the solar spots. The author improves the opportunity to test his conclusions offered by the publication of Prof. Loewering's new and very complete catalogue of auroras. The following table exhibits the dates of the maximum and minimum of auroral disturbances and sun-spots, at periods of eleven or twelve years, from which it will be seen that the coincidence is remarkable:

DATE OF MAXIMUM.		DATE OF MINIMUM.	
Solar Spots.	Aurora.	Solar Spots.	Aurora.
1778	1778	1874	1794
1789.5	1787.5	1798	1798
1804	1804.5	1810	1811
1816.5	1818	1823	1823
1829.5	1830	1833.5	1834.5
1837	1840	1843.5	1843.5
1844.5	1850.5	1856	1856
1863	1859.5	1867	1867
1870	1870.5		

Prof. Loomis comments as follows:

In only two cases is there any sensible difference in the dates of minimum of the two classes of phenomena. Also in the year 1839 only one aurora was recorded, so that this year presents no real discrepancy in the dates of minimum.

From 1833 to 1835 the number of auroras was quite small, so that for the entire series of observations we may say there is an almost complete identity in the dates of minimum of the two classes of phenomena.

With regard to the dates of maximum there is some discrepancy, which in 1840 amounts to three years. It is also noticeable that the magnetic curve remained nearly stationary from 1836 to 1838, while the sun-spot maximum was sharply defined, suggesting the idea that the connection between the auroral and magnetic curves is more intimate than between the auroral and sun-spot curves.

The discrepancy in 1850 is apparently due to a double or triple maximum of the auroral curve. The New Haven observations show a maximum in 1848, and another in 1852; the combination of all the observations shows three maxima, viz., in 1848, 1850, and 1852, the greatest frequency being in 1850; that is, there was a prolonged period of unusual auroral displays extending over several years.

A comparison of both maxima and minima indicates that the critical periods of the auroral curve occur a little later than those of the sun-spot curve, and that the auroral maximum is frequently more prolonged than the sun-spot maximum.

The author also introduces a comparison between the auroral curve and the magnetic curve, with results still more surprising. The following table shows the comparatively close

agreement between the dates of maximum and minimum of the two classes of phenomena:

DATE OF MAXIMUM.		DATE OF MINIMUM.	
Magnetic Declination.	Aurora.	Magnetic Declination.	Aurora.
1777	1778	1784	1784
1787	1787.5	1799.5	1798
1803	1804.5	wanting.	1811
1817.5	1818	1823.5	1823
1829	1830	wanting.	1834.5
1838	1840	1844	1843.5
1848.5	1850.5	1856	1856
1860.5	1859.5	1867	1867
1870.5	1870.5		

Prof. Loomis adds:

We perceive that the auroral maximum generally occurs a little later than the magnetic maximum, the average difference amounting to one year; while the time of auroral minimum either coincides with the magnetic minimum or slightly precedes it, the average difference amounting to about half a year.

On the whole, there seems to be no room for question that the number of auroras seen in the middle latitudes of Europe and America exhibits a true periodicity, following very closely the magnetic periods, but not exactly copying them. In particular we notice that during those periods in which the range of the magnetic declination was unusually small, as from 1794 to 1824, auroral exhibitions were extremely few in number and insignificant in respect of brilliancy.

If now we inquire as to the probable connection between these three classes of phenomena, we cannot suppose that a small black spot on the sun exerts any direct influence on the earth's magnetism or electricity, but we must rather conclude that the black spot is a result of a disturbance of the sun's surface which is accompanied by an emanation of some influence from the sun, which is almost instantly felt upon the earth in an unusual disturbance of the earth's magnetism, and a flow of electricity developing the auroral light in the upper regions of the earth's atmosphere. The appearances favor the idea that this emanation consists of a direct flow of electricity from the sun. If we maintain that light and heat are the result of vibrations of a rare ether which fills all space, the analogy between these agents and electricity would lead us to conclude that this agent also is the result of vibrations in the same medium, or at least that it is a force capable of being propagated through the ether, with a velocity similar to that of light. While this influence is traveling through the void celestial spaces, it develops no light; but, as soon as it encounters the earth's atmosphere, which appears to extend to a height of about 500 miles, it develops light, and its movements are controlled by the earth's magnetic force, in a manner analogous to the influence of an artificial magnet upon a current of electricity circulating round it.

AUSTRALIA AND NEW ZEALAND. The area and population of the British colonies in Australia, and of New Zealand, were, according to the latest official accounts, as follows:

COLONIES.	Area.	Population.	Year of Census.
New South Wales..	208,000	501,590	April, 1871
Victoria.....	88,451	731,529	" 1871
South Australia....	280,000	*188,995	" 1871
Queensland.....	658,250	120,390	" 1871
Western Australia..	975,804	24,755	March, 1870
Northern Territory.	523,531		
Tasmania.....	26,215	90,328	Feb., 1870
New Zealand.....	106,250	*294,028	" 1871
Total.....	8,077,701	1,960,530	

* Inclusive of natives.

The population of Victoria was estimated, on March 31, 1872, at 755,676; that of South Australia, in December, 1871, at 189,018; that of Western Australia, in December, 1871, at 25,353; that of Tasmania, in December, 1870, at 100,765. The revenue, expenditures, and public debt of the colonies were, in 1871, as follows:

COLONIES.	Revenue.	Expenses.	Public Debt.
New South Wales...	£2,575,308	£2,602,979	£10,606,030
Victoria.....	3,825,195	3,754,569	11,921,800
South Australia....	785,489	759,339	1,944,700
Queenstown.....	799,005	779,631	4,106,378
Western Australia...	98,132	113,046	none.
Tasmania.....	230,000	235,000	1,328,400
New Zealand.....	1,007,000	1,250,000	7,360,616
Total.....	9,320,129	9,493,964	37,270,924

The following table exhibits the imports and exports:

COLONIES.	Imports.	Exports.
New South Wales.....	£7,737,361	£7,990,088
Victoria.....	12,341,995	14,557,820
South Australia.....	2,160,864	2,582,358
Queenstown.....	1,577,339	2,533,732
Western Australia.....	196,010	199,240
Tasmania.....	761,273	685,088
New Zealand.....	4,078,193	5,282,064
Total.....	28,895,060	34,830,400

Railroads and telegraphs continue to make rapid progress in the Australian colonies. The latest dates published concerning them were:

COLONIES.	Railroads.	Telegraph Lines.
New South Wales.....	408	5,247
Victoria.....	383	3,398
South Australia.....	126	1,617
Queenstown.....	218	1,811
Western Australia.....		
Tasmania.....	43	
New Zealand.....	44	2,159

Religious Denominations.—The number of churches and chapels in New South Wales was, in 1872, 924; that of ministers of religion, 501. The average attendance at public worship was 176,596, in 1871. According to the enumerations of 1861 and 1871, the religious divisions of the inhabitants was as follows:

DENOMINATIONS.	Numbers.		Proportion p. 1000.	
	1861.	1871.	1861.	1871.
Church of England....	159,326	229,343	456	456
Presbyterians.....	34,692	49,123	99	96
Wesleyans.....	23,682	36,277	67	72
Congregationalists....	5,111	9,253	16	18
Other Protestants.....	9,868	15,499	28	30
Roman Catholics.....	99,198	147,627	283	293
Hebrews.....	1,759	2,305	4	4
Mohammedans and Asiatic Creeds.....	12,909	7,455	37	17
All others.....	8,398	7,112	10	14

The Church of England had 277 places of worship; the Free Church of England, 1; the Roman Catholics, 196; the Presbyterians, 17; the Wesleyan Methodists, 223; the Primitive Methodists, 39; the Congregationalists, 19; the United Methodists, 4; the Baptists, 16; the Unitarians, 1; the German Lutherans, 2;

the Christians, 3; the Jews, 2; the Christian Israelites, 3. There were 1,232 churches and chapels, and, with the exception of a small vote of £50,000 made by the colonial government, and available by all denominations, they are entirely self-sustaining. Besides these, 825 school-houses, and 577 other buildings, making a grand total of 2,134 buildings of all descriptions, are used for public worship. The places used for worship by the several denominations were as follows: Church of England, 200 churches, 99 school-houses, and 117 dwellings or public buildings; Free Church of England, 5 churches, 3 school-houses, 1 dwelling; Presbyterians, 256 churches, 92 school-houses, and 141 dwellings; Free Presbyterians, 5 churches, 3 school-houses, 1 dwelling-house; Wesleyans, 315 chapels, 30 school-houses, 70 dwellings; Primitive Methodists, 79 chapels, 5 school-houses, 15 dwellings; United Methodist Free Church, 26 chapels, 9 school-houses, and 4 dwellings; Methodist New Connection, 3 chapels; Bible Christians, 46 chapels, and 29 dwellings; Congregationalists, 63 chapels, 12 school-houses, and 12 dwellings; Baptists, 43 chapels, 35 dwellings; Evangelical Lutherans, 19 chapels, 8 school-houses, 17 dwellings; Unitarian Christians, 1 chapel; Welsh Calvinistic Connection, 7 chapels, 1 school-house, and 1 temporary place of worship; Christians, or Disciples of Christ, 18 chapels, 17 dwellings; United Brethren, or Moravians, 2 chapels, 1 school-house; Catholic Apostolic Church, 1 chapel, 2 temporary places of worship; Roman Catholic Church, 137 chapels, 58 school-houses, 115 occasional places of worship; Christian Israelites, 4 chapels, 1 school-house; Jews, 4 synagogues, 1 school-house, and 5 occasional buildings. The census returns of 1871 thus classify the people according to their creeds: 257,835 Episcopalians (including 5,997 Protestants not otherwise defined); 112,983 Presbyterians; 94,220 Wesleyan Methodists; 18,191 Independents, or Congregationalists; 16,311 Baptists; 10,559 Lutherans, or German Protestants; 8,540 Christians (Church of Christ); 93 Moravians and United Brethren; 1,432 Calvinists and Calvinistic Methodists; 333 members of the Society of Friends; 1,016 Unitarians; 1,028 other Protestants; 170,620 Roman Catholics (including 352 Catholics not otherwise defined); 278 Catholic Apostolic Church; 332 Greek Church; 285 Israelites and Christian Israelites; 79 Mormons; 357 Jews; 18,392 of other sects, including 17,650 pagans; 2,737 of no denomination; 2,150 of no religion; 5,560 unspecified; 9,965 who object to state their religion.

In South Australia, the aggregate number of churches and chapels is upward of 568, with seats for nearly 110,067 persons, exclusive of a large number of buildings and rooms occasionally used for devotional purposes. The membership of the different denominations, according to the census of 1871, with the places of worship, was as follows:

DENOMINATIONS.	Population connected with it.	Churches and Chapels.	Other Houses of Worship.
Church of England.....	50,840	14	40
Roman Catholics.....	28,624	40	5
Wesleyans.....	27,075	146	51
Lutherans.....	16,412	42	..
Presbyterians.....	13,371	16	..
Congregationalists.....	5,329	20	14
Unitarian Christians.....	7,708	64	19
Primitive Methodists.....	8,237	100	31
Baptists.....	8,782	27	..
Christian Brethren.....	1,188	8	..
Methodists, New Connec.....	..	..	..
Jews.....	563	1	..
Unitarians.....	663	1	..
Moravians.....	210	1	..
Friends.....	92	1	..
New Jerusalem Church.....	137	..	..
Jews.....	435	1	..

Fourteen thousand four hundred and seventy-nine persons were not classified, or objected to state their persuasion.

The creeds of West Australia are thus represented: Church of England, 14,619; Roman Catholics, 7,118; Wesleyans, 1,347; Independents, 882; Presbyterians, 529; Baptists, 54; Jews, 62; 147 are returned as of no denomination. The religious denominations of Tasmania were thus recorded, according to the census of February, 1870: Church of England, 53,047; Church of Rome, 22,091; Church of Scotland, 6,644; Free Church of Scotland, 2,420; Wesleyan Methodists, 7,187; Independents, 3,981; Baptists, 931; Jews, 232; Society of Friends, 92; Mohammedans and pagans, 4; other sects, 2,759. The number of churches and places of worship owned by the several denominations was as follows: Church of England, 100; Roman Catholics, 32; Church of Scotland, 25; Wesleyans, 52; Congregationalists, 54; Primitive Methodists, 15; United Free Methodists, 1; Friends, 1; Jews, 1.

AUSTRIA, CAROLINE AUGUSTA, Dowager-Empress of, fourth spouse, and widow of the Emperor Franz I., and step-grandmother of the reigning Emperor, Franz Joseph, daughter of the late Maximilian Joseph I., King of Bavaria, born at Munich, February 8, 1792; died in Vienna, February 8, 1873. She was married to Franz I. October 29, 1816, and crowned Queen of Hungary, September 25, 1825. The Emperor died, March 2, 1835, leaving her a widow at the age of forty-three. After the accession of the present Emperor, he was, until her death, very much under the influence of his mother, the Archduchess Sophia Wilhelmina, a sister of the subject of the present notice, who, though thirteen years younger, possessed an imperious will, and brooked no interference with her behests. It was much to the honor of the late Empress-Dowager, that, during her thirty-eight years of widowhood in the imperial capital, she steadfastly sought to maintain peace in the imperial household, often yielding what she might justly have demanded, to attain it.

AUSTRO-HUNGARIAN MONARCHY, an empire in Central Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded

his uncle, the Emperor Ferdinand I., on December 2, 1848. Heir-apparent to the throne, Archduke Rudolphus, born August 21, 1858. Area of the monarchy, 240,348 square miles; population, according to the census of 1869, 35,901,435. The area of cis-Leithan Austria (the lands represented in the Reichsrath) is 115,908 square miles; population in December, 1872, estimated at 20,727,164. It was distributed among the different crown-lands as follows:

Countries.	Inhabitants in 1872.
Austria below the Enns.....	2,037,249
Austria above the Enns.....	737,655
Salzburg.....	152,595
Styria.....	1,150,164
Carinthia.....	321,387
Carniola.....	406,117
Littoral.....	597,656
Tyrol.....	882,315
Bohemia.....	5,207,688
Moravia.....	2,030,975
Silesia.....	525,932
Galicia.....	5,629,361
Bukovina.....	526,001
Dalmatia.....	452,510
Total.....	20,727,164

Of the total population, 10,073,110 were of the male, and 10,654,054 of the female sex. Emigration from Austria,* compared with that of other countries, is insignificant. The total number of emigrants in 1871 was only 6,169, while that of immigrants was only 687. The number of marriages in 1870 was 199,083, of births 826,882, of deaths 598,581.

The value of the agricultural productions was, in 1871, estimated at 1,411,500,000 florins. The most important articles are: wheat, 111,400,000 fl.; rye, 156,700,000 fl.; oats, 101,500,000 fl.; potatoes, 117,400,000 fl.; hay, 204,500,000 fl.; straw, 115,000,000 fl.; barley, 76,700,000 fl.; maize, 22,500,000 fl.; beets, 64,700,000 fl.; wine, 36,700,000 fl.; milk, 88,300,000 fl.; butter, cheese, and other kinds of milk-products, 66,800,000 fl. The total value of the mineral production (exclusive of rock-salt) was, in 1871, 32,800,000 fl.; rock-salt, and the production of the smelting-houses (exclusive of the salt-works), 25,600,000 fl.; the aggregate value of rock-salt, and the production of the salt-works, 22,000,000 fl.: 82,618 persons were employed in the mines, 14,014 in the smelting-houses, and 9,720 in the salt-works.

The number of beet-sugar manufactories in 1871 was 225, and the number of beets used 21,500,000. Of the 2,390 breweries, the largest number was in Bohemia, 959; Upper Austria, 277; Galicia, 255; and Moravia, 251. Of the distilleries, 40,435: in Tyrol, 11,800; Styria, 6,800; Upper Austria, 4,900; the Littoral, 4,100; Carinthia, 3,700; Salzburg, 3,800.

The commerce of the Austro-Hungarian monarchy, in 1871, was as follows:

	Imports.	Exports.
Austro-Hungarian Customs Union, without precious metals.....	Florins. 340,750,111	Florins. 467,583,098
Austro-Hungarian Customs Union, precious metals.....	59,392,876	55,487,390
Customs Territory of Dalmatia.....	8,631,860	7,824,972

* All the following statistics refer to cis-Leithan Austria, unless the contrary is expressly stated.

The First Danube Steam-Navigation Company had, in 1871, 154 steamers and 552 towing-boats: income, 10,900,000 florins; expenditures, 12,100,000 florins. The Steam-Navigation Company of the Austrian Lloyds had, in 1871, 66 steamers: income, 10,800,000 florins; expenditures, 9,600,000 florins.

The Greek Oriental Church of cis-Leithan Austria had hitherto no archbishop, while in the territory of the Hungarian crown there was one for the Roumanian nation (Hermannstadt), and one for the Servians (Carlovitz). In order to complete the organization of this church in the districts represented in the Reichsrath, the Austrian Government erected, in January, 1873, the Greek bishopric of Czernowitz in the Bukowina into an archbishopric, to which henceforth the Greek Church in cis-Leithan Austria is subordinate. The Greek Oriental Church has, besides the archbishop, 2 bishops (both in Dalmatia), 316 parishes, and 14 convents, and 2 theological institutions at Czernowitz and at Zara, in Dalmatia. The Roman Catholic Church has 7 archbishops of the Latin rite, 1 of the Greek, and 1 of the Armenian, 25 bishops of the Latin and 1 of the Greek rite, 6,567 parishes of the Latin and Armenian, and 1,427 of the Greek rite; 463 convents and houses of male, and 290 of female orders. The most numerous among the male orders are: the Franciscans (110 houses); Capuchins, 88; Dominicans, 35; Minorites, 31; Piarists, 29; Benedictines, 19; Regular Canons (Augustinians), 17; Brothers of Mercy, Bernhardines, and Jesuits, each 16. Among the female orders, the most numerous are the Sisters of Charity (103 houses); the Franciscan Tertiarians, 38; the School Sisters, 49; the Benedictines, 17.

The system of public schools is in course of reconstruction, on the basis of the law of May 14, 1869. The duty of erecting *Volkschulen* devolves on the communes. All children have to attend school from their sixth to their fourteenth year. During the year 1870-'71, there were 46 Bürgerschulen and 13,769 Volkschulen; in all, 18,815 public schools. With regard to the language used in schools, 6,040 were German, 5,495 Slavic, 1,007 Italian, 1,248 mixed, and 25 others. The number of Kindergarten connected with the schools was 53. The number of children of school-age was 1,287,803 boys and 1,295,375 girls of an age from six to twelve, and 413,197 boys and 413,725 girls of an age from twelve to fourteen. The number of attendants was, at the Bürgerschulen, 9,757 boys and 4,377 girls, at the Volkschulen, 932,740 boys and 873,836 girls. The number of gymnasia (colleges) in 1873 was 93, with 24,429 pupils (among whom were 9,658 Germans, 5,394 Czechs, 5,239 Poles, 1,502 Ruthenes, 1,255 Servians, Croats, and Slovenes; there were besides 47 Realgymnasias, with 7,042 pupils, and 63 Realschulen, with 18,349 pupils; 43 commercial academies and schools, with 349 teachers and 7,050 pupils. The universities of

Austria had, during the winter of 1872-'73, the following number of professors and students:

UNIVERSITIES.	Professors.	Students.
Vienna.....	206	3,756
Grätz.....	70	963
Innsbruck.....	46	663
Prague.....	115	1,755
Lemberg (1872).....	82	1,031
Cracow (1872).....	112	662

The list of societies in 1871 embraced 462 stock-companies, 703 singing-societies, 50 societies for the promotion of commerce and industry, 18 art-unions, 270 agricultural societies, 188 musical societies, 473 political societies, 219 Schützen-companies, and 294 Turnvereine, 146 literary, and 524 charitable societies; total number of societies reported, 8,999. The number of savings-banks in 1871 was 211, the number of depositors, 1,027,048; the total amount of deposits, 341,137,880 florins.

The Austrian Reichsrath, which had adjourned on December 20, 1872, again assembled on January 15, 1873. The most important work of the session was the discussion of the law on electoral reform which the Government had promised to introduce.* The consent of the Emperor to the ministerial draft was given on February 10th; on February 14th the draft was distributed among the members of the Reichsrath, and on March 4th the Committee on the Constitution made its report. The Liberal majority of the Reichsrath, all the time fearing that reactionary influences might again prevail at court, and at the last moment dispose the Emperor against the reform, concluded to hasten, as much as possible, the adoption of the ministerial draft. Although the Committee on the Constitution, in whose name the most prominent leader of the Liberal majority, Dr. Herbst, had drawn up the report, desired to improve the Government bill by a number of amendments, they thought it safer to secure for the present a sympathizing ministry, and therefore fully concurred in the bill, with the insignificant exception of raising the future number of members of the Reichsrath from 351 to 353. The vote on the bill was taken on March 6th. As the Czechic Federalists from Bohemia and Moravia had not taken part at all in the work of the Reichsrath, and the deputies of the Catholic party from German Tyrol had laid down their ultimatum, the opposition to the ministry was chiefly limited to the Polish deputies. The efforts to conciliate them by compromises had failed. After a declaration from their leader, Grocholski, they left the hall before the vote, and the electoral reform was carried by all against two votes. It was agreeably noticed that several deputies of Galicia, and all of Dalmatia, voted with the majority. The Herrenhaus likewise

* The principal features of the law proposed by the Government are mentioned in the AMERICAN ANNUAL CYCLOPEDIA for 1872, p. 51.

adopted the law, on March 27th, by a large majority, after Prince Starhemberg and Baron von Lichtenfels had pointed out its significance. The signing of the bill by the Emperor called forth enthusiastic demonstrations of joy, especially in the German districts; the town council of Vienna was among the first to express to the Emperor profound gratitude. The German Liberals regard the adoption of the electoral reform as the beginning of a new political era in Austria. Henceforth, they think, it will be impossible for the provincial Diets, where the Federalists and Reactionists have their chief strength, to conspire, with any hope of success, for the overthrow of the Constitution by means of a two-thirds majority.

The second important point of the ministerial programme for the session was the *Angleich* with Galicia (the regulation of its provincial rights). Although the Government believed itself to have gone in its concessions to the Poles as far as the care for the union of the empire would allow, it concluded, in view of the electoral reform just carried, to make a new attempt at conciliating the more moderate Polish party, and of withdrawing it from the influence of the ultra-nationalists under the influence of Grocholski. The Emperor, therefore, on April 22d, in order to give, as he expressed himself, to Galicia "a proof of his continuing care," appointed the burgomaster Ziemiakowski, of Lemberg, as minister without portfolio. The new minister had not taken any part in the negotiations for effecting the *Angleich*, and was known to be a friend of direct elections; like the present Prime-Minister of Hungary, he had been, during the revolutionary period of 1848-'49, condemned to death for his complicity with the revolutionary schemes. As the session was closed on April 24th, there was no time for observing the immediate effect of this appointment upon the Reichsrath. In his closing speech, the Emperor, referring to the electoral reform, expressed his hope that, "on this ground all the tribes and parties may unite in order to work in the spirit of reconciliation, in noble competition, and with united strength for the greatness and the honor of the Fatherland, and for the prosperous development of constitutional life."

The meetings of the two delegations of Austria proper and of Hungary for the discussion of the common affairs of the Austro-Hungarian monarchy were opened on April 2d. The Emperor, and the presidents of the two delegations, expressed their satisfaction with the present prospects of a long peace, which they believed to have been strengthened by the meeting of the Emperors of Austria, Germany, and Russia, in Berlin.

On April 20th, the eldest daughter of the Emperor, Arch-duchess Gisela (born July 13, 1856), was married to Prince Leopold of Bavaria (born February 9, 1846), second son of Prince Luitpold. In a note addressed to the

prime-minister, Prince Auersperg, on April 18th, the Emperor expressed his "thanks for the numerous proofs of warm interest" which, on this occasion, he had received from all classes of the population.

Although the Austrian ministry was, in general, looked upon as the exponent of the principles of the Liberal party, it pursued in some, and particularly in religious questions, a conciliatory policy, which gave great offense to the majority of the Liberal party. The Minister of Public Worship, Von Stremayr, in a circular to the public schools, increased the religious exercises of the pupils. They must go four times a year to confession, and be conducted by the teachers to the mass and to the public procession of Corpus Christi. The teachers protested, and the standing committee of the Austrian Teachers' Association, in April, asked the minister to withdraw his circular, as irreconcilable with Article 14 of the fundamental law of the state, according to which no body can be forced to take part in a religious act. The minister replied to this remonstrance by the deposition of Herr Bobies, the director of a "Bürgerschule" at Vienna, and the chief of the Austrian Teachers' Association, and directed the school authorities of Austria to suppress all public expressions of sympathy with Bobies. The ministry approved of the circular of Stremayr, and dissolved several political associations which had passed resolutions in favor of Bobies, or asked for the separation of church and state. Specially distasteful to the Liberals was a rescript of the Minister of Public Instruction, in which he restored to the Jesuits, who are professors of the theological faculty of the University of Innsbruck, the right to be elected into the Academic Senate. While the ministry thus offended a portion of the Liberal party, it fully conciliated the more moderate portion of the Catholic party, who, under the leadership of the Cardinal-Archbishop of Vienna, separated from the Ultramontane section of the party, abandoned a direct opposition to the Austrian Constitution, and only demanded an outspoken Austrian basis for the new constitutional life of the empire. Other bishops were less conciliatory: thus, the Bishop of Olmütz, Prince of Furstenberg, refused to notify the parish priests that the certificates of the deaths of Italian subjects must henceforth be drawn up according to a schedule agreed upon by the Governments of Austria and Italy, on the ground that this agreement between Austria and Italy was an encroachment upon the rights of the Apostolic See.

The foreign policy of the Austrian Government was more acceptable to the Liberal party. The visits of the Empress of Germany to Vienna in June, and of the Emperor in October, called forth very enthusiastic popular demonstrations in favor of the establishment of intimate relations between Austria and Germany. The reception of King Victor Emmanuel by

the Emperor and people of Austria was likewise very cordial, although many members of the imperial family, and of the high aristocracy, left Vienna in time in order to avoid meeting the excommunicated king.

During the summer months all the political parties were active in their preparations for the first general elections according to the new electoral law which took place in the latter part of October. The parties favorable to the present Constitution obtained a considerable majority; the German Liberals gained several seats in Bohemia over the Czechs, and in Galicia the Ruthenians, who are favorable to the Constitution, gained ground against the Polish nationalists. The session of the Reichsrath was opened on November 4th. On the day before, a meeting of all the feudal federalist and Catholic opponents of the Constitution was held, which was attended by Czechs, Slovenes, a few Poles, the feudal deputies and the Catholic deputies of the rural districts of Tyrol, Styria, and Upper Austria. It was resolved to leave every deputy of the opposition at liberty to enter the Reichsrath or not, and it was expected that nearly all, except forty-five Czechs and Moravians, would enter. On November 5th, the Emperor Francis Joseph delivered the opening speech, in which new laws, for the protection of commerce from the disastrous consequence of panics, and for the new regulations of religious affairs, were announced. The Reichstag elected Dr. Rechbauer, one of the leaders of the German Liberals, president, and Vidulich (Dalmatian) and Pillersdorf (German) vice-presidents. In the address to the Emperor, which the Reichstag adopted in reply to the speech from the throne, it expressed the hope that the principle of complete liberty of religion and conscience would be carried through, and that the sovereignty of the state governments would be guarded against any encroachments on the part of Church boards.

The International Exhibition at Vienna was opened by the Emperor on May 1st, in the presence of the Empress and several grand-dukes and grand-duchesses, the Crown-prince and the Crown-princess of Germany, the Prince of Wales and Prince Arthur of Great Britain, the Crown-prince of Denmark, and of from 30,000 to 40,000 people. The prime-minister, Prince Auersberg, represented the Exhibition as the Emperor's own work, for which the people of Austria offered to him their heartfelt thanks. In the name of the city in Vienna, the Emperor was thanked by the burgomaster, Dr. Felder. It was generally observed that there was less enthusiasm among the masses of the people than at any of the preceding great international exhibitions. With the exception of the German and the English departments, the preparations were far from being completed. This was especially the case in the department of the United States, the commissioners of which had been sus-

pended by President Grant, in consequence of grave charges brought against them. The number of countries represented at the Exhibition was larger than on any of the preceding exhibitions, as not only the countries of Europe and America were represented, but also the empires of the East, which of late have begun to establish closer commercial and diplomatic relations with the Christian world. China, Japan, India, Persia, Morocco, Tunis, had sent their contributions, no less than Turkey and Egypt. The International Jury of the Exhibition began its labors on June 16th. Each of the twenty-six groups into which the objects of the Exhibition were divided had its own special jury, and the presidents of the several groups formed a Council of Presidents. The President of this Council was Prince Joseph Adolphus Schwarzenberg; Vice-Presidents, the Netherlandish ambassador, Baron Heeckeren, the Brazilian ambassador, Baron Porto Seguro, and the Swedish ambassador, Count Piper. The series of literary International Congresses which were held in connection with the Exhibition began on April 16th, with an International Patent Congress. The Congress declared in favor of efficient patent laws for the protection of inventors. It also resolved that only inventors should obtain patents; that patents should be issued for, or extended to, a term of fifteen years; that a complete publication of patents should be obligatory. An international patent law was declared to be greatly desirable, and the Austrian Government promised to use its diplomatic influence in behalf of such a law. An executive committee, with the General-Director of the Exhibition, Baron Schwarz, at its head, was appointed to carry out the intentions of the Congress. The Congress of Agriculture and Forestry was attended by representatives of a large number of countries, among them of Turkey and the South American republics. The first subject of discussion was the protection of useful birds, and a resolution was passed to ask the Austrian Government to secure the protection of the birds which were useful to agriculture, by means of international treaties. According to the opinion of the Congress the capture and the killing of birds which eat insects are to be unconditionally forbidden; a list of the birds which ought to be protected is to be made; the birds which mostly feed on grain should be protected during the time from March 1st to September 15th; the capture of birds by means of slings, traps, and lines, is to be totally forbidden; as well as the robbing of birds' eggs and young birds, the destruction of nests, and the sale of birds, living or dead, which eat insects. The Austrian Government was also requested to exert itself in behalf of bringing about an international agreement among the states for improving the statistics of agriculture and forestry. A series of six resolutions was adopted, suggesting measures for the

better protection of forests. The Congress of Cultivators of Flax, which was closed on August 1st, resolved to establish a standing committee embracing all the states cultivating flax, which is to act as an international organ for the improvement of flax. The next International Congress will be held at Ghent. The third International Medical Congress was opened on September 1st, by Archduke Rainier, after whom, it was addressed by Prof. Rokitanaky. For every subject embraced in the programme, a special president was elected. The first subject discussed was the question of vaccination, Prof. Jaccoud, of Paris, the founder of the Medical Congress, being in the chair. The Congress declared itself in favor of the compulsory introduction of vaccination. The discussion on syphilis was presided over by Prof. Warlomout, of Brussels, and resulted in the adoption of twelve resolutions, defining the measures which the states should adopt with regard to prostitution and syphilis. A special meeting of physicians of insane asylums recommended the appointment of a special committee on insanity in the Ministry of the Interior of every state. With regard to the question of quarantine, the Congress declared in favor of abolishing all land and river quarantines, and a thorough revision of the ocean quarantine. The fourth International Medical Congress will be held at Brussels. A Pomological and Oinological (of wine-culture) Congress was opened on October 3d. The two sections held separate sessions. The oinological section resolved to appoint an international committee which is to fix common names for all kinds of grapes, and to hold annual meetings. The Congress will meet again at the close of September, 1874, at Treves, and, on motion of a French member, the Government will be invited to send representatives. The most interesting and the best attended of all the International Congresses held in connection with the Exhibition was the Private International Conference for voluntary aid in times of war. A number of resolutions, relative to improved methods of transporting the wounded from the field of battle and on railroads, were adopted. One resolution recommended that, in war, every soldier be supplied with bandages, in order that, in case of his being wounded, the necessary material is sure to be on hand. An International Monetary Conference, held under the presidency of August Eggers, of Bremen, declared in favor of the gold standard, in preference to the pure silver or double (gold and silver) standard, and recommended the introduction of an international chief gold-piece (of 7½ grammes refined gold), and an international monetary unit (the metrical dollar of 1½ grammes, divided into 100 cents). The Meteorological Congress, at which the states of Europe, the United States, and China, were represented, was presided over by Dr. Jelinek, of Vienna. A number of resolutions aiming

at the improvement of meteorological observations were passed, and the establishment of a central meteorological institution was declared to be desirable. The governments of the several states are to be requested to cause the meeting of a new International Meteorological Congress three years hence. A standing committee for carrying out the resolutions of the Congress was elected, consisting of seven members. The International Jury, after finishing their labors, presented to the Director-General of the Exhibition, Baron von Schwarz-Senborn, through the Council of Presidents, a magnificent farewell address, in which they express the most grateful recognition of his eminent services. The members of the jury declared that, after having made themselves familiar with all the details of the Exhibition, they consider it an event of so vast importance for the progress of civilization, that its results can at present not yet be fully appreciated, but they are sure that, for all time to come, it will secure to the talented director a famous name in history. The document is signed by seventy-two members of the jury. On August 16th, the city of Vienna gave a splendid banquet to the prominent men of the Exhibition in the city of Vienna, which was followed by popular festivities in the park of the Exhibition, attended by more than 100,000 persons. The solemn announcement of the prizes which had been awarded by the International Jury took place on August 18th, the birthday of the Emperor of Austria. As the Emperor was absent, his eldest brother, the Archduke Charles Louis, acted in his place. As the large rotunda of the palace of exhibition was too much crowded with articles of the Exhibition, the festivity took place in the imperial riding-school. The number of "Diplomas of Honor" which were awarded was 419, of which Germany received 100; Austria, 81; France, 80; Great Britain, 28; Switzerland, 22; Russia, 20; Belgium, 20; Italy, 19; North America, 9; Sweden, 9; Spain, 8; Netherlands, 6; Japan, 5; China, 2; Brazil, 2; Turkey, 2; Denmark, 2; Portugal, 1; Roumania, Greece, and Egypt, one each. The diploma of honor was designed to bear the character of a peculiar distinction for eminent merits in the domain of science, and its applications to the education of the people, and the advancement of the intellectual, social, and material welfare of men. Nine diplomas were given to the United States. Besides these diplomas of honor, 70 "Medals for Progress," 177 "Medals of Merit," 2 "Medals for Fine Arts," 5 "Medals for Good Taste," 28 "Medals for Coöperators," and 145 "Diplomas of Merit or Honorable Mention," were awarded to citizens of the United States. The Exhibition closed on November 2d, on which day it was visited by 139,037 persons. The aggregate number of persons who had visited the Exhibition was reported at 7,254,000.

B

BADGER, Rev. MILTON, D. D., a Congregationalist clergyman and writer, for thirty-eight years an active and efficient secretary of the American Home Missionary Society, born in Coventry, Conn., May 6, 1800; died in Madison, Conn., March 1, 1873. From early youth he gave evidence of the possession of remarkable talent, and, having united with the Congregational Church at the age of sixteen, he was encouraged to obtain an education with a view to the ministry. He entered Yale College in 1819, and graduated with distinguished honor in 1823. After spending a year in teaching in New Canaan, Conn., he began his theological studies in Andover Theological Seminary, but in 1826 removed to New Haven to become a tutor in Yale College, and finished his preparation for the ministry in the Yale Divinity School. He was licensed to preach in 1827 by the New Haven East Association, and was ordained January 3, 1828, as pastor of the South Congregational Church in Andover, Mass. His parish included the Theological Seminary and Phillips Academy, and his congregation was, as a body, highly intelligent and intellectual. In this field of labor he remained for seven years, gaining with each year in the confidence of his church and of his brethren in the ministry, by his earnest devotion to his work, his eloquence as a preacher, and his tact and skill as a pastor. In 1835 he was called from his parish to become the associate secretary of the American Home Missionary Society, and, though it completely overthrew all his previously-formed plans for usefulness and activity, and placed him at once outside of all opportunities of advancement and prominence in the ministry of his denomination, he felt it his duty to accept the position. He was soon, by the resignation of Dr. Peters, placed in the position of senior secretary, and for thirty-four years he performed the often difficult and trying duties of his office with a faithfulness, an assiduity, a comprehensiveness of purpose, and a skill in the management of all its details, almost incredible. He possessed a vigorous constitution, but the vastness and constant pressure of his work proved too much for even his iron frame, and in 1869 he was compelled, by the manifestations of the disease which finally ended his life, to withdraw from active duties, though he continued until the last to be the wise and affectionate counselor of his associates and successors in office. He received the degree of D. D. from Middlebury College in 1844.

BAIRD, THOMAS D., PH. D., LL. D., a distinguished scholar, Principal and Professor of Mental and Moral Philosophy in Baltimore City College, born in Ohio, July 14, 1819; died

in Baltimore, Md., June 9, 1873. He was the second son of the late Rev. Thomas D. Baird, a distinguished Presbyterian clergyman and religious journalist of Pittsburg, Pa. He was educated at Jefferson College, Pa., where he took both the regular degrees of Bachelor of Arts and Master of Arts. In 1839 Prof. Baird came to Baltimore, having been called to the chair of Mathematics in the then Baltimore High School, a chartered institution, but in no way connected with the system of public education. He continued in this position for some years, and in the mean time studied law with the late William Schley. In 1844 he was admitted to the Baltimore bar, but never practised law, preferring the more congenial duties of an instructor of youth. In 1847 he became a Professor of Mathematics in Marshall College, Pennsylvania, where he remained until 1850, when he returned to Baltimore, and opened a private classical and mathematical school. In 1854 he was again called to the West, having been elected a professor in Westminster College, Missouri. He returned to Baltimore in 1857, when he was elected Principal of the High School (now Baltimore City College), a position he continued to hold, under all the changing administrations, up to his death. About the time he took charge of the Baltimore City College he was made Doctor of Philosophy by Concordia College, Missouri, and some years later Doctor of Laws by Centre College, Kentucky. For many years Dr. Baird was Secretary of the Maryland Historical Society, member of the Board of Managers of the Maryland Bible Society, a member of the Children's Aid Society, a member of the Evangelical Alliance, and a ruling elder in the Central Presbyterian Church. Prof. Baird was distinguished as a successful teacher of youth—one who always united gentleness with firmness, and so won the sincere affection and respect of his pupils. He had many warm friends in Baltimore, who deeply mourned the loss of such a man, and in educational circles his death was especially felt.

BAPTISTS. I. REGULAR BAPTISTS IN AMERICA.—In the table on the following page are given the statistics of the Baptist Churches in the United States, as published in January, 1873.

The number of Associations was 858; number of Sunday-schools (so far as reported), 9,412; of officers and teachers in the same, 88,085; of scholars, 653,742. The entire amount of benevolent contributions reported for the year 1872 was \$4,926,527.04. The nine theological institutions reported 40 instructors and 419 students; the 34 colleges and universities, 256 teachers, 3,814 male and 446

female pupils; the 51 academies, seminaries, institutes, and female colleges, 264 teachers, 1,687 male and 2,469 female pupils.

The anniversaries of the Northern Baptist societies in the United States for 1873 were held at Albany, N. Y., from the 19th to the 23d of May. The meetings of the *American Baptist Missionary Union* were held May 19th and 20th. The income for the year from all sources was reported to have been \$216,100.70, or about \$8,000 more than the income of any previous year. The two Woman's Societies, the Eastern and the Western, had contributed toward the support of women laboring in foreign countries the sum of \$22,155.94. Including the sum of \$18,758.07 applied to the payment of the debt of the previous year, the schedule of appropriations of the Union had reached \$258,170.84. The accounts thus still showed a balance against the Union of \$42,069.64. An amendment to the constitution, the design of which was to make the annual meeting a delegated body instead of a mass meeting of all the members who should choose to attend, had been proposed at a previous meeting, and laid over for the consideration of this one. It was acted upon unfavorably by the Board of Managers, who passed a resolution that they did "not consider it expedient at present to make any change in the terms of membership of the Union." A resolution of sympathy with the undertaking by the Southern Baptist Convention of a mission in Rome was adopted.

The Board of Councillors of the *American Baptist Educational Commission* met at Albany, May 20th. The Executive Committee, in their report, presented two questions as demanding consideration and action: 1. Whether the time had arrived for entering upon the work of aiding in the founding of institutions of higher learning in States and regions requiring exterior aid; 2. Whether it would be expedient to make the approaching national centennial anniversary the occasion of a simultaneous movement in all the States for the endowment of institutions of learning? The report of the committee was adopted, and its suggestions were approved by the Board of Councillors. In their resolutions on the points presented, the Councillors pledged themselves to sustain the Executive Committee in their efforts "to collect and appropriate funds for nourishing and sustaining, during periods of special exigency, unendowed or inadequately endowed institutions for higher learning in States requiring exterior aid," according as in the judgment of the committee such special exigencies may require. The Board also approved the suggestion of the Executive Committee to have the approaching national centennial anniversary celebrated by a simultaneous movement in all the States and Territories for the endowment of Baptist institutions of learning, and invoked the cooperation of all the churches, societies, and other Baptist bodies in this movement.

The anniversary of the *American Baptist Home Missionary Society* was held at Albany,

May 21st. The report showed the total receipts for the year from all sources to have been \$248,593.44, and the expenditures \$245,733.09. Three hundred and thirty-seven missionaries had been supported in the Northern Department, of whom one hundred and sixty-seven had labored west of the Mississippi River, and thirty-two on or beyond the Rocky Mountains. They returned 2,117 persons baptized, and 25,538 in the Sunday-schools. The number of missionaries supported in the Southern States and Mexico was one hundred and three; forty-one churches had been organized in this part of the field, 2,977 persons baptized, and between 700 and 800 freedmen and students were under instruction.

The anniversary of the *American Baptist Bible and Publication Society* was held at Albany, May 22d. The entire receipts of the Society in all departments for the year ending March 1, 1873, were \$403,823.82, or \$17,454.87 larger than the receipts for any previous year. Of this amount, \$324,201.36 were received in the business department, being \$11,203.58 less than were received the previous year in the same department; while \$79,770.46 were received in the missionary department, being \$28,658.45 more than the receipts of the previous year. Twenty thousand dollars of the amount of the receipts reported had been contributed especially for the Bible and Sunday-school work in Italy. The publications of the Society for the year included 544,623 copies of books and tracts, six periodicals, a series of Bible-lessons, and the *American Baptist Year-Book*. The effort to unite this Society with the American and Foreign Bible Society having failed, a request was presented from the Executive Board of the latter Society that this one resume its former name of the "American Baptist Publication Society." An amendment to the constitution to give effect to the desired change was adopted.

The annual meeting of the *American Baptist Historical Society* was held at Albany, May 23d. The report showed the receipts for the year to have been \$477, and the expenditures \$367. The number of additions to the library during the year was: of books, 221; of pamphlets, 1,226; of manuscripts (chiefly historical), 83. Autograph letters of eminent Baptists, likenesses, and views of Baptist public buildings, had been procured. The library contained, at the time the report was made, more than 6,000 volumes, many of which were rare.

The second annual report of the two *Women's Baptist Missionary Societies* shows the receipts of the Eastern Society (office at Boston), for the year ending with March, 1873, to have been \$22,629, and those of the Western Society (office at Chicago), for the same time, to have been \$7,368. The Eastern Society supports nine women missionaries, one native preacher, and four Bible-women, and helps support 15 schools, in which are more than 500 scholars. The Western Society supports

six women missionaries and four Bible-women, and helps support five schools.

The twenty-fourth anniversary of the *American Bible Union* was held in New York, October 1st. The object of this Society is to effect new translations of the Bible. The Books of Joshua (revised by Dr. Bliss) and Judges (revised by Drs. Hackett and Bliss) had been printed during the year, and were reported ready for circulation. The Book of Isaiah (revised by Dr. Conant) was in press. Forty-nine thousand one hundred and sixty-seven bound copies of the sacred Scriptures had been given to churches, Sunday-schools, benevolent organizations, and individuals, during the year. Six hundred copies of Spanish Scriptures had been given away for circulation in Mexico, and one hundred copies for circulation in the city of New York. Copies of the Scriptures had also been distributed in the Italian, German, and Welsh languages. Dr. Conant, under whose supervision a large part of the work of revision is done, is also one of the members of the American Committee who are coöperating in the work of revision which is going on under the direction of the English Convocation of Canterbury. The receipts of the Union for the year were \$63,707.51, and its expenditures \$65,481.41.

The eighteenth meeting of the *Southern Baptist Convention* was held at Mobile, Ala., beginning May 8th. The Rev. J. P. Boyce, D. D., of South Carolina, was elected president. The *Board of Foreign Missions* reported that their gross receipts for the year had been \$51,023.82, of which \$22,263 were for the chapel in Rome. The amount of \$3,834.49 had been contributed to the latter sum from the Northern States, and \$1,240.20 from England and Scotland. The entire receipts were more than double the average receipts of the preceding six years. It was remarked with regret that, contrary to the understanding expressed at the preceding meeting of the convention, the extraordinary interest taken in the chapel at Rome had diverted attention and contributions from the general fund. The effort to buy a house at Rome had not, as yet, succeeded. The Rev. Dr. G. B. Taylor had been appointed missionary to Italy, and was expecting to sail at an early day. The Board had already stations at Rome, Civita Vecchia, Bari, Bologna, Modena, Carpi, and La Tour, with 277 members.—The direct receipts of the *Board of Domestic Missions* for the year closing with the time of the meeting of the convention were \$27,199.20. Considerable sums had also been employed under the direction of the different associations in what was styled "State work." These sums and the balance from the previous year added to the direct receipts reported by the Board, made the whole amount, subject to use during the year in the work of home missions, \$46,784.35. The work of the Board had been prosecuted to the extent of its financial

ability. Fifty-five missionaries had been employed in the domestic field, and twenty-two with the Indians; seventy missionaries had been employed by societies coöperating with the Board, making in all 155 effective laborers. A statement was made in connection with the report of the Board of Domestic Missions regarding the Indians with whom the Board labors. It appears from this that there are among the Creeks and Seminoles 39 churches, with 28 native ministers, and 2,100 members. Two hundred and eight Sunday-schools had been conducted in connection with the domestic and Indian missions, in which were included 7,879 teachers and pupils.—The *Sunday-School Board* reported that its receipts had been \$16,449.25. The number of Sunday-schools in the Southern States was 4,535, with 126,690 officers and teachers, and 210,960 scholars, of whom 3,277 had been baptized during the year. The subject of the removal of the Theological Seminary at Greenville, South Carolina, was again considered. This institution was not originally connected with the Convention, but its trustees having resolved, conditionally, to remove it to Louisville, Ky., asked the advice of the convention on the subject. The removal of the school, as proposed by the trustees, was approved. During the debate on this measure it was stated by the president of the convention, in illustration of the need of a thorough theological institution in the South, that there were in that section only 5,000 Baptist ministers for 13,000 churches. The next meeting of the convention is to be held at Jefferson, Texas.

The following is a summary of the statistics of the *Baptist Churches of Nova Scotia, New Brunswick, and Prince Edward Island*, as reported at the meeting of their convention, August 23, 1878:

PROVINCES,	Churches,	Baptisms,	Members.
Nova Scotia.....	168	419	18,021
New Brunswick.....	136	316	10,516
Prince Edward Island.....	14	32	820
Total.....	318	767	29,357

The net increase during four years was 81 churches, and 2,642 members.

The Baptist Convention of *Nova Scotia, New Brunswick, and Prince Edward Island*, met at Windsor, August 23d. Its functions are chiefly confined to the oversight of the educational interests and foreign missionary operations of the Baptist churches of these provinces. The seminary at Fredericton, N. B., had been suspended through the effects of the new school law of New Brunswick. The academy at Wolfville, N. S., was prosperous. The endowment funds of Acadia College actually on hand amounted to \$40,000. The Board of Foreign Missions had been endeavoring since 1871 to obtain a sufficient amount of funds to justify them in establishing an independent foreign mission. Their efforts had

at length met with success, so that they had at the meeting of the convention a sum, including what had been collected by the Woman's Foreign Missionary Society, amounting to about \$12,000. They had determined to establish the mission among the Karens of Siam. Seven missionaries had been accepted for this work, and were formally recognized on the 25th of August. A proposition has been made on behalf of the Baptists of Ontario to unite with the Baptists of the Lower Provinces in foreign mission effort.

The *Baptist Home Missionary Convention of Ontario and Quebec* met at Brantford, Ont., October 14th. The treasurer reported the receipts of the year to have been \$5,289. Forty-three missionaries had been employed during the year. The Society was sustaining a foreign mission, with two stations, among the Telugos of India. It had connected with it two missionaries, 38 assistants, of whom 21 were native preachers, and 14 school-teachers. A theological seminary had been established at the Ramapatam station, which had already an endowment fund of \$50,000. The Ongola station reported 25 school-houses, which were attended by 300 pupils. A Home Missionary Society had been organized at this station.

II. FREE-WILL BAPTISTS.—The following are the statistics of the Free-will Baptist Church, as given in the *Free-will Baptist Register*:

YEARLY MEETINGS.	Number of Churches.	Ordained Preachers.	Number of Communicants.
New Hampshire.....	130	116	9,660
Maine Western.....	67	65	4,102
Maine Central.....	107	97	6,451
Penobscot.....	115	70	4,075

Ontario.....	16	4	686
Nine Quarterly Meetings not connected.....	42	85	872
Churches not connected.....	23	18	393
Liberty Association, Mt. Vernon, Indiana.....	27	16	1,605
Shelby Association, Shelbyville, Indiana.....	14	9	578
Total, 35 Yearly Meetings.....	1,504	1,155	70,576

The number of quarterly meetings is 161; of licensed preachers (not ordained) 114. The tables show an increase from 1872 of seven quarterly meetings, 41 churches, and 666 members, and a decrease of 77 ministers. The number of colleges, seminaries, and literary institutes, under the care of the Free-will Baptists, is given as 21.

The *Free-will Baptist Register* for 1874 gives also the following names and numbers of "some of the various associations of Baptists in America, which, in doctrine and polity, are in general agreement with the Free-will Baptists: "

ASSOCIATIONS.	Churches.	Members.
New Brunswick Conference.....	29	7,000
Nova Scotia Conference.....	29	3,000
Chattahoochee United Baptist Associ'n, Ga.	13	534
American Free Baptist Association, Tenn. and N. C.....	11	460

Sabine County, Missouri, Association.....	10	507
Northwest District, Ill., Quarterly Meeting of General Baptists.....	6	243
Union Free Baptist Association, Tenn.....	19	817
Arkansas Association of Baptists.....	7	153

The anniversaries of the benevolent societies connected with the Free-will Baptist denomination in the United States were held at Farmington, N. H., October 7th, 8th, and 9th. The *Education Society* had, during the year, aided seventy young men studying for the ministry, or ten more than they had aided during the preceding year. The number of such young men in the various institutions of learning under the care of the denomination, seemed to be increasing. The report of the Society dwelt upon the question of the manner in which the demand for a more efficient and adequate ministry could be met.

The *Home Missionary Society* reported an improved financial condition. Its receipts during the year were \$10,126.61, or about \$2,000 more than that of the preceding year. It reported a permanent fund of \$4,478.30. The debt of the Western Board had been paid, as well as the other old debts. About 25,000 members had been gathered into the churches among the freedmen. Calls for help had been received from Kansas, Alabama, Texas, Oregon, and other parts of the country. The entire receipts of the *Foreign Missionary Society* during the year, including bequests, were \$15,778.68. Three times that amount, says the report, would hardly provide for improving the opportunities that were constantly offered. The number of missionaries in the field were insufficient for the work to be done. Three

missionaries had been sent out during the year, and three more had offered themselves.

The *Woman's Missionary Society* had received \$538.40, nearly all of which was still unappropriated. The subject of sending a young woman to India as a missionary was under consideration. The *Sunday-School Union* reported \$484.90 in the treasury. Most of this amount is so invested that the interest meets current expenses. Reports had been received from only 147 schools.

The *Free Baptist General Conference of Nova Scotia* met at Session Hill, Yarmouth County, September 11th. The convention represents 30 churches, which have about 3,000 members. The number of ministers is 13. The number of additions to the churches by baptism during the year was 158. The Board of Missions of this conference have for five years undertaken the support of one missionary in the foreign field. For the first four years their expenses outrun their receipts. They then adopted the plan of assessing the churches, which met with such success that they were able in the last year to pay their expenses and the deficiencies of the preceding four years.

The *Free Baptist Conference of New Brunswick* met at St. John, October 13th. Of the 36 ministers, 28 had had regular pastoral work, two had been engaged in mission-work, and six had not been employed. The unwavering adherence of the denomination to its old position, in favor of open communion, was unanimously affirmed by resolution. The hearty sympathy of the conference was given to the movement for the prohibition of the sale of intoxicating liquors. The number of additions to the churches by baptism, during the year, was 465.

III. SEVENTH-DAY BAPTISTS.—The fifty-ninth session of the *Seventh-Day Baptist General Conference* met at Westerly, R. I., September 10th. The Rev. L. O. Rogers was elected moderator. The committee appointed by the previous General Conference to prepare a paper on the subject of communion, not having consulted, had each prepared an independent paper, embodying his own views on the subject. A committee was appointed to prepare, for consideration at the next session of the Conference, a plan for denominational reorganization, to embrace the following items: 1. A definite basis of representation, upon which all delegates to the Conference shall be elected; 2. If necessary, such revision of the constitution of the Conference as will enable it to carry forward, legally, all operations which may hereafter be intrusted to it; 3. Such definite information as will show how the Missionary, Tract, and Education Societies, may legally transfer their works and property to the Conference, if they shall at any time determine so to do. Twenty-seven of the churches had made no report on Sabbath-schools; the other churches reported 55 Sabbath-schools, with 447 teach-

ers, and 4,459 scholars. The Conference recommended the holding of Sabbath-school teachers' institutes and Church normal-classes, the publication of a monthly Sabbath-school journal, and an exposition of the International series of lessons.

IV. **TUNKERS.**—The annual meeting and love-feast of those German Baptists who are commonly called *Tunkers* or *Dunkards*, took place at Dale City, Somerset County, Pa., June 21st and 22d. The meetings were held in a barn. Between six and seven hundred delegates were present, representing most of the States and Territories, and the British Possessions. The questions discussed concerned minute points of ritual and daily life. Among them was: "Is it sinful for a ministering brother at any time to occupy a stand elevated above the level of the surrounding space occupied by the assembly, for reading the Scriptures, praying, or preaching?" A decision rendered in 1866 was renewed; it left the matter with the conscience of the ministering brother, but advised all to "try to keep down." Upon the question, "Is it according to the Gospel, or is it conforming to the world, when brethren subscribe for railroad-stock?" the meeting decided that such subscription was not condemned by the Scriptures, but advised the brethren "not to engage in it, because it brings them into a position in which they are liable to violate their Christian principles." The possession of musical instruments in their houses by members was declared "unauthorized by the Gospel, and clearly opposed to the old order of the Brethren and the doctrine of self-denial." The advice of the meeting was given against the use of hymn-books with notes in public worship, on the ground, as avowed by the speakers, that their use might lead to choir-singing.

V. **MENNONITES.**—The movement for the emigration of Mennonites from Russia to the United States began to assume definite shape in 1873. Several commissioners representing different neighborhoods of the Russian Mennonites came to America during the year, and visited different parts of Canada and the United States for the purpose of selecting lands to settle upon. Inducements to settle upon lands belonging to them were offered by the Government of Canada and by the Union Pacific and Northern Pacific Railroad Companies. One of the Mennonite deputations visited the settlements on the Red River, in Manitoba, but were not favorably impressed. The same deputation afterward visited parts of the Western States and Territories of the United States. Selections were made by different parties, of tracts in Kansas and Dakota. On the 26th of September, thirty-six families had reached the United States on their way to their new homes. Many of the families intending to emigrate are without the means of paying the expenses of such an undertaking, and the Russians have issued an appeal in behalf of them.

The American Mennonites have taken up their cause, and are endeavoring to furnish all the money that will be needed for the help of the poorer members. It is understood to be the policy of those who intend to emigrate, not to settle in a body, but to divide into smaller neighborhoods, so that they may be brought into more close contact with the American people. It is now thought that the whole body of Mennonites in Russia, who number about 40,000 souls, will, in the end, remove to this country.

VI. **PARTICULAR BAPTISTS IN GREAT BRITAIN AND IRELAND.**—The meetings of the *Baptist Union of Great Britain and Ireland* are held in the spring and in the autumn. The spring meeting for 1873 was held in London, beginning on April 28th. The committee appointed at the autumnal session of 1871, to prepare a revised constitution, presented their report. The name, "The Baptist Union of Great Britain and Ireland," was definitely adopted as the title by which the body should be designated. The discussion of other provisions of the constitution was continued during this meeting, and at the autumnal meeting. The custodians of the building-fund reported at the spring meeting, that the income of this fund for the year had been \$45,000 greater than that of the preceding year. The income of the Tract Society was \$13,000. The funds are disbursed mostly through the Missionary Society. The autumnal meeting of the Union was held at Nottingham, and commenced October 18th. The published reports of the proceedings relate chiefly to the addresses which were delivered. Dr. Underhill, the chairman, delivered an address on "Christian Missions." An address on "Ritualism," by the Rev. Dr. Landels, attracted much attention, and was widely commented upon in Great Britain and the United States.

The *Home and Irish Mission* is an organization constituted by the union of the Baptist Home Missionary Society (founded in 1779) and the Baptist Irish Society (founded in 1814), which took place in 1865. It sustains about eighty Evangelists in Ireland. Its work in England is conducted chiefly through the county associations. Its income for the year ending in April, 1873, was more than \$3,000, and slightly exceeded the income of the previous year.

The anniversary of the *English Baptist Missionary Society* was held May 1st. The income of the Society from all sources for the year had been £38,611, being a larger amount than had been received in any year except 1870. Twelve hundred and fifty-three churches, including 150,000 members, had contributed to the funds of the Society. The missions of the Society are established in India, Ceylon, Western Africa, China, the West Indies, and on the Continent of Europe. Of these, the missions in India are the most important. The Santhal mission in India ex-

hibited features of especial interest. Dr. Wenger, after more than twenty years' labor, had completed the Sanscrit Bible, in five volumes. A New Testament in Bengalee had been finished, and the revision of the Old Testament in that language was far advanced. Missionary conferences had been held by the missionaries in Calcutta and Agra, besides the general conference of missionaries of all denominations, which was held at Allahabad. An increase of the Christian community in India was mentioned. Twenty-four members had been added to the churches in Ceylon, and the number of schools had increased from 24 to 31. The whole number of Baptist churches in Jamaica was given at 107, and of members, communicants, 23,367. Sixty-two members had been added to the churches in Norway. The other European missions of the Society are in Brittany and at Rome.

VII. GENERAL BAPTISTS OF ENGLAND.—The one hundred and fourth annual meeting of the *General Baptist Association* (New Connection) of England was held at Burnley, Lancashire, June 23d to 26th. Of the 162 churches connected with the Association, 139 returned 21,231 members, 1,160 baptisms, and a net increase in membership of 316. Twelve new chapels had been built, and eight schools established. The Association passed resolutions in favor of the disestablishment of the Church of England, approving the principle of international arbitration, asking that the public-houses be entirely closed on the Sabbath, condemning the Educational Act, and the course of the Government on that subject, and expressing preference for non-sectarian education.

The New Connection of General Baptists separated from the old body of General Baptists in 1770. They differ from them in that they hold views classed as "Evangelical," on certain articles of faith, in which the old body inclined to Arian and Socinian views. The old body of General Baptists is still in existence; but it has only a few churches, some of which, however, are liberally endowed.

BARING, THOMAS, M. P., an English banker and member of Parliament, born in 1800; died in London, November 19, 1873. He was the second of the brothers who have made the house of Baring Brothers so famous in finance, Lord Northcote (Sir Francis Baring), who died September 6, 1866, being the eldest. He was educated at Winchester School, and early engaged in mercantile and banking pursuits, in connection with his father and brothers. He was a member of Parliament from Great Yarmouth from 1835 to 1837; in 1843 was defeated by 156 votes in a canvass for the representation of the city of London, and in 1844 was elected from the borough of Huntingdon, which he continued to represent until his death. In politics he was a Conservative, and it is said was offered by Earl Derby in 1852, and again in 1858, the chancellorship of

the Exchequer, but declined the appointment. He was chairman of Lloyd's, the great corporation of marine underwriters, from 1830 to 1868, when he resigned. He was one of the Commissioners of the International Exhibition of 1862, and Deputy-Lieutenant of London until his death. Mr. Baring was held in high esteem by all who knew him, for his probity, his high sense of honor, and his wise and sagacious judgment in all financial questions.

BARRINGER, DANIEL MOREAU, an American political leader and diplomatist, born in Cabarras County, N. C., in 1807; died at Greenbrier, White Sulphur Springs, Va., September 1, 1873. He graduated from the University of North Carolina in 1826, studied law, and was admitted to the bar in 1829. He was elected the same year a member of the State Legislature, in which position he continued for a number of years. He was a member of the convention which met in 1835 to amend the State constitution, and also represented his State in Congress from 1843 to 1849. In the latter year he was appointed minister to Spain by President Taylor. He was continued in that mission by President Fillmore, but resigned after serving four years. He then traveled extensively in Europe, and on his return home was elected to the State Legislature. In 1855 he declined a reelection, retired to private life, and devoted himself to literary studies and pursuits. Mr. Barringer was elected a delegate to the Peace Congress of 1861, and also to the Philadelphia National Union Convention in 1866.

BARSTOW, REV. ZEDEKIAH SMITH, D. D., a Congregationalist clergyman and educator, born in Canterbury, Conn., October 4, 1790; died in Keene, N. H., March 1, 1873. He was of Revolutionary stock, his father having been one of the soldiers of Gates's army, who was a witness of Burgoyne's surrender. His early years were passed upon his father's farm, but his zeal for learning impelled him to study, and at the age of nineteen he had fitted himself for college so thoroughly as to enter Yale College in an advanced standing. He graduated with high honors in 1813, studied theology under President Dwight, and was principal of Hopkins's Grammar School in New Haven from 1813 to 1816, when he was chosen tutor and college chaplain of Hamilton College, Clinton, N. Y., where he remained two years and was offered a professorship, but declined it. In March, 1818, he preached at Keene, N. H., and in July of that year was ordained pastor of that church, in which office he remained till his death, fifty-five years later. In every department of intellectual and Christian activity Dr. Barstow was during those fifty-five years one of the foremost men in the State. He continued to teach the classics after his settlement at Keene, and the late Chief-Justice Chase was one of his pupils. He was for thirty-seven years a trustee of Dartmouth College, and always active in its councils; secretary for many years

of the General Association of New Hampshire, a corporate member of the A. B. C. F. M., a trustee of Kimball Union Academy, a trustee and secretary of Keene Academy until his death, and prominent in all the educational and religious movements of the day. In 1868 and 1869 he was a member of the New Hampshire Legislature, and chaplain of that body. He published many sermons, dissertations, and essays, and was, till near the close of his long life, a frequent contributor to religious and theological reviews and periodicals. Dartmouth College conferred on him the degree of D. D. in 1849.

BELGIUM, a kingdom of Europe. Leopold II., King of the Belgians, was born April 9, 1835; son of King Leopold I., former Duke of Saxe-Coburg, and of Princess Louisa, daughter of King Louis Philippe of France; ascended the throne at the death of his father, December 10, 1865; was married August 23, 1858, to Marie Henriette, daughter of the late Archduke Joseph of Austria, born August 23, 1836. Offspring of this union are three daughters: 1. Louise, born February 18, 1858. 2. Stephanie, born May 21, 1864; Clémentine, born July 30, 1872. Her apparent is the brother of the King, Philip, Count of Flanders, born March 24, 1827, lieutenant-general in the service of Belgium; married April 20, 1867, to Princess Marie of Hohenzollern-Sigmaringen, born November 17, 1845; offspring of the union is a son, Baldwin. The king has a civil list of 3,300,000 francs.

The area of this kingdom is 11,878 square miles; population on January 1, 1871, according to an official calculation, 5,087,105; at the last census, in 1866, it was 4,827,833. About 54 per cent. of this population belong to the Flemish, and 44 per cent. to the Walloon-French nationality; the former prevails in the northern, the latter in the southern provinces. About two per cent. of the entire population belong to other nationalities. The population of the large cities was, on January 1, 1871, as follows:

Cities.	Inhabitants.	Cities.	Inhabitants.
Brussels.....	174,709	Monsieurbaix.....	29,373
Antwerp.....	139,339	Ixelles.....	35,608
Ghent.....	131,793	Scherbeek.....	25,325
Liège.....	108,198	Namur.....	36,237
Bruges.....	45,523	Charleroi.....	31,104
Wavre.....	26,794	St. Nicolas.....	21,657
Verviers.....	26,423	Jesse Ten Noode.....	21,750
Louvain.....	72,314	Monsieur.....	22,354
Tournay.....	51,327	Seraing.....	22,866

Nearly the entire population professes the Roman Catholic religion: the number of Protestants is only about 13,000; the number of Jews, 1,500. Part of the salary of clergyman of all religious denominations is paid by the state, the budget of 1870 appropriating 1,000,000 francs (1 franc a head) to Roman Catholics; 69,000 francs (15 francs a head) to Protestants; and 11,230 francs (7½ francs a

head) to the Jews. At the head of the Catholic Church are one Archbishop (Malines), and five bishops (Bruges, Ghent, Liège, Namur, and Tournay). The number of secular priests is about 5,070, the number of convents and religious houses, 1,814, with 18,000 members (2,901 male, 15,100 female). The Protestant Evangelical Church, which is under a synod, numbered, in 1872, 14 ministers; the Anglican Church, 8; the Jews have a central synagogue in Brussels; three branch synagogues of the first class at Antwerp, Ghent, and Liège, and two of the second class at Arlon and Namur.

In 1830 the number of children attending school was 293,000; in 1845, 429,000; in 1865, 564,000; in 1869, 593,379 (302,869 male and 290,510 female), or 11.7 per cent. of the total population. The number of primary schools was 5,641. There also were, at the end of the year 1869, 1,703 schools for adults, nearly all established by different communities, by manufacturing corporations and private individuals; 92 secondary schools, supported by the state or by the commune (with 15,165 pupils in 1869), among which were 10 royal atheneums, 68 secondary schools, supported by the clergy or by individuals; 4 universities (Ghent, Liège, Louvain, and Brussels—the two former belong to the state, Louvain is a Catholic, and Brussels a liberal institution), each with four faculties—philosophy and literature, mathematics and natural science, law, medicine, to which, in Louvain, a fifth faculty, theology, is added; the aggregate number of students was, in 1869, 1,898. Of technical schools there were, in 1869, 6 theological seminaries, 1 school of civil engineers (connected with the University of Ghent); 1 mining school (connected with the University of Liège), 2 schools of art and manufactures, connected with the same universities, 1 commercial school at Antwerp, 1 agricultural institute at Gembloux, 1 academy of fine arts, 1 military and 1 war school at Brussels, 26 schools of industry, 2 of horticulture, 2 of navigation, 2 conservatories of music. From the official report on the illiteracy of the militiamen, it appears that, in 1869, 24.8 per cent. of the militiamen were unable to read and write; in 1865 the percentage was 29.4; in 1864, 29.6; for 1870 the sum paid by the state for public education amounted to 6,800,000 francs. Hitherto French, though the language of the minority, has maintained a supremacy as the language of instruction, but a strong party is endeavoring to gain a more prominent position for the Flemish language. Their aim is to have more hours of instruction in Flemish, and to make it an obligatory study, while hitherto it has only been optional. It is likewise demanded that a knowledge of this language shall be a qualification for holding public offices, and for professorships in superior and professional schools.

The ministry in 1873 was composed of the following seven members, all belonging to the

* With the adjacent communes (suburbs) Brussels has about 220,000 inhabitants.

Catholic party: 1. Barthélemy Théodore, Count de Theux de Meylandt, President of the Council, born February 25, 1794, Minister of the Interior, 1831, 1832, 1846; and 1848; and Minister of Foreign Affairs, 1894-1840; appointed President of the Council of Ministers, December 7, 1871. Count de Theux is one of the veterans of Belgian independence, and has been, since 1831, a member of the Chamber of Representatives. 2. Jules Malou, Minister of Finance (appointed December 7, 1871). 3. T. de Lantsheere, Minister of Justice. 4. M. Beernaert, Minister of Public Works (October 23, 1873). 5. Minister of War (vacant). 6. C. B. Delcour, Minister of the Interior, formerly professor at the Catholic University of Louvain (appointed December 7, 1871). 7. Baron d'Aspremont-Lynden, Minister of Foreign Affairs (appointed December 6, 1871).

The power of making laws is vested in the Chamber of Representatives and the Senate. The members of both Houses are chosen by the people. The Chamber of Representatives is composed of deputies chosen directly by the citizens for four years. Their number cannot exceed one member for every 40,000 inhabitants, and in 1873 amounted to 124. The Senate consists of the heir-apparent to the throne, and of one-half the number of members composing the Chamber of Representatives; its members are elected for eight years, by the same class of citizens who choose the Chamber of Representatives. According to the new electoral law of May 18, 1872, the right of voting belongs to all Belgian citizens who have completed their twenty-first year of age, and pay direct taxes to the amount of 42 francs 31 centimes. To be eligible, it is necessary to be a Belgian by birth, or to have received *la grande naturalisation*, to be in possession of the civil and political rights of the kingdom, to reside in Belgium, to have attained the twenty-fifth year for the Chamber of Representatives, and the fortieth for the Senate, and for the latter to pay direct taxes, to the amount of 2,116 francs 40 centimes. The members of either Chamber cannot be elected to any salaried office (except that of minister, diplomatic agent, or governor) until one year after the cessation of their term of office, unless convoked by the King earlier. The Chambers meet annually on November 2d; they appoint, at the beginning of every session, their presidents; their meetings are public. Provincial councils have been introduced for the care of provincial interests. Their members are chosen for a term of four years. In order to be eligible, it is necessary, according to the new electoral law of May 18, 1872, to pay taxes to the amount of 20 francs.

Belgium is divided into 9 provinces and 41 arrondissements; at the head of the former are governors, who are assisted by standing deputations of the provincial council; at the head of the latter commissioners, who have the direct control of the communes, with the

exception of the towns with a population of more than 5,000 inhabitants, the burgomasters of which are immediately subordinate to the governor. Of courts there are in Belgium: 1 court of cassation in Brussels, 2 courts of appeal, 26 tribunals of primary jurisdiction, 9 courts of assizes, 204 justices of the peace, 14 commercial tribunals, 1 military court, and 9 provincial martial courts.

In the budget for 1873, the receipts were estimated at 205,985,000 francs; the expenditures at 201,412,211; the public debt (on June 1, 1871) at 684,549,013.

The military system of Belgium, which was partly reorganized by a law of June 3, 1870, is based on conscription, with the right of substitution. The legal period of service is eight years, of which, however, two-thirds are allowed, as a rule, on furlough. The strength of the army is to be of about 100,000 on the war-footing, and of 40,000 in time of peace. Besides the standing army, there is a civil militia—Garde Nationale—embracing all citizens between twenty and fifty years of age, able to bear arms. It is active in communes of more than 10,000 inhabitants; in the others it is not in active service, and can only be mobilized by law. The active militia, in 1872, numbered about 80,000; the active and non-active together about 500,000. The standing army is divided into 4 divisions of infantry, 2 divisions of cavalry, and 3 brigades of artillery. The navy numbers 10 steamers, which, in times of peace, are employed as transport and mail steamers between Ostend and Antwerp.

The progress of the commerce of Belgium, comprising such imports as are consumed within, and such exports as have been produced in the country, is shown by the following table (the value being expressed in million francs):

YEARS.	Imports.	Exports.
1871.....	1,277,000	888,600
1870.....	920,800	690,100
1869.....	903,600	691,600
1868.....	864,400	656,600
Yearly } 1864-1868.....	765,400	618,900
Average } 1854-1863.....	476,800	427,100

The merchant navy, on December 31, 1871, was composed as follows:

	No. of Vessels.	Tons.
Sailing-vessels.....	48	17,392
Steamers.....	12	8,743
Fishing boats.....	263	8,963
Total.....	323	34,967

The following table shows the movement in shipping in the Belgian ports during the period from 1869 to 1871:

YEAR.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
1869.....	5,411	1,470,322	5,326	1,456,965
1870.....	5,658	1,575,293	5,406	1,534,013
1871.....	7,778	2,166,270	7,952	2,182,706

In both Chambers of the Legislature, which were in session at the beginning of the year, the Catholic party was in a considerable majority. A motion made in the Senate, by a Liberal member, to discontinue the office of Belgian ambassador near the Pope, was therefore rejected by a large majority. The new militia law, which extends the time of military service, and aims at restricting the system of substitution, was adopted on May 1st by 55 against 43 votes. At a supplemental election, held in Antwerp on September 16th, the two candidates of the Catholic party were elected by 400 majority.

On September 10th, an International Conference of Jurists was opened at Ghent for the purpose of preparing a codification of the international law, and of defining the principles by which international arbitrations should be guided. Signor Mancini, a member of the Italian Parliament, was elected president. The Conference resolved to found a permanent Institute of International Law, and adopted the constitution of the institute. The next meeting is to be held in 1874, at Geneva. The founders of the institute who were present at the conference are: Asser, of Amsterdam; Besobrasow, of St. Petersburg; Bluntschli, of Heidelberg; Calvo, of Buenos Ayres; David Dudley Field, of New York; De Laveleye, of Liege; Lorimer, of Edinburgh; Mancini, of Rome; Moynier, of Geneva; Pierantoni, of Naples; and Rolins-Jacquemyns, of Ghent.

The regular session of the two Chambers of the year 1873 was opened by the King in person on November 11th. The speech from the throne mentions the friendly relations to all foreign powers, and speaks of the foreign trade of the kingdom as very prosperous; the conclusion of a commercial treaty with France, of a treaty with the Netherlands concerning the construction of a railroad from Antwerp to the Lower Rhine, the actual construction of this road, and the establishment of regular steamship-lines to North and South America, are mentioned as very favorable to the further development of commerce. The great want of improvements in the maritime institutions of the country is dwelt upon, and the opening of negotiations to this end with the municipal council of Antwerp is announced. The diplomatic and consular representation of Belgium in the East is to be completed, and treaties of extradition are to be concluded with several foreign powers. The King then points to the reforms of the commercial legislation, and of the civil code which was in course of progress; announces new laws on insane asylums, and promises a revision of the laws of public instruction. The condition of national industry is described as favorable; that of the harvest of the year unfavorable, though not threatening want; the fine arts are said to have maintained their old reputation at Vienna. Several laws on military affairs are announced, and a review of the public works which have been

completed and which are in the course of construction, is given. The financial condition is very good; in spite of the abolition or reduction of several taxes, the public revenue is increasing every year. The speech then reviews the forty-three years of Belgian independence, and closes with the words: "Calm and prosperous, the Belgium of 1873 can be proud of its past, and with serene confidence look forward toward its future." Both in the Senate and in the Chamber of Representatives the former President and Vice-Presidents were reflected; in the Senate the Prince de Ligne as President, and MM. de Tornaco and Della Faille as Vice-Presidents; in the Chamber of Representatives, M. Thibaut as President, and MM. Tack and Schollaert as Vice-Presidents.

BENEDIX, JULIEN ROBERT, a German comedian, poet, and dramatist, born in Leipzig, in 1811; died at Cologne, September 27, 1873. His early education was desultory and imperfect, but he commenced writing plays while yet a child. These were for the most part modeled on the moral tales of Berquin. At about the age of eighteen he entered one of the Leipzig *gymnasias*, or colleges, and devoted his attention principally to the study of modern languages. In 1831 he joined Bethman's troupe in one of the Leipzig theatres as a comedian, studying music at the same time. In 1833 he made his first appearance as a tenor-singer, and attained considerable reputation in the German cities as a vocalist. In 1834 or 1835 he became manager of the Winter Theatre at Wesel, and started also in that city a literary journal called *The Talker*, to which he contributed largely, both in critical articles and novelettes. At Wesel also he commenced the composition of the comedies which have made his name so famous on the Continent of Europe, having been produced in almost all the theatres of Germany, Austria, Holland, and Belgium, and translated into French for the Parisian theatres. There are more than thirty of these comic dramas, written mostly within the sixteen years 1835-'51, and they have been collected into a series of six volumes. In 1842 Herr Benedix removed to Cologne, and in the university of that city commenced the delivery of a course of lectures on German literature, which he continued for several years. He became director-general of the new Elberfeld Theatre in 1845, and in 1848 inspector-general of the theatres of the city of Cologne. These offices did not diminish his literary activity. He has published, besides the six volumes of his dramatic works, "*Deutsche Volkssagen*" (Popular German stories), 6 vols., 1839-'40; a very lively history of the German War of Independence, entitled "1813, 1814, and 1815," 6 parts, 1841; "*Handbuch für die Reise von Rotterdam bis Strasburg*" (a Hand-book or Guide-book from Rotterdam to Strasburg), 1839; "*Niederrheinischer Volkskalender*" (a Popular Almanac of the Lower Rhine), which was continued from 1836 to 1842; "*Bilder aus*

dem Schauspielerleben" (Scenes in the Lives of the Comedians), 2 vols., 1847; a series of personal histories, "Auseinander," 1850; a comedy, "Junker Otto," and a drama entitled "Die Stiefmutter," both published in 1859.

BIDDLE, CHARLES JOHN, a soldier, lawyer, journalist, and political leader, born in Philadelphia in 1819; died there, September 28, 1873. He was a son of the late Nicholas Biddle, graduated from Princeton College in 1837, studied law and was admitted to the bar in 1840; served as a captain of the Voltigeurs in the U. S. Army in the Mexican War, and was in the actions of Contreras, Churubusco, Molino del Rey, Chapultepec, and the taking of the city of Mexico, and was brevetted major for gallant and meritorious services. At the close of that war he resumed the practice of his profession in his native city. In 1861 he was appointed a colonel in the Pennsylvania Reserve Volunteer Corps, and in October, 1861, was elected a member of the Thirty-seventh Congress, to fill the vacancy caused by the resignation of Hon. E. J. Morris. Before quitting the field to take his seat in Congress he was tendered a commission as brigadier-general, but declined it. After the war he became one of the proprietors and editor-in-chief of the *Philadelphia Age*. His associates in that paper rendered him a tribute of praise as eloquent as it was true: "His scholastic attainments were of the highest order of excellence. He was a bold, vigorous thinker, and a clear, concise, forcible writer. In all he said and did he was conscientious and earnest. He defended truth and denounced error with unflinching bravery. He was insensible to fear when in the discharge of duty. His love of truth, justice, and fair dealing, was of the pure, chivalrous type. He knew but one path to reach an object, and that was the straight road of open, honest word and deed. He was a stranger to guile, duplicity, or deceit. Selfishness was no part of his character. He was entirely free from the taint of worldliness, and, as husband, father, brother, he was ever willing to sacrifice himself for the welfare of others."

BIGSBY, ROBERT, LL. D., F. R. S., F. S. A., an English historian and archæologist, born in Nottingham, England, in 1806; died in London, October, 2, 1873. He was educated at Repton School, and was intended for the law; but, being disappointed in regard to this, turned his attention to antiquarian subjects, and began to gather materials for a history of the town of Repton, which was not finally published till 1854. From 1829 to his death he had devoted himself with great ardor to literary, historical, and antiquarian studies, and had published a great number of works on these subjects. His first book was "A Collection of Original Epigrams," published in 1829. In 1839 he issued a poem, entitled "The Triumph of Drake;" in 1842, a volume of "Miscellaneous Poems and Essays;" in 1848, "Visions of the Times of Old, or the Antiquarian Enthu-

siast;" in 1853, a drama in twelve acts, founded on the slave conspiracy at Malta, in the time of the Knights of St. John, and entitled "Ombo;" the same year, "Baldon Delaval," "The Delaval Correspondence," "My Cousin's Story," and "Scraps from my Note-Book;" in 1855, "Remarks on the Expediency of a National Order of Merit;" a year or two later, "Observations on the Expediency of founding a National Institution in Honor of Literature;" "Irminsula, or the Great Pillar, a Mythological Research," 1864; "A Tribute to the Memory of Scanderbeg the Great," 1866; "National Honors, and their Noblest Claimants," 1867; "A Memoir of the Order of St. John of Jerusalem, from the Capitulation of Malta in 1798." Dr. Bigsby received the degree of LL. D. from the University of Glasgow for literary merit; was granted a pension on the civil list for literary services of \$500 per annum, from 1860 to his death; was an honorary and corresponding member of most of the foreign literary societies; secretary and registrar of the English "Langue" of the Order of St. John of Jerusalem; and had received the decoration of several foreign orders of merit.

BIRTHS, REGISTRY OF. See MARRIAGE LICENSES.

BOGLE, JAMES, N. A., an American painter, born in Georgetown, S. C., in 1817; died in Brooklyn, N. Y., October 11, 1873. Mr. Bogle came to New York in 1836, when but nineteen years of age, and entered the studio of the late Prof. Samuel F. B. Morse, the inventor of the telegraph, but then a painter of distinguished reputation, and the founder of the National Academy of Design. After a period of careful instruction, in which he proved himself an apt pupil, Mr. Bogle opened a studio of his own, and, confining himself to portrait-painting, soon achieved a merited distinction in that department of the art. In 1850 he was elected an Associate of the National Academy, and in 1861 an Academician. For many years his pictures occupied a prominent position at the recurring exhibitions of the Academy, but for a few years past his health compelled him to spend much of his time in the South, and his works appeared less frequently at the annual exhibitions. From a long list of distinguished men whose portraits Mr. Bogle has executed, those deserving of particular mention are Hon. John C. Calhoun, Henry Clay, Daniel Webster, Chief-Justice Jones, Bishop Atkinson, DeWitt Clinton, Rev. Dr. Budington, and many others. As an artist, Mr. Bogle excelled in the accuracy of his drawings, and in achieving that happy medium between strength and vigor of touch, and that delicacy of treatment which, in portraiture, while giving a sufficiently literal representation of the face, always furnished a pleasing picture, even from unpromising subjects. As a colorist, his portraits exhibit thorough knowledge of art in delicacy of gradation or mellowness of tone.

His heads of elderly subjects remind one of the masterpieces of Elliott in richness and warmth of color. In the death of Mr. Bogle, art has lost one of its most faithful interpreters.

BOLIVIA (REPÚBLICA DE BOLIVIA), an independent republic of South America, extending from latitude 10° to 24° south, and from longitude 57° 25' to 70° 30' west. Its boundaries are: north and northeast, Brazil, from which the Rio Paraguay separates it in part southeast; south, the Argentine Republic and Chili; and west, the Pacific Ocean and Peru. The boundary question has not yet been definitively settled with Brazil; but the Pilcomayo has been fixed, instead of the Bermejo, as the northern limit of Bolivian territory in the Gran Chaco.

The area of the republic is estimated at 677,288 square miles; but these figures should not be taken as absolutely correct, no official or regular survey of the country having ever been made. The population is probably not far short of 2,000,000.*

President of Bolivia, Don Adolfo Ballivian (May, 1873); Minister of the Interior and of Foreign Affairs, Dr. M. Baptista; Minister of Finance, etc., Dr. R. Bustillos; Minister of War, General M. Ballivian; and Minister of Justice and Public Worship, Dr. D. Calvo. Archbishop and Primate of the Republic, Dr. S. J. Puch y Solana (1861). There are three bishoprics: La Paz, C. Clavijo (1869); Santa Cruz de la Sierra, F. X. Rodriguez (1870); and Cochabamba (titular bishop), F. M. del Granado.

The regular army comprises 81 generals, 359 commanding officers, 654 subaltern officers, and 2,000 men, at an annual expense of \$2,000,000.

The following tables exhibit the trade with Great Britain for the years 1871 and 1872:

ARTICLES.	Imports for 1871.	Imports for 1872.
Copper-ore	\$197,700	\$117,000
(Iregulose)	299,745	307,740
Guano	375,165	540,750
Nitrate (sulphate)	475,355	602,375
(Iregulose)		3,280,895
All other articles	14,145	28,015
Total	\$1,846,760	\$4,907,385

ARTICLES.	Exports for 1871.	Exports for 1872.
Beer and ale	\$1,000	\$11,925
Cloths, shirtings, etc.	4,000	12,500
Customs	87,805	27,710
Hardware and cutlery		5,005
Machineries	1,635	175
Iron wrought and unwrought	6,775	88,940
Woolens	27,175	17,705
All other articles	18,135	29,940
Total	\$114,985	\$148,980

Besides the above, there is a certain limited trade with the United States and some of the neighboring countries; but, in the absence of official returns, it would be unsafe to attempt

to give even approximate figures. The export of calisaya-bark through the Peruvian ports of Arica and Islay is far from inconsiderable; it amounts in all probability to some \$150,000; but this is not the only article of Bolivian commerce imported or exported through the ports just mentioned, since Peru annually pays Bolivia more than half a million of pesos (dollars), as compensation for duties collected at Arica on Bolivian merchandise *in transitu*.

The annual trade in coca-leaves may be set down as averaging sixty millions.

Almost one-half of the national revenue is raised by a land-tax levied upon the Indian population; the remainder is derived mainly from customs receipts, mines, and other state property.

As a rule, the income is altogether incommensurate with the expenditure, the former being, on an average, about \$5,000,000, while the latter is rarely below \$6,000,000, a state of things which burdens the nation from year to year with a deficit of a million. Bolivian credit, nevertheless, stands fair in the European money market, and, notwithstanding the loan contracted in 1872—£1,700,000—the Bolivian debt is smaller than that of any other South American republic. In November, 1872, the Government presented to Congress a balance-sheet showing the foreign debt to be \$20,115,998.24, and the home debt, \$4,641,174, making a total national debt of \$24,757,072.88.

This state of things, though not comparatively unfavorable, would soon cease if Bolivia had an adequate seaboard, and suitable means of transport from the interior to the coast. But its monster mountain-ranges present a formidable barrier between the productive regions of Bolivia and the Pacific Ocean. That difficulty does not exist on the eastern side of the country, and an easy path to the Atlantic is presented by the numerous gigantic rivers which drain the soil of Alto Perú, as this favored country was once called. In effect, more than two-thirds of the water of Bolivia are emptied into the Madeira, which in turn pours them into the mighty Amazonas. The only obstacle to the navigation of the Madeira by steam are the rapids; but these are so situated as to be easily avoided by means of a railway 150 miles in length. That railway was commenced many months ago; but, the British contractors having failed to keep good faith with the company, the works were temporarily suspended about the middle of the year.

Shortly before the Assembly Extraordinary terminated its session, some of the financial questions submitted for deliberation resulted in such economical measures as reduction of the salaries of public officials, and of the allowances of pensioners. The Government also was authorized to contract a new loan of £1,000,000.

The period immediately preceding the elections for President of the republic was marked

* For the territorial divisions, area, and population of Bolivia, see the ANNUAL CYCLOPEDIA for 1872.

by political effervescence of a grave character. The candidates were: Adolfo Ballivian, Casimiro Corral, Quintin Quevedo, and José M. Randon. Ballivian was elected by a majority of 1,200 votes.

Meantime the mineral wealth of the country, which, during Spanish supremacy in South America, poured into the treasury of Madrid the registered amount of \$2,000,000,000, is likely to sink into comparative insignificance before that of the Caracoles silver-mines, discovered within a few years. The average daily yield is stated to reach 1,000 quintals, with a mean standard of one hundred marks per box. The railway from these mines to the port of Mejillones is rapidly progressing.

The route from Mollendo, *via* Arequipa and Puno, to La Paz, is about 460 miles. The culminating point of this line is 14,668 feet above the level of the sea. The time from Mollendo to La Paz is about five days, and a quintal of freight will cost eight soles. First-class passengers will pay thirty-two soles; second-class, eighteen soles. But what is that cost, compared to the onerous freights unavoidable with the old system of mule-carrying, and by which the sending a ton of merchandise from Europe implies an expenditure of about \$300 for freight, and an average increase of 280 per cent. in the cost of the commodity?

President Ballivian of Bolivia issued a decree, dated Cochabamba, 15th September last, to the effect that an exposition of manufactured articles would take place on the 9th of December. Those who should excel in the works exhibited were to receive a premium of 3,000 Bolivian dollars, to be decided by the President, the prefect, and two members of the Municipal Council.

BONAPARTE, CHARLES LOUIS NAPOLEON (better known as Napoleon III.), ex-Emperor of France, born in the palace of the Tuileries, Paris, France, April 20, 1808; died at Chislehurst, England, January 9, 1873. He was reputed the third son of Louis Bonaparte, ex-King of Holland, and of Hortense Beauharnais, the daughter of Josephine, from whom the ex-King had been for some time estranged. He was, nevertheless, inscribed at the head of the register of the family of the Napoleonic dynasty, the Emperor having recognized Louis and his heirs as successors to the crown in preference to his elder brothers. His birth was announced, through the empire and in Holland, by the roar of artillery. On November, 4, 1810, he was baptized by Cardinal Fesch, the Emperor and the Empress Louise being his sponsors. After Napoleon's return from Elba, his nephew accompanied him to the Champ de Mars, and was there presented to the deputies of the people and the army. After Waterloo the Bonaparte family was banished from France. The father and mother of Louis Napoleon had separated, and young Louis was educated chiefly by his mother, who retained the title of Queen of Holland. His

education was, indeed, desultory, and in many respects imperfect. The family resided in Augsburg, and afterward in Switzerland. When the Revolution of 1830 broke out, Napoleon petitioned Louis Philippe for leave to return to France, but that monarch refused the request. Napoleon and his elder brother having joined the *Carbonari*, took part in the revolutionary movements of 1831 in Italy, and were banished from Papal territory; Napoleon's escape from death or long imprisonment being due to the tact and genius of his mother; his brother died from the indirect effects of his exertions and perils at this time. The death of the Duke de Reichstadt (the son of Napoleon I. by Maria Louisa), in 1832, left him successor to Napoleon I.

He had always been given to study and to writing, and in 1836 he published a work entitled "Political Reveries," and a "Manual of Artillery." His ambition, his name, and his unscrupulous audacity, urged him to enter a career which presents the most wonderful vicissitudes of fortune. Having secured the aid of Colonel Vaudrey and other officers stationed at Strasbourg, he made an attempt on that place, with a few adherents, in October, 1836. He failed, was arrested, and was banished to the United States in November of that year. He embarked for Rio Janeiro, and went thence to New York, and spent some time here in comparative obscurity and idleness.

In 1837 he returned to Europe, attended Queen Hortense in her last illness at Arenenberg, and took refuge in England, where he passed about two years. In 1839 he published his "Napoleonic Ideas" ("*Idées Napoléoniennes*"), which has been described as a "*mélange* of liberal principles and prætorian domination." It is an apology for the *régime* of Napoleon I. The unpopular measures of Louis Philippe encouraged Louis Napoleon to engage in another rash and desperate enterprise. Attended by about fifty partisans and a tame eagle, which was expected to perch upon his banner as the harbinger of victory, he sailed from England in August, 1840, and entered Boulogne, where he obtained but little support, and was speedily arrested by the soldiers who he had hoped would be induced to join his standard. He was tried on a charge of treason by the House of Peers, and, after he had made a speech in his own defense, and professed his devotion to the principle of popular sovereignty, was sentenced to perpetual imprisonment. He was confined in the Castle of Ham, where he pursued his political studies and wrote several political and historical treatises. Aided by his physician, Dr. Conneau, and disguised as a laborer, he escaped from Ham in May, 1846, and retired to England.

The revolution in 1848 afforded him an opportunity to return to France, and thus opened a new field to his irrepressible ambition. In June, 1848, he was elected to the National Assembly for the Department of the Seine. He

was excluded from that body by Lamartine and his colleagues for a time, but took his seat in September, 1848, and became a candidate for the office of President of France. On December 10, 1848, he was elected President for four years, having received 5,562,834 votes. His chief competitor was General Cavaignac, who obtained 1,469,166 votes. He soon became involved in a contest with the Constituent Assembly, the Republican majority of which regarded him with hostility or suspicion. In April, 1849, he sent an army to Rome to intervene in favor of the Pope, who had been expelled by the Republicans. The French army took Rome, and continued to occupy that city until 1866.

The Constituent Assembly dissolved itself, and was succeeded by the Legislative Assembly in May, 1849. Here he encountered a strong opposition. In May, 1850, the Assembly restricted universal suffrage, and ordered that a residence of three years in a commune must be a qualification of voters. A long and violent struggle with the President was terminated by the *coup d'état* of December 2, 1851. Having secured the support of the army, he raised himself to the supreme power. The Assembly was forcibly dissolved, and the leading statesmen were arrested. Legislators and felons, statesmen and vulgar culprits, were huddled together in the same vehicle, and conveyed to prison. Before the end of the year, his acts were ratified by the form of a popular election, and he was chosen President for ten years. A new constitution was adopted in January, 1852, and the legislative functions were divided between two Houses, the Senate and the Corps Législatif, which, however, were so organized that they offered little or no check to his absolute power. The question whether he should take the title of Emperor, was submitted to the vote of the people in November, 1852, when, according to the official report, nearly eight millions voted in the affirmative. He assumed the title of Napoleon III., and, after making overtures to several of the reigning families of Europe for a bride, which were rejected most peremptorily, and in some cases with contempt, he finally married a Spanish lady of great personal attractions, Eugénie Marie de Guzman, Countess de Teba, in January, 1859. Having formed an alliance with England, and publicly announced that his policy was peace, he, in conjunction with his new ally, declared war against Russia in March, 1854, and sent an army to the Crimea. After a long siege, the allies took Sevastopol in September, 1855, and the war was ended by the Treaty of Paris, in March, 1856. Among the events of this year was the birth of the Prince Imperial, Napoleon Eugène Louis.

In 1856 Napoleon and Eugénie paid a visit to England and were received with splendor and enthusiasm, the Queen recognizing them and making them her guests, with great ap-

parent cordiality. In 1858 an attempt was made on the life of Napoleon by Orsini and his fellow-conspirators. One great aim of Napoleon III. appears to have been to reconcile the French people to the loss of liberty by promoting their material prosperity, by splendid public improvements, and by gratifying their passion for military glory. Accordingly, as an ally of the King of Sardinia in the war caused by the aggressions of Austria, he led a large army into Italy in May, 1859. He commanded in person at the battle of Solferino, where the Austrians were defeated, June 24, 1859, and shortly after concluded the peace of Villafranca. Among the results of this war was the cession of Nice and Savoy to France by the King of Sardinia, who had extended his own dominions by the conquest of Lombardy. Peking was captured by the allied French and English in 1860. In 1861 he availed himself of the opportunity presented by the breaking out of the civil war in America, to intervene in Mexico, and fitted out against that republic an expedition which landed a well-appointed army under General Forey early in 1862. After several victories over the Mexican Liberals, the French forces entered the city of Mexico in June, 1863. Napoleon offered the imperial crown of Mexico to Maximilian of Austria, who accepted the fatal gift, and was supported by a part of the native population. The United States refused to acknowledge the Mexican Emperor, and intimated to Napoleon that European powers would not be permitted to establish monarchies by arms in North America. He accordingly withdrew his army from Mexico about the end of 1866. He doubtless sympathized with the South in the war against the Union.

The Emperor's prestige was greatly impaired by the events of 1866. He remained neutral in the war between Austria and Prussia, which war he probably might have prevented; but, in the diplomatic contest which ensued between France and Prussia, he appears to have found more than a match in Bismarck. The French felt themselves humiliated by the fact that so great changes in the map of Europe should have been effected without their agency or concurrence, and condemned the policy by which France was excluded from the hope of extension toward the Rhine. After the battle of Sadowa, July 3, 1866, Napoleon offered himself as a mediator between the belligerent powers. The Emperor of Austria ceded to him Venetia, which was transferred to Italy. About the 10th of December, 1866, the French army was withdrawn finally from Rome, and the Pope thereupon addressed to Napoleon language far from complimentary. Napoleon and Bismarck were involved in a dispute about Luxemburg, which the former purchased of the King of Holland; but the Prussians occupied a strong fortress in that province, which they refused to relinquish. It

was generally believed that war was imminent; but the difficulty was settled by a European Convention which met in London in May, 1867, and decided that neither France nor Prussia should retain possession of Luxemburg. The great International Exhibition opened in April of that year, and every thing seemed to promise an era of peace. In February, 1868, the French army was raised to 1,200,000 men—at least on paper—and there was much uneasiness in all the South of Europe, Queen Isabella of Spain being dethroned in September of that year. The elections of May and June, 1869, showed so strong a popular feeling against imperial despotism, that Napoleon made large concessions to the people, announced his intention of giving up his own theory of "personal government," and of inaugurating something like constitutional liberty. He gave the legislative body the right to elect its own officers, to have partial control over the expenditure of the public money, the right of interpellation, and the privilege to share with himself the power of initiating laws. He proclaimed a general amnesty for political offenses, in August, 1869. A new political constitution for France was adopted on September 10, 1869. In December of that year, he appointed Emile Ollivier prime-minister, and requested him to form a cabinet. "Designate persons," he said, "who will, associated with yourself, form a homogeneous cabinet, faithfully representing the legislative majority." This was regarded as the end of personal government in France, and the beginning or restoration of constitutional liberty. But France was still restless and uneasy, and as the last resort, to quiet the national discontent, Napoleon resolved on war. On the 1st of July, 1870, the Government asked the Corps Législatif for 900,000 men. July 6th the *Constitutionnel* declared that the enthronement of Leopold of Hohenzollern as King of Spain would be a menace to France. On the same day there was a debate on war in the Corps Législatif. July 10th the army at Paris was ordered to the Moselle, and Prussian troops were being concentrated near Baden. July 15th the declaration of war by France was announced in the Corps Législatif. Saturday, July 23d, a skirmish near Saarloris resulted favorably for the French. On Sunday, the 24th, the Prussians gained an advantage near Saarbrück. July 27th, Eugénie, Napoleon being absent with the army, was proclaimed Regent. On the 2d of August there was another insignificant skirmish at Saarbrück, at which the Emperor and the little prince were present, and the former telegraphed to the Empress that Louis had "received his baptism of fire, and that the soldiers wept at his tranquillity." More stirring events followed. The French were severely defeated at Wörth, and retreated from the German frontier toward Paris, while Bazaine was left to garrison Metz, and

the connection between him and the French army severed by the three days' fighting around Gravelotte; the retreat toward Paris still continued, as far as Rheims, when by some fatal blunder the French army struck northward, and on the 2d of September, just forty-nine days after the declaration of war, were overwhelmingly defeated at Sedan, and the Emperor surrendered himself and his army to the German King. He was assigned to the palace of Wilhelmslohe as a prisoner, and the war went on, but with continued disasters to the French. On the 8th of February, 1871, when the preliminaries for a treaty of peace were being considered, the ex-Emperor, against whom a decree of *dechéance* or dethronement had been pronounced by the French Legislative Assembly, issued a proclamation from Wilhelmslohe, declaring that it was impossible to abandon the destinies of France to an unauthorized government. This producing no apparent effect, he soon after issued a second, declaring himself ready to abide by the *plébiscite*. But France at this time, and indeed thenceforward to his death, had no occasion for his further services. After the declaration of peace, he was set at liberty, his imprisonment having never been irksome, and on the 20th of March, 1871, he reached England, where the princely residence of Chiselhurst was placed at his disposal by the Queen, and where the ex-Empress and the young prince soon after joined him. His life at Chiselhurst was sufficiently quiet, though one or two attempts were made to allow him to enter France and rally his old friends about him, but without success. He employed himself in writing, much of the time, and published one or two pamphlets defending his administration, and giving his views of the management of the war. He had evidently become convinced that the system of misappropriation of the public funds which he had inaugurated, to cover his own lavish expenditure, had been secretly copied by his subordinates, and that he had actually not more than half the force which he supposed to be at his command when he declared war against Prussia. His health, which for years had been impaired, grew steadily worse in his exile, and it became certain that he was suffering from a very large calculus in the bladder. An operation was determined upon, and performed by some of the most eminent surgeons in Europe, but he did not rally fully from the shock, and died after intense suffering.—Besides the works published early in his career, he was the author of several books and pamphlets which have been collected as "*Cœuvres de Napoléon III.*" (5 vols., 1854-'59), and "*Cœuvres militaires*" (3 vols., 1856), and is supposed to have been the writer of an anonymous pamphlet on the "Causes which led to the Capitulation of Sedan," published at Brussels in 1870, and of one or two subsequent pamphlets. His "*Histoire de Jules César*," of

which only two volumes were ever published (1866 and 1869), was an elaborate, costly work, on which he was long engaged, and made much use of the labor of assistants, but, though translated into several languages, it had not a large circulation; not as large, perhaps, as its really careful research merited.

BRAZIL (*Imperio do Brazil*), a vast country of South America, and the only empire in the Western Hemisphere, lies between lat. 4° 30' N. and 33° S., and lon. 35° and 73° W. It is bounded on the north by the United States of Colombia, Venezuela, British, French, and Dutch Guiana, and the Atlantic; on the east by the same ocean; on the south by Uruguay, the Argentine Republic, and Paraguay; and on the west by Bolivia, Peru, Ecuador, and the United States of Colombia. A joint commission, appointed by the Governments of Brazil and Peru, set out from Manaus on June 11th for the Iça, for the purpose of fixing the boundaries between the two countries. The area of the empire is (with the territory acquired in 1872 from Paraguay as a war indemnity) nearly 3,500,000 square miles, or more than two-fifths of the area of the South American Continent. Brazil is divided into twenty provinces and one neutral municipality (*município neutro*), and has, according to the census of August 31, 1872, a population of 10,095,978, of which number 1,683,864 were slaves. The great majority of the inhabitants are mestizos, but the African is the most numerous unmixed race in the empire. The rate of increase of population has been greatest in the following provinces, as will be seen by comparison with previous census returns: * Alagoas, 841,316; Paraná, 126,722; Rio Grande do Sul (or São Pedro), 500,000. Rio de Janeiro, the capital city of the empire, has, according to the returns of 1872, a population of 274,972, of whom 226,033 are free. The number of inhabited houses in Rio is given as 39,045, occupied by 44,211 families; there are 74 public buildings; 99 churches, three of these being Protestant; 17 prisons and lockups; 28 hospitals, public and private; 6 convents; 1 almshouse, or asylum for beggars; and 13 theatres.

The Government is constitutional and hereditary, based upon the fundamental law of March 25, 1824, modified by amendments bearing dates August 12, 1834, and May 12, 1840.

Emperor, Dom Pedro II., born December 2, 1825; proclaimed April 7, 1831, regency from the latter date till July 23, 1840; crowned July 18, 1841; married September 4, 1843, to Theresa Christina Maria, daughter of the late King Francis I. of the Two Sicilies.

Minister of the Interior, Dr. J. A. Corrêa de Oliveira, Deputy; Minister of Justice, Dr. M. A. Duarte d'Azevedo, Deputy; Minister of Foreign Affairs, Viscount de Caravellas, Councillor of State and Senator; Minister of

War, J. J. de O. Junqueira, Deputy; Minister of Marine, J. D. Ribeiro da Luz, Senator; Minister of Public Works, Commerce, and Agriculture, J. F. da Costa Pereira, Deputy; and Minister of Finance, Viscount do Rio Branco, President of the Council of State, and of the Tribunal of the National Treasury.

The Council of State is composed of the following members in ordinary: Viscount do Rio Branco, President; Princess Imperial Donna Isabel; Prince Gaston d'Orleans, Count d'Eu; Senators Viscount d'Abacé, Viscount Sapucahy, Viscount B. de Souza Franco, Viscount de São Vicente, J. T. Nabuco de Araújo, and Baron de Maritima.—Members extraordinary: Viscount de Inhamirim, Senator; Viscount de Bom Retiro, Senator; Viscount de Araxá, and Senators: Viscount de Jaguaré, Viscount de Caravellas, Duke de Caxias, and Viscount de Nietheroy.

President of the Senate, which contains 58 life-members, Viscount d'Abacé; Vice-President, Viscount de Jaguaré. President of the Chamber of Deputies (122 members for four years), J. M. d'Araújo Góes; Councillor, A. J. Henriques; J. P. M. Portella, A. G. de Paula Fonseca.

The provinces are administered by legislative assemblies, whose presidents, appointed by the central government, are as follows:

Alagoas.....	R. Veres de Moreno.
Amazonas.....	D. M. Pelxoto.
Bahia.....	J. E. Freire de Carvalho.
Ceará.....	F. A. Oliveira.
Espirito Santo.....	J. Thomé da Silva.
Goyaz.....	A. Cicero de Assis.
Maranhão.....	S. E. Carneiro da Cunha.
Mato Grosso.....	J. M. da Silva Reis.
Minas Geraes.....	V. J. d'Oliveira Lisboa.
Páris.....	D. J. da Cunha, Jr.
Parahyba.....	F. P. de Sá.
Paraná.....	F. J. C. d'Araújo Abranches.
Pernambuco.....	H. P. de Lucena.
Piauí.....	G. C. de Albuquerque Mello.
Rio Grande do Norte.....	J. C. Bandeira de Melo Filho.
Rio Grande (or São Pedro) do Sul.....	J. P. de Carvalho Moraes.
Rio de Janeiro.....	M. J. de Freitas Travassos.
Santa Catharina.....	P. Affonso Ferreira.
São Paulo.....	J. F. Xavier.
Sergipe.....	M. N. de Fonseca Galvão.

Archbishop, M. J. da Silveira, Count São Salvador, Primate of Brazil, March, 1861. There are 11 bishoprics: those of Belém, S. Luiz, Olinda, Rio de Janeiro, São Paulo, Porto Alegre, Marianna, Diamantina, Goyaz, and Coimbra.

The Supreme Court of Justice (Rio de Janeiro) is composed of a president and 17 members; the Courts of Appeals, of a president and 23 members; the Tribunals of Commerce, of a president, a procurator, and an adjunct (who are likewise members of the Courts of Appeals); the other members are commercial "deputies." The president of the Supreme Court of War and of Justice is the Emperor; Vice-President, Marshal the Duke de Caxias.

The army comprises a special corps of 641 men; 21 battalions of infantry, 16,163 strong; 5 cavalry regiments, 4,152 strong; and 5 battalions of artillery, with 1 battalion of engi-

* For complete details of areas, population, etc., see the ANNUAL CYCLOPEDIA for 1872.

neers, 4,826. Total, 25,282. By virtue of a new law, the strength of the army is to be reduced, for 1874, to 16,000 men; or 32,000 in case of war. The number of the police force is 6,082, of whom 804 are in Rio de Janeiro. The police force for 1874 is to consist of 5,278 men, and a supplementary corps of 3,843 National Guards, to be employed on police duty. The National Guard consists of an active force of 550,766 foot, 44,746 horse, and 8,571 artillery, besides a reserve corps of 129,881; in all, 733,964 men. The National Guard is movable in time of war.

The navy is made up of 18 iron-clad steamships, 6 steam-corvettes, 27 steam-gunboats, 6 steam transports, and 6 sail of the line, with a total armament of 236 guns; besides 2 frigates, 2 corvettes, 1 school-ship, and 1 brig for midshipmen, without armament. Several iron-clads are in process of construction in the navy-yards of Rio de Janeiro, Bahia, and Pernambuco. There are in the navy 19 general staff-officers, 545 first-class officers, 142 second-class officers, a sanitary corps composed of 79 men, 26 almoners, 219 accountants, 40 cabin-boys, etc., and 117 engineers. The corps of Imperial Marines numbers 2,995 men, and the naval battalion 1,055 men, which, with 1,075 apprentice marines, form a total of 6,311 men.

The withdrawal of the Brazilian forces from Paraguay began in January, two battalions of foot having arrived at Santa Catharina on the 31st of that month. It was not intended, however, to retire all the troops before the termination of General Mitre's negotiations with the Paraguayan Government.

Pursuant to a decree under date of February 4th, the pay of the officers and men of the naval battalion, of the officers of the corps of health, religion, and finance, was to be increased two-thirds. The salaries of the employés of the Treasury, sub-treasuries, recebedorias (tax-offices), and of the amortization-office, were to be augmented in like proportion. The creation of new departments and suppression of some of the old ones in those offices were likewise authorized by the same decree, on condition that the expense should not be raised more than 50 per cent., and that any changes made should have for effect the reducing the number of employés.

An act of the legislative body fixed the naval force of the empire, for 1874-'75, at 3,000 sailors and marines, or 8,000 in case of war.

The Minister of Justice declared that judges of rights can grant writs of *habeas corpus* in cases of impressment at any time before individuals impressed are actually taken into possession of the army or navy.

A bill reforming the National Guard and relieving it from military or police duty, save in time of war or sedition, passed both Chambers in August. A bill concerning conscription had a second reading, but was not made a law during the session.

The annexed table will show the total value

of the exports and imports in the five years therein expressed:

YEARS.	Exports.	Imports.
1866-'67.....	\$78,000,000	\$71,750,000
1867-'68.....	92,650,000	70,300,000
1868-'69.....	101,350,000	83,350,000
1870-'71.....	83,950,000	81,150,000
1871-'72.....	88,522,944	77,802,262
Total.....	\$444,473,944	\$384,412,263

The following is a table of the proportions of the exports and imports of 1871-'72 for the provinces therein mentioned:

PROVINCES.	Exports.	Imports.
Rio de Janeiro.....	37.3 per cent.	53.0 per cent.
Pernambuco.....	12.7 "	15.0 "
Bahia.....	12.6 "	14.0 "
São Paulo.....	7.7 "	1.4 "
Pará.....	6.2 "	5.2 "
Rio Grande do Sul.....	6.0 "	6.0 "
Alagoas.....	5.2 "	...
Maranhão.....	3.0 "	2.8 "
Ceará.....	2.6 "	2.2 "
Paraná.....	2.2 "	...
Parahyba.....	1.8 "	...
Rio Grande do Norte.....	0.9 "	...
Sergipe.....	0.8 "	...
Santa Catharina.....	0.5 "	...
Espirito Santo.....	0.3 "	...
Eight Provinces.....	...	0.5 "

The three grand staples of export are coffee, raw cotton, and sugar (unrefined). Of the first of these articles, about one-half is taken by the United States; about one-twelfth by England; and the remaining five-twelfths are divided between the other countries of Western Europe.

Coffee usually stands for fully one-half of the whole exports of the empire; cotton, for one-fifth; and sugar, for about one-eighth.

We annex a table of the total quantities and value of these three commodities in the five years from 1867-'68 to 1871-'72 inclusive:

COFFEE.

YEARS.	Quantities.	Value.
	Tons.	
1867-'68.....	213,647	\$41,205,365
1868-'69.....	228,041	45,258,914
1869-'70.....	186,888	38,513,211
1870-'71.....	299,590	42,251,954
1871-'72.....	243,584	35,822,829

SUGAR.

YEARS.	Quantities.	Value.
	Tons.	
1867-'68.....	123,092	\$11,403,158
1868-'69.....	130,066	14,023,256
1869-'70.....	133,204	14,113,374
1870-'71.....	125,315	11,604,409
1871-'72.....	141,995	13,288,676

COTTON.

YEARS.	Quantities.	Value.
	Bales.	
1867-'68.....	47,670	\$16,135,265
1868-'69.....	41,404	18,244,150
1869-'70.....	37,324	18,184,797
1870-'71.....	38,396	12,211,904
1871-'72.....	53,589	17,515,900

The coffee exports from Santos in the year ending January 30, 1873, were 443,215 sacks, against 409,000 sacks in the preceding year. The cotton exported from the same port in the year 1872-73 was 156,963 bales, against 168,036 in the year before.

In 1871-72 Pernambuco shipped but 12,476 tons of cotton; and 83,487 tons of sugar.

The values of the principal among the other exports from the empire in 1871-72, and not mentioned above, were as follows:

India rubber.....	\$3,750,000
Tobacco.....	3,150,000
Diamonds, etc.....	1,320,000
Cocoa.....	750,000
Paraguay tea.....	1,000,000
Skine.....	400,000

Brazil sends on an average one-half of her products to Great Britain; and one-half of her imports proceed from that country.

The unit of weight, in reference to price, now generally adopted by sugar-merchants and coffee-sackers, is 10 kilogrammes, and the sack of 60 kilogrammes by the coffee-men.

Here follow the arrivals and departures of vessels at the ports of the empire for 1871 and 1872:

<i>Entered, 1871.</i>	3,447 sea-going vessels, with an aggregate of.....	1,492 tons.
	4,880 coasters, with an aggregate of.....	1,009 tons.
" 1872	3,483 sea-going vessels, with an aggregate of.....	1,740 tons.
	5,245 coasters, with an aggregate of.....	1,183 tons.
<i>Cleared, 1871.</i>	3,060 sea-going vessels, with an aggregate of.....	1,469 tons.
	4,564 coasters, with an aggregate of.....	1,068 tons.
" 1872.	2,841 sea-going vessels, with an aggregate of.....	1,058 tons.
	4,618 coasters, with an aggregate of.....	1,219 tons.

The great coast-trade of Bahia was carried on last year by 59 Brazilian vessels, 23 English, 17 American, 7 Portuguese, 6 German, and 1 Spanish.

The commercial relations of Brazil with the United States might be increased fourfold with extended and improved means of communication between the two countries. As above mentioned, the United States offer the chief mart for Brazilian coffee, which article stands for one-half of the entire exports; and send in return machinery, implements, of various kinds, and "Yankee notions," the consumption for all which is greater and greater every year in Brazil. At present the direct mail communications with the United States are limited to one a month, effected by steamers so greatly inferior in speed to the first-class and swift packets with which the European companies now give Brazilians almost daily communication with Europe, that it is possible for letters sent to New York by the roundabout voyage *à la* England, to arrive at their destination within the time taken by the American packets; which, indeed, even sailing-vessels have beaten by two or three days. As a mail service, therefore, the existing New York one is practically useless, except to Pará, which

finds once a month a saving of a few days in its North American communications.

In addition to the railways enumerated in another volume,* some new lines have been opened to the public service in the course of 1873; and there are at present about 500 miles in operation in the empire. Some 10 miles of the Nietheroy & Villa Nova Railway were opened before May; and it was expected that the line would be completed in June, and so establish communication between the Cantagallo Railway and the city of Nietheroy.

A portion of the Campos and São Sebastião road, at São Gonçalo, was opened to traffic; and it was hoped that by the end of the year trains would be running over 12 kilometres of the Porto da Cunha and Leopoldina line in Minas Geraes.

A large number of new lines are in process of construction; concessions have been granted for others; and concessions for more were solicited.

The first rail of the Baturité Railway, in the province of Ceará, was laid in July, and it was presumed that the first section—25 miles—would be ready for service by January 1, 1874. This line will be the cheapest yet made in Brazil, the cost being considerably under \$25,000 per mile. The gauge is one metre.

A bill was passed in August authorizing an outlay of \$20,000,000 on railways in the province of Rio Grande do Sul; and another empowering the general Government to grant a 7 per cent. guarantee on railways in the empire.

The receipts of the Pernambuco Railway tripled from 1868 to 1872, in which latter year they reached \$467,178; while the expenses in the same year (\$224,890) showed an increase of only \$48,000 over 1868.

Owing to constant outlays for repairs, the expenses of the Bahia line frequently exceed the receipts.

A decree was issued on May 3d, authorizing the Government to exempt from duties all tools, fuel, rolling-stock, etc., necessary for the construction and working of railways belonging to companies organized in Brazil.

In Rio Grande do Sul a provincial concession of a railway between Rio Pardo and the Santa Cruz Colony was granted.

The opening of the Itá Railway was to take place April 17th.

The great railway project of the day is that of a line of 1,000 leagues from the city of Pará to Porto Alegre, and passing through all the principal maritime cities of the empire.

A company, entitled the Locomotora Bahiana, was established in Rio, in January, for the construction of a tramway between the upper and lower cities of Bahia, with a capital of \$400,000, in \$100 shares. The Rio Grande do Sul tramway was opened January 8th.

In Rio Grande do Sul the completion of a

* See the ANNUAL CYCLOPEDIA for 1872.

tramway between the port and the coal-mines of Arroio dos Ratos, near São Jeronymo, was celebrated July 19th, with a festivity and the benediction of the trucks and engines. The tramway is about thirteen miles in length. The shaft of the coal-mine is seventy-five yards in depth. The coal is similar to that of Cardiff, and is used on the steamers plying on Lake Patos.

The central Government continued to offer liberal encouragement to all projects tending to increase the means of internal communication, such, for instance, as the making new roads, and navigating by steam the great Brazilian rivers.

By decree of January 25th, the river Madeira was opened to the merchant shipping of all nations, up to São Antonio, the lower terminus of the Madeira & Mamoré Railway; and foreign vessels can engage in the transport trade between São Antonio and other river ports of the Amazon and Pará. Goods for Peru or Bolivia may be transferred to lighter vessels at Serpa. A custom-house is to be established at the latter place, and a board of revenue, qualified for import, export, and transit clearances, at São Antonio. These provisions will be of considerable advantage to the Madeira & Mamoré Railway Company, whose steamers, with materials and stores for the railway, will be able to take return-cargoes.

The returns of the Administrator-General of the Post-Office Department give the number of letters transmitted by mail in 1871-'72 as having reached 6,206,952.

The French system of weights and measures was to be obligatory in all mercantile transactions in the empire, on and after January 1, 1874.

The Transatlantic Cable Company informed the Government that the cable from Lisbon would be connected with Brazil in January, 1874.

The Brazilian Submarine Telegraph Company was formed in February, with a capital of £1,800,000, in £10 shares.

Telegraph communication was established between Sorocaba and São Paulo in March.

A new contract with the Telegraph Construction and Maintenance Company of London was published in the *Diário Official*, of Rio de Janeiro, in May, for the laying of a submarine telegraph-cable along the coast of Brazil, from the junction with the Montevidean cable to Pará. It is probable that the whole cable will be laid early in the present year (1874), and then, with the Lisbon cable above referred to, communication by telegraph will be established between Europe and the greater part of South America; and will shortly afterward be extended to the United States, as soon as the cable proposed between Pará and St. Thomas shall have been completed. The privilege for the coast cable is for sixty years, on the expiration of which time the ownership will remain with the company.

On the 24th of August the branch from Pernambuco to Pará was finished, and that from the former port to Bahia was to be commenced about November 21st. The cable will, of course, touch at all important points between the termini.

The Montevidean & Brazilian Telegraph Company obtained an authority to make a land line from Rio Grande to the Chuy, on the Uruguayan frontier, the concession being for thirty years. The rights of the Brazil & River Plate and the Telegraph Construction and Maintenance Companies are reserved.

A government line of telegraph from São Paulo to Santos was opened to traffic on September 18th. The Rio Doce was crossed at Linhares.

At the end of 1873 there were 3,445 kilometres of telegraph-lines in operation in the empire, with 64 offices or stations.

Nearly one-half of the national revenue is derived from customs receipts on imports; and about one-seventh from export duties, the average rate of these last being ten per cent.

The budget of 1871-'72 was, according to the report of the Minister of Finances, laid before the Chambers on May 8, 1873, as follows:

INCOME.	
Import duties.....	\$29,399,642
Shipping duties.....	350,689
Export duties.....	8,614,685
Interest on railway shares.....	58,073
Receipts of the Dom Pedro II. Railway.....	2,443,166
Post-Office Department.....	358,699
Telegraphs.....	58,580
Stamp duties.....	1,900,734
Mutation duties.....	1,873,450
Industrial taxes.....	1,451,529
Lottery taxes.....	745,251
Mines.....	19,253
Receipts extraordinary.....	1,177,482
Deposits.....	1,947,125
Appropriation for the liberation of slaves....	487,925
Sundries.....	2,238,667
Total.....	\$52,324,920

EXPENDITURE.	
Ministry of the Interior:	
Civil list.....	\$400,000
Legislative Chambers.....	308,780
Public Worship.....	567,450
Public Instruction.....	561,541
Sundries.....	197,999
Ministry of Justice.....	\$2,495,770
Ministry of Foreign Affairs.....	1,869,202
Ministry of Marine.....	414,374
Ministry of War.....	6,811,289
Ministry of Finances.....	7,783,256
Ministry of Commerce, etc.....	19,587,618
Total.....	\$49,905,362

The income in 1870-'71 was but \$50,516,-842, or \$1,808,078 less than in 1871-'72; the expenditure for 1870-'71 amounted to \$41,149,-427, or \$8,755,935 less than in 1871-'72. But the surplus in the former of those two years was greater than that of the latter by \$6,947,-857.

The income of the year 1872-'73 was estimated at \$53,406,161, or, with the net deposits, the issue of nickel coin, and the Paraguayan Railway payment, \$54,804,166; and the expenditure (inclusive of various credits extraordinary)—\$8,925,000 disbursed for the

extension of the Dom Pedro II. Railway) at \$54,861,427, which would constitute a deficit of over half a million.

The estimates for the financial year, commencing July 1, 1873, are: income, exclusive of deposits and the emancipation fund, \$51,500,000; and expenditure, \$49,473,213.

The last balances struck before May 23, 1873, showed the amount of paper money in circulation to be \$92,505,391, of which \$74,788,361 was national, \$16,850,000 of the Bank of Brazil, and the remainder of the banks of Maranhão and Bahia. On April 30th there were treasury notes in circulation to the amount of \$6,403,100, an increase of \$904,100 as compared with the previous year.

The income and expenditure for 1874-'75 are estimated at \$51,500,000 and \$50,742,397 respectively.

The import duties for the same year are reckoned at \$29,000,000; and the export duties at \$9,052,500.

By virtue of an act bearing date August 25, 1873, the Minister of Finance issued decrees to the following effect: To readjust the official values of goods; to fuse the 5 per cent. additional duties, and the 28 and 21 percentages into one surtax of 30 to 40 per cent.; the lower rate to be applied to goods tarified at 40 to 50 per cent.; to reclassify goods tarified according to weight; to extend for five years longer the exemption of Corumbá, in Matto Grosso, from import and export duties; to reduce the anchorage dues to ten cents per ton measurement, on all foreign merchant-vessels not putting in, bringing one hundred immigrants, entering in *franklin*, or having paid the dues six times in the year; to extend, without limit of time, the permission to foreign vessels to engage in the larger coasting-trade; to grant \$25 per ton bounty, exemption from anchorage dues, and other favors, to home-built vessels; to permit Brazilians domiciled abroad to own Brazilian vessels; to permit crews of two-thirds foreigners, including master and mate; to relieve from export duties timber and other Brazilian materials used in repairs of foreign vessels; and to reduce by one-half all taxes and expenses on salvage.

The revenue of the province of Rio de Janeiro in 1872 amounted to \$2,448,523, inclusive of \$400,000 borrowed, and a balance of \$221,249 from the preceding year. The expenditure was \$2,088,316. The four per cent. on coffee yielded \$74,761 more than had been estimated; but the yield of the three per cent. on sugar, cotton, and tobacco, fell short by \$8,538.

The customs receipts at the port of Bahia have doubled in the space of nine years: in 1868-'64, they amounted to only \$2,652,567; and in 1873-'75 they reached \$5,311,477.

The provincial receipts of Bahia, during the first half of the fiscal year, 1872-'73, amounted to \$609,716. The treasurer estimates the whole revenue of the year at \$1,077,783; and the expenditure at \$1,142,402.

The provincial receipts in the whole empire, in 1871-'72, amounted to \$10,910,381; and the municipal to \$1,941,092.

The following table shows the state of the national debt in 1873.

Foreign debt.....	\$68,723,111
Home debt, at 4, 5, and 6 per cent.....	141,881,560
Debt previous to 1827.....	152,365
Orphans' fund and deposits.....	14,576,392
Paper-money.....	74,788,361
Treasury notes (2, 4, and 6 months).....	6,403,100
Total.....	\$306,182,684

A large proportion of this debt originated from the immense drain upon the national resources to meet the expenses of the war against Paraguay—a war which cost Brazil \$244,360,323, besides certain liabilities not yet liquidated.

The number of banks in the empire in 1872 was nineteen, exclusive of a large number of private banking establishments.*

The Bank of Brazil had in circulation on the 30th of June, 1873, notes to the amount of \$15,960,000. The transactions during the twelve months ending on that day reached \$142,070,406, being an increase of 80 per cent. over the preceding year. The gross profits of the year were \$1,485,229; the expenses, \$425,509, leaving \$1,058,220; out of which two half-yearly dividends of 4 per cent. each were paid; \$472,781 passed to the new Reserve Fund; and \$573,005, to the Special Reserve Fund; raising the former to \$1,510,781; while the latter was reduced to \$363,954 by a debit of losses in liquidations of \$1,204,858. The Liquidation Account was reduced to \$3,564,650, and any fear of its compromising the capital of the bank was considered by the directors to be past.

By decree of January 31st, the New London and Brazilian Bank was authorized to establish branches in Bahia, Pernambuco, and Rio Grande do Sul. Conselheiro A. N. Tolentino was authorized to incorporate the Territorial Credit Bank law of September, 1864.

The Hypothecary Bank of Rio was to be established.

The *União Agrícola*, a mutual aid association for coffee-planters, and for the establishment of a sale agency at Rio, was authorized to operate; the capital of the company was fixed at \$125,000, with power to raise it to \$500,000.

Permission was granted for the incorporation in Europe of the Imperial Credit Foncier Company (limited), with its seat either in England or Rio, and with power to operate throughout the empire, but without exclusive privilege. The organization to be under the Hypothecary Bank Act of 1864; and the capital, £2,000,000, in £20 shares. Its operations are to be confined to loans on mortgage, for terms of from ten to thirty years, with amortizations; loans or hypothecations for

* The leading banks are enumerated in the ANNUAL CYCLOPEDIA for 1872.

short terms, with or without amortizations; receiving deposits; and the employment of these last in short loans on hypothecary bills or government stock, or in purchasing and discounting treasury bills.

The *Empresa Predial* Company of Rio (now the Banco Predial) was also authorized to operate under the provisions of the Hypothecary Bank Act of 1864.

The Companhia Gossipiana Brasileira received approval of statutes and authorization to operate. The capital of the company was fixed at \$100,000, in \$100 shares, with power to increase. Its primary object is to utilize cotton-seed, for its oil and other marketable products. A factory for the purpose has been established at Rio as the first essay of the company.

The Pernambuco branch of the New London and Brazilian Bank (limited) was declared constituted, on May 7th, by order of the president of the province.

The *Commercio de Café* Company was successfully inaugurated, August 9th, all the shares having been subscribed. The capital is \$3,000,000, in shares of \$50 each. The object of the association, as its name expresses, is the coffee-trade in general.

In no country of South America does the cause of public instruction find more numerous or zealous advocates than in Brazil; nor are the endeavors of these at all times fruitless. No better proof can be adduced of the progress made in that important branch, than by pointing to the schools, which are fast multiplying in every province. Last year there were recorded 4,437; the number is now much larger. Some 3,700 are public schools, and the rest private. There is one secondary for every 18 primary schools; and the number of both for male scholars is double that for females. It is computed that no less than 150,000 children now receive education in these schools; and, although the number is small when compared with the ten million inhabitants, it is large in comparison with the attendance in 1868, since which time there has been an increase of 50 per cent.

There are other establishments in which the higher branches of education are taught. Some of these belong to the state, and most of them receive a subsidy from the Government. In a few of the large cities, there are faculties of law and medicine; and almost all have private academies giving a thorough course of liberal education. Eleven seminaries are devoted to the education of the clergy, and subsidized by the state. There is an Academy of Fine Arts; a Musical Conservatory; Lyceum of Arts and Professions; military, naval, preparatory, normal, and other schools.

The Deaf and Dumb Institute of Rio was reorganized. The number of boarders is limited to 100, who will pay \$250 per annum. Day-scholars pay nothing. The Government may

admit thirty gratuitous boarders. The director will receive \$1,600, the chaplain \$500, the teacher of written language \$1,500, the teacher of articulate language, and the mathematician, \$1,200 each. For entry, the mute must be over nine years of age, and under fourteen, and none may remain after eighteen years of age.

After six years of study the mute will be dismissed, but the Government may permit two more years of stay. Corporal punishment is prohibited in the Institute.

The Dramatic Conservatory and the Astronomical Observatory received important modifications in the course of the year. A number of libraries were founded in the city of Rio de Janeiro, in pursuance of the provincial law of December 26, 1871; and most of the other provinces likewise possess public libraries.

The Extradition Treaty between Brazil and Great Britain was republished, with a protocol excluding attempts at infanticide.

Under the title of "The Electoral System in Brazil," was published an essay on the system, its history and workings, and the reforms necessary, etc.

In Brazil, the wealthy planters and graziers, whose numbers are of necessity comparatively limited, and who virtually control the hitherto useful lands of the empire, wield the whole of the political influence, to the direct prejudice of the lower classes; these latter being in a state of utter dependence upon those who, in effect, if not in fact, are their feudal lords. This subservency of the humbler classes is attributable in part to their ignorance, their extreme poverty, the prevalent tenant-at-will system, and in no small share to the demoralizing and dispiriting tendencies of the laws relating to impressment and the National Guard; consequently society outside of the large cities presents a patriarchal character. Before the time of the election, the central Government sends an agent into each of the provinces, who usually succeeds in crushing all legitimate influence, so that the term "representative of the nation" remains a mere technical form void of real significance. The Government controls the nominal representative; and when avowed opponents chance to be returned it is only because the Government for the time has refrained from exercising its power, and, whether from moderation or from motives of expediency, tacitly acquiesced in the independence of the electors. Thus whatever of power is possessed by the legislative Chambers of the empire resides in the Senate, whose members are appointed for life.

Referring to the constitution of the Chambers, the author says: "The great majority of our Chambers have been composed of public employés and petitioners for concessions of every kind. Up to a certain time, in fact, the non-political magistrate can hardly obtain good places. To advance and promote his career he has to obtain a seat in the Cham-

bers, or even the presidency of a province, where, owing to the government need of a safe and unscrupulous delegate for difficult elections, the pay will correspond to the service. As to the public employes in the Chamber, the ministers count on their adhesion without the need of soliciting it; and, if one by chance shows signs of independence, they become irritated, and general astonishment is excited."

Among the leading reforms advocated is one requiring that every voter should be able to read and write, and pay some direct tax; another is for direct suffrage; another establishes the ineligibility of judiciary and public officers to exercise legislative functions; that senators, instead of being elected for life by "electors," should be chosen by the provincial assemblies; and that renewals of one-third should take place at certain intervals, as in the United States.

The Chamber of Deputies, in 1878, was composed of: advocates, 44; judges, 18; public employes, 18; physicians, 11; collegiate professors, 5; priests, 6; capitalists, 5; planters, 18; and merchants, 8. Total, 118.

The Treaty of Extradition between Brazil and Belgium was ratified and promulgated. By a protocol, the penalty of death is not to be carried into effect in the case of persons delivered up under the treaty.

At Caetitê, Bahia, a great bed of amethysts was discovered, and some four hundred diamond-miners left Diamantina for the new mines.

A diamond-strike is threatened in Brazil. Numbers of the diamond-miners have, in consequence of the low prices obtainable in Europe, abandoned the search for diamonds, and turned their attention to gold-washings, or repaired to the amethyst-beds in Bahia. The Diamantina organ advocates this move and a general strike, by way of reprisals against Europeans, who now give the preference to the cheap, colored diamonds from Africa.

In consequence of an unusual freshet of the Amazon, in September, sixty thousand head of cattle perished in seven municipalities of Pará and Amazonas.

Steps were taken to develop the province of Paraná, and improvements made in the port, so that ocean-steamers can discharge into railway-trucks.

A law was promulgated concerning the naturalization of foreigners, of which the following were a few of the leading clauses:

Any foreigner, over twenty-one years of age, having resided two years in Brazil, or been for two years in foreign service of the state, can be naturalized by the Government, on declaring his intention to continue his residence or his service.

The residence may be dispensed with in the case of being married to a Brazilian woman, of owning realty in Brazil, of being the inventor or introducer of some trade, of being notable for his talents or professional skill, or of being the son of a naturalized foreigner, born abroad before his father's naturalization.

Proof can be given by certificates of records, or

testimonials given by authorities, or even by persons of repute.

The only tax on naturalization is the \$12.50 stamp. The oath, or promise to obey the Constitution and laws, and to recognize Brazil as his country, may be taken by attorney, before the Government, or a provincial president.

State colonists have further facilities:

A foreigner buying and settling on land, or coming at his own cost and working at a trade, can be naturalized after two years of residence, by making the declaration in the Municipal Chamber; and, upon a certificate thereof, the president of the province will give the proper certificate, free of expense or fee.

The Government may dispense with the two years' residence.

The fathers or guardians of minor colonists, born abroad before the naturalization of their parents, can make the above declaration for them, but on attaining majority the minors may change their nationality, notwithstanding that declaration.

On the evening of February 28th, the republicans of Rio held a meeting at the office of the *Republica*, on receiving the news of the reestablishment of the republic in Spain, and speeches were made to the assemblage outside. Finally, however, some persons got up a counter-demonstration, demolished the colored oil-lamps forming "Viva a Republica!" and a transparency of Castelar, and demanded the lowering of the republican flag, which was composed of the national colors, but without the usual arms. But, before the affair assumed importance, the police magistrate obliged the proprietor of the building to withdraw the obnoxious flag, and the assembled crowds then dispersed quietly. The republican newspaper had not been a financial success, and the proprietor, on the next day, announced its suspension, but continued to issue daily inflammatory bulletins, of which neither the authorities nor the public took any notice.

On the 6th of February the Minister of Foreign Affairs gave the requisite year's notice to the legations of France, Switzerland, Italy, Spain, and Portugal, of the intention of Brazil to rescind the consular treaties with those countries.

Dr. Ladisláo Nepto, Director of the Rio Museum, announced that an alleged copy from an inscribed stone found in Parahyba is clearly in Phœnician characters, and records a visit to Brazil (supposed by him to have been involuntary) by Sidonian refugees, in the reign of one of the Hiram, apparently the later, and therefore two thousand years before the discovery of Brazil by Cabral.

The first and second sessions of the present Legislature were respectively closed and opened on May 8d. In his speech, his Majesty the Emperor announced that the steady increase of the revenue would permit of reductions on the taxes; that a bill on public instruction would be introduced; that immigration, professional education, roads, and telegraphs, are the special need of the country; that the coast-cable concession had been modified and transferred to the Brazilian Submarine Telegraph Company; and recommended to the attention of the Leg-

islature various important bills still pending, one of which is for the creation of a new province out of the valley of the Upper São Francisco.

Here follows the Emperor's message, read at the closing of the third session of the Senate.

August and most worthy Representatives of the Nation:

I heartily thank you for the powers you have conferred on the Government, for the law of estimates and other special laws, to provide for the needs of the public service, and to carry on the moral and material improvement of Brazil. I expect that the establishment of the new judiciary tribunals of second instance will greatly facilitate the thorough administration of justice, and give more efficacious protection to political and personal rights.

The new National Guard law realizes one of our sincerest wishes.

Public instruction, much in need of a more perfect regimen and larger appropriations, as in good time will be proposed to you, has received some benefits; and I doubt not you will continue the good work begun.

Electoral reform, which was brought forward in the Chamber of Deputies, and studied by a special committee, will doubtless be laid before you during the next session.

The conscription bill, on which the Senate committee have already reported, is another reform deserving of your particular attention.

I congratulate you and myself upon the facility and rapidity with which the Submarine Telegraph Cable Company is carrying its engagements into effect. The provinces of Pará and Pernambuco are already in communication thereby, and I believe it will not be long ere a like event will be celebrated here and at Rio Grande do Sul. The submersion of the transatlantic line, which will place South America in contact with Europe, is likewise proceeding with rapidity.

The greater number of the provinces could not prepare in time for the industrial exhibition of Vienna; but, nevertheless, Brazil figures therein in a manner to attract the observation of professionals. A notice of our social state, written in various languages, completes as far as possible the manifestation of our advancement and of the riches and fertility of Brazil.

Thanks to God, our internal peace remains undisturbed, and our sanitary state, though not wholly satisfactory, has in general improved. Our relations with the other powers continue to be friendly.

August and most worthy Representatives of the Nation, one of the longest and most laborious legislative periods ends to-day; but our task should not cease, and I am sure that, when outside of these precincts, you will not fail to animate the Brazilian people to the conquests of labor, and to instruct it in the sound principles of moral and political education, the most solid foundation of free institutions.

The All-Powerful will bless our faith and our exertions.

The session is closed.

A controversy arose between the ecclesiastical and temporal authorities in the matter of freemasonry, and the validity of Protestant marriages in the empire. In the first case, the Bishop of Pernambuco issued an apostolic decree against freemasonry, interdicting the whole brotherhood, and refusing them burial in consecrated grounds. The central Government instituted proceedings against the bishop for disobedience to a legal order of the Government and for publication of a papal brief without the *place*. Notwithstanding the precise and peremptory decision of the Govern-

ment, the Bishops of Olinda, Pará, and Rio Grande do Sul, have openly affirmed that they are not bound to obey the civil law in any thing contrary to the canon law; it was feared that the conflict of authorities had not yet reached its termination.

The second year allowed for the registration of slaves, in compliance with the act of September 28, 1871, ended on the 30th of September last in the municipality of Rio de Janeiro, and the number of the slaves amounted to 47,260. By a provision of that act, all slaves not registered before the close of the second year are presumed to be free; and only in exceptional cases, wherein the owners establish inability to effect the registration within that term, will they be permitted to place their slaves on the register and thus retain their ownership.

Odorico Mendes's Portuguese translation of the "Iliad" and the "Odyssey" was sent by his heirs to Rio to be printed and published, the provincial treasury having donated the sum of \$2,450 toward the publication. It will be the first Portuguese translation of Homer yet published.

The legacy left to the imperial family of Brazil by the late Empress-Dowager, who died in Portugal in the beginning of the year, consisted of \$32,000 in government stock, and a jewel to each of its members.

A large number of English emigrants arrived at Rio in the early part of the year, and, after the necessary delay to prepare a place for them in the province of Paraná, they refused to accept the district allotted for them, and many would not even consent to go and see it. After having remained a long time in Rio de Janeiro in idleness, at the expense of the Government, they were sent back to England, the Crown paying their passage.

The forwarding of emigrants from England was, by order of the Minister of Agriculture, under date February 5th, suspended until April.

Some British immigrants, dissatisfied with their prospect in Brazil, left for the United States, February 24th, the imperial Government paying their passage.

On January 1st, his Imperial Majesty, Dom Pedro II., inaugurated at Rio de Janeiro an exhibition of national products, intended to be sent to the exposition of Vienna. The articles exposed to view comprised specimens sent from all the different provinces; and, for the ultimate selection of those to be sent, there was appointed a higher commission. In the machine department were observable steam-engines, sugar and other machinery, chiefly from the works of Maylor & Co.; stamping and counting apparatus from the mint, etc. Hundreds of specimens of wood for carpentry and cabinet-works attest the boundless and endlessly varying products of the Brazilian forests. In the ceramic department were displayed vases, pans, and other vessels of the

native kaolin found in Rio province, together with a collection of clay-ware painted after the Indian style.

Samples of raw cotton from the seven cotton-producing provinces held a conspicuous place in the exhibition.

Countless species of fibrous materials, suited for ropes, twine, and coarse fabrics, were furnished; most remarkable among which was a white silky sample from Minas Geraes, derived from a climber yielding three cuttings annually, and which has been declared by competent judges to be worth three times the price of flax for textile purposes.

In tobacco, of which there was a goodly exhibit, Bahia and Minas Geraes took the pre-eminence.

Ceará, the great coffee-bearing country of the north, was fairly represented by Mocha and flat coffee in the skin; and handsome samples were likewise shown from Rio, Minas, Pernambuco, São Paulo, etc.

The brilliant display of sugars, especially a collection from Bahia comprising all the grades of plantation make, left no room to apprehend that Brazil would not be fairly represented in this branch.

Samples of black and green "India" (Chinese) tea from São Paulo bespoke creditable handling. It is asserted that the culture of this article will soon be revived in the uplands, where it finds a genial soil and climate.

Favorable specimens of the several *cerealia*, and farinaceous roots and plants, were also on exhibition. The number of packages sent was 687; besides seven barrels of sugar, two rolls of sarsaparilla, 27 sacks of coffee, two barrels of arrow-root, one barrel of tapioca, and 19 bales of cotton, for distribution. A great pine-tree from Paraná, measuring fully five feet in diameter and 150 feet in height, went in 31 logs to be set up at the exhibition, with its branches and cones.

BRAZIL, AMELIA AUGUSTA EUGENIA NAPOLEONE, EMPRESS-DOWAGER OF, born in Bavaria, July 31, 1812; died in Lisbon, Portugal, January 26, 1878. She was the third daughter of Eugene de Beauharnais, Duke of Leuchtenberg, and son of Josephine, afterward Empress of France. She was married to Dom Pedro I., Emperor of Brazil, October 17, 1829, his first Empress, the mother of Dom Pedro II., the present Emperor, having died in 1826. In 1831 Dom Pedro I. abdicated the Brazilian throne in favor of his son, and returned with his Empress to Portugal, where he died September 24, 1834. The Empress remained a widow from that time till her death, and did not return to Brazil, though there was the most cordial feeling between her and her stepson, the present Emperor. She resided at the Portuguese court, and, by the marriage of her brothers and sisters, was closely connected with the reigning houses of Russia, Sweden, and Germany. She was a first-cousin of the late Napoleon III.

BRODHEAD, JOHN ROMEYN, LL. D., an American historian, archæologist, and diplomatist, born in Philadelphia, January 2, 1814; died in New York City, May 6, 1878. His father was an eminent clergyman of the Reformed (Dutch) Church, and removed to New York City while his son was an infant. Mr. Brodhead was educated at Rutgers College, New Brunswick, whence he graduated in 1831, at the early age of seventeen. After graduation he studied law in the office of the late Hugh Maxwell, and was admitted to the bar in 1835. During two years he practised his profession in New York, after which he retired to Saugerties, and devoted himself to literary pursuits. In 1841 he went to Holland, under authority from Governor Seward, to investigate the colonial records and land grants, and procured many valuable documents relating to the early history of the State of New York. Among them were 16 volumes of manuscript from Holland, mainly the records of the colonial secretaries under the Dutch supremacy, 1609-1674, but with separate records also of New Amsterdam (New York), and Beavertwyck (Albany); 47 volumes from England, and 17 from France, comprising in all more than 5,000 important papers relative to the history of the State. These documents were translated and edited by Mr. E. B. O'Callaghan, and published in 11 quarto volumes, by act of the New York Legislature. In 1846 Mr. Brodhead was appointed Secretary of the United States legation in England, of which Mr. Bancroft was then minister. He returned to this country in 1849, and was Naval Officer of the port during Mr. Pierce's Administration, since which time he had held no official position. In the spring of 1855 he was appointed consul-general to Japan, but declined the honor. For many years he was one of the trustees of the Astor and New York Society Libraries, and a member of the Historical Society and the Union League Club. Early in life Mr. Brodhead had displayed a fondness for historical and antiquarian researches, especially in matters relating to the rule of the Dutch in this State. Endowed with rare powers of perception, and deeply imbued with earnestness and zeal, he pursued his researches with a perseverance which overcame all obstacles, and carried him forward to success. His mission to Holland afforded him facilities in his search for information, by which he greatly profited. The knowledge thus acquired was embodied in his well-known "History of the State of New York," published in two volumes, the first of which appeared in 1853, and the second in 1871. Mr. Brodhead once intended to add a third volume, and to bring the narrative down to the present day, but had to abandon the intention on account of declining health. He had delivered an address before the New York Historical Society, in 1844, and one on the commercial history of New York, before the Mercantile Library Association, at

the opening of Clinton Hall, June 8, 1854. But the sterling qualities of the man outshone his literary fame and his public services. He was eminently a lovable man—manly, considerate, generous, and benevolent, he won the affection of all who were brought into intercourse with him.

BROOKS, JAMES, an able New York journalist and politician, born in Portland, Me., November 10, 1810; died in Washington, D. C., April 30, 1873. His father, a sea-captain, was lost at sea while James was yet a child, and the family, a widow and three children, were left destitute. James was sent to a public school in Portland, and at eleven years became a clerk in a store at Lewiston, Me., then a frontier town. There he used to read the news to the village loungers and fill his thirsty mind from the town library. His employer, observing the eagerness of the boy for learning, kindly offered to release him from his apprenticeship and to aid him in obtaining an education. This offer was gratefully accepted, and he at once entered the academy at Monmouth, taught school at ten dollars a month and board, and finally after severe struggles graduated at Waterville College in 1831. To accomplish this his life was one of the most rigid economy and self-denial. Returning to Portland, he began to study law with John Neal, the lawyer-author, teaching meanwhile a Latin school in that city. He contributed to the *Portland Advertiser*, and subsequently had a regular engagement at five hundred dollars a year. At twenty-two he went to Washington as the correspondent of the *Advertiser*, and was a pioneer in that line. After that, he traveled through the South, visiting and writing letters from the Creek, Cherokee, and Choctaw country in Georgia and Alabama, at the time when these tribes were compelled to move West. His correspondence at this period was a new revelation in journalism, and gave a greatly-increased circulation to the *Advertiser*. In 1835 he was a member of the Maine Legislature, and introduced the first proposition for a railroad from Portland to Montreal and Quebec. After the adjournment he sailed for Europe, and traveled on foot over Great Britain and the Continent, writing letters to Portland descriptive of his travels. In 1836 he came to New York and established the *Express*. It was at first very discouraging, but he had the elements of character necessary to meet precisely the situation, and conquered a success. In two years he consolidated it with another paper, and it became a favorite journal with many merchants and politicians. Mr. Brooks made political speeches in Indiana for Harrison in 1840. In 1841 he married Mrs. Mary Randolph, a widow, of Richmond, Va., whom he required to manumit three or four slaves before he would consent that the wedding should take place. In 1847 he was elected to the State Legislature, and two years later to Congress, where he re-

mained two terms, 1849-'53. He took ground in 1850 in favor of the compromise measures, and in 1854 became identified with the American party, and after 1861 with the Democratic. He was elected to Congress again in 1865, and served till 1873 by repeated reelections. He made two later trips to Europe, and acquired four languages. In 1867 he was a member of the State Constitutional Convention, and in 1869 was one of the Government directors of the Union Pacific Railway, and while a director was implicated in some dealings, on account of his son-in-law, in the *Crédit-Mobilier* stock, for which he was censured by the Forty-second Congress at its session of 1872-'73. Believing that this censure was undeserved, it was thought by his friends that the mortification which he felt aggravated the severe disease under which he labored, and hastened his death. In 1871-'72 Mr. Brooks, in pursuit of health, made a voyage around the world, and gave the results of his observations first in letters to the *Express*, and afterward in a volume published in 1872, with the title "A Seven Months' Run, Up and Down and Around the World." Mr. Brooks was an able writer. For perspicuous narrative, terse comment, apt reflection, ready information, courteous tone, and dignified manner, he was as remarkable as for unflinching labor, untiring enterprise, and an intuitional knowledge of the salient points of affairs. There were few more capable Congressmen. Long membership had made the forms of deliberative bodies as household words to him. He attained success as an editor, an author, and a politician, and could have attained greatness in any one of the three professions to which he might have chosen to devote the whole, not a part, of his very clever, thoroughly-trained powers. Personally, he was most popular, because a considerate, pure, and worthy gentleman—one whose fine social qualities and whose amiability in all the relations of life had won for him the regard and esteem of all who had the honor of his acquaintance.

BRUNSWICK, CHARLES FREDERICK AUGUSTUS WILLIAM, EX-DUKE of, born in the duchy of Brunswick, October 30, 1804; died at Geneva, Switzerland, August 19, 1873. He was the eldest son of the Duke Frederick William who was slain in the battle of Quatre Bras, in 1815. After the battle of Jena, his mother fled with him and his younger brother, then an infant, to Sweden, where she died in 1808. After her death he was confided to the care of strangers, and, wandering from country to country till after the fall of the French Empire in 1815, his education and his moral training were both very much neglected. He received the title of duke after the death of his father, and was placed under the care of George IV., King of England, but his habits, even as a boy, were so vicious that his guardian, though himself of depraved morals, dreaded to have his majority come, from the conviction that he would be a curse to his subjects.

When he had reached his nineteenth year, however, he was obliged to consent to his accession to the ducal throne. At first he took no interest in public affairs, but gave himself up to dissipation, and traveled in Italy and other European states. After a time he returned, and soon alienated his most faithful subjects by his negligence, his cruelty, and the heavy taxes he imposed on the duchy. In 1829 his administration had become so intolerable that the Germanic Diet took up the case, and the duke, without waiting their decision, went to France, whence he escaped, at the time of the revolution in July, 1830, to Belgium. In September of that year he was driven from Brussels by the appearance of the Revolution there, and reentered his own duchy; but his presence there soon roused a state of feeling which could only be appeased by his deposition from power, and, by the Council of the Germanic Diet, his younger brother William was made his successor. The Duke Charles appeared in vain to the British Government to restore him to his position, but, finding that this was hopeless, he spent the remainder of his life abroad, mostly in London, Paris, and Geneva. He had managed to retain most of the treasures of the duchy which were movable, and was one of the richest men in Europe. He fell into the mania of buying diamonds, and made one of the largest and most costly collections in Europe. He inhabited a pretty, rose-colored palace in the Avenue Friedland, house and garden jealously guarded from the street by high walls crowded with statues, and the entire establishment was constructed with reference to the safety of the duke's jewels. Not a door or window could be opened without a clamorous ringing of bells, and the caskets where the diamonds lay could only be reached over his dead body. This was the theory, but the practice was otherwise. He was regularly robbed every year or two, though his most valuable treasures always escaped. The very tradesmen who supplied and cheated him did not desire his custom. He never paid a bill without a quarrel. He was a symmetrical character. He was as contemptible in small things as in great ones. He plundered and oppressed his people while he could, and afterward bullied his servants, and tried to cheat his butcher. In 1868, as on many previous occasions, he issued one of his periodical protests against what he styled his brother's usurpation of his rightful authority; but then, as always before,

no attention was paid to it. He left his immense collection of jewels and antiques to the city of Geneva, but the reigning Duke of Brunswick gave notice of his intention to contest this disposition of them on the ground that they were purchased with the treasures of the duchy.

BUTLER, THOMAS BELDER, M. D., LL. D., late Chief-Justice of the Supreme Court of Connecticut, born at Wethersfield, Conn., August 22, 1806; died at Norwalk, Conn., June 8, 1873. His early education, which was a very thorough classical one, was obtained in Wethersfield and Hartford, and he entered the Yale Medical School in 1826, and took his degree of M. D. in 1828, spending a year subsequently in Philadelphia in further study of his profession. He practised medicine for eight years in Norwalk, when, finding that its anxieties affected his health, he decided to abandon it, and commenced the study of law with Hon. Clark Bissell. He was admitted to the bar in Norwalk in 1837, and almost immediately entered into partnership with Hon. Thaddens Betts, and, after his death, successively with M. G. A. Davenport, Hon. O. S. Ferry (now United States Senator), and J. M. Carter. Mr. Butler was a member of the Connecticut House of Representatives in 1832, 1833, 1837, 1843, and 1846, and of the State Senate in 1848, 1852, and 1858. In 1849 he was elected to Congress, and served one term. In May, 1855, he was elected a Judge of the Superior Court, in 1861 was appointed to the Supreme Court, and was made Chief-Justice in 1870. He resigned, on account of ill-health, May 20, 1873, and died nineteen days after. Chief-Justice Butler maintained the very high reputation for legal ability and profound learning which has characterized the Supreme Court of Connecticut for so many years. He was a careful student of the law, and his keen insight of difficult points, and his perception of the great principles of equity which underlie all law, seemed intuitive. His active mind also led him to take an uncommon interest in other departments of science and human industry. He was an excellent and skillful farmer, thoroughly versed in all the principles of mechanics, and was particularly interested in meteorology. He published a volume on this subject in 1856, entitled "The Philosophy of the Weather," and in 1870 a much enlarged and perfected edition of the same, under the title of "The Atmospheric System developed; a Weather-Book for Practical Men."

C

CALIFORNIA. This Empire State of the Pacific develops with each succeeding year new resources and new causes for surprise at the vastness and variety of its productions. Its area is 120,947,849 acres; its population,

which in 1870 was 560,285, is now estimated on apparently good grounds to exceed 650,000. Of the entire area of the State, 20,466,806, or a little more than one-sixth, is held in private ownership outside of towns and cities; and of

this 122 owners possess 5,347,464 acres in tracts of from 20,000 to 334,100 acres; 150 owners possess 2,098,475 acres in tracts of between 10,000 and 20,000 acres; 231 owners possess 1,603,458 acres in tracts of between 5,000 and 10,000 acres; 1,860 owners possess 3,744,537 acres, in tracts of between 1,000 and 5,000 acres; 2,383 owners possess 1,961,209 acres in tracts of between 500 and 1,000 acres; and 23,250 owners possess 5,711,663 acres, in tracts of from 100 to 500 acres. The amount of arable land in the State, including the reclaimed swamp and *tule* lands, is now stated at nearly 50,000,000 acres; and although, including towns and cities, nearly one-half of this is in the hands of private owners, yet, owing to the mistaken policy of such large estates being held by single individuals, and to the difficulty of obtaining a sufficiency of farm-hands, it is asserted that less than 3,500,000 acres are under actual cultivation. Immigration is increasing slowly; the distance is so great and the expense so heavy that comparatively few of the European immigrants reach California, and the immigration of Chinese, Japanese, and Malays is not encouraged, though there are some accessions to the number every year. Mining, the cultivation of cereals, the production of wine and grapes, the rearing of cattle, and of sheep with a special view to the wool-product, are the leading industries of the State, and all of them are, in general, lucrative. But, aside from these principal products, there are many others, some of them peculiar (so far as the United States are concerned) to California, in which the State bids fair to take a high rank ere long. Among these we may name the production of sugar from the sugar-beet, which from the peculiar character of the soil is more successful here than elsewhere in the United States; the production of silk, now becoming in some sections of the State a household industry, and, from the favorable climate and the long dry season, attaining an excellence which has not been observed elsewhere; the culture of the olive, largely practised in the southern counties; of the orange and lemon, of excellent quality and in abundant quantity; of the fig, the pomegranate, the almond, and the English walnut, all profitable crops; of tea and coffee, both now successfully grown in the State; of ramie, jute, and other textile fibres, including cotton, of long staple and silky fibre; of tobacco, which by new processes of curing is produced of quality equal to that of the *Vuelta Abajo* of Cuba; of the wool of the Angora goat, a long and delicate fibre which is in great demand; of dried and pickled fish, especially the salmon, of excellent quality, though of an entirely different species from the Eastern fish. With these varied resources, and a soil of the most remarkable fertility, it is not surprising that the growth of the State in material wealth should have been so rapid, or that for the year, July, 1872, to July, 1873, its

assessed valuation of taxable property should have amounted to \$637,232,823.31, nor that at the close of the year they should sum up their leading productions as follows: 25,000,000 bushels of wheat harvested (this was below the yield of the previous year, which exceeded 30,000,000); 11,700,000 bushels of wheat and flour exported. The gold and silver mines yielded \$80,000,000, and the Branch Mint coined \$16,380,000. The wool-clip was 25,000,000 pounds; the wine-product 4,000,000 gallons; the mining-stock sales \$189,000,000; the direct imports of the year \$40,000,000 (aside from large indirect imports and exports), and the direct exports \$24,000,000. In some classes of manufactures, California, notwithstanding the disadvantages of high wages and the distance of great markets, has proved a formidable competitor with the Eastern States. This is particularly true of all mining tools and machinery which are produced in San Francisco and other Californian cities of exceptional excellence and durability; of woollen blankets and generally of heavy woollen goods; and of wines, cordials, and distilled liquors. The production and refining of sugars, and especially of the crude and raw sugars of the Sandwich Islands, is also a large and growing industry.

The railroad system of California is practically under the control of a single company, the Central Pacific, which either by lease or purchase has brought all the railroad lines of the State, except the projected Texas Pacific, under its management. About 1,200 miles of completed railway in the State are already tributary to this great trunk-line, and more than 300 miles more are in course of construction. The prices for freight per mile exacted by the combined railroads have been in some instances almost prohibitory, ranging from three or four to fifteen cents per ton per mile, and a long, exciting, and determined struggle between the railroads and the citizens who were not stockholders has been maintained for three years. The progress of this controversy to the close of 1872 was very fully detailed in the *ANNUAL CYCLOPEDIA* for 1872. During the year 1873 both parties were active and resolute. The strife had entered into politics, and, as both parties realized that very much depended upon the sympathies and efforts of the men who should represent them in the United States Senate, the term of Mr. Casserly expiring in March, 1875, and he having already resigned, there was a fierce struggle both in and out of the two old parties to elect such members of the Legislature as would support their candidate. The elections of 1871 had been carried by the Republicans in regard to the State officers; Governor Booth having been elected by a large majority, and the Legislature being largely Republican in both branches. The election of 1872 was only for President and members of Congress, and resulted in a majority of 13,302 for Presi-

dent Grant, and the election of three Republican and one Democrat and Liberal member. But the election of September, 1873, was controlled largely by new elements. There was a Legislature to be elected, which, as has been said, would have two United States Senators to elect, and subsequently (in October) there were judges to be elected also. The contest between the people and the railroad companies had been growing more and more intense; on the side of the former were rallied the great farming and producing interests, now thoroughly alive to their danger from the oppressive freight charges of the railroad companies, and determined to control them and compel the reduction of their rates; while on the side of the railways were the bankers, financiers, and politicians. The railway companies succeeded in controlling both of the old political organizations so far as to secure from them nominations which would generally vote in their favor, but the people at once put up independent nominations, selecting those men who could be depended upon to take strong and decided ground against the railway monopolies. Governor Booth and Hon. Eugene Casserly, who had just resigned the senatorship, recognizing the importance of this movement, and the fact that it dominated all ordinary partisan politics, put themselves at the head of this independent or anti-monopoly party, and labored with great zeal for its success. The results of this struggle were that the new Legislature which organized on the first Monday in December, 1873, was composed of thirty-seven strict party Republicans, forty-two Democrats, and forty-one independents. A considerable number of the Republicans and Democrats were opposed to the railroad monopoly; but when the Legislature met on the first of December it seemed exceedingly doubtful whether a majority could be obtained for any of the candidates for United States Senators. The struggle which commenced on the first day of the session continued for three weeks, and there was a lavish expenditure of money on the part of the railway companies; but on the 30th of December, Newton Booth, the independent candidate, was elected for the long term, six years from March, 1875, and Judge Johnson S. Hayes, an anti-railroad Democrat, for the short term, the sessions of the Forty-third Congress. At the organization of the Legislature, Governor Booth laid before them his second biennial message, a very able document, and one which exhibits the condition and resources of the State with great fairness and clearness. Some passages of this message will give a better idea of the State finances and needs, as well as of its institutions and their condition, than can be obtained elsewhere. The equalization of taxes, a topic of great interest in every large State, had excited attention and caused the passage of an act by the previous Legislature, and he thus relates the action which had followed:

Prior to 1872 no uniform rule was observed for determining the values of property for purposes of taxation. The result was, valuations were almost as various as the counties, ranging from 15 to 80 per cent. of real values. As the rate of taxation for county purposes was generally limited by law, the counties that were poor and embarrassed were compelled to adopt a higher standard of valuation than their more unfortunate neighbors, in order to obtain the necessary county revenues, and their property-holders paid an undue proportion for the support of the State government. To remedy this injustice the State Board of Equalization was instituted. The code adopted by the last Legislature did not assume to enlarge the definition of property or change the law of assessment, but only provided the machinery for ascertaining the cash value of all that which the courts of the State had decided to be property subject to taxation in the meaning of the constitution, so as to secure the uniformity the constitution requires. Under the operation of this provision, the assessment rolls, as equalized, were increased from \$207,868,126.76, in 1871, to \$637,232,523.31, in 1872. In order to conform to the fiscal theory of the government, that the revenues of each year should be, as nearly as possible, equal to the appropriations, the Legislature authorized the Board of Equalization to determine the rate of taxation necessary to meet the current appropriations of the fiscal year after they had received and equalized the assessors' returns.

For the twenty-fourth fiscal year (July 1, 1872, to July 1, 1873), the Board fixed the rate at one-half of one per cent. The rate was not reduced in the same proportion the valuation was increased, for reasons shown in the report of the Board of Equalization: 1. Because under the code the State derives her revenue from a property tax only, and prior to its enactment she had received annually about \$420,000 from licenses, half the poll taxes, stamps, premiums on insurance, etc. 2. The deficiencies of the twenty-second and twenty-third fiscal years were large, as the rate of the State tax fixed by the Legislature of 1869 and 1870 was insufficient. 3. Unusually large appropriations were made by the last Legislature.

After various writs, orders, and appeals, a majority of the Justices of the Supreme Court, at the April term, 1873, held in substance: That the law creating the Board of Equalization, and authorizing it to fix the rate of taxation, was constitutional; that the taxation of solvent debts amounted to double taxation, and violated the rule of the constitution which requires uniformity. On account of this decision, solvent debts were omitted from the assessment rolls of 1873, and the amount of taxable property reduced to \$527,203,953. The Board were prevented from making a reduction of the rate corresponding to the reduction of expenses, but compelled to again fix it at one-half of one per cent. to raise the necessary revenues. After a rehearing of the cases in which the decision above referred to was rendered on the 7th of November, 1873, it was held by the majority of the court, two justices dissenting, that the law prescribing the powers of the State Board of Equalization was constitutional.

I am of opinion that the constitution should prohibit injunctions to restrain the collection of taxes. I concur in the recommendation of the State Board that the law should provide that taxes paid under protest should be paid over to the State and county, and that the tax-payer desiring to test the legality of the taxes so paid should be denied an action against the tax collector to recover, but allowed one against the county and State.

No system of taxation can be absolutely just, but no system is so unjust practically as one that is but partially enforced, and which necessarily lays the burdens of government upon those who are least able, or most patriotic and conscientious. Appropriations are made by the representatives chosen by the people for that purpose. If the science of politi-

cal economy has not succeeded in demonstrating the exact best method of collecting a revenue, and probably cannot under the varying conditions of civilized society, it is not the fault of legislators, who, in the apportionment of taxes, endeavor, to the best of their judgment, to adopt an equitable system; and the refusal of any one to pay is not an imaginary injury to that incorporeal something called the State, but a substantial wrong to those who are compelled to make the default good.

In regard to the finances of the State he makes the following showing:

At the beginning of this administration, the indebtedness of the State, exclusive of money on hand to redeem bonds, was....\$4,042,884 23
On June 30, 1873..... 3,714,668 92

Decrease.....\$328,196 01
On November 1, 1871, the debt of the State, bearing interest, in private hands, was....\$2,121,500
On November 1, 1873..... 1,634,000

Decrease.....\$487,500
The entire funded debt, exclusive of money applicable to redemption, was, November 1, 1873.....\$3,443,000
Of which there was held:
In trust for the school fund.....\$1,417,500
In trust for the University fund..... 394,500
In private hands..... 1,634,000

It seems to have grown into a prescriptive usage that the State should hold a portion of her own bonds, in trust, for purposes of her own good government, and that the sum so held should figure in the annual exhibit of her indebtedness—an indebtedness held by herself against herself.

It is true, a portion of these bonds are the proceeds of lands given to the State by the General Government for educational purposes; but the State does, and always will, discharge that obligation, and more, and could do so equally well without the unnecessary machinery of bond and coupon accounts; and, if the appropriation were made direct, we should have a more definite idea of the amount of money devoted to the support of each department of government.

The State really owes, November 1, 1873:
On bonds to parties other than to herself....\$1,634,000 00
On outstanding warrants..... 600,604 94
Total.....\$2,234,604 94

When we consider the circumstances under which the State was settled: the habits of speculation and personal extravagance which were stimulated by its early methods of business; the changeable character of its population; the facts that public buildings had to be provided in a brief period—that appropriations for public charities have necessarily been exceptionally large, and those for educational purposes upon a liberal scale—we are compelled to the conclusion that the fiscal policy of the State government, as a whole, has been prudently managed.

The total of the funded debt of the counties is \$7,523,698.41. Much of this was contracted in the "flush times," from an unfortunate habit of liberally discounting the future; a considerable portion of it is for subsidies to railroads and toll-roads; and, in some instances, it is so heavy a burden as to threaten the bankruptcy and practical dissolution of the county governments. I find in this the most gloomy outlook of the financial future of the people of this State, and the most difficult one for the Legislature to deal with.

The revenues received by the State from all sources, for two years, beginning July 1, 1871, and ending June 30, 1873, which were applicable to payment of current expenses, and principal and interest of public debt, were \$4,948,937.22. This does not include such receipts from lands as are invested in bonds for the school and university funds, or the receipts from the San Francisco wharves, which are

set apart and used only for the improvement of the water front—but does include \$250,000 from the sale of State Capitol bonds.

The values of land are distributed between the towns and cities and the country, as follows:

Towns and city lots.....\$162,887,859 00
Lands in the country..... 152,128,004 00

Total.....\$315,015,863 00
Improvements on town and city lots.....\$64,814,343 00
Improvements on lands..... 29,256,030 00

Total.....\$94,070,373 00
The value of personal property is.....\$118,117,746 00

Total valuation of property.....\$527,203,989 00

These are assessed values, and are probably not far from 50 per cent. of the real values.

The report of the Superintendent of Public Instruction is devoted to the discussion of three important topics concerning the common-school system of the State, viz., compulsory education, the need of trained teachers, and the support of common schools.

The statistics given show the attendance at the public and private schools, and the non-attendance and truancy of census children for a period of eight years.

In 1878 there were on the census-roll 141,610 children. Of this number, 12,507 attended private schools, and 97,018 were enrolled in public schools; but only 71,170—or 50.26 per cent. of the whole—attended regularly enough to be considered pupils.

As shown by the tables annexed to the report of the Superintendent, there were 1,462 school districts in 1873, of which 637 maintained an eight months' school; in many districts the appropriations were only sufficient to maintain a school for three months, and 100 districts—from inability to support a term of three months—were deprived of their "proportion of the interest of the public fund."

The number of census children has increased 9 per cent. since 1871, and, as the funds provided by the State have increased only 1.5 per cent., the appropriation has decreased from \$3.56 to \$3.18 to each census child.

The total expenditures for common schools in the State, from June 30, 1872, to July 1, 1873, was \$2,118,356.25. The funds for school purposes are obtained: 1. from the State apportionment. 2. From county apportionments. 3. From district apportionments. The property of the public schools is estimated at \$4,000,000, and it is generally in excellent condition.

The reports of the Board of Trustees and of the Principal of the State Normal School show that institution to be now in a prosperous condition. The corps of teachers is satisfactory. Two additional teachers will be needed during the present year. A training-school has been organized in connection with the institution, and its advantages are so evident that other classes will soon be added.

The University of California took possession of its permanent site at Berkeley, July 16, 1873; and instructions in literary and scientific

studies are now given there. The two buildings provided by the State have been completed, and their suitable equipment is now in progress. The number of instructors there employed is eighteen, and the number of students enrolled at the beginning of the present college year was one hundred and ninety-nine, of whom thirty-two are ladies. Instruction of a high order is given in literary and historical studies and in science, with special reference to the agriculture, the mines, and the engineering works of the State. A system of manual labor has been inaugurated.

The biennial report of the Trustees and Principal of the Asylum for the Deaf and Dumb, and the Blind, is interesting, not only exhibiting the condition of the asylum, but discussing with intelligence and accuracy the mental disabilities of the unfortunate classes for whom it is provided, and the best methods for their care and education.

The asylum is free from debt, the appropriation made by the last Legislature having proved sufficient for current expenses.

In addition to the appropriation for current expenses, one of \$8,000 is asked for to complete the entrance front, and for improvement of grounds. On July 1, 1873, there were 93 pupils in the institution.

On the subject of provision for the insane, California has pursued a course directly the reverse of that of the older States. They recognize the necessity of having the counties provide for the incurable and idiotic pauper insane, after the effort has been made to benefit them in the State asylums without success; but California has opened her State asylums to these, and has accumulated a large number of these incurable and hopeless cases there, while she has also received all new cases freely, and, as a result, she has the Stockton Asylum full to overflowing, and the new Napa Asylum will be filled from the start. The Stockton Asylum contains eleven hundred and fifty-six patients—more than one superintendent, however able and vigorous, can properly attend. These have been maintained during the two years at an average cost of forty-five cents a day for each patient. This includes salaries of physicians, wages of employés, and every expense payable out of the appropriation for the support of the asylum.

The history of the State-prison is not creditable to the State. There has been no settled policy in regard to it. The treatment of the prisoners is humane; they have a sufficiency of coarse, healthy food, and no greater punishment is inflicted than is deemed essential to maintain discipline. The hygienic condition of the prison is as good as it can be, where the prisoners are confined twelve hours in twenty-four in imperfectly-ventilated cells and rooms, with an average of not more than one hundred and fifty cubic feet of air to the inmate. That there there should be so little sickness, and an average mortality less than that of the State,

speaks highly for the healthfulness of the location, and the skill and care of the surgeon. The prisoners who are able are kept employed, when not at work for contractors, about the grounds and buildings. This is all it is possible to say in favor of the management of a prison where 850 convicts are confined in 8 rooms, 192 in 48 cells, and 182 in 66 cells, without a possibility of classification.

The price paid by contractors for convict-labor—forty cents per day inside the walls—seems to be much under its value, but no administration has been able to get more. The last advanced the price to fifty cents, but were compelled to recede to forty, or allow the prisoners to be unemployed. The present Board of Directors have made no contracts not terminable on six months' notice, but have received no higher application, from responsible parties, for enough men to justify the enlargement of shops. Acting upon the policy of keeping prisoners at work, the directors have made some improvements in necessary buildings for officers, laying out roads, and building reservoirs; but have employed no more free labor than was necessary to direct that of the prisoners. The supply of water at the prison, except in the rainy season, has always been short and of poor quality. In the summer, much of it had to be hauled long distances; there was no protection against fire, and there was always a dread of a water-famine. The Board, therefore, contracted with the Marin County Water Company for a supply of fifty thousand gallons a day, for the sum of \$1,000 per month, until December 1, 1875. The sanitary condition of the prison has been improved by the introduction of water, and the risk of destructive fires has been greatly diminished.

The State Geological Survey has made many valuable contributions to science.

In establishing and continuing this work, the State has appropriated \$246,600, and the State Geologist now reports \$100,000 as the minimum appropriation adequate to the publication of the work in hand.

The State Geologist, February 12, 1872, stated that the volumes of ornithology, botany, conchology, and possibly paleontology, would probably in the publisher's hands within a year. By his report it will be seen that, notwithstanding the lapse of nearly two years, and the expenditure of \$84,000, no new maps have been published which were not exhibited in proof-sheets in 1872, and no new volumes have been published, nor have any been sent to the printer, except a portion of that on botany, "which will be in type, if no unexpected delay occurs, before the end of 1874."

The present condition of the survey is, that there have been published one volume of geology, two volumes of paleontology, one volume of ornithology, the Yosemite books, map of the vicinity of the Bay of San Francisco, map of the Sierra Nevada adjacent to the Yosemite, map of the Yosemite valley, and a portion of

the map of Central California, and that there is a large quantity of work in various stages of preparation.

The operations during the past two years have been confined to trips to Yosemite, Alpine, and Calaveras Counties, the earthquake region in Inyo County, and a geological excursion from San Diego to Los Angeles.

Work was also done on that particular geology of the San Francisco Bay Map, the immediate publication of which was promised eleven years ago. No other geological work was done; nothing in the mining districts. So far as the survey is concerned, the world is yet in ignorance of the geological features of the mining region on the western slope of the Sierra Nevada, excepting such information as can be gleaned from the generalizations and scientific descriptions contained in the one volume of geology published. A scientific description, and the accurate geological mapping of the auriferous area bounded by the Stanislaus River, Spanish Peak, in Plumas County, the Sacramento River, and the summit of the Sierra, would be of greater service than all that has been accomplished and made public. The topographical maps are beautifully executed, exhibiting original and compiled work of great value; but no maps have been published showing elevation of areas, and there is nothing in the books, maps, or reports, unless incidentally, that will assist to solve the great problems of drainage, irrigation, or reclamation.

There are now in preparation, and it is contemplated to eventually publish, the following volumes, together with numerous maps: Physical Geography, General Geology, Economical Geology, Ornithology, Botany, Paleontology, Fossil Plants, Ichthyology, Conchology, and an Atlas Folio.

The subject of the grant to the State of the Yosemite Valley as a "Public Park" is presented in the report of the "Commissioners to manage the Yosemite Valley, and the Mariposa Big Tree Grove." Little has been done by the State in fulfillment of the obligation she imposed upon herself by accepting the grant made by Congress—\$4,000 only having been devoted to the trust during the nine years which have elapsed. By decisions of the Supreme Court, as well as that of the United States, the ample power and authority of the commissioners, within the limit of the grant, have been established, and there remains to do the one thing always requisite to be done when good results are expected or demanded—the appropriation of funds commensurate to the required results.

The subject of Chinese immigration naturally comes up for consideration, in the Governor's message, and his views are tersely expressed as follows:

The increased volume of Chinese immigration in the past year has excited unusual attention. Those who are so far removed from us as to form their opinions on this subject from general principles, rather than from the special facts, and many per-

sons here who are not brought in competition with Chinese labor, but are benefited by its cheapness, have often indulged in harsh criticisms upon the prevailing sentiment of this State in regard to Chinese immigration. Upon this subject I beg to repeat substantially what I have before said. The Chinese immigration constitutes a marked class—a distinctive element of society. We cannot be blind to the fact that China, with a population of more than three hundred millions, is as near to us, practically, as New York, and may send here such a volume of immigration as would modify our society, and substantially change the relations of capital to labor. That modification would not be such as we desire in American civilization; that change would not be in the interest of free labor. The labor of the Chinese who come here is cheap, because in the mass they have no families to support, no children to educate, and are free from the wants which differentiate our civilization from theirs; and, in order to successfully compete with them in price, other laborers would be compelled to reduce themselves to the same conditions.

Besides these considerations, the presence of a large population in our midst, to whom we are unwilling to accord equality of political rights, establishes, to that extent, a system of caste, and is at variance with the genius of our institutions.

I believe the general sentiment of the people of the State will concur in the view that, while the Chinese who are here, or who may come under the stipulations of our treaty, should be protected from violence and persecution, the General Government should call for such a readjustment of the treaty as will restrain their further immigration.

One point, which the Governor does not make, is important in this connection; viz., that, with very few exceptions, the Chinese do not come to stay; that their only object is to accumulate, by a few years of labor, sufficient property to enable them to live in comparative luxury in China, and then to return there.

Under the operation of the laws of the State, a large portion of its inland waters, available for purposes of irrigation, have passed under private control. This right of control has been acquired simply by appropriation, and although the law requires such appropriation to be for some useful or beneficial purpose, the terms are so broad—any useful or beneficial purpose fulfilling the definition—and the legal means of determining what is useful or beneficial, within the meaning of the law, so defective, that the control is practically absolute, and will be regulated only by the self-interest, more or less enlightened, of the appropriators. It is in their power to carry the waters appropriated over one arid district to another, to make their own prices, to discriminate in prices, and between owners of lands. In many districts in the State the control of the waters necessary for irrigation is of as great value as the lands to be irrigated.

The present laws grew up from the immediate necessities of mining, and were, to some extent, justified by the hazards of mining enterprises, the impossibility of determining in advance the value of a mine, or the amount of water its working would require. Privileges were granted to compensate risks. The agricultural development of the State presents different conditions.

The question of regulating the rates of railroad transportation has been clouded by unnecessary difficulty. Railroads are public highways in private ownership. In their construction they invoke the highest attribute of the State's sovereignty—the right of taking private property for public use. Their owners are common carriers with special privileges. The maximum rates in California—ten cents per mile for passengers, and fifteen cents per ton for freight—were fixed at a time when prices and profits were so much higher than now, it seems to belong to a different age.

One of the most serious charges against the railroad companies was, that, after the grant to them in 1868, at a mere nominal price, of a large tract of submerged and tide lands north-west of and adjacent to Yerba Buena Island, on certain conditions of improvement, they had not only neglected to make these improvements, in their eagerness to get possession of Goat Island, although they were aware that the causeways and other structures which they proposed to erect there would ruin the harbor of San Francisco, but they had the effrontery to demand that the State or the city should pay them \$2,500,000, as a condition of their improving this tract. Governor Booth advises that the \$12,000 paid by the company should be refunded to them and the tract reclaimed. The final decision in regard to Goat Island had not been reached, but there was very little prospect of its falling into the hands of the railroad companies.

The Supreme Court of the State decided that a tax on a solvent debt, secured by a mortgage, was a double taxation, and therefore unconstitutional. The majority of the court seemed also inclined to regard a tax upon land, and upon a mortgage given upon the land to secure a debt, as a double taxation.

The savings-banks of California have, in their few years of existence, attained to a magnitude of business which indicates a higher degree of thrift among the working-classes there than we have been in the habit of attributing to them. In the spring of 1873 there were twenty of these banks, only five of which had been in existence more than five years, and only half the number more than three years; the number of depositors was 64,501; the amount of deposits, \$51,431,326; the amount of loans and investments, \$52,156,467; the gross earnings, \$2,734,104; and the amount of dividends for six months, \$2,288,304.

During the spring of 1873 there was a massacre by the Modoc Indians in the Klamath district of Northern California, of several officers and citizens of the United States, followed by a war of extermination of the greater part of that tribe (see *MODOC WAR*). This disaster led to considerable criticism on the system of Indian reservations as it exists on the Pacific slope, and to some attempts to improve it. The fact came out in the controversy on the subject that the Klamath Indians, a peace-

able, quiet tribe, more industrious and less intemperate than most of the tribes on the Pacific, had been employed for many years on the ranches of the large farmers as herdmen, laborers, and as domestic servants, and had a good reputation among the farmers. In an evil hour some of the more ignorant, vicious, and lazy whites in that region began to demand that they should be sent to the reservation. The best citizens opposed it, but this worthless class finally took the law into their own hands, and drove them to Round Valley, with great cruelty and abuse. Even this might not have produced a revolt, though the poor Klamath Indians were greatly demoralized by the treatment they had suffered, but the same ruffians undertook to drive the Modocs, a plucky, fighting tribe, to the same reservation, and met with a resistance they little expected.

The reclamations of large tracts of what are called the tule-lands, swampy districts, in the delta of the Sacramento and San Joaquin Rivers, some of them islands, and others tracts of the main-land, but all covered by the *tule*, a rush or reed which attains a height of ten feet, but dies down to the ground each autumn, has been going forward for several years, but is now so thoroughly systematized, that in 1873 about 600 miles of levee were completed. These lands, comprising about 660,000 acres, were granted to the State by Congress, and by the State were virtually given to purchasers on condition of their reclamation. The process is a very simple one, though costing from six to ten dollars per acre. A levee is first constructed to a height of ten or twelve feet, taken from the land itself, and a ditch is made on the inside of the levee. The inclosed land is usually below the level of the river at high tide; and when inclosed it is at first burned over to destroy all the dead *tule* stalks, and to some extent the peat-like roots of the *tule*, and then sown with wheat on the ashes, which is trampled in by sheep. Sometimes alfalfa is also sown for an after-crop. When this crop has been harvested, the land is ploughed, the horses being shod with broad wooden shoes to enable them to keep up in the light, ashen surface. After two or three ploughings, and the taking off the same number of crops, the land is considered thoroughly reclaimed, and yields large crops. It is easily irrigated, and forms the best wheat and barley lands in the State. Alfalfa, red clover, root-crops, and fruits, also do well on this rich soil. The land when reclaimed sells for about twenty-five dollars per acre. Most of the work of reclamation is performed by Chinese laborers.

CANBY, Brigadier and Brevet Major-General EDWARD RICHARD SPRIGG, U. S. A., a gallant and eminent general of the Army, born in Kentucky, in 1819: murdered by the Modoc Indians at the Lava Beds in Northern California, April 11, 1873. His parents removed to Indiana in his boyhood, and, after receiving a liberal education there, he entered the Military

Academy at West Point as a cadet in July, 1835, and graduated from that institution in July, 1839, in the same class with Generals Halleck, Isaac Stevens, Ord, Paine, of Illinois, and other distinguished officers. Immediately on his graduation he received a commission as Second-Lieutenant in the Second Infantry, and served in the Florida War from 1839 to 1842, on quartermaster's duty, being commissary of subsistence from October, 1839, and after the close of that war was engaged in the removal of the Cherokees, Creeks, and Choctaws, to the present Indian Territory, in 1842; in garrison duty from 1842 to 1845; and on recruiting service during 1845 and a part of 1846. In March, 1846, he was appointed adjutant of his regiment, and three months later was promoted to a first-lieutenancy. The outbreak of the Mexican War called his regiment into active service. Serving under General Riley, and with several officers who have since attained distinction as his companions-in-arms, he participated in the advance on the Mexican capital, behaving bravely at the siege of Vera Cruz, at Cerro Gordo, Contreras, and Churubusco, as well as at the attack upon the De Belen gate. He received the brevets of major and lieutenant-colonel for his services in this campaign, and was promoted to the full rank of captain in June, 1851; but, having been transferred to the Adjutant General's Department as Assistant Adjutant-General, with the rank of lieutenant-colonel, he relinquished his rank in the line. In March, 1855, he was appointed major of the Tenth United States Infantry—a new regiment with which he was engaged on frontier duty in Western Wisconsin and Minnesota for the next three years, and in 1858 received command of Fort Bridger, Utah, where he had under his control portions of the Second Dragoons, and Seventh and Tenth United States Infantry. He held this post until 1860, when he was appointed commander of the expedition against the Navajo Indians, and was in command of Fort Defiance, New Mexico, at the advent of the civil war. At that critical period Major Canby did not leave his loyalty in doubt for a single moment. He promptly sided with the national cause, and ever after during the war was one of the most active and conspicuous defenders of the Union. In May, 1861, he was made colonel of the Nineteenth Regiment U. S. Infantry, and was acting brigadier-general of the Union troops in New Mexico. He resisted, in 1862, Sibley in his daring attempt to acquire possession of New Mexico, and had at length the satisfaction of seeing the invader retreat, "leaving behind him," as he observed in his report, "in dead and wounded, and in sick and prisoners, one-half of his original force." He was promoted to the rank of brigadier-general of the volunteers, March, 1862, and, after transferring the command of the forces in New Mexico, he repaired to Washington, where he remained some time, rendering valuable assistance to

Secretary Stanton in the War Department. Always ready for great emergencies, he took command of the United States troops in New York City and Harbor during the draft riots of July, 1863, and by his energetic measures and resolute bearing promptly suppressed the rioters and restored order. He remained here until November, 1863, when he resumed his position at the War Department. At the opening of the campaign of 1864, General Canby received the rank of major-general of volunteers, and was placed in command of the Military Division of West Mississippi—a position he held until some months after the close of the war. His first act in this field of duty was to take charge of General Banks's retreating forces at the Atchafalaya, and conduct them safely to New Orleans, where, for want of troops, he remained inactive throughout the summer and autumn of 1864. While on a tour of inspection on White River, Ark., November 4, 1864, he was severely wounded by hostile guerrillas; but as soon as he was sufficiently reinforced he proceeded, with an army of from 25,000 to 30,000 men, against Mobile, which, with the assistance of the fleet, he succeeded in capturing. On learning of the fall of Richmond, General Dick Taylor surrendered his forces to him, and hostilities ceased. On March 18, 1865, he received the brevets of brigadier and major-general of the regular army. General Canby remained in command of Southern military departments until 1866, when he was transferred to Washington and received (July 28, 1866) the full rank of brigadier-general in the regular army. Subsequently he was appointed a member of the Special Commission for deciding claims on the War Department, and of the board to prepare plans for a new building for the same department. He was more recently placed in command of the Department of Columbia, and was, during the last six months, actively engaged in bringing the Modocs to accept the terms offered them by the Government. He was specially adapted for this duty. He had never shared the fierce hatred of the Indians so common on the border, but had always leaned to the side of humanity in his dealings with them. Only four days before his death he sent a dispatch to Washington, which, read in the tragic light of after-events, shows plainly and touchingly both his generosity to his slayers, and his sagacious doubts of them: "I do not question the right or the power of the General Government to make any arrangement that may be thought proper, but I think they should make such as to secure a permanent peace, together with liberal and just treatment of the Indians. In my judgment permanent peace cannot be secured if they are allowed to remain in this immediate neighborhood. The Modocs are now sensible that they cannot live in peace on Lost River, and have abandoned their claim to it, but wish to be left in the Lava Beds. This means license

to plunder and a stronghold to retreat to, and was refused. Their last proposition is, to come in and have the opportunity of looking for a new home not far away, and if they are sincere in this the trouble will soon be ended. But there has been so much vacillation and duplicity in their talks that I have hesitated about reporting until some definite result was attained." General Canby was a remarkable instance of an officer of high rank and universal popularity without enemies in his profession. He was so upright that he was very rarely criticised by his brother officers. He had little ambition beyond his duty; was always satisfied, or appeared to be, with any position to which he was assigned; and never during his career engaged in any of those squabbles or intrigues for preferment which deform the record of many able soldiers. He had a singular power of inspiring the most perfect trust and confidence among those who served under his command. His subordinates considered him infallible, and this feeling had much to do with the perfect discipline which he always, apparently without effort, exercised wherever he went. He was the ideal of the thoughtful and studious soldier—a man rather of the type of Moltke than of Murat. He was tall, slender, severe, and silent. His love for order and regularity was one of his distinguishing traits.

CANDLISH, ROY. ROBERT SMITH, D. D., an eloquent preacher and leader of the Free Church of Scotland, born in Edinburgh, March 23, 1807; died there, October 20, 1873. He was educated at the University of Glasgow, entering as a student there in 1822. He was for a time a private tutor at Eton College, and in 1828 was licensed as a preacher of the Kirk of Scotland, by the Presbytery of Scotland. In 1829 he became minister of St. Andrew's Church, Glasgow, and in 1831 was called to the kirk at Bonhill, in the dale of Severn, where he continued to officiate till he became minister of St. George's, Edinburgh, in 1834, where he soon advocated with intense zeal the justice and necessity of ecclesiastical reforms. He became one of the boldest and most vigorous leaders of the popular "non-intrusion party," which resisted the claim of patrons to appoint ministers to churches irrespective of the approval of the parishioners. In 1839 he took a prominent part in the debates of the General Assembly of the Kirk of Scotland on these questions. This movement led to the disruption of the Established Church in 1843, and the founding of the Free (Presbyterian) Church of Scotland. Dr. Candlish cooperated with Dr. Chalmers and other chiefs of this newly formed denomination in organizing, consolidating, and extending its aggressive efforts. Since the death of Dr. Chalmers, in 1847, he had been the most active and influential worker in the Free Church, and the man to whom, above all others, it is most deeply indebted. As a debater in church courts he was un-

equaled; as a preacher he was noted for earnestness, strength, and acuteness of mind. In 1845 and 1846 he was largely concerned in the establishment of the Evangelical Alliance. In 1846 he was appointed Convener of the Education Committee of the Free Church. In 1847, on the death of Dr. Chalmers, he was appointed his successor in the chair of Divinity in New College, and, on the death of Principal Cunningham, in 1861, succeeded him as principal of the same college. Though mainly distinguished as a preacher and debater in the church courts, Dr. Candlish had also a high reputation as a writer. His principal published works were: "Contributions toward the Exposition of the Book of Genesis;" "The Atonement: its Reality and Extent;" "Scripture Characters and Miscellanies;" "Life in a Risen Saviour;" "The Two Great Commandments;" "The Fatherhood of God," being the Cunningham Lectures; "The First Epistle of St. John, expounded in a Series of Lectures;" and numerous contributions to the periodical press. Though stern, searching, and earnest in debate, and somewhat peculiar and uncouth in appearance, having a giant's head on a weak, puny, and almost dwarfish body, Dr. Candlish was noted in private life for his gentleness, and the depth of his tenderness and affection.

CASSIDY, WILLIAM, an able and accomplished journalist and political leader, born in Albany, N. Y., in 1814; died there, January 23, 1873. His father was a merchant, and gave his son the advantages of an early and thorough education. He graduated from Union College in 1833, studied law, and in 1840 entered the field of journalism.—At that time the *Plaindealer* and the *Rough Haver*, both short-lived papers of the Radical or Barnburner section of the Democratic party, were in existence, and young Cassidy wrote for both. In 1841 the *Albany Atlas* was founded by Vance and Wendell, as the organ of the Barnburners, and H. H. Van Dyke and William Cassidy became its editors. The *Argus*, founded in 1813, supported by the Hunkers, and edited with extraordinary ability by Edwin Croswell, was a formidable rival, and for some years the success of the *Atlas* was doubtful, though its young and brilliant editor devoted his whole energies to it, and fought a vigorous battle. In those days he labored long and hard. Writing often on a poor table, amid the confusion and turmoil of the composing-room, his articles bristled with the sharp points and caustic wit for which he was always after famous. The battle was at its height in 1848, when Cass was the candidate of the regular Democracy and Van Buren was the nominee of the Barnburners. When the two factions had thus partially destroyed each other, the conflict ceased, and in 1856 the *Atlas* and *Argus* were united under the latter name. Mr. Croswell had retired some time before, and Mr. Cassidy became editor of the *Argus*,

and continued so until his death. Besides his position as editor, Mr. Cassidy exercised great influence in the councils of the Democratic party, and was on intimate terms with its leaders, and his social, genial disposition made him numerous friends. When Mr. Caggar died, he succeeded him as Secretary of the State Committee, and evinced good judgment and keen prescience. His contemporaries have regarded Mr. Cassidy as undoubtedly the ablest Democratic editor in the country. He was at once a wit, a scholar, and a politician. His subtle gift was not simply that of talent—it was genius. Joined with the finest taste and the best culture, it made him one of the most accomplished and brilliant men of his times. As a writer, he might at his best fairly rank as a classic. His compositions had an Attic severity, a chaste finish, and a gleaming brightness which commanded the admiration even of those whom they assailed. He had an extraordinary faculty of condensed expression. Rarely undertaking prolonged logical argument, he rather flashed his reasoning in comprehensive statement, in surprising point or in deft suggestion. His pen had the edge of a Damascus blade. He could cut to the quick with a single stroke, and with a little sentence leave a sting which would rankle for years. This quality sometimes made him seem rancorous when there was nothing of bitterness in his heart—when the thrust was nothing more than fine intellectual fence. His generous character was indicated in his well-remembered article on the death of Lincoln—dashed off in the first hours after the news of the assassination, and fragrant with feeling. But in the social circle this was still more apparent. Those who met him there saw the real kindness of his genial nature. He was eminently social, and his influence in every circle in which he mixed was joyous and inspiring. As a conversationalist he had few equals and no superiors. His sentences sparkled with wit and gems of thought, of which he was apparently wholly unconscious. There was no touch of asperity. If the leader seemed icy and sharp, its impression was here dissolved in sunshine. In that field, Mr. Cassidy was peculiarly fascinating. His wit, and knowledge, and culture, made him the chief figure. Mr. Cassidy seemed indifferent to official honors. His career was that of the political editor. He helped to make and unmake men. He lifted others from obscurity to renown; but he sought none of the honors of public station for himself. For thirty years he had been a prominent figure in the politics of the State, but the only public position he held was that of member of the Constitutional Convention of 1867, and of the similar commission which now mourns his loss.

CENTRAL AMERICA (CENTRO-AMÉRICA) comprises the five independent republics of Guatemala, Honduras, Nicaragua, San Salvador, and Costa Rica. After these states

shook off the yoke of Spain, and asserted their independence, in 1821, they established a confederacy named the Republic of Central America; which, however, was, by reason of internecine dissensions, dismembered in 1839. Ineffectual efforts were made in 1842, and again in 1847, to restore the Union; and in 1849 commissioners from the different countries assembled at Leon, Nicaragua, and agreed upon a basis of reunion to be called the "National Representation of Central America." This assembly afterward met at Tegucigalpa, Honduras, in 1852, but was dissolved, owing to the refusal of some of the states to send delegates. The last attempt at reconstruction took place on February 17, 1872, when ministers plenipotentiary from four of the republics met in conference in La Union, San Salvador. Nicaragua was not represented at that conference.* Since that time events have transpired of a nature to retard, at least, the realization of the project, although the latter is eagerly desired by, and seriously occupies the attention of, most of the leading men in Central America, who are aware that thereupon depends the permanent welfare of that distracted country.

One obstacle to the formation of the Union is the difficulty to find a constitution at once agreeable to each individual state, and favorable to the interests of all; a difficulty which might nevertheless be easily overcome, did not others of a graver character stand in the way. The vexed question of territorial limits between Costa Rica and Nicaragua may in all probability not be settled without an appeal to arms, in spite of the disastrous results which must attend such an issue, especially for the former of these two powers; for Costa Rica has more at stake at the present time, in material progress, national credit, and national honor, than any other of the Central American states. None would suffer so much in the event of hostilities, nor would any gain so much from the establishment of the confederation against which she alone now raises a dissenting voice. Nicaragua, in common with the other Spanish-American republics, had her share of the political strife and social perturbations which succeeded the epoch of independence, nor was her experience as a member of the first Central-American Union more enviable than that of Costa Rica; and, notwithstanding, and spite of her satisfaction with, the present order of things, she is now willing to unite with the sister states. This readiness on the part of Nicaragua to re-enter the Union is rather a mark of true patriotism, and far-seeing policy, than of mere selfish ambition; for, with a fertile soil, watered by a river and lake system the most extensive in Central America, and the only one offering adequate facilities for internal navigation; and the prospect, besides, of see-

* For the stipulations agreed upon, see the *ANNUAL CYCLOPEDIA* for 1872.

ing her territory one day traversed by a canal between the Atlantic and Pacific Oceans, she possesses within herself all the elements requisite for working out her own destiny unaided by any of her neighbors.

Honduras exhibits no less readiness than Nicaragua to come into the proposed confederation. And as for San Salvador and Guatemala, a refusal from them to enter into the grand scheme is scarcely to be apprehended. In the course of the year just terminated, the two powers last alluded to again found an opportunity to lend armed aid to Honduras, whose territory was invaded by the filibuster Palacios; and Nicaragua, neutral for a time, afterward changed her policy, and entered with San Salvador and Guatemala into an alliance offensive and defensive, as well to protect herself from any aggression on the part of Palacios, as to secure sufficient help in case of hostilities with Costa Rica.

It may not be uninteresting to present the following statistics, as indicative of the rapid growth of trade between California and Central America during the last eight years.

The value of the imports from San Francisco in 1865 was but \$35,600; in 1866 it increased to \$144,000; large quantities of flour having been received during the two years immediately following, the figures in 1867 swelled to \$213,000; and in 1868 reached \$294,000. The returns for 1869, in which year the trade was very irregular, and shipments were mostly effected in the first and last quarters, exhibited a decrease of over \$100,000. The year 1870 was marked by a like languor; but, in 1871, the aggregate imports amounted to \$290,700, an increase of more than \$100,000 as compared with the two years immediately preceding; while in 1872 the total rose to \$482,700, being an excess of \$12,000 over the trade of 1870 and 1871 together. The value of the imports during the first six months of 1873 is set down at \$188,600; and the whole of the imports from San Francisco through all the Central-American ports, in the space of eight years and a half, represent a value of \$2,000,000. It should be observed that the great bulk of merchandise imported was taken by Guatemala.

The export returns exhibit a no less favorable state of things. In 1865, for instance, 3,150,000 lbs. of coffee were sent to San Francisco; 4,322,000 lbs. in 1866; 5,129,000 lbs. in 1867; the increase in the following year fell little short of 50 per cent.; 1869 was marked by a falling off of about 40 per cent. as compared with 1868; and in 1870 only 3,094,000 lbs. were shipped, a decrease to be attributed to the failure of the coffee-crops in most of the republics, and especially in Guatemala. But the year after, 1871, gave 2,422,000 lbs.; 1872 gave 10,421,000 lbs.; and in the first six months of 1873 the shipments reached 6,450,000 lbs. It is fair to calculate that the aggregate exports of coffee in 1873

will not be under 11,000,000, in which case the total quantity sent to San Francisco from January 1, 1865, to December 31, 1873, would be 60,000,000 lbs., which, at an average of 15 cents per lb., makes \$9,000,000. One-third of the exports from Guatemala in 1871 went to the United States. (For further details, see COSTA RICA, GUATEMALA, HONDURAS, NICARAGUA, and SAN SALVADOR.)

CHANDLER, Colonel and Brevet Brigadier-General JOHN G., United States Army, a meritorious and active army officer, born in Massachusetts, about 1832; died in Washington, D. C., May 12, 1873. He entered the Military Academy as a cadet in 1848, and graduated in 1853, was appointed brevet second-lieutenant of artillery in July of that year, and commissioned full second-lieutenant of Third Artillery in December following. He was engaged mainly in frontier duty for the next eight years, being promoted to be first-lieutenant in May, 1856. During the late civil war he was engaged for the most part in quartermaster duty, and was promoted to a captaincy on the staff in May, 1861; to the rank of lieutenant-colonel in 1863 on the staff; and was commissioned major on staff, as quartermaster, in the regular army in 1867, lieutenant-colonel in 1870, and colonel in 1872. All these were staff appointments. He had received brevet rank as major, lieutenant-colonel, and colonel in 1865, and as brigadier-general in 1870. During the war he was successively chief-quartermaster of the Department of West Virginia, of the Fourth Division of the Army of the Ohio, of the Pittsburg-Landing Depot of the Army of the Ohio; of the Nineteenth Army Corps (Department of the Gulf); and of the Thirteenth Army Corps in Texas. After the war he was depot-quartermaster at New Orleans, chief-quartermaster of the Department of Dakota, and finally attached to the Quartermaster-General's Department at Washington, where he died.

CHAPMAN, REUBEN ATTWATER, LL. D., Chief-Justice of the Supreme Court of Massachusetts, born in Russell, Hampden County, Mass., September 20, 1801; died at the Hôtel de la Croix, Fluelen, on Lake Lucerne, Switzerland, June 28, 1873. His early life was that of an ordinary New England farmer's boy, with its rugged toil and scanty but well-improved schooling. At the age of nineteen he became a clerk in a country store in the town of Blanford, where his superior native qualities attracted the attention of the leading lawyer of the place, who invited him to become a student in his office. Young Chapman not only gratefully embraced the opportunity, but his aptness and devotion to his studies justified the foresight of his patron. He began the practice of his profession in the town of Westfield, thence removing successively to Monson, Ware, and Springfield. His advent in the professional circles of the latter place was very trying and discouraging.

He had come to a bar unusually strong in talent, with caste prejudices of an aristocratic tinge hard to realize in these days, while he was without the advantages of a liberal education, and without money or special reputation. Another young lawyer had also come in under similar circumstances—the late George Ashmun—and it was natural that the two should join forces, although they were as inherently unlike as two men could well be. But their united abilities, zeal, and devotion to the interests of their clients, soon made the firm of Chapman & Ashmun well known to the whole region, and, in spite of professional opposition, brought it to the front during its twenty years' continuance. Mr. Chapman's reputation by this time had become so well established throughout the State, that in September 28, 1860, he was appointed an associate justice of the Supreme Judicial Court; in which position his merits were so conspicuous that, on the resignation of Chief-Justice Bigelow, Governor Bullock, February 7, 1863, advanced him to the vacancy, amid the general approval of the bar and the people. Among all who have filled that high place none did so more acceptably, with more evidences of public respect and confidence, than Chief-Justice Chapman. He had all the requisite professional acquirements, and he had the transcendent qualification of a stainless, lofty Christian character. He received the honorary degree of LL. D. from Amherst College in 1861, and from Harvard University in 1864.

CHASE, SALMON PORTLAND, LL. D., an American statesman, Chief-Justice of the Supreme Court of the United States, and previously Governor of Ohio, Senator, and Secretary of the Treasury, born in Cornish, N. H., January 13, 1808; died in New York City, May 7, 1878. He was descended from Aquila Chase, a native of Cornwall, England, who emigrated to the American colonies in 1636, or thereabouts, and settled in Newburyport, Mass. His great-grandson, Dudley Chase, with several of his sons, founded and settled at Cornish, New Hampshire, and these sons all became notable men. One of them, Philander, was the Bishop of the Episcopal Diocese of Ohio; and another, D. P. Chase, was made Chief-Justice of the Supreme Court of Vermont. Ithamar, the father of Salmon P. Chase, was a fine specimen of the old-fashioned New England gentleman, a man of imposing stature, great natural dignity, and at the same time a genial and affable manner which attracted all hearts to him. He was at the beginning of the present century a man of substance, a magistrate, and a member of the Executive Council of the State of New Hampshire. But the close of the War of 1812 brought disastrous reverses, and necessitated his removal in 1815 to Keene, N. H., where he died in 1817, leaving to his widow and children little more than the heritage of an honorable name. His widow had, whoever,

a little property in her own right which had survived the wreck, and with this and her indomitable energy she managed to keep her children in comparative comfort, and give them the rudiments of an education. Salmon, at his father's death, was a little more than nine years of age. He was fond of books and had made good progress for his age in English studies, and had by his twelfth year made considerable progress in the classics and Euclid, under the careful tuition of Rev. Zedekiah S. Barstow, who had been settled in 1818 at Keene. In 1820 Mrs. Chase received from her brother-in-law, Right Rev. Philander Chase, then Bishop of the Diocese of Ohio, the offer to take charge of Salmon and educate him. The offer was gladly accepted, and the long journey to Worthington, Ohio, made with his elder brother and the late Henry R. Schoolcraft. There were delays at different points on the route, and it was late in the season when the boy reached his uncle's house. The bishop gave him a place in his school, but made him his "chore-boy" in the intervals of study. Notwithstanding the interruption to his studies, however, he excelled as a scholar. In 1822, the bishop removed to Cincinnati, and became President of the Episcopal College there, to which his nephew was at once admitted as freshman. In August, 1823, Bishop Chase resigned the presidency of the college, to go to England and endeavor to obtain funds for the endowment of a Protestant Episcopal Theological Seminary in the West, and his nephew returned to his home in New Hampshire, traveling much of the way on foot, and, after a short period of school-teaching, and a few months of close and rapid preparation at the Royalton Academy, Vt., he entered Dartmouth College as a junior, and graduated with high honors in 1826, being but little more than eighteen years of age. He went from Hanover directly to Washington, D. C., and opened a classical school for boys, which, though small at first, gradually became popular, and received the patronage of Henry Clay, William Wirt, Samuel L. Southard, and other eminent men. While teaching thus successfully for nearly four years, he was also diligently studying law, with William Wirt for his preceptor, and, having previously closed his school, he was admitted to the Washington bar in February, 1830. A month later he was on his way to Cincinnati, to establish himself there in his profession. He associated himself first with Mr. E. King, and afterward with a Mr. Caswell, and, while neglecting no opportunity of securing practice, devoted his leisure time to a compilation of the Statutes of Ohio, with copious annotations and an historical sketch of the State, the whole occupying three large octavo volumes. This compilation was an admirable piece of work, and, while it made him very thoroughly familiar with the laws of Ohio, it gave him the respect and confidence of the older members of the profession. He soon

secured a large and lucrative business. He had not for the first seven or eight years of his residence in Cincinnati given much attention to politics, voting sometimes with the Democrats and sometimes with the Whigs, though, so far as general principles of national policy were concerned, he was more in sympathy with the Democracy. On one point, however, he was decided: he was inflexibly hostile to slavery. In July, 1836, when the office of the *Philanthropist* newspaper, an antislavery periodical, edited by James G. Birney, was attacked and destroyed by a mob, Birney owed the preservation of his life to the stalwart arm and intrepid courage of Salmon P. Chase, and from that time forward he was, as much as Birney himself, a leader in the conflict with slavery, and one always ready to take his position in the front, where the battle raged most fiercely. In 1837 he defended a fugitive slave woman, claimed under the law of 1793, and took the highest ground against the unconstitutionality of that law. It was at this time that one of the oldest and ablest lawyers in the court-room was heard to remark concerning him: "There is a promising young man who has just ruined himself." How great an error this was, time effectually demonstrated. In 1837 Mr. Chase also defended his friend Birney in a suit for harboring a negro slave. In 1838 he reviewed with great severity a report of the Judiciary Committee of the State Senate, refusing the trial by jury to slaves, and in a second suit defended Mr. Birney.

It was not long after this that he judged the time to be ripe for carrying these great and important questions into politics. He had supported Harrison and Tyler for the presidency in 1840, but "the tone of his inaugural address, and, still more, the course of the Tyler Administration, convinced him that no effective resistance to the encroachments of slavery was to be expected from any party with a slaveholding and pro-slavery wing, modifying, if not controlling, its action. He had made up his mind. His day for giving a stray vote with the Democracy was gone, and the time for fully organizing a distinct party, pledged to antislavery views, had come." He led the way, in 1841, in calling a convention of those opposed to slavery and slavery extension. The convention met in December of that year, organized the "Liberal party of Ohio, nominated a candidate for Governor, and issued an address defining its principles and purposes." Mr. Chase wrote and reported this address, which has an historical importance as being one of the earliest as well as one of the ablest expositions of the political warfare against slavery. In 1848 Mr. Chase was an active participant in the "National Liberty Convention," which assembled in Buffalo. He was on the Committee on Resolutions, to which was referred, under a rule of the convention, a resolution proposing "to regard and treat the third clause

of the Constitution, whenever applied to the case of a fugitive slave, as utterly null and void, and consequently as forming no part of the Constitution of the United States, whenever we are called upon or sworn to support it." This resolution was opposed by Mr. Chase, and was not reported by the committee. Having been moved, however, in convention, it was adopted by that body. Senator Butler, of South Carolina, afterward charged the authorship and advocacy of the resolution on Mr. Chase, and denounced the doctrine of mental reservation apparently sanctioned by it. Chase replied: "I have only to say, I never proposed the resolution; I never would propose or vote for such a resolution. I hold no doctrine of mental reservation. Every man, in my judgment, should speak just as he thinks, keeping nothing back, here or elsewhere." In the same year, "the great repeal year," as it was called, Mr. Chase was designated to prepare an address on behalf of the friends of Liberty, of Ireland, and of Repeal, in Cincinnati, to the Loyal National Repeal Association of Ireland, in reply to a letter from Daniel O'Connell. In it he reviewed "the relations of the Federal Government to slavery at the period of its organization, set forth its original antislavery policy, and the subsequent growth of the political power of slavery, vindicated the action of the Liberal party, and repelled the aspersions cast by a Repeal Association in Cincinnati upon antislavery men."

The Southern and Western Liberty Convention held in Cincinnati, June, 1845, originated with Mr. Chase. He desired to embrace "all who, believing that whatever is worth preserving in republicanism can be maintained only by uncompromising war against the usurpations of the slave-power, are, therefore, resolved to use all constitutional and honorable means to effect the extinction of slavery in their respective States, and its reduction to its constitutional limits in the United States." There were two thousand delegates present, and over twice that number of spectators. As chairman of the committee, the projector of the movement drew up the address, embracing a history of the Whig and Democratic parties in their relation to the slavery question, recommending, as a political necessity, the formation of a party pledged to the overthrow of the Southern institution, and showing what to the writer seemed the natural and necessary antagonism between democracy and Southern interests. Mr. Chase was now a widely-known champion of the growing antislavery party. He was the counsel of John Van Zandt, who was arraigned before the United States Circuit Court for the Southern District of Ohio, for aiding in the escape of slaves. The Circuit Court decided against Van Zandt, and Mr. Chase promptly carried the case before the Supreme Court of the United States, on appeal. At the trial, in Washington, Mr. Seward was associated with him, and made one of his most elo-

quent efforts; and Mr. Chase followed up the arguments suggested by the above outline of his views on the subject in a still more elaborate manner, contending that, "under the Ordinance of 1787, no fugitive from service could be reclaimed from Ohio, unless there had been an escape from one of the original States; that it was the clear understanding of the framers of the Constitution, and of the people who adopted it, that slavery was to be left exclusively to the disposal of the several States, without sanction or support from the national Government; and that the clause of the Constitution relative to persons held to service was one of compact between the States, and conferred no power of legislation on Congress, having been transferred from the Ordinance of 1787, in which it conferred no power on the Confederation, and was never understood to confer any." The court, however, through Justice Woodbury, affirmed the constitutionality of the act; and Van Zandt, ruined by the fine imposed upon him, and the costs of the defense, died broken-hearted. Mr. Chase was subsequently engaged for the defense in the case of *Dieckell vs. Parish*, before the United States Circuit Court at Columbus, and argued the same positions.

Mr. Chase attended a second "National Liberty Convention" in 1847, and, in expectation that the agitation of the Wilmot Proviso would result in a more positive movement against slavery extension, opposed the making of any national nominations at that time. He anticipated the Whig and Democratic Conventions in 1848, by calling a Free-Territory Convention, which resulted in the Buffalo Convention in August, and the nomination of Martin Van Buren for the presidency. On the 22d of February of the following year, Mr. Chase was elected to the United States Senate, receiving the entire vote of the Democratic members of the Legislature, as well as a large number of the Free-Soilers. Agreeing with the Democracy of Ohio, which had, by resolution in convention, declared slavery to be an evil, he supported its State policy and nominees, but declared that he would desert it if it deserted the antislavery position. He spoke at length, on the 26th and 27th of March, 1850, against the Compromise resolutions. Opening with a modest allusion to his coming from the private walks of life, without the advantage of previous public position or experience in legislative debates, he claimed consideration for his sincerity, and the directness with which he would present his positions. He followed up this speech with others on special topics connected with the Compromise resolutions, moving an amendment against the introduction of slavery in the Territories, to which Mr. Clay's bill applied; but it was lost, receiving 25 yeas to 30 nays. He also offered amendments to the Fugitive-slave Bill, to conform its provisions to the provisions of the Constitution, which was also lost. When the Nebraska question came

up, he proved a tower of strength to the Antislavery party, at a critical and exciting period of its existence. He drew up an appeal to the people against the repeal of the Missouri Compromise in 1854. He made the first elaborate exposure of the wrongs of that iniquitous measure. His persistent attacks upon it in the Senate, though they failed to prevent the consummation of the scheme, did thoroughly rouse the North, and are admitted to have influenced in a remarkable degree the subsequent scenes in the struggle.

During his senatorial career, Mr. Chase also advocated economy in the national finances, a Pacific Railroad by the shortest and best route, the homestead movement, cheap postage, and held that the national Treasury should defray the expense of providing for the safe navigation of the lakes, as well as of the Atlantic and Pacific Oceans. When the Democratic Convention of Baltimore nominated Franklin Pierce, in 1852, and approved of the Compromise acts of 1850, Senator Chase dissolved his connection with the Democratic party in Ohio, as he had declared he should do, when elected to the Senate, if it deserted the antislavery position. At this time he addressed a letter to Hon. Benjamin F. Butler, of New York, suggesting and vindicating the idea of an Independent Democracy. He made a platform, which was substantially that adopted at the Pittsburg Convention, in the same year. He continued his support to the "Independent Democrats" until the Nebraska-Kansas Bill came up. In 1855 Mr. Chase was elected Governor of Ohio, by the opponents of the Pierce Administration. His inaugural address, among other things, recommended single districts for legislative representation, annual instead of biennial sessions of the Legislature, and an extended educational system.

The new Republican party held its first National Convention in 1856. In that convention Governor Chase was the first choice of many of the delegates for the presidential nomination; but his name was withdrawn at his own request. At the close of his first term he was renominated for Governor by acclamation, and elected by the largest vote ever given for a Governor in Ohio, although in that State, as in the States generally, the Republicans failed to cast any such heavy vote as they had given to Fremont. At the Chicago Convention, in 1860, Mr. Chase's name was naturally prominent. On the first ballot the votes stood: Seward, 173½; Lincoln, 102; Cameron, 50½; Chase, 49. On the third ballot Mr. Lincoln lacked only four of the number necessary to nominate, and these were given by Mr. Chase's friends before the result was declared.

Mr. Lincoln was, perhaps, the one man who could have guided the nation through the civil war. Salmon P. Chase was doubtless the one man who could have saved the Treasury from bankruptcy during the long and terrible struggle. He had displayed in the governor-

ship of Ohio a remarkable aptitude for financial affairs; but he had of course no special training, and his selection as Secretary of the Treasury in President Lincoln's first cabinet, at a time when the nation was entering a period of great peril, was regarded with no little apprehension. Mr. Chase's whole life was a succession of surprises; but his career as Secretary of the Treasury was the greatest surprise of them all. In the worst days of the war, when the prospect was darkest and the cost of the campaign most enormous, the Government was never at a loss for money. His services at this period, though universally recognized, have never been more clearly or succinctly stated than by Mr. Greeley in his "American Conflict:" "When he accepted the office of Secretary of the Treasury, on the accession of Mr. Lincoln," says Mr. Greeley, "the finances were already in chaos; the current revenue being inadequate, even in the absence of all expenditure or preparation for war, his predecessor (Cobb, of Georgia) having attempted to borrow \$10,000,000, in October, 1860, and obtained only \$7,022,000—the bidders to whom the balance was awarded choosing to forfeit their initial deposit, rather than take and pay for their bonds. Thenceforth, he had tided over till his resignation, by selling Treasury notes, payable a year from date, at 6 to 12 per cent. discount; and, when, after he had retired from the scene, General Dix, who succeeded him in Mr. Buchanan's cabinet, attempted (February, 1861) to borrow a small sum on twenty-year bonds at 6 per cent., he was obliged to sell those bonds at an average discount of 9½ per cent. Hence, of Mr. Chase's first loan of \$8,000,000, for which bids were opened (April 2d) ten days before Beauregard first fired on Fort Sumter, the offerings ranged from 5 to 10 per cent. discount; and only \$3,099,000 were tendered at or under 6 per cent. discount—ho, in the face of a vehement clamor, declining all bids at higher rates of discount than 6 per cent., and placing soon afterward the balance of the \$8,000,000 in two-year Treasury notes at par or a fraction over. Such were the financial auspices under which the republic commenced the most gigantic and costly struggle that the world had ever known—a struggle in which it was ultimately required to keep on foot an army of 1,000,000 men, with a vast and costly steam navy—a war in which well-appointed armies had to be transported by water or by railroads for hundreds of miles—a war for which nearly every weapon, every carriage, every means of offense, had to be created or bought on the spur of the exigency—a war wherein our inexperience and lack of adaptation to the business were serious elements of cost—a war wherein countless millions had to be raised on the heel of every great disaster, often when our seat of government was in imminent peril of capture, and when foreigners, with scarcely an exception, proclaimed our cause already

hopelessly lost, and deafened the general ear with their vehement protests against the criminal madness of pouring out rivers more of blood and heaping up mountains of debt to no possible end but to gratify a sullen, stupid, brutal obstinacy, a bankrupt but inexorable pride. When we add that a very considerable proportion of the wealth and intelligence of the loyal States was profoundly hostile to the prosecution of the war on our part as fatal to all hopes of any desirable or even possible restoration of the Union, and very naturally not only refrained from subscribing to the loan continually pressed on the market, but dissuaded others from subscribing, and that we number few moneyed capitalists among our people—most, even of those in thrifty and comfortable circumstances, being oftener in debt than otherwise, while few are accustomed to control considerable sums in money—it must be felt that the raising, in one way or another, of the gigantic loans and other means whereby the war was at length brought to a conclusion, was the standing miracle of the contest. Had the wildest devotee of Manifest Destiny been asked beforehand to estimate the extent to which our Government could borrow money or incur debt to prosecute a civil war which imperiled its existence, he could hardly have gone beyond \$1,000,000,000—which was barely a third of the debt actually created; and, when we consider, also, the State and local debts likewise incurred in raising and fitting out their several contingents, the actual debt incurred was probably over four billions, the total expenditure in prosecuting the war on our side being considerably above that stupendous sum."

Having accomplished his part in this great work, and completely exhausted by his arduous labors which had known no moment of intermission in considerably more than three years, Secretary Chase resigned on June 30, 1864, and was succeeded on the 5th of July by the late William Pitt Fessenden. The next few months were spent, though not without many and oppressive patriotic anxieties, in the endeavor to regain a portion of the wasted health and strength. On December 6, 1864, President Lincoln nominated him for Chief Justice of the Supreme Court of the United States, as the successor of Roger B. Taney, deceased. He was at once confirmed by the Senate, and soon after his assumption of the office made an extended tour throughout the Southern States to ascertain by personal observation the actual condition of the people. This tour was of great service in many of the questions which subsequently came up for decision in that court. There were those who were inclined to think unfavorably of Mr. Chase's appointment to this high office. For the better part of his life he had practically abandoned the profession of the law; he had never filled a judicial position; he had never remained at the bar even long enough to be

reckoned one of the really eminent jurists of the West. Yet men had learned to know that Salmon P. Chase was one of those rarely-endowed men who adorn and dignify any eminence to which they may be raised, irrespective of their previous training; and there was a general confidence that Mr. Lincoln's choice would prove a wise one. It cannot, indeed, be said that Mr. Chase's rank as a judge will equal his fame as a financier; but he showed himself not unworthy to preside over a bench which had once been made eminent by John Marshall. His decisions invariably commanded respect, and on many occasions displayed traces of transcendent abilities. What he might have done in this position, had the ermine fallen upon him at an earlier period of his life, we can easily conjecture. He came to the bench with mental powers unimpaired—as they were indeed to the very last day of his life—and a mind enriched by much and varied experience; but with a physical system utterly broken down by the stupendous labors of the previous three years. Like Mr. Lincoln and Mr. Stanton, he was killed by the war. By great care, constant bodily exercise, and strict habits of life, he exacted from his enfeebled frame the last exertion of which it was capable; but it never was able, after his retirement from the cabinet, to perform the full measure of work which his intellect would have imposed upon it.

He was called, in the exercise of his office, to some duties for which there were no precedents in the past. No other Chief-Justice had ever been called to preside over a High Court of Impeachment, in which the accused was the President of the United States; yet, though party spirit ran high at that time, no serious fault was found with the course of the Chief-Justice as a presiding officer.

The name of the Chief-Justice was brought into singular prominence at the time of the Democratic National Convention in 1868. For some months before the meeting of that convention, there was more or less mention and discussion of his fitness as a possible candidate who could unite the progressive Democrats and the reasonable Republicans upon a platform which should save the rights of the States without periling any of the results of the war. This style of remark grew so general that it seemed proper for the chairman of the National Democratic Committee to address a letter to Judge Chase, asking his views upon pending political questions. To this the judge responded on the 30th of May, in the following language, which was taken as indicating a willingness to serve as the Democratic candidate:

For more than a quarter of a century I have been, in my political views and sentiments, a Democrat, and I still think that upon questions of finance, commerce, and administration generally, the old Democratic principles afford the best guidance. What separated me in former times from both parties was the depth and positiveness of my convictions on the

slavery question. On that question I thought the Democratic party failed to make a just application of Democratic principles, and regarded myself as more Democratic than the Democrats. In 1849 I was elected to the Senate by the united votes of the old-line Democrats and independent Democrats, and subsequently made earnest efforts to bring about a union of all Democrats on the ground of the limitation of slavery to the States in which it then existed, and non-intervention in these States by Congress. Had that union been effected, it is my firm belief that the country would have escaped the late civil war and all its evils. I never favored interference by Congress with slavery, but as a war measure Mr. Lincoln's proclamation of emancipation had my hearty assent, and I united, as a member of his Administration, in the pledge made to maintain the freedom of the enfranchised people. I have been, and am, in favor of so much of the reconstruction policy of Congress as based the reorganization of the State governments of the South upon universal suffrage. I think that President Johnson was right in regarding the Southern States, except Virginia and Tennessee, as being, at the close of the war, without governments which the United States Government could properly recognize—without governors, judges, legislators, or other State functionaries—but wrong in limiting, by his reconstruction proclamations, the right of suffrage to whites, and only such whites as had the qualification he required. On the other hand, it seemed to me, Congress was right in not limiting, by its reconstruction acts, the right of suffrage to the whites; but wrong in the exclusion from suffrage of certain classes of citizens, and of all unable to take a prescribed retrospective oath, and wrong also in the establishment of arbitrary military governments for the States, and in authorizing military commissions for the trial of civilians in time of peace. There should have been as little military government as possible; no military commissions, no classes excluded from suffrage, and no oath except one of faithful obedience and support to the Constitution and laws, and sincere attachment to the constitutional Government of the United States. I am glad to know that many intelligent Southern Democrats agree with me in these views, and are willing to accept universal suffrage and universal amnesty as the basis of reconstruction and restoration. They see that the shortest way to revive prosperity, possible only with contented industry, is universal suffrage now, and universal amnesty, with removal of all disabilities as speedily as possible through the action of the State and national Governments. I have long been a believer in the wisdom and justice of securing the right of suffrage to all citizens by State constitutions and legislation. It is the best guarantee of the stability of institutions, and the prosperity of communities. My views on this subject were well known when the Democrats elected me to the Senate in 1849. I have now answered your letter as I think I ought to answer it. I beg you to believe me—for I say it in all sincerity—that I do not desire the office of President, nor a nomination for it. Nor do I know that, with my views and convictions, I am a suitable candidate for any party. Of that my countrymen must judge.

Judge Chase subsequently prepared an elaborate declaration of principles, embodying the main ideas of his letter, and submitted it to those prominent Democrats who desired his nomination, as a practicable platform in that event. This was not adopted by the convention. While the nomination of the Chief-Justice was thus earnestly desired and urged by many influential Democrats, it was not taken up by the press or indorsed in any preliminary convention. When the convention

met in New York, this apparently studied reticence had confirmed the suspicions of the gossip, that at the proper time, when the convention had become weary of balloting with no choice, the name of Mr. Chase would be sprung upon them and his nomination would follow.

There was, however, a failure in proposing his name at the right time, and by the right men, which prevented the accomplishment of this plan; a plan which was certainly consistent with the most thorough patriotism and honor on the part of those who desired to make the nomination, as well as on that of the nominee. Chief-Justice Chase did not seem to lay this failure to heart very deeply; and it is hardly probable that, beyond the feeling of momentary gratification that his abundant labors for his country were so fully appreciated, that in the opinion of a large number of his fellow-citizens he was deemed the man who could most surely avert threatened disaster from that country, he was particularly desirous of the presidency. He continued to discharge the duties of his high office with industry and marked ability till June, 1870, when he suffered from an attack of paralysis. He had been previously complaining of failing health, and had been gradually losing flesh; but his attack was no less unexpected than the second and fatal one. His failing condition was attributed to neglect of exercise more than to any other cause, and, in the hope of staying this apparent waste, at the close of the term of the Supreme Court he made a Western trip, accompanied by his youngest daughter. This trip extended as far West as Duluth, Mr. Chase remaining at St. Paul until the completion of the Lake Superior and Mississippi Railroad, and going over on the first train to Duluth. It was on his return East that the blow came, and when he was on the cars in the neighborhood of Niagara Falls. Although completely prostrated, he continued his journey through Rhode Island to Narragansett, the residence of Mrs. Sprague, where he remained until winter. In January, 1871, he came to New York in order to obtain greater conveniences in medical treatment. Leaving here in March, he remained in Washington until June. During this time, however, his strength did not permit him to go upon the bench, except for a week at the close of the term.

During the summer and early autumn of 1871, he visited some new springs in Michigan, from the waters of which he derived material benefit, and during the winter and spring of 1872 he was able to perform a part of his duties with an intellectual ability which never faltered, and with something of his old physical vigor. Travel and rest in the summer and autumn of 1872 contributed to his restoration, and his noble, commanding form was not often absent from the Supreme Court room during the winter session. He had, however,

been gradually failing, though, for a week or two previous to the shock which ended his life, he had seemed in better health and spirits than for some time previous.

The fatal attack came on soon after his arrival in New York, and his death followed in about twenty-four hours.

Chief-Justice Chase had held many offices of honor and trust where the opportunities to enrich himself had been abundant, and for more than three years he occupied a position where his slightest whisper would have commanded millions; yet he never was accused, by any one who knew him, of the slightest leaning toward fraud or corruption—and he died poor, or at least poorer than when he first accepted office, notwithstanding his long public career. This, in these days of corruption and dishonesty, is no slight praise; but we may justly add to it, that in all the relations of life he was in the highest and best sense of the word a Christian gentleman.

CHASLES, VICTOR EUPHÉMION PHILARÈTE, LL. D., a French author and man of letters, born at Mainvilliers, near Chartres, October 8, 1798; died in Venice, August 2, 1878. His father was originally a Professor of Rhetoric, who supported with great zeal the French Revolution of 1793, was a member of the Republican Assembly, and subsequently an army commissary with the rank of colonel. His mother was a very devoted member of the Reformed or Protestant Church. The son, however, was educated according to the principles of Rousseau. At the early age of fifteen he became an apprentice in Paris to a poor printer, who had been a Jacobin during the Revolution, and who still adhered to his political convictions. At the Restoration, both master and apprentice were thrown into prison, on the charge of conspiring against the State. The latter, after remaining in prison for two months, was liberated at the intercession of Chateaubriand, the author and statesman. On his release he departed for England, where he resided seven years, superintending the publication of Valpy's editions of Greek and Latin classics. Afterward he went to Germany, and finally returned to Paris, where he assisted M. Victor de Jouy in his literary labors. M. Chasles had reached his twenty-ninth year before he succeeded in raising himself to any distinction. Then, however, with M. Saint-Marc Girardin, he took the prize offered by the French Academy for the best essay on the history of the sixteenth century. His work was entitled "*Tableau de la Marche et des Progrès de la Langue et de la Littérature françaises depuis le Commencement du XVI^e Siècle jusqu'en 1610*" (View of the Course and Progress of the French Language and Literature from the Commencement of the Sixteenth Century up to the Year 1610). Shortly afterward he was attached to the editorial staff of the *Journal des Débats*, a connection severed only by his death. His principal articles have been

published in a series of volumes under the title of "Études de Littérature comparée" (Studies of Comparative Literature), 1837-1867. Of these sixteen volumes, all interesting, though many of them tinged with a Frenchman's prejudices, and greatly inferior in breadth and comprehensiveness of insight to the great works of M. Taine, the following are the principal. Some of them have been translated into English, and one or two republished in this country: "Studies of Antiquity;" "Studies on the Middle Ages;" "Studies on the Sixteenth Century in France;" "Studies on Spain;" "Studies on the English Revolution and Oliver Cromwell;" "Studies on the Eighteenth Century in England" (two vols.); "Studies of the Literature and Manners of the Anglo-Americans of the Nineteenth Century;" "Studies on William Shakespeare, Mary Stuart, and L'Aretin;" "Studies on Germany, Ancient and Modern;" "Travels of a Critic in regard to Life and Books;" "Contemporaneous Studies;" "Questions of the Times and other Problems." M. Chasles received the degree of doctor of letters (equivalent to our LL. D.) in 1840, and was subsequently called to various posts of honor connected with literature. In 1837 he was made keeper of the Mazarin Library; in 1841 he was appointed Professor of the Foreign Languages and Literatures of Modern Europe, in the College of France. He became Chevalier of the Legion of Honor in 1838.

CHASSELOUP-LAUBAT, JUSTIN NAPOLEON SAMUEL PROSPER, Marquis DE, a French statesman, senator, and cabinet officer, born in Alexandria, Piedmont, March 29, 1805; died in Paris, March 31, 1878. He was educated at the Lyceum of Louis the Great, in Paris, and in 1828 was appointed Auditor of the second class in the Council of State. He was promoted to be Master of Requests in 1830, and sent as assistant to M. Baude, commissary of the King in Algeria. He left Algeria for Tunis in 1836, and took part in the siege of Constantine. In 1837 he was elected a deputy in the Legislative Assembly for the arrondissement of Marennes (Charente-Inférieure), and in the following year was appointed Councillor of State. In 1849 he was a member of the Legislative Assembly for Charente-Inférieure, and sustained the policy of the *Elysée*, i. e., of the Prince President. In 1851 he was minister of the Marine from April 10th to October 26th. After the *coup d'état* he entered the Corps Législatif as a government candidate, and was reelected in 1857. He was a member of the Council of Colonization under the ministry for Algeria and the Colonies, created in 1858, and in 1859 was called to succeed Prince Napoleon as minister of that department. In this capacity he visited Algeria, to the prosperity of which his administration greatly contributed. In 1861 he pointed out the necessity for an increase of the staff-officers of the French Navy, and in November, 1862, founded an in-

stitution called "Establishment of the Pupils of the Marine," for the education of the orphans of sailors in the imperial navy. In 1867 he resigned his portfolio as minister, and retired from public life; but on July, 1869, he was called to succeed M. Verety as President of the Council of State, and in that capacity was intrusted with the preparation of the Senate decree for carrying into effect the liberal programme of the message of the Emperor on the 12th of July, and restoring in France the system of parliamentary government. The Marquis de Chasseloup-Laubat was President of the French Geographical Society. He was promoted commander of the Legion of Honor in 1851, and Grand Cross of the Legion in 1860. He was appointed Minister of Public Instruction in 1866. He was a man of wide and generous culture, especially in matters of physical science, and had been a frequent and valued contributor to the *Revue des Deux Mondes*.

CHEMISTRY. *Composition of the Sun.*—At the meeting of the British Association for 1873, Mr. Lockyer stated the results of his own observations as also those of Huggins and Secchi on the composition of the sun. His own conclusions were:

1. That the absorption of some elementary and compound gases was limited to the most refrangible part of the spectrum when the gases were rare, but crept gradually into the visible violet part, and finally to the red end of the spectrum as the pressure was increased.

2. That the absorption of the photospheric light, and therefore the temperature of the photosphere of the sun, was much greater than had been supposed.

3. That the lines of compound metallic vapors lay generally in the red end of the spectrum, and this held good for absorption in the case of aqueous vapor. Such spectra, like those of the metalloids, were separated spectroscopically from those of the metallic elements by their columnar or banded structure.

4. That there were, in all probability, no compounds ordinarily present in the sun's reversing layer.

5. That when a metallic compound vapor was dissociated by the spark, the band spectrum died out, and the elemental lines came in according to the degree of temperature employed. Again, although their knowledge of the spectra of the stars was lamentably incomplete, he gathered the following facts from the work already accomplished with marvellous skill and industry by Secchi, of Rome: 1. The sun, so far as its spectrum went, might be arranged between stars with much simpler and with much more complex spectra. 2. Sirius, as a type of the former, was the brightest, and therefore, probably, the hottest star in our northern sky; and was only known to contain hydrogen, sodium, and magnesium; and the hydrogen lines in this star were enormously distended, showing that the chromosphere was largely composed of that element. There were many other bright stars of this class. 3. As types of the much more complex spectra, the red stars might be quoted, the spectra of which were composed of channelled spaces and bands. Hence these stars were of a lower temperature than our sun, and here the quantity of hydrogen was greatly reduced. He had asked himself whether these facts could not be grouped together in a working hypothesis, which assumed that in the sun and stars were various degrees of "celestial dissociation" at work, which prevented the coming together of the atoms that, at the temperature of the

earth, and at all artificial temperatures yet attained, furnished the metals, all the metalloids not represented in each star, and the compounds known here at present.

Iron Electrotypes.—The substitution of iron for copper in the electrotyping process has been successfully effected by M. Eugene Klein, of St. Petersburg. The importance of this achievement is very great. By replacing plates of copper with those of iron, greater facilities will be afforded for producing publications, works of art, and especially bank notes and checks. Iron electrotype plates are almost indestructible. Not only can they be printed from a great number of times, but they are better calculated than those of copper to withstand the inevitable accidents constantly occurring in printing establishments.

The history of the experiments thus now happily crowned with success is as follows: M. Feuquières sent to the Paris Exposition Universelle of 1867 some specimens of iron electrotype, which presented a fair appearance as regarded their surface, but still were inferior to those produced by Klein in the following year. The medals produced by the latter in the early part of his researches showed, on their reverse, porosities and deep hollows, which penetrated nearly through the thickness of the deposit. These cavities were also observable in great numbers in the productions of M. Feuquières. In Klein's later specimens these singular cavities—which were probably caused by gas-bubbles—entirely disappeared, and their reverses are in no way inferior to those of copper specimens produced under the best conditions. The starting-point of M. Klein was the steeling of engraved copper plates, which process was effected in a bath composed of the chlorate of ammonia and iron, to which he added a small portion of glycerine. Those who have paid attention to the steeling process have remarked that, in giving the deposit of iron a greater thickness, the surface cracks and the deposit detaches itself from the cathode in excessively brittle flakes. It became necessary, therefore, to employ baths of two different kinds, composed of sulphate of iron and sulphate or chlorate of ammonia. Finally Klein employed three baths under the formula $\text{FeO}, \text{SO}_4 + \text{NH}_4\text{O}, \text{SO}_4 + 6 \text{H}_2\text{O}$. The first bath consists of a concentrated solution of crystals of the above double salt. The second was made by mixing the concentrated solution of each of these two salts in the proportion of their equivalents. At length M. Klein obtained the third bath by taking a solution of sulphate of iron, precipitating the iron by carbonate of ammonia, and dissolving the precipitate by sulphuric acid, getting rid of all excess of acid. Another method of preparing the second bath is by dissolving in a solution of sulphate of iron as much chlorate of ammonia as it will readily absorb at about 66°Fahr . All these baths were concentrated as highly as they could be. As an anode M. Klein employed

iron plates, giving a surface about eight times that of the copper cathode. In using a Daniell battery for the decomposition, the deposit was formed in twenty-four hours upon the whole of the cathode; but it was full of flaws, and easily detached and broken up into fragments.

Judging that this was due to acidification of the bath, M. Klein tested it, and found a very decided acid reaction. This he attributed to the circumstance that the amount of iron deposited on the cathode was greater than that dissolved by the anode. It was, therefore, necessary to give the anode a greater degree of solubility, and, as that could be effected only by increasing its area, Klein conceived the idea of placing in the bath a plate of copper, and uniting it with the iron. The result was very remarkable: not only were the baths of the first class rendered neutral after several hours, but the deposits became much more uniform. Their color was a dull gray; they adhered perfectly to the cathode, without warping or cracking. It was noted that if the energy of the current becomes too great, cavities will be formed on the under side of the deposit. But by reducing this energy in the process, and having only an imperceptible disengagement of gas, by diminishing the concentration of the bath, or augmenting the resistance of the solid portions of the circuit, no cavities were formed. On leaving the bath the iron is as hard as tempered steel, and very brittle. When reheated to a dull-red heat, it loses much of its sharpness and hardness. Heated to a cherry red, it becomes malleable. If the deposits are produced in good condition, and annealed uniformly, and with the necessary precautions, they are subject to neither warp nor bend.

Noctilucent.—Dr. T. L. Phipson has discovered the existence of a substance which he calls *noctilucent*. It shines like phosphorus in the dark, and is widely distributed through the organic world. It causes the phosphorescence of certain animals and fish, and is also secreted by glow-worms and fire-flies, and probably by all animate objects which exhibit the phenomena of phosphorescence. It is likewise produced by certain living plants, such as *Agaricus*, *Euphorbia*, and by the decomposition of vegetal matter under certain conditions, such as the fermentation of potatoes, etc. Noctilucent is a nitrogenous substance which at common temperatures is almost liquid; it is capable of dilution with water, and has a faint odor, somewhat like that of caprylic acid. It is insoluble in alcohol or ether, but is readily decomposed by mineral acids and alkalis; potash disengages ammonia from it. When fermented in contact with water, it after a time gives out the odor of decayed cheese. While damp, noctilucent absorbs oxygen and gives off carbonic acid, but if it be exposed to the air it dries in thin, translucent, amorphous flakes, resembling the dried slime of slugs. When fresh it is strongly

phosphorescent, owing to its rapid oxidation in contact with moist air, and will even shine under water that contains air. In oxygen it is a little more brilliant, but shines most vividly in highly-ozonized air.

In phosphorescent animals noctilucine is secreted by a special organ. Under certain conditions of temperature and humidity it is also generated by dead animal matter, flesh, blood, and sometimes urine. Whatever its source, its light is the same. It is monochromatic, gives a spectrum mainly visible between the lines E and F, and possesses always the same chemical properties. The *Scolopendra electrica* secretes noctilucine in a state of comparative purity, and, by making several of these myriapods run about over a large glass capsule, in the month of September, a sufficient quantity may be obtained for examination and analysis. It can also be obtained, though less pure, from glow-worms and the phosphorescent surface of dead fish, by scraping the luminous matter on to damp filter-paper.

The secretion of noctilucine by the superior luminous creatures, such as insects (*Lampyrus*, *Elater*, etc.), is doubtless up to a certain point under the influence of the nervous system, so that they have the faculty of causing their light to cease at will, in which case the secretion is arrested for the time; but glowworms' eggs continue to shine for some time after they have been laid, so that they must also contain a small quantity of noctilucine. In the lower orders of animate beings, such as the little *Noctiluca miliaris* of the English Channel, the flexible polypi, etc., there is also no doubt of the existence of a special organ for the production of the light; and, where there are scarcely any indications of a nervous system, the secretion of the material appears frequently to be susceptible to the influence of external circumstances.

The most sensitive thermo-electric pile fails to detect the presence of heat in the rays of light emitted by noctilucine under any conditions.

Decomposition of Explosives and the Phenomena of Supersaturation.—During the past year Messrs. Champion & Pellet have continued their researches on explosives, and from time to time communicated their results to the Académie des Sciences. In one of these contributions they compare the mode of decomposition of explosive bodies with the phenomena of supersaturation. The name of explosives is commonly given to compounds or mixtures which under various circumstances disengage a volume of gas whose rapid formation causes an explosion. In certain cases, as in the powders whose type is gunpowder, the explosion is produced by combinations which take place between the component elements. In others, as in substances of indefinite composition, such as the ethers of the monatomic and polyatomic alcohols, the fulminates, the compounds of nitrogen with several non-metallic elements,

etc., the explosion results from the violent separation of the elements. This definition appears limited to a restricted number of phenomena, whence the authors have concluded that, in order respectively to distinguish bodies with regard to their rapid decomposition, a classification into stable and unstable would be more appropriate and comprehensive. From this point of view we might designate as unstable the bodies or compounds in which the equilibrium, if broken in one point and under given conditions, determines the immediate decomposition of the whole mass with a rapidity and an evolution of heat depending on the nature of the body and on the circumstances to which it is exposed. A great number of unstable bodies can manifest their change of state either by a rapid decomposition giving rise to a true detonation, or by the more gradual separation of the component elements. Dynamite and gun-cotton, which can be decomposed by ignition, flame, or a violent shock (such as that of a detonator), present a striking example of these facts. The authors have sought to establish precise analogies between the phenomena which accompany the different modes of action of supersaturated solutions, and of unstable compounds; among the latter they have selected dynamite on account of the facility with which it undergoes decompositions of different grades. Supersaturated solutions may be considered as unstable compounds of water and of a hydrated salt or its isomorphs. This crystal represents the detonating primer which effects the rapid decomposition of nitro-glycerine. In fact, while a few decigrammes of fulminate of mercury induce the explosion of dynamite, iodide of nitrogen, sufficient in quantity to be mechanically equivalent to the fulminate, is unable to explode the dynamite. With a suitable charge of fulminate of mercury, dynamite explodes, whatever its quantity or whatever the form of the containing vessel. A sufficient weight of sulphate of soda, at ordinary temperatures, determines the crystallization of supersaturated sulphate, even in those cases of "desensibilization" which will be examined below. The diameter of the tubes containing the sulphate of soda or the shape of the recipients is without influence on the speed of crystallization. If the primer is insufficient, the dynamite undergoes only partial decomposition, and in certain cases does not ignite. Supersaturated sulphate of soda presents different crystallizations, resembling the modes of action of the primer. Solutions crystallizing under the influence of sulphate-of-soda particles contained in the air yield long crystalline needles. But, if large crystals of the sulphate be introduced, the crystallization is confused, and the crystals appear partly broken. An inert body (silica, etc.) added in excess to nitro-glycerine completely modifies its sensibility, and transforms it into a compound which resists even energetic shocks. A

corresponding result is obtained with supersaturated solutions. To 50 cubic centimetres of a supersaturated solution of sulphate of soda were added:

Crystallization, caused by atmospheric dust, & effected in—	
	Seconds.
Water, 2 grammes	37
Glycerine, 2 grammes	41
Chloride of sodium, 2 grammes	40
Nitrate of potassa, 2 grammes	61
Carbonate of soda, 2 grammes	62
Sulphate of ammonia, 2 grammes	64
Sulphate of soda, 46 grammes, in water, 79 grammes	114
Replacing the glycerine with syrup of sugar, 100 grammes; water, 50 (5)	177
Glycerine at 58°, 12.5 c.c.; supersaturated sulphate of soda, 25	360
Water, 72 grammes; sulphate of soda, 46 grammes, saturated with carbonate of soda.	900

If to 25 cubic centimetres of the supersaturated sulphate-of-soda solution are added 12.5 cubic centimetres of a solution of nitrate of potassa saturated in the cold, the mixture can be left exposed to atmospheric dust without effect. Crystallization can only be induced by the direct introduction of sulphate-of-soda crystals of an appreciable bulk. Hence we see that the introduction of foreign bodies acts similarly with nitro-glycerine and with supersaturated solutions. As regards the action of temperature, by reason of the very nature of the phenomena between which it is sought to establish analogies, we comprehend that their action must be inverse in the two cases in order to give place to comparable phenomena. At low temperatures the explosive power of dynamite and of explosives in general decreases notably, while under the same conditions the instability of supersaturated solutions augments rapidly. A charge of 0.2 cubic centimetre of fulminate of mercury is without action on dynamite at 75° Cent., cold. A supersaturated solution of sulphate of soda, placed in a tube, crystallized in 39 seconds at a temperature of 15° to 16° Cent., while at 8° Cent. the crystallization was completely effected in 19 seconds with the same depth of liquid. A like inversion of results was again produced on introducing into a supersaturated solution a pulverulent body; and if, reciprocally, the silica which serves as an absorbent for nitro-glycerine is replaced by any solvent wood-spirit, added to nitro-glycerine in the proportion of $\frac{1}{2}$ to $\frac{1}{3}$ per cent., it prevents explosion, but in this case the very nature of the body is seriously modified. On the other hand, the presence of a sufficient quantity of an absorbent, like silica, prevents supersaturation.

Action of Water on Lead.—The question of poisoning by lead, dissolved in water passing through leaden pipes, has recently been discussed in the French Academy of Sciences, and the chemists in that body are very decided in the opinion that under ordinary circumstances nothing is to be feared from that cause. Dumas stated the results of his own experiment, in which five bottles containing leaden

shot were partially filled with the following waters respectively: Distilled water, rain-water, lime-water, Onroq-water, and well-water. It was found that the one containing distilled water showed in a very short time traces of lead in solution, while the waters charged more or less with calcareous salts contained none. The rapidity with which pure water acts upon lead is surprising, and the effect produced by traces of lime in preventing this reaction is not less so. It is impossible not to be reminded of Schloesing's observations upon clay, which, in pure water, remains indefinitely suspended, but which is precipitated by the slightest trace of lime-salts. M. Dumas thinks that pure water is an agent not yet perfectly known, and that its properties differ from those of common water more than is suspected. On the same subject we have a note from M. Belgrand, proving the innocuity of lead pipes in the Paris water-service. Of the public pipes there are only 3,000 metres of lead out of a total of some 1,500,000 metres. The branch pipes for domestic use have a total length of 1,580,000 metres, but in this net-work each litre of water traverses only 5 to 100 metres of lead, and, where the house is inhabited, the water is but a short time in contact with the lead. In the 3,000 metres of public lead pipes the interior surface is quite smooth, and without trace of erosion, even in pipes 200 years old. The branch pipes have a thin adherent crust (lime, etc.) which hinders the contact of water and lead. Belgrand further made a series of analyses of water used in dwelling-houses, and found no traces of lead. His associate, M. Le Blanc, experimented on a longer contact of water with lead, and his tables show that very pure water, such as that from the wells of Grenelle, though possessing much less saline matter than Seine-water, yet has the property of preserving lead from oxidation during long contact. Rain-water even does not attack the lead, unless it has been received after a prolonged washing of the atmosphere by rains. When it has become insensible to the action of reagents of lime, it attacks the lead rapidly, like distilled water. Salts of lime, in the most minute quantity, notably prevent the oxidation of lead in contact with water.

Phenoleyanine.—This new derivative of phenol possesses considerable interest as having many analogies with various coloring-matters derived from lichens; it is possible, also, that the study of it may throw some light on the constitution of indigo. It is obtained directly from phenol, says Dr. T. L. Phipson, by dissolving the latter in alcohol, adding liquid ammonia, and allowing the mixture to remain for some weeks in a partially-closed flask; but in about fifteen days, when the liquid has become a rather dark green, twice its volume of water and one-quarter of its volume of ammonia are added, and the mixture is left to itself for about six weeks. By that time the

liquid has taken a very fine blue tint, very dark, and a certain quantity of phenolcyanine is found at the bottom, and adhering strongly to it. That which remains in solution can be collected by saturating the liquid with salt. The product is thrown on a filter, and the new substance dissolved in hot alcohol or benzol, from which it is obtained by evaporation. With regard to its properties and composition, Dr. Phipson says:

Thus obtained, phenolcyanine is a resinous substance of a very dark blue, nearly black, and showing metallic copper-colored reflections like indigo. In alcohol, it forms a fine deep-blue solution, in ether a reddish purple-blue, and in benzol a reddish purple solution. Concentrated sulphuric acid dissolves it easily, forming a bluish-green liquid; hydrochloric acid has little action; and nitric acid forms a nitrous compound very different from picric acid. Phenolcyanine is very slightly soluble in water, but dissolves in hydrated alcohol to which ammonia is added, and this solution can be considerably diluted with water. These alkaline solutions are deep sky-blue by day, but of a vinous red by night or when a flame is seen through them. Acids redden these solutions, and alkalis bring back the blue, as with litmus. Nascent hydrogen reduces phenolcyanine, and renders it completely colorless, but when the solution remains exposed to the air in presence of ammonia the blue color soon returns. A mixture of ferrous sulphate and lime does not destroy the color of phenolcyanine as it does that of indigo-blue; so that the former rather resembles the colored derivatives of orcein than it does indigo. Phenolcyanine melts very easily, and can be partially volatilized in purple vapor; the remainder is decomposed, and leaves a porous charcoal.

My analyses of this new product have not been very satisfactory, on account of the very small quantity which I have yet had at my disposal for this purpose; I believe, however, that I can assign to it the formula $C_{12}H_7NO_3$, or $C_{12}H_7NO_4 = C_{12}H_7NO_3 + 2H_2O$. According to the most recent analyses, orcein is $C_{11}H_7NO_4$, and indigo-blue $C_{16}H_7NO_2$, so that it is possible both may some day be formed from phenolcyanine. I hope to be able soon to refer to its composition again.

Alcohol in Bread.—Some years ago a company was formed in London for the purpose of saving and utilizing the alcohol developed in the process of bread-making. The object, says Miller, was attained by performing the baking in closed ovens, furnished with a still-head for collecting and condensing the vapors. The project was, however, soon abandoned, and failed as a commercial speculation, owing in a great measure to the dry, unpalatable nature of the bread produced. It was Miller's opinion that during the baking "the alcohol formed by decomposition of the sugar, which corresponds in quantity to that of the carbonic anhydride, is expelled." Some experiments made by Mr. Thomas Bolas show that by distilling two ounces of ordinary bread in water, and rectifying the distillate, it is easy to obtain a quantity of alcohol which is quite sufficient to show that all the spirit does not pass away in the process of baking. The author says:

In order to determine the amount of alcohol quantitatively, about one pound ($\frac{1}{2}$ kilo.) of each sample was distilled with water, an addition of

about $\frac{1}{2}$ c.c. of oil being made to moderate the frothing; and the distillate was rectified a sufficient number of times, the alcohol being finally determined in the usual way. The results of the examination of six samples of new bread purchased at different shops in London are embodied in the following table:

	Percentage of Alcohol.
I.....	0.245
II.....	0.221
III.....	0.401
IV.....	0.368
V.....	0.249
VI.....	0.399
Average.....	0.314

These samples were subjected to distillation as soon as practicable after baking, they having been obtained almost immediately after the opening of the shops; and, in order to ascertain the loss of alcohol which bread undergoes on keeping, portions of Nos. III. and VI. were exposed to the air in a moderately warm room for a week, after which time it was found that nearly two-thirds of the alcohol had evaporated, the amount remaining being 0.132 per cent. and 0.120 per cent. respectively. Although the presence of alcohol in the machine-made (aerated) bread would naturally create surprise, a portion of this kind of bread was, for the sake of comparison, submitted to distillation as in the above cases, and, as might have been expected, no alcohol was detected.

It is probable that the amount of alcohol contained in bread is too small to be of any dietetic importance, but it may be perhaps worth while to notice that forty two-pound loaves are about equal in alcoholic strength to an ordinary bottle of port.

I hope shortly to determine the amount of alcohol which dough loses on baking, not only when it is baked in large masses, but also when it is divided into small pieces (rolls) before baking.

Examination of Blood-Stains.—A commission of French medical men have been investigating the methods of examining blood-stains. They point out that, in the present day, it is no longer possible to rest satisfied with the physical characters observed by the naked eye. But the microscope, either alone or in connection with chemical analysis and the spectroscope, enables us to obtain a correct diagnosis formerly impossible in a great number of cases. Two conditions may occur: 1. When the stain is of recent date, or supposed to be so, the red corpuscles should be particularly examined, and every care taken to preserve them without change. The stains must not be washed with water, as the hæmatine may thus be altered. Among fluids which are destructive of blood-corpuscles, are enumerated water, and particularly hot water, acetic, gallic, hydrochloric, and sulphuric acids; of the alkalies, potash and soda, even in weak solution; ether, and chloroform, and many other reagents. Alcohol, chromic and picric acids, and bichromate of potash, preserve the corpuscles, though they alter their form. The preservative fluids are those whose composition approaches nearest to serum, such as the iodized serum of Schultzze, consisting of amniotic fluid, to which are added a few drops of the tincture of iodine; or, better, a fluid composed of white of egg, 30 grammes; distilled water, 270 grammes; and chloride of sodium,

40 grammes. If the stain be wetted and softened by these fluids, and then examined, white and red corpuscles and fibroid particles will be observed. 2. In more difficult cases, when the microscope, owing to great changes in the hæmatine, can give but vague information, the spectroscope and chemical analysis give us precise results:

1. *Spectrum Analysis*.—If into an analyzing tube filled with water a few drops of a solution of hæmoglobin be introduced till it has the color of peach-blossoms, the luminous rays of the spectrum passing through this fluid present two bands of absorption between the lines D and E of Fraunhofer, in the yellow and the green. The same fact would be observed if a few drops of blood were substituted for hæmoglobin in the analysis. In a case of doubt, the hæmoglobin of the blood could be reduced by adding to the latter a reducing body. Destroyed hæmoglobin has a different spectrum from oxygenated hæmoglobin—a single absorption-band, as large as the two former bands, and a little to the left of Fraunhofer's line D. 2. In decomposed blood, or which has been treated with acids or caustic alkalis, hæmoglobin is changed into a new substance, hæmatine being formed, which, combined with hydrochloric acid, gives characteristic crystals. We obtain these crystals in the following way: A small fragment of dried blood is placed on a glass slide, and dissolved in a drop of water, a minute portion of sea-salt being added. It is covered with a thin slide, and pure acetic acid is made to pass between the two slides, and it is heated to boiling-point over a spirit-lamp. Acetic acid is added again, and it is heated afresh; and this is repeated until the crystals are obtained. They are rhomboidal, and of a dirty-brown color. These two reactions—the spectrum examination and the crystals of hydrochlorate of hæmatine—can always be produced with even the smallest quantity of blood; and they are so certain that the existence of one alone enables us to affirm the presence of blood. 3. If to a very small quantity of blood, dissolved in a little water, you add a few drops of tincture of guaiacum and of binoxide of hydrogen, a persistent blue color is immediately produced; but, as other organic matters—mucus, saliva, etc.—give the same reaction, this process gives only a probability. The mode of procedure is as follows: A tincture of guaiacum is prepared with alcohol at 55° Centigrade, and guaiacum resin; a mixture of sulphuric ether and binoxide of hydrogen is also made and inclosed in a stoppered bottle, and kept under water in the dark. The object stained with blood, if it be white, is put into a little cup, then moistened with water to dissolve out the blood-stain, and washed in distilled water; this water is then submitted to the action of the reagents. If the thing stained be colored, and the stain little or not at all visible, it must be moistened and then passed between two or three sheets of white blotting-paper, and tried first with the guaiacum. If the stain be of blood, a reddish or brown spot will form on the paper. One of the sheets should be treated with ammonia, and the stain will become crimson or green. A second sheet, treated with tincture of guaiacum and ozonized ether, will give a blue color more or less intense, according to the quantity of the blood. It need not be added that none of these reactions will show whether the blood is human or animal.

Ozone.—Houzeau uses, as a reagent for ozone, red litmus-paper impregnated over half its surface with one per cent. neutral solution of potassium iodide. In contact with ozone, the paper assumes a blue color only in the part charged with the iodide, this change of color

being due, not to the liberation of iodine, but to the oxidization of the potassium, the alkali thus formed changing the color of the litmus. The part of the litmus-paper which is not iodized serves to reveal the accidental presence in the air of alkaline vapors (free ammonia, ammonium carbonate, etc.), which turn the red litmus-paper blue throughout its entire length; it is impossible, therefore, to mistake the indications. Moreover, the iodized litmus-paper cannot be turned blue by chlorine, bromine, etc., since the chloride and bromide of potassium are neutral. Houzeau states as follows his conclusions, drawn from a large number of observations in various localities, at different seasons of the year:

1. The air of the country contains an odoriferous and oxidizing principle, which imparts to it a peculiar odor, and the power of bluing iodized red litmus-paper; also of decolorizing blue litmus-paper without previously reddening it; and of destroying certain bad smells.
2. This principle is ozone.
3. Ozone exists in the air normally, but the intensity with which it acts at any given point of the atmosphere is often very variable.
4. The air of the country contains, at most, about $\frac{1}{1000}$ of its weight, or $\frac{1}{10000}$ of its volume, of ozone.
5. The manifestation of ozone by the iodized litmus-papers is much more frequent in the country than in town.
6. This difference may be due to the greater circulation of air in the fields.
7. At Rouen the frequency of the ozone manifestations varies with the seasons, being greatest in spring, strong in summer, weaker in autumn, and still weaker in winter.
8. The maximum of ozone manifestation occurs in May and June (16 ozone days per month), and the minimum in December and January (4 ozone days per month).
9. With respect to the frequency of ozone manifestation, the meteorological year in our climates may be divided into two great seasons—the very active season (spring and summer), comprising 78 ozone days, and the feebly active season (autumn and winter), including 83.
10. In general, ozone shows itself most frequently on rainy days (48 ozone days in 100 of rain, to 28 in 100 of fine weather).
11. Winds, according to their strength, exert the greatest influence on the manifestation of ozone (24 ozone days in 100 when the air was calm or but slightly agitated, and 60 in 100 when the air was greatly disturbed).
12. At Rouen, the largest number of ozone days occurs when the wind is from the west or southwest, the smallest number when it is from the east.
13. Most frequently an exaggerated manifestation of ozone is in intimate relation to the great atmospheric perturbations, known as storms, gales, and hurricanes.
14. These great commotions of the atmosphere act at very great distances. Sometimes they momentarily affect the ozone of entire towns and localities, which, nevertheless, continue to enjoy very fine weather.
15. Atmospheric electricity appears to be the most active cause of the formation of atmospheric ozone.

New Ozone Generator.—This instrument is thus described by its inventor, Mr. T. Willa, of the London Chemical Society: "It consists of a piece of glass tube as cylindrical as possible, with an annular coating of tin-foil on

the exterior; in the interior is a carefully-turned brass box, slightly smaller than the glass tube, and tinned to protect it from the action of the ozone. Through this box a current of ice-cold water can be passed, so as to prevent the heating of the apparatus, the oxygen or air passing through the annular space between the box and the glass tube, which is fitted with caps and tubes for that purpose. The brass box and tin-foil coating are connected with the induction coil in the usual way. This apparatus yields large quantities of ozone with great ease, and, with the same battery power, appears to be more powerful than either of the other forms of apparatus; its cost, moreover, is small, and it is not liable to be broken. It can also easily be adapted to other pieces of apparatus, and the current of cold water keeps the apparatus cool, thus allowing it to be used for any length of time."

Gas-Manufacture.—Ruck's process for gas-manufacture, now being tested in London, is thus described by Prof. Crookes, F. R. S.: The apparatus consists of three iron gas-retorts set in a single furnace, one over the other two. Close above the retorts, and heated to bright redness by the same fire, is a horizontal U-shaped iron pipe, about four inches diameter. The retorts are charged with a mixture of coke and iron, and steam from an ordinary boiler is then forced through the iron pipe, which, it is obvious, acts as a superheater. The superheated steam passes into the two lower retorts, being carried by pipes arranged in their axes to the farther end, and then returning through the mass of heated coke and iron. It then traverses the third retort in the same manner, and in this way a large volume of gas is generated, which is cooled in a temporary condenser and carried to a gas-holder. It is then purified in the ordinary way. The gas so obtained has of course no illuminating, though a very considerable heating value. It is, in fact, a mixture of hydrogen, carbonic oxide, and carbonic acid, the latter amounting, it is said, to about 12 per cent. To render it luminiferous it is passed through a chamber containing rectified petroleum-spirit of sp. gr. 0.68. A considerable quantity of the vapor of this spirit is taken up, and the volume of the gas is increased by about 25 per cent. The gas then burns with a brilliant flame, and is ready for distribution.

Neither the decomposing nor the carbureting process is novel; but the great question is whether the product will fulfill all the requirements of an illuminating gas to be carried through the streets of cities under various conditions of temperature, etc. It is of importance to know whether and how far its illuminating power will stand the test of cold. Would its vapor condense in cold weather, and, if so, would the amount of this condensation be sufficient to impair in any degree the value of the gas? The experiment witnessed by the writer did not throw any light on this point.

Some doubt also hangs over another matter. The printed reports of the company claim for the gas a specific gravity less than that of air; but, if it be true that it contains 20 per cent. of liquid hydrocarbons, it is difficult to see how this can be so.

Indigo Dyeing and Printing.—Messrs. Schutzenberger and De Lalande have introduced a new method of dyeing with indigo, which possesses great advantages over all previous methods. They find that indigo is almost instantaneously converted into white indigo by the action of hydrosulphite of soda. The authors therefore substitute for the copperas vat and the fermentation vat a hydrosulphite vat, which they describe as follows:

Bisulphite of soda, standing at 30° to 35° Baumé, is brought in contact in a covered vessel with twisted sheet zinc or granulated zinc, filling up to the top of the vessel without occupying more than one-fourth of its real volume. After the lapse of about one hour the liquid is poured into an excess of milk of lime, which precipitates the salts of zinc. It is stirred, and the clear liquid drawn off either by filtration and pressure, or by decantation after the addition of water. Air should be excluded as much as possible. By mixing the hydrosulphite thus obtained with ground indigo and the amounts of lime or soda needful to dissolve the reduced indigo, we obtain at once a yellowish liquid containing no insoluble matter except the earthy impurities of the indigo. One kilogramme of indigo may be thus reduced so as to form a solution not exceeding 10 to 15 litres in volume. For dyeing, a certain quantity of the reduced indigo solution is run into a vat filled with water. This vat being clear in its entire depth, the operation of dyeing involves no loss of time. The excess of hydrosulphite constantly reduces the scum of oxidized indigo forming on the surface of the dye-bath, the strength of which can be kept up during working by successive additions of the concentrated indigo solution. Thus the required shade can be obtained with the smallest possible number of dips. This vat gives shades more solid and clear than can be obtained with the old vats, and enables the dyer to produce upon wool very light blue bottoms, which are ordinarily got by means of sulphate of indigo, and are in consequence much more fugitive. The process at present employed for printing indigo-blues consists in printing on white indigo, or indigo-tale of tin, obtained by precipitating a tin vat with hydrochloric acid, or by adding to the clear portion of a copperas vat a mixture of tin-salt and hydrochloric acid. The precipitate, thickened with gum, is printed on the calico, and then fixed with milk of lime. The goods are next passed through a chloride-of-lime bath, sulphuric acid, and soap. The process is difficult, delicate, and costly. Various attempts at improvement have hitherto failed in securing complete success. We may mention as examples the faïencé blue, pencil-blue, and printing with a concentrated vat in an atmosphere of coal-gas, air being excluded. The authors propose to print with an alkaline solution of reduced indigo, suitably concentrated and thickened, containing a large excess of hydrosulphite of soda. The presence of this salt tends to keep the indigo-blue reduced, which otherwise tends to become oxidized during the time of printing. This part of the process can be carried out in common air, and with an ordinary machine, the oxidation being so slight that after an hour's work the remnant of the color is still yellow and soluble. By thus printing on reduced indigo immediate fixation is secured, and the entire coloring-matter is utilized. Experience has proved that, for equal shades, 50 to 60 per cent. less indigo is consumed with the new pro-

cess than with the old. The shades obtained are more beautiful and solid, and the impression is better defined. The new indigo-blue, requiring no subsequent fixing process, can be printed along with a great number of other colors, such as aniline black, garatin, colors obtained by dyeing or steaming, catechu shades, chrome colors, colors fixed with albumen, etc. Thus new styles may be created which would be difficult to execute in any other manner. The blue printing color is formed by thickening with gum, or any other suitable material, a sufficiently concentrated solution of white indigo in an alkali, and adding to the mixture a sufficient quantity of hydrosulphate of soda. After printing, the pieces are hung up for twenty-four hours to oxidize, washed and soaped.

Silicic Alcohols.—Carbon has hitherto been considered the sole alcohol-forming element, but Dr. Emerson Reynolds, in a discourse before the English Royal Institution, has shown how by chemical means flint and quartz may be made to yield an alcohol, resembling in chemical action, and even in appearance, the alcohol of wine. We meet with nearly pure carbon (which is the alcohol-producing element *par excellence*) under the three forms of charcoal, graphite, and diamond. We can easily prepare the corresponding varieties of silicon—the amorphous, the graphitoid, and the adamantine. The specific gravity of carbon is lowest in charcoal and highest in diamond, and corresponding differences are observed between the varieties of silicon. And as the specific heat of diamond is lower than that of graphite, so is the specific heat of adamantine silicon lower than that of the graphitoid variety. The chemical relations between the two elements, silicon and carbon, are also very close. Thus charcoal and coke burn readily in oxygen, while graphite is consumed with considerable difficulty, and the diamond is still more difficult of combustion; so, too, amorphous silicon burns readily in oxygen, while the graphitoid and adamantine varieties are very difficult of combustion. Crystalline silicon may even be raised to a white heat in oxygen without burning.

We next pass to a compound of silicon with hydrogen. It may be prepared in a pure state by a rather complex reaction; but the impure gas may be easily obtained by Wöhler's method, viz., treating a compound of silicon and magnesium with hydrochloric acid. We thus get a colorless, spontaneously inflammable gas, which burns with a bright light on contact with the air. The compositions of these silicon and carbon compounds are shown in this table:

SiO ₂	Oxides	CO ₂
SiCl ₄	Chlorides	CCl ₄
Si ₂ Cl ₆	"	C ₂ Cl ₆
SiH ₄	Hydrides	CH ₄

As marsh-gas—CH₄—is the typical carbon compound from which some alcoholic series may be supposed to spring, and as in these cases the carbon of the marsh-gas is the grouping element of the compound, so the silicon in SiH₄ (decolorated hydrogen) is the nucleus round which can be grouped hydroxyl, methyl,

ethyl, etc., so as to form silicic alcohols. Several of the less complex terms are still wanting, but their existence is rendered highly probable by the occurrence of bodies bearing the same close relation to the unknown alcohol that marsh-gas bears to wood-spirit, or acetic acid to common spirit of wine. As we ascend in the series, however, we meet with the true alcohols, in which silicon takes the place of carbon as the grouping element.

In 1857 Buff and Wöhler, on heating crystalline silicon nearly to redness in a current of dry hydrochloric-acid gas, obtained a volatile fuming liquid, afterward found to be the strict chemical analogue of chloroform, silicon replacing carbon. When this is made to unite with anhydrous alcohol, a colorless ethereal liquid is obtained on distillation, having an agreeable odor and a boiling-point of 134° C. This body is strictly analogous in composition to a substance obtained by acting on ordinary chloroform with sodium alcohol.

Ordinary chloroform is closely allied to wood-spirit, or methyl alcohol. In fact, chloroform is easily obtained by treating wood-spirit with bleaching-powder. Arguing from analogy, we should look for a simple silicon alcohol similar to wood-spirit, or methyl alcohol. As a matter of fact, no such alcohol has as yet been produced even indirectly, but an acid corresponding to formic acid (which is one of the most remarkable products of the oxidation of methyl alcohol) is very readily produced, and, what is more, this acid yields an anhydride which is wanting in the corresponding carbon series. Dr. Reynolds gives as follows the formulæ of two heptyl alcohols, the one a silicon, the other a carbon alcohol:

This silico-heptyl alcohol is obtained by treating the product of the action of silicon upon absolute alcohol with zinc, ethyl, and sodium, decomposing the products with water in sealed tubes, and then distilling. This alcohol is a colorless liquid, not unlike wine alcohol. Chemically it acts just like any of the other alcohols, producing ethers, and dissolving the alkali metals to form sodium or potassium alcoholates. At least one other compound of this same order is known. On treating silicon ethide—a body prepared by the action of chloride of silicon on zinc ethide—in the same manner we should adopt in preparing wood-spirit from marsh-gas, a colorless liquid, lighter than and insoluble in water, is obtained. It yields an ether with acetic acid, dissolves sodium, forming an alcoholate, and in fact conforms to the general habits of the alcohols of the series to which the common spirit belongs.

Though no well-defined alcohols have yet been discovered in which silicon acts in any

other way than as the nucleus of the compound, carbon radicals in all these cases playing the subordinate parts, there is every reason to expect that complex alcohols containing silicon only will yet be obtained.

New Aniline Color.—The Bulletin of the Paris Chemical Society describes a new aniline color, cinnamon-brown. This color yields, on wool, silk, and cotton, a fine brown, which may be varied at pleasure by the addition of blue, red, or yellow dye-ware. On silk and wool it is applied without mordant. It is dissolved in warm water, and filtered after cooling. For silk it is acidulated with tartaric acid. For wool one kilo. of sulphate of soda, and 250 grammes of sulphuric acid, are taken to 20 kilos. of wool. The dyeing is performed at a boiling heat. Cotton is previously mordanted with tannin. Cinnamon-brown is obtained by means of one of the products formed in the manufacture of magenta. It is an acid salt of crysoluidin, $C_{21}H_{21}N_3$, a base derived from toluidin, by the elimination of hydrogen— $3C_6H_5N-3H_2=C_{21}H_{21}N_3$. The base is insoluble in water, and is separated from the solution of its salts by alkalis, in the form of a light-yellow precipitate. Its neutral salts are sparingly soluble in boiling water, which splits them up into an insoluble basic salt and a soluble acid salt. The solution of the acid salts is of a yellowish-brown color; the alcoholic solution of the free base is a pure yellow. This shade is obtained on dyeing in a bath of the acid salt mixed with an alkali.

Passage of Gases through Vegetable Colloid Membranes.—The experiments made by Graham with caoutchouc, to show the passage of gas through thin colloidal membranes, have been repeated by Barthelemy with leaves of certain varieties of *Begoniaceae*. In an account of his process to the French Academy, M. Barthelemy says that, though it was difficult to preserve in the several experiments the same condition of external pressure, temperature, and hygrometric state, the numbers sufficiently show that oxygen passes more quickly than nitrogen, and that air thus dialyzed contains on an average thirty-six per cent. oxygen (a number slightly under that which Graham obtained with caoutchouc). In another experiment, having made CO_2 pass over the membrane, he marked the point to which mercury descended in an hour; then, passing nitrogen or oxygen, he marked how long the mercury took to descend to the same level. The results closely agreed with Graham's, and warrant the conclusion that the natural colloidal surfaces of plants have for CO_2 an admissive power thirteen to fifteen times greater than that for nitrogen, and six to seven times greater than that for oxygen. Carbonic anhydride passes less quickly than hydrated carbonic acid. The author remarks that "cuticular respiration appears sufficiently proved by the presence of colloidal membrane

in all organs; by the similarity (physical and chemical) between this membrane and caoutchouc; by Graham's experiments; by measurements of the passage of gas through colloidal membrane; and, last, by M. Boussingault's experiments, which attribute to the upper surface of leaves devoid of stomata a decomposing power greater than that of the under face covered with these small orifices."

Antimony Terchloride as a Reagent for Oils.—Dr. Isidor Walz, in a communication to the *American Chemist*, details as follows the results of his investigation on the subject of reagents for testing oils: He first took up anhydrous stannic chloride, but abandoned it after trying it with several oils, because the abundant fumes which it gives off render it a very disagreeable reagent to work with. He found anhydrous stannic chloride completely soluble in benzine; the oil after a time turns reddish-brown and is partially resinified, while large acicular crystals form throughout the liquid. Turning next to antimony terchloride, he attempted to use Meek's solution, sp. gr. 1.345, but found that this would not mix sufficiently well with oils to produce satisfactory reactions. Good results were, however, obtained by concentrating this solution on the water-bath to a syrupy consistence. Antimony terchloride as thus prepared reacts with all the oils which he tried, animal, vegetable, essential, and those derived from petroleum. In the case of the animal and vegetable oils there ensues generally a rapid darkening, the color turning to a reddish, greenish, or dirty brown, accompanied generally by a perceptible rise in temperature, and increased consistency of the oil, the latter becoming viscid, and in one or two cases solidifying altogether. After the lapse of a little time a stratum of antimony-chloride solution separates at the bottom of the test-tube, which has a greenish-yellow color. The oils for which this general description may suffice are rape-seed, poppy-seed, tallow, neat's-foot, and sperm. Some characteristic reactions were observed with the following:

1. Olive-oil (three samples) forms a whitish emulsion, rapidly passing through light to dark green. No perceptible rise of temperature.
2. Cotton-seed oil (two samples) turns chocolate-brown, with evolution of considerable heat. One of the samples solidified a few minutes after the test was applied, so that the tube could be inverted, while still warm, without the oil flowing out.
3. Neat's-foot oil turns pink, subsequently darker and thicker. The temperature rises.
4. Resin-oil turns purple. Though the color becomes gradually darker, the peculiar purple tint can be recognized even after a long time.

Of the petroleum-oils he tried gasolene, benzine, and kerosene. After shaking, two strata separate in the test-tube. A portion of the oil is resinified, the resin adhering to the sides of

the tube as a thin, peculiarly colored bluish-green-purple coating. The lower stratum is of a bright-red color. Antimony trichloride is, therefore, a very good reagent for the petroleum-oils. With oil of turpentine he obtained a very violent reaction, attended by the evolution of great heat and the deposition of a yellowish resinous mass.

Soda-Manufacture.—The Proceedings of the German Chemical Society contains a paper by Dr. Rudolph Wagner on the revolution in the process of soda-manufacture, brought about by the introduction of the "Ammonia Process." That distinguished chemist, while acknowledging the immense superiority of the new method over all preceding methods, shows that it presents really nothing new to science, its great merit being that it renders available for economic use a principle that has long been recognized. The value of the process is, nevertheless, very great, and there is no doubt at all that it has already effected a revolution in soda-manufacture. The ammonia process, says Dr. Wagner—

Is not new, as far as its chemically scientific side is concerned. It belongs to that class of methods which for a century past have striven to accomplish the *direct* conversion of common salt into soda, no matter whether oxide of lead, bicarbonate of magnesia, caustic lime, alumina, silica, sesquioxide of chromium, or hydrofluosilicic acid, were employed to decompose the chloride of sodium, without having attained any noticeable result. The "new process" is based upon the action of bicarbonate of ammonia on a concentrated solution of common salt, a matter already known for a third of a century, whereby the greater part of the sodium is precipitated as bicarbonate of soda, while chloride of ammonia remains in the solutions, from which, by means of caustic lime, ammonia can again be obtained to serve for the decomposition of fresh portions of salt. The carbonic acid necessary for the continuance of the process is in part furnished by the bicarbonate of soda, on transforming it by heat to neutral carbonate; in part the carbonic acid issuing from natural vents in the earth is used, or it is formed by the combustion of coal. . . .

The advantages of the new process, the details of which are, as a matter of course, still withheld from publication, over that of Leblanc are self-apparent. They minimize in the possibility of the *direct* conversion of salt into soda, and in the fact that out of saturated saline solutions only the sodium is precipitated, and not the other metals of the salts of the mother-liquor, in the absolute freedom of the product from all sulphur compounds, in the high degree of the soda obtained, in the simplicity of the apparatus and utensils, in the great economy of fuel and labor, and in the fact, which, in the interests of hygiene and the neighbors of the manufactory, must certainly not be too lightly valued, that no noxious by-products and refuse are produced. The weak point in the ammonia process, at present, is the loss of the chlorine of the salt, which by the regeneration of the ammonia is obtained in worthless chloride of calcium.

The consequences to chemical manufacturers attending the general introduction of the new process, and especially the effect on the consumption of sulphur, the manufacture of sulphuric acid, and the price of muriatic acid and chloride of lime, cannot at the present moment be foreseen.

Decomposing Action of Light.—Dr. John H. Draper's assertion that the curve which should represent the decomposing power of the vari-

ous rays of light would correspond to the curve of brightness, has been questioned, and different correspondences have been substituted. Thus, it has been held that this decomposition-curve corresponds with the curve of heat-intensity, or to the curve of absorption by chlorophyll, and of mechanical intensity or heat-action. But experiments made by Dr. Pfeiffer, and communicated to the Marburg Society of Natural Science, confirm Draper's conclusion. In that communication, Dr. Pfeiffer, in the first place, refutes the conclusions of Lommel and Müller, who asserted correspondence with the chlorophyll curve. He shows that chlorophyll solutions may be obtained which give the absorption-bands, and yet show no decomposition of carbonic acid, but rather absorb oxygen. Hence it is an unwarranted inference that the rays most active in decomposition are those which are extinguished. In order to determine experimentally the decomposing force of different rays, the author adopted the method of counting the bubbles of gas given off by a branch in water. His procedure, as detailed in the *Chemical News*, was as follows:

Two lenses of different focal distances were so combined that solar rays, passing through them from a heliostat, issued nearly parallel, and formed an image of 40 millimetres diameter. The diameter of this image fell on a slit 3 millimetres broad; and the rays, then passing through a prism and an achromatic lens, formed a spectrum at 2 to 24 metres distance, having a length of 230 millimetres, and a height of 50 millimetres. The weakening of the rays through absorption and reflection was reckoned at about $\frac{1}{10}$, but the absolute intensity was not measured. The yellow was sufficiently bright to cause pain in looking at it. The spectrum was not perfectly pure, but proved sufficiently so for the purpose.

In the gasometric method, Dr. Pfeiffer remarks, there are various disadvantages. A long exposure is required, and small errors are apt to creep in, both in this and in removing the leaves from the tube; and these errors assume importance, from the small quantity of carbonic acid decomposed. The method of counting gas-bubbles, indeed, does not give a perfectly accurate value for the quantity of CO_2 decomposed; still, in all circumstances where the bubbles increase, there is more energetic decomposition, and conversely, the amount of correspondence being sufficient. When a plant is giving off bubbles, the slightest shadow makes a difference, and in less than a minute the new stream of bubbles becomes constant for the new light intensity.

The plant employed was *Elaeode Canadensis*. Branches of this, 45 millimetres long, fixed to a glass rod, were placed, with cut surface uppermost, in a parallel-sided glass vessel filled with water. A pasteboard cover was applied to one side of the vessel, having a vertical slit, 18 millimetres in breadth, opposite the branch, and including it. The vessel was then submitted to the spectral rays, which came to it at right angles through the slit. Care was taken that, in moving the vessel to a new position, the rays should still meet its surface at right angles.

The counting of bubbles began at the yellow. After each removal, a short time was allowed for the stream of bubbles to become constant. From the yellow throughout there was in every case a continuous diminution in the number of bubbles, as the following shows:

In yellow, in a quarter of a minute,	22 bubbles.
In orange next yellow,	19 "
In middle orange,	15 "
In orange next red,	14 "
In red next orange,	7 "
In red farther off,	4 "
In " " "	3 "
In " " "	2 "
In extreme red,	1 "
Back to yellow,	22 "
In yellow, in a quarter of a minute,	25 bubbles.
In middle of green,	9 "
In middle of blue,	6 "
In middle of indigo,	4 "
In middle of violet,	3 "
Back to yellow,	24 "

(It may be observed that, where the process became very slow, counting was continued for half a minute to one minute, and then a reduction made.)

Dr. Pfeiffer next experimented by placing a chlorophyll solution in the path of the rays, and bringing the plant to the band between B and C, which, with a breadth of 10 millimetres, almost entirely covered it. The number of bubbles given off here was compared with that in the bright yellow. Reckoning the latter as 100, the average for the other was 29.1.

Thus, no connection is indicated between absorption of the light-rays in a chlorophyll solution, and the "assimilation-value" of these absorbed rays.

On the other hand, the little-absorbed yellow rays appeared most active in decomposing CO_2 , and what appeared the brightest part of the yellow gave most bubbles; so that, on moving the plant even a very little on either side, and without leaving the yellow, the number of bubbles diminished. For example, the following bubble-numbers were got in half a minute's exposure:

In brightest yellow.....	42 bubbles.
A little toward green.....	40 "
Back to first position.....	43 "
In brightest yellow.....	43 bubbles.
A little toward orange.....	40 "
Back to first position.....	43 "

From a large collation of instances are obtained the following average values for the several spectral rays, reckoning the number of bubbles in the yellow at 100:

Red.....	25.4
Orange.....	63.0
Yellow.....	100.0
Green.....	37.3
Blue.....	22.1
Indigo.....	13.5
Violet.....	7.1

The curve formed in accordance with these numbers agrees very nearly with the curve obtained by Vierordt in his measurement of brightness in the solar spectrum. From the culmination-point in yellow, to the middle of orange and green, they are almost alike; thereafter they diverge slightly.

Now, this curve obtained from bubble-numbers does not truly represent the assimilation-curve. The numbers (as Dr. Pfeiffer had pointed out in a previous paper) were too high, and the more so the less carbonic acid was decomposed in given circumstances. The relation between the values for the gas-bubbles, and the quantity of CO_2 decomposed, is, on account of individual peculiarities and other causes, not constant, and must be determined empirically. If, however, the proper reduction be made, Dr. Pfeiffer thinks the curve then obtained will have a still closer resemblance to the brightness-curve.

Still, the agreement of the gas-bubbles curve with the brightness-curve is so close as to warrant Draper's conclusion, as to decomposition of CO_2 in plants, that the decomposing force of the various rays corresponds in general to their apparent brightness in the spectrum.

Suint.—It has been ascertained that sheep derive from the soil upon which they pasture

a considerable amount of potash, which, after it has circulated in the blood, is excreted by the skin with the sweat, and remains, generally in connection with this, attached to the wool. Chevreuil discovered, some time ago, that this peculiar mixture, known by the French as *suint*, constitutes not less than one-third the weight of the raw merino fleece, from which it is easily removed by immersion in cold water. In ordinary wools the suint is less, the amount being about fifteen per cent. of the raw fleece. Formerly it was considered as a kind of soap, mainly for the reason that the wool, besides this, sometimes contained about eight per cent., or a not inconsiderable quantity, of fat. This fat, however, is usually combined with earthy matters, mostly with lime, and consequently forms a soap which is very insoluble. The soluble suint is a neutral salt arising from the combination of potash with a peculiar animal acid, of which little more is known than that it contains salt-petre. Attention has lately been directed to suint, in order to obtain as much as possible of the potash eliminated from the animal, and a special industry has been established in various portions of the great French wool district, such as Reims, Elbœuf, etc. A company purchases from the wool-raiser the solution of the suint obtained by rinsing the wool in cold water, the price paid for it being higher in proportion as it is more concentrated. As a general rule, it is maintained that a fleece weighing nine pounds contains about twenty ounces of suint, which should contain about one-third part, or six to seven ounces, of potash, although not more than five and a half ounces are perhaps directly available. In the wool-manufactories of the towns referred to, there are nearly 60,000,000 pounds of wool washed annually, the yield of about 6,750,000 sheep. This quantity should contain over 3,000,000 pounds of pure potash. Thus the water in which the wool is washed, and which has heretofore been thrown away, is made to yield a product adding appreciably to the value of the wool itself, and more than covering the cost of the treatment. It is, of course, not an easy matter to utilize this solution of suint on a small scale, but wherever the work is carried on wholesale, as it is in connection with all great manufacturing establishments, it will undoubtedly become a regular part of the process of manufacture.

CHESEBRO, CAROLINE, an American authoress and teacher, born in Canandaigua, N. Y., about 1828; died in Piermont, N. J., February 16, 1878. Miss Chesebro's education was obtained mostly in her native village, which has for many years borne a high reputation for the excellence of its female seminaries. She commenced writing for the magazines about 1848, contributing at first to *Graham's* and *Holden's Dollar Magazine*. In 1851, a volume of her stories and sketches was collected and published with the title of "Dream-Land

by Daylight." This was followed, in 1852, by "Isa, a Pilgrimage," and in subsequent years she published several novels of considerable merit, the best of which were "Victoria, or the World Overcome," "Peter Carrington," "The Foe in the Household," and a collection of stories entitled "The Beautiful Gate, and other Tales." She was a frequent contributor to *Harper, Putnam, the Atlantic, the Knickerbocker, Hours at Home, the Galaxy, Lippincott, and Scribner*, and had a novel passing through the press of Lippincott & Co. at the time of her death. For eight years previous to her death she had been teacher of Rhetoric and Composition in the Packer Collegiate Institute in Brooklyn. Miss Cheebro was no candidate for a reputation founded on sensationalism or exaggeration. She was eminently truthful, not only in her every word, but in her entire modes of thought. Her nature was singularly healthy. She was never led astray by fantastic images. She was little known in general society, but was always a favorite in the domestic circle, commanding homage from men of intellect, and winning the cordial friendship of persons of her own sex. Her disposition was so considerate and just, there was so little pretension in her manners, so little that was exacting in her temper, that she happily escaped the frequent rivalries of literary life, and numbered among her warmest admirers many eminent persons whom her generous nature prevented from becoming envious of her fame.

CHILI (REPÚBLICA DE CHILE), an independent state of South America, lying between latitude 24° and 56° south, and longitude 70° and 74° west. It is bounded north by Bolivia; east, by the Argentine Republic, from which it is separated by the Cordillera of the Andes, and by Patagonia; south, by Cape Horn; and west, by the Pacific Ocean. It has an area of 248,818 square miles, inclusive of 115,590 square miles of territory claimed by Chili in Patagonia, but disputed by the Argentine Government. The republic is divided into fifteen provinces and one colony, which, with their respective populations, in 1870, are as follows:

Provinces.	Population.	Provinces.	Population.
Araucanía.....	131,178	Maule.....	211,567
Arica.....	87,977	Suble.....	125,519
Atacama.....	89,343	Santiago.....	374,078
Chilo.....	62,223	Talca.....	102,112
Coquimbó.....	152,936	Valdivia.....	27,980
Concepcion.....	155,382	Valparaiso.....	144,354
Copiapó.....	159,628	Magellan Colony.....	739
Curauma.....	100,200		
Llanquihue.....	42,342	Total.....	1,972,438

The population of the principal towns, in 1865, was: Santiago, 115,377; Valparaiso, 70,488; Talca, 17,900; Concepcion, 18,958; La Serena, 13,550; and Copiapó, 13,881.

Of the inhabitants in 1865, not Chileans by birth, 3,092 were English, 3,876 Germans, and 2,482 French.

The President of the republic is F. Errázuriz (elected September 18, 1871, for a term of five years); Minister of the Interior, E. Al-

tamirano, elected September 18, 1871; Minister of Foreign Affairs, A. Ibañez, elected December 9, 1871; Minister of Justice, Public Worship, and Instruction, A. Cifuentes, elected September 18, 1871; Minister of Finance, R. Barros Luco, elected April 12, 1872; Minister of War and Marine, A. Pinto, elected September 18, 1871.

There is a Supreme Court at the capital, Santiago, and a Court of Appeals at Valparaiso, Concepcion, and La Serena.

The Postmaster-General is J. M. Riesco; the Archbishop of Santiago is R. V. Valdivieso, elevated in 1847; Bishop of La Serena, M. Orrego; of Concepcion, T. H. Salas, appointed in 1854; and of San Carlos de Chiloé, Fr. de Paule Solar, appointed in 1857.

The regular army is composed of 9 generals, 10 colonels, 40 lieutenant-colonels, 60 majors, 188 captains, 290 lieutenants (47 field and 186 subaltern officers of which number belong to the National Guard), 2,000 foot, 712 horse; and 804 artillery: total, 3,516 men.

The National Guard is made up as follows: Horse, 47 commanding and 1,084 subaltern officers, and 28,296 men; foot, 12 commanding and 147 subaltern officers, and 4,187 men; and artillery, 10 commanding and 121 subaltern officers, and 2,659 men.

The navy comprises 9 vessels mounting 80 guns, with 121 marines, and 624 men. There are, besides, two iron-clads, and one small ship-of-war in course of building in England.

There are in the Chilean navy 2 rear-admirals; 3 first-class, 5 second-class, and 9 third-class captains; 40 lieutenants; and 43 midshipmen; one battalion of marine artillery of 400 men, commanded by one colonel, one lieutenant-colonel, 4 captains, and 10 lieutenants. There is also at Valparaiso a battalion of marine artillery, forming a part of the *guardia civil* (police force), with one lieutenant-colonel, 6 captains, 23 lieutenants, and 1,173 men.

The foreign commerce of Chili, if the extent and capabilities of the republic be taken into consideration, is larger than that of any other South American state.

The staple articles of exportation are copper, silver, wheat, flour, cotton, hides, and wool, more than one-half of which is taken by Great Britain. The exports for the year 1871 were:

Countries.	Value.
Great Britain.....	\$18,991,801
Peru.....	6,616,000
France.....	2,288,000
Bolivia.....	2,030,000
Uruguay.....	1,331,000
Germany.....	333,000
Ecuador.....	277,000
United States.....	292,000
Central America.....	123,000
Belgium.....	146,000
Other countries.....	859,000

Total for 1871.....\$33,285,801

Total for 1870.....27,064,000

Increase for 1871.....\$16,225,801

The imports consist, for the most part, of cotton, linen, woollen, and silk fabrics; paper,

perfumery, leather, wine, and brandy; tea, coffee, sugar, cacao, tobacco, rice, dyes, pearls, salts, etc., etc. Two-fifths of the articles imported proceed from England, and about one-sixth from France. The following table exhibits the imports for 1871:

Countries.	Value.
England.....	\$10,746,555
France.....	4,521,000
Germany.....	2,622,000
United States.....	1,267,000
Peru.....	1,371,000
Argentine Republic.....	933,000
Belgium.....	798,000
Brazil.....	796,000
Central America.....	216,000
Other countries.....	1,002,000
Total for 1871.....	\$24,832,555
Total for 1870.....	28,300,000
Decrease for 1871.....	\$3,467,555

In the above tables there is not stated the value of goods received *in transitu*, which, in 1871, amounted to \$5,279,000 inward, and \$4,714,000 outward.

The total value of the exports to England, in 1872, was \$27,958,915, which is considerably above the aggregate value of the exports to all countries in 1870. The entire value of the imports from Great Britain, in 1872, reached \$16,842,515.

The coasting-trade for 1871 represented a total value of \$31,188,000. The whole trade of the republic, for 1871, may be recapitulated as follows:

Exports.....	\$33,245,901
Imports.....	21,892,555
Goods in transitu.....	4,714,000
Coasting-trade.....	31,188,000
Total.....	\$94,020,956

The port movements for 1871 are exhibited in the subjoined table:

Number of Vessels entered.	Flags.	Tons.
1,471.....	National.....	448,000
2,299.....	French.....	2,281,000
445.....	American.....	111,000
412.....	Guatemala.....	136,000
278.....	San Salvador.....	67,000
101.....	Italian.....	53,000
116.....	British.....	31,000
70.....	German.....	25,000
509.....	Other flags.....	106,000
5,462.....		3,261,000

The merchant navy comprised, in the same year, 75 vessels, with an aggregate of 16,187 tons measurement; of which number 18 were steamers, with 3,857 tons.

At the end of 1873, the following railways were in operation:

	Kilometres.
Santiago & Valparaiso.....	184
Ladrial, San Felipe & Los Andes.....	44
Santiago & Quilón.....	185
San Felipe & Palmita.....	30
Valdivia & Chilian.....	185
Caldes & San Antonio.....	150
Ovalle & Tongay.....	67
Coyumbal & Las Cardas.....	62
Palmón & Chafaralillo.....	43
Cerrizal Alto & Cerrizal Bajo.....	40
Total.....	990

Besides the foregoing, the first five of which belong to the state, the lines hereafter named are in process of construction: Curicó to Ohillan, 196 kilometres; San Rosendo to Angol, 98 kilometres; and Santa Fé to Los Angeles, 14 kilometres, all the property of the state.

The length of the government lines of telegraph was 3,092 kilometres; that of the line from Santiago to Valparaiso, the property of a private company, 180 kilometres. Of the fifty-two offices in the republic, so far, fifty belong to the state. The laying of the telegraph to Concepcion was completed, and the line opened to the public service in January.

In the same month the Inspector-General of Telegraphs ordered a line to be made between Lota and Coronel, and another to connect the latter place with Arauco.

At a meeting of the directors of the Transandine Telegraph Company, held on May 21st, it was stated that the business of the company was steadily increasing, and that it would soon be possible to declare a dividend. It was also asserted that the Brazilian and Lisbon cable would be laid and opened as far as St. Vincent, Cape de Verde, in September next, and that the construction of the Pernambuco cable would be completed by May, 1874; so that about the middle of the the latter year Chili would be in telegraphic communication with the whole world.

Snow, as it had been apprehended, is likely to give rise to interruptions in the Transandine Telegraph service at certain seasons of the year. Communications were for a time suspended in August.

It was reported that the Antofagasta and Mejillones Railway Companies had amalgamated, and that the Bolivian Government had been petitioned to sanction the agreement.

Permission was granted to Urmeneta and Errázuriz to build a railway from Totoralillo to La Higuera, with an exclusive privilege for thirty years.

A person named Francisco Riso Patron obtained an exclusive privilege, for eight years, for an invention which he denominates a maritime railway. The commissioners appointed to report upon the invention state that it will effect quite a revolution in the manner of loading and unloading vessels. The inventor claims that by means of his apparatus he can discharge the largest of the straits steamers in four hours.

The modifications in the proposal of Messrs. Clark & Co., for the construction of a railway over the Andes, consist in an annual subsidy of \$153,000, in bonds of the six per cent. loan, instead of a guarantee of seven per cent. Messrs. Clark & Co. bind themselves to give up the bonds when the net receipts of the line exceed seven per cent. on the cost of the line. The Government is to be allowed to take part in the formation of the tariffs of the line, when the net receipts exceed twelve per cent. on the cost.

A bill to empower the Government to purchase the stock held by private individuals in the Southern Railway having passed Congress, in August, the Minister of the Interior appointed a commission to frame a code of regulations for the administration of the state railways. The Council of State sanctioned another bill, authorizing the Government to expend \$2,700,000 in the purchase of new rolling-stock for the line just mentioned. The works on the road were pushed forward with remarkable activity; and, if the same rate of progress is maintained, the line will be completed considerably under contract time.

The works on the Mejillones Railway were definitively suspended on August 9th, and one thousand laborers discharged.

The Talcahuano & Chillan Railway promises to prove very prosperous. The portion of the road in operation—as far as Malvoa—produced, in little more than twelve months, a surplus of \$17,000, and that in spite of the high rates still ruling on the line. Once the latter has reached Chillan, a larger number of places will be connected, and the returns will be most satisfactory. It was expected that trains would commence to run over the whole line early in 1874.

The Copiapó & Paquies Railway will before long form a part of a transandine line, the construction of which, from the heart of the Argentine Republic to the mountain frontier, was finally sanctioned by the Government of the latter country.

In 1872 no less than 6,000,000 passengers were carried by the different city railroads in the republic.

In the course of the year 1871, the total number of letters, newspapers, and packages that passed through the post-office was 11,549,175.

Wheat, for export to England, brought from \$3.50 to \$3.90 per hectolitre of 166 pounds, on board, in April, in bulk, or in buyers' bags; and the flourishing state of trade in general, in and around Concepcion was hailed as the herald of the prosperity expected to result from the opening of the new railway to Chillan, which is situated in the very heart of the wheat country.

Concepcion now boasts of two banks of issue and deposit, and one mortgage bank; and the numerous and handsome buildings, both public and private, in course of construction, afford ample testimony to its prosperity.

A Protestant congregation has existed there for some years, under the ministration of Dr. I. A. Swamy, of the United States.

The total value of the exports from Tomé, in 1872, was \$2,459,486, being upward of \$1,000,000 in excess of 1871.

Samples of Chilian tobacco were found to be of excellent quality.

The ordinary national income, in 1872, was \$13,843,283; and the expenditure, \$12,514,408; constituting a surplus of \$1,328,880.

The annexed table shows the sources and the amount of the income for 1871 :

Customs duties.....	\$5,942,906
State railways.....	1,892,686
Government monopolies (tobacco, playing-cards, etc.).....	1,462,174
Real-estate tax.....	646,083
Alcabala.....	445,660
Patent rights.....	343,767
Sale of Mejillones guano.....	195,750
Post-Office.....	22,003
Telegraphs.....	35,505
Sundries.....	604,069
Total.....	\$11,782,880
Expenditures for same year.....	12,542,493
Deficit.....	\$759,613

Here follow the estimated expenditures for 1873 :

Ministry of the Interior.....	\$2,918,514
Ministry of Foreign Affairs.....	229,323
Ministry of War and Marine.....	2,899,666
Ministry of Justice, Public Worship, and Public Instruction.....	1,978,267
Ministry of Finances.....	5,338,780
Total.....	\$13,364,350

HOME DEBT.	Capital.	Interest.	Amortization, 1871.
Three per cent., 1865...	\$3,185,375	\$95,561	\$30,625
Eight per cent., 1865...	2,459,500	196,784	125,600
Meiggs loan at 6 per ct.	1,564,000	98,840	92,000
Garland loan at 6 per ct.	1,309,000	78,540	20,000
On real estate (3 to 6 per cent.).....	7,739,498	236,702	
Other debts.....	215,651	8,643	
Total.....	\$16,463,234	\$500,069	\$763,500
FOREIGN DEBT.			
Loan of 1843, at 8 per cent.....	\$1,812,000	\$54,360	\$103,500
Loan of 1848, at 4½ per cent.....	6,288,500	282,982	166,500
Loan of 1870, at 5 per cent.....	4,908,000	245,400	105,000
Loan of 1867, at 6 per cent.....	9,125,000	547,500	238,000
Loan of 1866, at 7 per cent.....	4,946,000	246,220	150,000
Total.....	\$37,079,500	\$1,476,462	\$763,500
Total national debt in January, 1873.....	\$43,542,634	\$2,276,531	\$1,081,925

The railway debts, which are included in the above total, amounted, on January 1, 1872, to \$7,886,000.

Articles of consumption pay, for the most part, an import duty of 25 per cent. ad valorem; tools, hardware, etc., 15 per cent.; and most machines enter duty-free. The export duties on metals and ores reach as high as 5 per cent. ad valorem.

The receipts of the Valparaíso custom-house for January amounted to \$1,200,000. Those for June were \$800,724.55—an increase of \$102,223.37 over the same month of the previous year. The total receipts, from January 1st to September 30th, figure in the official returns at \$5,429,379.39, being an improvement of \$777,109.73, as compared to those of the corresponding period in 1872.

The coinage in the mint for the month of December, 1872, was as follows: \$506.76 in 2-cent nickel coins; \$1,195.58 in 1-cent do.; and \$724.57 in ½-cent do. The purchases

of gold and silver bullion in 1872 were as follows: 3,424 kilos of gold, amounting to \$2,448,150; and 25,702,882 do. of silver, of the value of \$1,089,287.73; total, \$3,537,437.73. The coinage in 1872 was as follows: \$2,343,107 in \$10 gold coins; \$114,750 in \$5 do.; \$794,704 in \$1 silver do.; \$52,100 in 50-cent do.; \$395,832.30 in 20-cent do.; \$28,769.10 in 10-cent do.; \$14,313 in 5-cent do.; \$4,135.16 in 2-cent nickel do.; \$6,895.89 in 1-cent do. do.; \$12,531.97 in $\frac{1}{2}$ -cent do. The price the mint pays for gold is \$715 per kilogramme, and \$42.88 for silver.

The Santiago mint commenced coining about \$3,000,000 worth of coins for Peru in April, and about \$1,000,000 worth for Ecuador.

In September silver and gold bullion were purchased to the amount of \$284,387.80; the value of the gold was \$271,507.91, and included a remittance of \$50,000 on account of the loan. The coinage in September was \$257,409.34, as follows: \$10 gold coins, \$139,710; \$5 do., \$28,965; \$2 do., \$70,272; 20-cent. silver do., \$16,397; 2-cent nickel, \$1,545.20; and 1-cent do., \$520.14.

A bronze coinage to the extent of \$100,000 was soon to be issued.

The prices of some commodities at the mines of Caracoles are suggestive at once of insufficient supplies and high freights; gun powder is selling at \$28 per quintal; sugar, \$27. and bread, \$20; lard brings \$40; grease, \$30, and steel for tools, \$28 to \$30.

The London, Mexico, and South American Banking Company were to establish, in July, a branch at Valparaiso, with a capital of \$50,000.

A fusion of the Sud-Americano Bank and the Bank of Valparaiso was in contemplation in October. The nominal capital of the new establishment would be \$30,500,000.

The following bills were sanctioned by the Council of State, January 2, 1873: the San Felipe Railway; exemption of import duties on materials required for the Caldera and Lota Telegraph; the reform of the 54th clause of the Constitution; the Totoralillo & Higuera Railway; issue of bonds for the purchase of a site for and the erection of a Lyceum at Valparaiso; and to declare as of public utility the lands required by the Valparaiso Water Company.

The question of boundaries between Chili and Bolivia was finally settled by a treaty under date La Paz, December 5, 1872, and some of the more important articles we here transcribe:

ARTICLE I. The eastern limits of Chili, mentioned in Article I. of the Boundary Treaty of 1866, are hereby declared to be the highest summits of the Andes, and therefore the dividing line between Chili and Bolivia is the twenty-fourth degree of south latitude from the Pacific Ocean to the summit of the Andes.

ART. II. In order to determine by means of visible marks the situation of the mines and ore-producing places subject to a common participation in the export duties within the twenty-third and twenty-fourth degrees, each party will appoint a commissioner to determine said places.

ART. III. The participation in the export duties is hereby declared to comprise ores properly so called, as well as inorganic substances that come under the general designation of ores in the mineral kingdom.

ART. IV. For the working of guano deposits already discovered, or that may hereafter be discovered within the zone determined in Art. II. of this protocol, the Governments of Chili and of Bolivia will form, by mutual consent, the respective rules and regulations in order to derive the greatest possible profit from the system of working.

ART. VI. The inspector of customs at Mejillones, in conjunction with the chief of the Chilian commission there established, will proceed to balance, liquidate and pay all accounts, and collect the duties of other custom-houses established within the twenty-third degree, and, this done, the Government of Bolivia will pay over to that of Chili half of the export duties on ores arising from its custom-houses up to the date of liquidation.

After liquidation, every two months the Mejillones custom-house will pay over to the fiscal agent of Chili his corresponding share of the profits.

ART. VII. By common agreement the two governments will fix the tariff of duties on bullion and ores of every description exported from the zone determined in Article II., and no one will be permitted to alter or modify the tariff except by common consent and agreement.

ART. VIII. As for the guano and ores of every description obtained from the territories situated north of the twenty-third degree, and exported through the custom-houses established within said degree, the Bolivian Government will keep a separate account of the duties levied upon them within its territory, and the fiscal commissioner of Chili at Mejillones will have no right whatever to interfere with this account.

Chili will enjoy the same right in respect to the products obtained south of the twenty-fifth degree, and exported through custom-houses established north of said degree.

ART. IX. The two governments agree to continue negotiating in a friendly manner, with a view to the revision and abrogation of the treaty of August 10, 1866, substituting in lieu thereof another, better calculated to promote the mutual interests of the two sister republics, in order to obviate all causes of future dispute, and on the unchangeable basis of the twenty-fourth degree, and the highest summits of the Andes.

In the liquidations above mentioned, allowance will always be made for the amount of the salaries of the government employes necessary for the proper administration of the territory referred to in Article II.

A bill was presented to Congress authorizing the President of Chili to apply two hundred and fifty thousand dollars toward erecting a building to be appropriated to general and national exhibitions.

In consideration of the eminent services of Admiral Thomas Cochrane, there has been granted as a free gift to his grandson, Lord Douglas Cochrane, a section of two thousand hectares (five thousand acres) of arable land, situated in the province of Arauco, in such locality as government might designate.

The Minister of Public Instruction issued, in October, a decree to the effect that religious teaching should not be obligatory, except when expressly desired by parents.

A new penal code, submitted in the same month for the approval of the Congress will bring about a complete revolution in criminal

law. One very important feature, among others of the code, is the establishment of guarantees for the peaceful exercise of all forms of worship, and the placing the clergy, in certain cases, within the jurisdiction of the civil authority. The clerical party, as was natural, were alarmed at such innovation; and the latter became the object of violent protestations on the part of the archbishop, who petitioned the Senate not to sanction such heretical machinations.

A law was enacted in November permitting the planting of tobacco, under certain restrictions. It will now be seen whether the soil of Chili is favorable or unfavorable to tobacco-culture.

Inasmuch as there has been considerable discussion in Congress of late years, and especially in 1872, as to the advisability of any patent law, commissioners having been appointed to examine into and report upon the same, and to suggest what reforms they deemed necessary in the event of the continuation of the law now in force, it may not be uninteresting to transcribe here the leading clauses of that law:

Article 152 of the Chilean Constitution, dated May, 1833, grants to every author or inventor the exclusive proprietorship of his discovery or invention for the time allowed by law; and, further, authorizes the payment of a proper indemnity, should it be found necessary to publish the invention.

In 1840 a law was passed which expressly limits the privileges which should be ceded in Chili to patentees of an invention, and lays down the formula and conditions under which such privileges shall be granted. A new invention or discovery must be laid by the inventor before the Minister of the Interior, who has to appoint a committee for the examination of the samples, models, or drawings produced. On the report of these commissioners, who are sworn to secrecy, the minister grants or withholds the patent.

The term of a patent cannot exceed ten years.

The patentee pays a sum of fifty dollars into the treasury as a contribution toward the museum, in which the model of his invention is kept, together with a full explanation of the use and method of the article or matter he has invented, which is preserved, closed under private seal of the inventor, until the term of his patent has expired.

By the same law, and under the same conditions, a patent is allowed for inventions of arts or industries which may appear in foreign countries, but are unknown in Chili; but such patents are granted for shorter periods, not exceeding eight years.

The transfer of patents, or the privileges thereon, to another party is permitted, unless fraudulency be suspected.

Forgeries of an article already patented are subject to a fine of from one hundred to one thousand dollars, and the forfeiture not only of the article itself produced, but also of the establishment and implements used in manufacturing, the proceeds of such a fine and forfeiture being equally divided between the treasury and the patentee, after payment of the loss calculated as suffered by the latter.

Should a patent be fraudulently obtained, that is, under false pretences, or by any other but the inventor himself, such person is liable to a fine of from one hundred to one thousand dollars, or an imprisonment of from three to twelve months.

In case of disputes arising between parties who may obtain privileges sanctioning the issue of the

same article, the law provides the settlement of such causes by arbitration, an arbitrator being named by each party, and a third by the Minister of the Interior.

Patents may be granted as effective throughout the country, or be confined to one or more provinces.

Terms exclusive of the period allotted for the patent are granted for the purpose of installing the establishment, machinery, or industry for the issue of the invention; but, should this term expire without the object for which it is intended being carried out, all privileges allowed for the patent are annulled; and in the same manner is all exclusive privilege disallowed, if such establishment is abandoned for more than one year, or if the article produced is inferior to the original sample.

Extension of the term ceded for patents on exclusive privileges of production, are allowed when the patentee is judged worthy of such an extension of his patent, but for which he must have applied six months before the expiration of his first license.

In August, 1851, a law was decreed, which obliges the commissioners who take cognizance of the petition for a patent, or introduction of an industry, to report, not only on its utility, but also on the hindrances which might result to industry or commerce by the cession of an exclusive privilege, as well to report on the difficulties or expenses to which the petitioners may be subjected in their undertaking, with a view to determine the allotted time for the introduction of the art or invention, in order that full knowledge may be taken of the industry which may be prejudiced by any cession of exclusive privilege. Special mention must also be made whether the petition is for a patent of invention, or for introducing into the country some new article.

Under date of August 16, 1856, a law was promulgated, which makes it obligatory on the petitioner for the introduction of inventions already known in other countries, that the privileges for which he solicits be published in the official journal during the term of thirty days, in order that those parties who may have already brought into the country, or established such inventions or industries, or have taken steps for their introduction or establishment, and thereby incurred expense previous to the petition for such exclusive privilege, shall have a right to oppose the cession of the monopoly.

A statue of Lord Cochrane was inaugurated on February 12th, in Valparaiso; and the occasion was solemnized with banquets and other demonstrations of rejoicing.

The relations between Chili and the Argentine Republic were becoming more cordial in the early part of the year; but toward September discussions arose concerning the vexed question of Patagonia, the whole of which territory is claimed by the Argentines.

The plans for the exhibition building of 1875, were approved of by the Government on March 17th. The building, which will be a permanent one, will be erected in the grounds of the Normal School of Agriculture, and is to cost \$225,000.

An earthquake was felt in Valparaiso and Santiago, on July 8th, the shocks of which were of unusually long duration, and of an intensity exceeding that of the earthquake of 1851. Some lives were lost, and public and private edifices, and even statues, etc., in the cemeteries, were considerably injured. All pendulum clocks stopped; the church bells tolled; and a railway-train was detained by

rocks which had been precipitated upon the line. The shocks were quite perceptible as far south as Curicó. The Governor of Potosí informed the Minister of the Interior that much damage had been done in that town on the 7th of the same month; the walls of the parish church, the jail, the market-house, and of a school, had been shattered, and the buildings left in ruins. Several persons were killed, and others sustained fractures of the arms or legs. At La Serena the severity of the shock caused great alarm; in Quillota many edifices were destroyed; the damage at Ligua was estimated at \$50,000, and that at Limache at \$137,000.

In Chiloé a bed of coal was reported to have been discovered, exceeding in width any of the coal-beds of England, and 40 yards in depth.

Machines for agricultural and mining purposes, and for use in the arts and sciences, intended for the exhibition of 1875, were to be admitted duty free.

A silver-mine was discovered in Cerro Negro, the vein of which is nearly five feet in width, and can be traced to a distance of upward of 300 yards. It is full of native silver.

The French residents in Valparaíso sent a handsome gold medal to be presented to M. Thiers, in recognition of the eminent services he had rendered to his country.

Early in November, a petition, signed by a large number of the leading property-holders in Valparaíso, was presented to the Central Government, demanding its protection against the arbitrary acts of the local authorities.

A great discovery of silver deposits was made in the vast desert of Atacama, some 45 miles from Chafaral. The ore is said to yield from 8,000 to 10,000 marks per *cajon*. At Copiapó much excitement was produced by the news, and all the towns of that region were likely to be deserted. Indeed, the crowds setting out for the new mines were so numerous that at Copiapó as much as \$150 had been paid for a single draught-mule.

Five of the Caracoles mines alone paid, during the first six months of the year, 3,598 laborers, who worked 1,705 metres, and obtained 45,782 kilogrammes of ore.

On September 5th, tenders for colonization were opened at Santiago, and were referred to a commission. In a reform measure, then under discussion in Congress, a clause was inserted enabling foreigners, after a residence of one year in the republic, to apply for letters of naturalization.

Some twenty Swiss families were about to settle in the Magellan Straits colony.

The losses caused to British insurance companies by the disastrous fires in Valparaíso are reported to have reached \$35,000.

Unlike most other similar regions, the Chilean deserts contain treasures at once infinite in variety, and inexhaustible in quality. The discovery of nitre was followed by the

discovery of borax; next came the vast metalliferous deposits, particularly as multitudinous veins of silver-lead ores; and then the silver-mines of Caracoles. Rich and abundant veins of copper are now reported to have been found within a few leagues of Salinas, and stratified parallel layers of pebbles suitable for the manufacture of cameos. A species of alabaster has also been discovered near Caracoles, susceptible of a high polish, and well adapted for parlor ornaments. Not long ago a stone was extracted from the Merceditas mines, containing embedded in it a shell of perfect form, in a matrix of chloride of silver. From other veins are obtained impressions of ammonites and bivalves (*Ecomphalus petangulatus*, and *Cardium porulosum*).

From the Blanca Torre more wonderful relics still, of a former world, have been brought to light. At a depth of some 230 feet, shells have been met with, presenting all the lustre of a bright pearl-shell. Round balls, somewhat resembling billiard-balls in size and shape, have been pronounced to be the eggs of antediluvian birds, winged reptiles, and toad-like monsters, that repaired to that locality for the purpose of laying their eggs at a period when the stratum now forming the bottom of the mines was the uppermost stratum of that part of the terrestrial surface.

CHINA, an empire in Asia; reigning Emperor, T'oung-ché, formerly called Ki-tsiang, "High Prosperity," born April 21, 1856, the eldest son of the Emperor Hien-fung, "Perfect Bliss;" succeeded to the throne at the death of his father, August 22, 1861, became of age and assumed the government in 1873. The present sovereign is the eighth ruler of the Tartar dynasty of Ta-tsing, "the Sublimely Pure," which has ruled in China since 1644. Each Emperor has the right of appointing his successor. The Emperor Hien-fung, on designating his son, a minor, as his successor, appointed eight high officials as guardians, but they were overthrown soon after the death of Hien-fung, and the supreme power was taken possession of by the mother of the young Emperor, and the first wife of the late Emperor, who appointed Jih-su, Prince of Kong, as the head of the council of ministers, and as regent of the empire.

The area and the population of China cannot at present be accurately stated, as parts of the western dependencies have successfully established their independence, while other portions, especially the district of Kooltsha, have been incorporated with Russia. Although the new frontiers cannot, as yet, be accurately defined, it is assumed, that at least 500,000 square miles of the former possessions of China were, in 1873, entirely lost for the imperial Government. Another large tract of land, in the southwestern part of China proper, which for many years had been in the hands of the Mohammedan Panthays, was, in the latter months of the year 1872, and in the beginning

of 1873, entirely recovered. The total area of China is now roughly estimated at about 4,700,000 square miles, of which 1,300,000 belong to China proper, and the remainder to the several dependencies. China proper is very densely peopled, the population amounting in 1812, according to an official census, to 367,000,000; in 1842, to 414,000,000; and in 1852, to 450,000,000, or 347 inhabitants per square mile. Since 1852, the population is believed to have somewhat decreased in consequence of the bloody civil wars, and famines; and in 1872 it was estimated at 420,000,000. The dependencies of China, embracing Mantchouoria, Mongolia, Thibet, and Corea, though their area is nearly double that of China, have a population of only about 26,000,000.

The public revenue is mostly derived from three sources, namely, customs, licenses, and a tax upon land; but the receipts from customs alone are made known. The customs duties fall more upon exports than imports;

their total produce at the treaty ports amounted, in 1871, to 11,216,000 Haikuan taels (1 tael = 8 francs, or \$1.52). China has, as yet, no foreign debt; it is not known whether the Government has raised, or is responsible for, loans contracted at home.

The latest reports of the United States consuls in the treaty ports give the following commercial intelligence on the imports, exports, and navigation of some of the ports: *Amoy*, value entered of imports for the year ending September, 1871, \$7,488,935; exports, including cost and charges, \$6,876,875; entries, 529 vessels (25 American), of 208,972 tons; clearances, 529 vessels (24 American), of 210,287 tons. *Tamsui* and *Kelung*, imports for year ending September, 1871, \$1,168,875; exports, \$745,852; entries, 84 vessels (4 American), of 27,501 tons; clearances, 76 vessels (4 American), of 24,622 tons. *Taiwanfoo* and *Takao*, imports for the year ending September, 1871, \$2,062,971; exports, \$1,523,245; entries, 145

THE GREAT CHINESE WALL.

vessels (10 American), of 31,443 tons; clearances, 145 vessels (10 American), of 31,443 tons. *Canton*, for the year ending September, 1872, entries, 980 vessels, of 432,324 tons; clearances, 980 vessels, of 428,899 tons; the exports certified at the United States consulate were valued at \$1,903,557. The trade of Canton with the United States yielded, during the year ending September, 1872, a considerable aggregate increase, as contrasted with the preceding twelve months. *Foo-chow*, for the year ending September, 1871, imports, \$5,598,939; exports, \$24,261,290; exports to the United States, consisting almost entirely of teas, \$3,160,533, showing an increase over the previous year, of \$816,587. *New-chwang*, for the year ending September, 1872, imports, \$8,701,096; exports, \$3,360,654; entries, 263

vessels (19 American, 81 British, 122 German), of 85,207 tons; clearances, 263 vessels (19 American), of 85,207 tons. *Ningpo*, for the year ending September, 1871, entries, 426 vessels (217 American), of 314,134 tons; clearances, 435 vessels (217 American), of 316,299 tons. *Tien-tsin*, for the year ending December, 1871, entries of American vessels, 86, with a total tonnage of 52,586 tons; clearances, 86 vessels; imports, \$16,291,390; exports, \$2,725,996.

The trade formerly carried on between the port of New-chwang and the town of Tungwang-chan, on the Korean border, and strictly prohibited by the Korean Government after its difficulties with the French, has never recommenced. Although New-chwang is situated but about 150 miles from the boundary, scarce-

ly any information from Corea is received. It has been ascertained that, during 1871-'72, about 1,500 Coreans have escaped across the northern boundary, the river Tumen, into Russian territory, where they have been welcomed and provided with land and seeds. These emigrants, on their arrival, are described as indigent, and, while raising sufficient for to-day, are quite thoughtless of the morrow. They soon improve, however, and easily acquire the Russian language.

The most important event in the history of China during the year 1873 is the complete suppression of the rebellion of the Mohammedan Panthays, who for several years had been able to sustain an independent government in the southwestern province of Yunnan. The attempts of the Mohammedans in the northwestern and southwestern provinces of China proper, and in the western dependencies, to shake off Chinese rule and establish independent governments, are not so well known as their importance would deserve. A connected history of the Mohammedan troubles in China will therefore supply a contribution to the current history of China, which is not easily obtained, from other sources, and, as the struggle is still going on in the dependencies and northwestern provinces, may be of importance for an understanding of coming events.*—The origin of Mohammedanism in China reaches back to the tenth century, and is connected with the first commercial transactions of the Arabs with China. Its development was favored by the successful campaigns and conquests of the Califs. In China proper this new faith did not gain a firm footing, except in the southern provinces of Yunnan and Kwei-Choo, where the Mohammedans sometimes claim to be the descendants of Arabian military colonists, but are not distinguished in their outward appearance from the other Chinese; to Mantchooria and Mongolia, the Islam likewise remained foreign; but the Chinese subjects of the Turkish race became its followers. Their seats were always in the north and west of China proper; only there the Mohammedans live in large number, the chief representatives being the Dunganese, whose name Waciliev traces to a transposition of vowels in the word Tangun, the plural of Tangut, which word designates the territory around Lake Koko. The opinions of ethnographic writers on the origin of the Dunganese are still divided. Radlof regards them as descendants of the Uigurians, the ethnographic relation of whom is still a mystery; but Palladius (for many years a member of the Russian mission in Peking) and others deny this, and point to the fact that the name Khoi-Khoi, which, by the Chinese, is given to designate the Uigurians, is also used by them in general for designating any Moham-

medan. At all events, the difference of religion has widened the breach between the Chinese subjects of Turkish descent and the Chinese proper. Much that is highly appreciated by the Chinamen is despised by the Mohammedans; thus to the Chinese pork is a favorite food, while to the Mohammedan to partake of it is a greater sin than theft and fraud. The number of Mohammedans in China is not accurately known. The estimates made by the Chinese officials are entirely untrustworthy, and are believed to be in many cases inspired by a wish to use them for extortions. It seems that there are some Mohammedans in every town of importance. The Russian clergyman, Palladius, one of the best authorities on the subject, estimates their number in the northern provinces at from three to four millions. In consequence of their small number they would have been powerless, even in the districts where they are most numerous, if they had rebelled against a strong government; but in China the power of the reigning Mantchoo dynasty is undermined, and the whole administrative system disorganized, and every movement that offers a prospect of success is therefore sure of being largely reinforced by malcontents of every kind, and by crowds looking out for plunder. The Mohammedans of China, generally, are not strict in the profession of their religion, although some tribes punctually perform the prescribed prayers and lavations, and rigidly observe the fasts. Their priests, imams, and mollahs, generally do not understand the contents of the Arabic prayers which they recite; and their pronunciation of the Arabic is so corrupt that a Mohammedan of Yunnan is not understood in Calcutta. The priests display a great zeal in urging parents to send their children to school; but for years they are only drilled in reading and committing to memory Arabic texts, which they are not taught to understand. The priests are not free from avarice, but in some instances have successfully defended their coreligionists against the extortions of Chinese officials. The first insurrection of the Mohammedans against Chinese authority took place, in 1855, in Yunnan; in 1862 a rebellion broke out in the northwestern province of Shensi, which soon spread to the neighboring province of Kansu; in 1863 an attack upon the Chinese fortresses was made in Soongaria; in 1865 Yakoub Kushbegi began to overthrow Chinese rule in East Toorkistan, which had been kept in constant excitement by the intrigues of the dynastic family of the Khodshas of Khokand, who in 1758 had been expelled by the Chinese. All these insurrections arose from local causes, and they were not connected with each other, though of course it must be assumed that any success of one of them must have aided in the progress of the others. The causes of the insurrection in Yunnan are very differently stated. A native of Yunnan who made a pilgrimage to Mecca,

* The following account is chiefly condensed from an article by "E. S." (Emil Schlegelweil) in the *Allgemeine Zeitung* of November 24, 1873.

stated that the oppressions of the Chinese officials called forth a resistance as early as 1839; but the Chinese authorities suppressed it with an iron hand, burned down several villages in the insurgent districts, and killed about 2,000 men. The provincial governor to whom the villages appealed took sides with the defendants, and punished the plaintiffs. An appeal to Peking led to the removal of the criminated official, because he had not prevented the lodging of the complaint; but his successor soon exceeded him in extortions, and coerced the Mohammedans to sell their property to Chinese at too low a price. New and isolated cases of resistance occurred, but always remained unsuccessful. Colonel Fytsche, the chief of British Burmah, learned in 1867 that the wealth of the Mohammedans had excited the envy and the avarice of the Chinese officials, and had called forth oppressions, and that Chinese and Mohammedans had begun to feel for each other a mortal hatred. The impulse to an open insurrection was given, according to the Mecca pilgrim, by a report spreading among the Mohammedans of a secret society having been among the Chinese for the purpose of massacring the Mohammedans and taking possession of their property; the Mohammedans, fearing for their lives, collected in small bands, which gained successes over the Chinese and gradually obtained the ascendancy. According to the reports received by Colonel Fytsche, the outbreak was caused by unjust orders given to the workmen in the extensive silver-mines of Lusun-Fu; they left the mines, withdrew into the woods, and began a guerrilla warfare, in which they found ready allies in the rapacious mountaineers of the neighboring districts of Burmah. Another account was given by the Catholic Bishop Chaveau, who for some time was a resident of Yunnan, to the English traveler, Cooper. He reported that the Governor of Yunnanfu had adopted the faith of Mohammed, but soon lost his popularity when he endeavored to introduce changes into the fundamental articles of the creed. Thereby his former friends became his enraged enemies; religion was declared to be in danger, the faithful were rallied, and the insurrection spread over the whole country. The war lasted for about eight years, until the southern and eastern districts of Yunnan were entirely free from Chinese troops. There was, however, no general leader among the victors; they simply called themselves Moslem, with the addition of the place of their birth: the name Panthay or Pansi, which the English reports gave to them, is derived from the Burman word Pathi, which means Mussulman. Soon two parties formed among the victors. The eastern and smaller portion received the name Jdon; its capital was Sin-thau; its regent had the name Mianfun. The larger, western, portion was called Jsi, the capital Talifu; the chief assumed the title of Sultan, and called himself Suleiman

Ibn-i-Abdur Rahman; the French officers, who in 1868 visited him in his capital, called him Uen-shoai; the Chinese reports call him Dau-win-shian. Soon the two parties became involved in difficulties; Mianfun began a war against Suleiman. After the first, undecided encounter, Hadji (Saint) Jussuf succeeded in concluding a peace for three years, Suleiman ceding some mines and valleys. But soon, and probably at the instigation of the Chinese, this war was renewed; Mianfun was defeated in ten battles, and lost four fortresses and four productive salt-works. Suleiman became the undisputed head of the new government. On the first report of the success of the Panthays the Government of Peking had appointed a new mandarin; but his predecessor did not yield, but sent accounts of pretended victories to the capital, and claimed to have obtained complete control of the insurrection. As a proof he adduced the withdrawal of the rebels from Yunnanfu, the capital of Yunnan, which he, however, had only saved by leaving Suleiman in undisturbed possession of the western part of the province. For several years the Chinese Government was deceived by mendacious accounts; even in 1868, when the English traveler, Cooper, made his journey along the northern frontier, the Chinese force in the province was insignificant. The suppression of the rebellion was entirely left to the local authorities, and no commander-in-chief was appointed. Under these circumstances the power of Suleiman was believed by many to be established on a firm basis. The area of his dominions was estimated as high as 65,000 square miles, the population at 4,000,000. In 1872 Suleiman sent his eldest son to the courts of Europe, in order to conclude with them commercial treaties.* It was therefore a matter of general surprise when in June, 1873, a report was received in Europe, that, five months before (January 9, 1873), Talifu, the capital of Suleiman, had been taken by the Chinese; Suleiman had committed suicide, and a terrible massacre had been made of the Mohammedan population. The news, at first discredited, was confirmed by later accounts; and in the early part of 1873 the second capital of the rebels, Momein, near the nominal border of Burmah, was captured, and the entire rebellion crushed out. The troops which obtained these victories over the Panthays were, according to the Prussian traveler Von Richthofen, who visited the country in the spring 1872, as arrogant as brutal, and the official report of the Government of British Burmah, for the year 1871-'72 (Rangoon, 1873), says of them that "irregular bands of Chinese marauders, under leaders who had received no imperial appointment, have invaded the south of Yunnan, goaded on and supported by the mandarins of the neighboring provinces; sometimes five or

* See AMERICAN ANNUAL CYCLOPEDIA for 1873; article CHINA.

six of these bands unite for besieging and storming a city." The rule of the Panthays had not been a benefit to Yunnan; its commerce had been reduced to the smallest proportions, notwithstanding the extensive concessions which the Government of Burmah, yielding to British pressure, had made to it, and throughout Burmah there was unbounded joy over the fall of Talifu. The few Panthays who had come into contact with Europeans had made a most favorable impression. The English embassy under Major Sladen had been, in 1868, sent back from the borders of Yunnan, and the members of the French expedition of the Mekhong complained of the unfriendly reception which they met with at Talifu on the part of the Sultan; even the governors were very coarse in their manners. No member of the embassy which the Panthays in 1872 sent to Europe understood any of the Indian languages, and the Arabic of the interpreter was not understood even by good Arabic scholars until it was written down. Mohammedanism, on this occasion, had again shown that it can destroy, but not build up; the province of Yunnan appears to have been since the fall of the Panthays in the hands of those bands of robbers who conquered it in the name of the Chinese Government.

After the downfall of the Panthay empire, the Government of British India was urged to take up again the plan proposed by Major Sladen, in consequence of his mission to Yunnan, of reestablishing the old commercial road between Baine in Northern Burmah and Yunnan, and of getting the start of Russia and France in establishing commercial connection with Western China. But before any move in this direction was made by the Government of British India, a French expedition arrived in Yunnan, and entered into negotiations with the Chinese authorities concerning the opening of a new commercial road between the southwestern provinces of China and the coast of Tonkin. According to a French account the expedition, consisting of two steamers, left Hong Kong on October 25, 1872, and was led by M. Dupuis, a merchant of Hankow. On November 9th, it arrived in Tonkin, at the mouth of a river, Chacum, which thus far has been unknown to the Europeans. Sailing up the river, the expedition found that it divided into four arms, one of which was navigable. Through this arm the expedition, on December 18th, reached the Red River, and on December 22d arrived at Kesho or Hanoi, the capital of Tonkin. From the capital they pursued their voyage in native boats, as this river did not contain sufficient water for the steamers. On January 18, 1873, Dupuis left Hanoi. In Tonkin two insurrections were at this time raging—one near the capital, led by a Chinese rebel chief, Kuang-tsung; the other, in the northern districts, and extending to the town Lankai, near the frontier of Tonkin, also led by a Chinese, by the name of Lease-yuen-fu.

Dupuis was asked, by the leaders of the rebels, to intercede in their behalf with the Chinese authority, and obtain for them permission to return. On March 4, 1873, the expedition reached Mangan, a port in Yunnan, where the navigation of the Red River ceases. On March 16th Dupuis reached the capital of Yunnan, Yunnanfu, when he learned that the rebellion of the Panthays was almost wholly crushed. In October, 1872, the prominent chief of Ling-ngan-fu, by the name of Leong-tzu-may, had, in August, been assassinated by one of his officers, who soon after had been defeated by the Chinese. Another prominent chief, Tschang of Mong-tze, had resolved to submit to the imperial authorities, and his example had soon been followed by a number of inferior chiefs during the months of September, October, and November. Then Suleiman, the Sultan of the Panthay empire, was betrayed by a number of his subordinates, and Talifu fell on January 9th. At the time when Dupuis was in Yunnanfu, only three towns near the frontier of Burmah were still held by the Panthays, which he expected would soon be attacked, "with the aid of French artillery and by means of the material which Dupuis had brought with him." The Chinese authorities of Yunnan expressed themselves delighted with the success of the expedition of Dupuis, and hoped that it would lead to the establishment of commercial relations with foreign nations, and create a market for the rich mineral and agricultural products of this province.

On February 23d the young Emperor, having become of age, assumed the government of the empire. The official journal of Peking announced that hereafter those who desired to be admitted to an audience would present only one card, although heretofore they had presented three, one for the Emperor, one for the Emperor's mother, and one for the Empress-dowager. All the Chinese men-of-war ran up their flags in honor of the event, and the foreign vessels in the Chinese ports followed their example; but the mass of the Chinese people seemed to take no notice of it, and followed their daily pursuits. Nothing whatever was known as to the sentiments of the young Emperor with regard to foreign nations, and to the policy which, under his reign, is to be pursued toward them. It was favorably noticed that when the Emperor, at the beginning of April, returned from the journey, which, according to the custom of his dynasty, he had undertaken to the tombs of his Mantchou ancestors, the streets were not cleared of people when the imperial *cortège* passed along, and for the first time they were allowed to see the face of the Emperor. A still greater concession was made by the new Government on the audience question. The representatives of the foreign powers had expressed a wish to present to the Emperor the sentiments of their Governments, without, of course, undergoing

the servile ceremonies to which Chinese officials, on such occasions, have to submit. After long negotiations, the Chinese Government conceded the demand of the foreign ministers, and agreed with them upon a ceremonial satisfactory to both parties. The audience took place on June 29th. Although no notice was given of the ceremony, the streets around the imperial palace were crowded with people, who came from all parts of the city to witness the arrival and departure of the foreign ministers. The ambassador of Japan was received first, and had a separate interview. When he had retired, the ministers of the United States, Russia, Great Britain, France, and the Netherlands, entered the presence in a body. M. de Vlanguly, the Russian minister, and dean of the diplomatic corps, read an address to the Emperor in French, which Herr Bismarck, the interpreter of the German legation, repeated in Chinese. Each minister then deposited his credentials on a table in front of the throne. When this ceremony was concluded the Emperor delivered, in the Mantchoo dialect, his reply to the address; Prince Kung, kneeling, interpreted the emperor's words in Chinese. Eight hundred mandarins, in splendid costumes, were present. At the close of the audience the foreign ministers were escorted to their chairs with great ceremony by members of the Tsung-li-Yamen.

On April 30th the treaty which two years ago had been concluded between China and Japan was ratified at Tien-tsin. As this treaty contained a stipulation which made it, in fact, an offensive and defensive alliance of the two states, the foreign diplomatists in Japan, when the treaty, which long had been kept secret, became known to them, prevailed upon the Mikado to send a plenipotentiary to Peking for the purpose of demanding its revision. In 1872 two Japanese diplomatists were therefore sent to Tien-tsin, but were unable to accomplish any thing. In the spring of 1873 a new embassy was sent, at the head of which was the Japanese Minister for Foreign Affairs. This time the efforts of the Japanese were successful, and ten days after the arrival of the ambassador at Tien-tsin the treaty was ratified. On May 6th the ambassador left for Peking, when he was admitted, in union with the European and American ambassadors, to the first audience accorded by the new Emperor to the representatives of foreign powers.

CLARK, HENRY JAMES, LL. D., an American scientist, born in Mansfield, Mass., about 1828; died in Amherst, Mass., June 1, 1878. He graduated from the University of the City of New York in 1848, and devoted his attention to physical science from that time. He became a student in the Lawrence Scientific School, where he studied botany with Prof. Gray, and zoology and paleontology with Prof. Agassiz, becoming the warm personal friend as well as the pupil of both. He also

became a member of the American Academy of the Natural Sciences, to which he contributed valuable papers. In 1854 he received from Harvard University the degree of Bachelor of Science. In 1860 he was appointed Assistant Professor of Zoology (adjunct to Prof. Agassiz), which position he held until 1865. Since that time he had been engaged in scientific pursuits, and had latterly resided at Amherst, Mass., having some connection with the Agricultural College of Massachusetts.

CLARK, HORACE FRANCIS, LL. D., an eminent citizen, lawyer, banker, and railroad president, born in Southbury, Conn., November 20, 1815; died in New York City, June 19, 1878. Mr. Clark was a son of Rev. Daniel A. Clark, a distinguished Presbyterian clergyman, who died in New York City in 1840. He was prepared for college at the Mount Pleasant Classical Institution, Amherst, Mass., and entered Williams College, from which he graduated in 1838, at the age of seventeen. He then came to New York and commenced the study of law in the office of Jonathan Prescott Hall, and in 1837 was admitted to the New York bar. His assiduity, his acknowledged ability, and his thorough mastery of his cases, soon won for him a large and lucrative practice. During the nineteen years that he was engaged in active practice he was reputed to be the most active, diligent, and hard-working lawyer in the profession in New York. In 1856 he was elected to Congress on the Democratic ticket, but, though identified by all his associations and his convictions with the wing of the Democratic party then known as Hardshells, he dissented from the first from the policy of Mr. Buchanan in regard to Kansas, supported the views of Senator Douglas, and was one of the five anti-Lecompton men who finally effected the organization of the House. At the close of his term he ran again as an independent candidate for the Thirty-sixth Congress, receiving also the nomination and support of a portion of the regular Democratic Convention, and was triumphantly reelected by an overwhelming majority. He served throughout this term, ending in 1861 with the Administration of Buchanan, when he retired to private life, and never afterward held political office. While a member of Congress, Mr. Clark held a high rank as an earnest and effective worker, and was most influential in shaping many of the measures of that body. During his first term he was assigned to the Judiciary Committee, and during the second to the Committee on Indian Affairs. On leaving Congress Mr. Clark resumed the practice of his profession, which he continued till his interest in railroad affairs began to absorb much of his time, when he abandoned the law entirely, and engaged wholly in the business which occupied his attention ever after. In 1857 he first became a director

in the New York & Harlem Railroad, then not a very profitable enterprise, from which time dated his active participation in railroad operations. He took stock also in numerous other roads, in the management of which he quickly obtained an important influence, and was, perhaps, at his death, in control, directly and indirectly, of as many miles of rail as any other railroad financier. He was President of the Lake Shore, Michigan Southern & Northern Indiana Railroad, to which he was elected upon the consolidation, a few years since, of the various connecting lines forming this route from Buffalo to Chicago, and of the Union Pacific Railroad, besides being director in the New York Central & Hudson River Railroad, the New York & Harlem, the New Haven, Hartford & Springfield, the Shore Line, the Chicago & Northwestern, and holding a valuable interest in various other lines. He was also President of the Union Trust Company of this city, an active manager of the Western Union Telegraph Company, and other corporations. His influence on the Stock Exchange may be inferred from the fact that, as the rumors of his illness were favorable or unfavorable, the most active stocks on the list, known as the "Clark stocks" and consisting of Lake Shore, Northwestern, Union Pacific, etc., rose or fell. At the close of his congressional career Mr. Clark retired from active participation in political affairs, though still retaining an interest in municipal and national matters, and the cares of his business quickly drew him away from political life altogether. When, however, the combined attack was made on the Tweed Ring, two years ago, he came forward once more, even to the neglect of his private business, and rendered powerful assistance to Mr. Samuel J. Tilden, and Mr. Augustus Schell, and others, whom he aided greatly in breaking the political power of the Ring, driving Tweed and his friends out of Tammany Hall, and from that time continued to be an active member of the General Committee, and recently a Sachem of that order. In appearance, Mr. Clark was a man of medium height, rather compact in build, with a broad and prominent forehead, clear, penetrating eye, firmly-set mouth, and hair freely tinged with gray. He was pleasant in address and affable in manners. Naturally of a social disposition, he was eminently agreeable to all with whom he came in contact, though the engrossing cares of his vast business operations prevented his mingling much in society. Attachments with him were strong and permanent. Liberal by nature, and retiring in taste, he gave for the sake of giving, and ever responded freely to charitable calls, but always without ostentation, and frequently even with an injunction to secrecy. He was a man of indomitable energy, and, being possessed of a very strong constitution, which allowed him to give full play to his powers, was

an exceedingly hard worker, attending to his affairs personally, which, being so vast, demanded his constant and prolonged attention day after day, so that he really had few hours of rest. But this tremendous strain made great inroads even upon so powerful an organization as his, and it was felt that, like many others, he really fell a victim to overwork. He received, in 1863, the degree of Doctor of Laws from his alma mater. He married, in 1848, a daughter of Commodore Vanderbilt, who survives him. His death was the consequence of an attack of rheumatism of the heart, brought on probably by the intense confinement to business.

CLARK, LEWIS GAYLORD, an American magazinist and man of letters, born in Otisco, Onondaga, N. Y., in 1810; died at Piermont-on-the-Hudson, November 3, 1873. Both Lewis and his twin-brother Willis Gaylord Clark (died June 12, 1841) were educated by their father, a Revolutionary soldier, and a man of fine culture and attainments. At the age of twenty-four the brothers undertook the editorship and general management of the *Knickerbocker* magazine, which had been founded two years before by Charles Fenno Hoffman. For some years before the death of Willis, Lewis conducted the magazine alone, his brother having removed to Philadelphia, and he continued its sole editor until the close of 1859, when it died from the want of business ability in its financial management. The *Knickerbocker* was during the greater part of this period the ablest of the American monthly magazines, and the first to bring to light the essays of nascent genius. A large number of our best American writers, living and dead, made their *début* in its pages. There was, of course, a considerable quantity of chaff with the wheat, but some of those whose first beginnings were weak developed ere long abilities of a high order. Mr. Clark was a genial, kindly editor, and sometimes suffered platitudes to pass from unwillingness to wound a sensitive spirit. But the magazine was really the parent of much that is best in quality in our later and abler periodicals. Its influence on American literature was wholesome and inspiring, and it led the way to a higher standard of magazine-writing. Mr. Clark, though an able and brilliant writer, confined himself mainly to the "Editor's Table," and "Gossip with Readers and Correspondents," and for years had a burlesque on the small country newspaper as a part of these departments, with the title of *The Bunkum Flagstaff*, edited by Wagstaff. This was the vehicle for many humorous hits at his contemporaries, though these were always devoid of asperity or bitterness. He published a volume of his brother's literary remains in 1844, with a memoir, and a collection of his poems in 1847. "The *Knickerbocker Sketches*," published about 1850, though edited and selected by Lewis Gaylord Clark, contained little or nothing

ing from his own pen; but "Knick-knacks from an Editor's Table," published in 1852, was altogether his own, and bubbled over with humor. In 1855 the principal contributors to the *Knickerbocker* furnished each an article and their portraits to an elegant volume called "The Knickerbocker Gallery," which, supplemented by some other aid, had a sufficient sale to purchase from its net profits a residence for him at Piermont, N. Y., where he resided till his death. After the *Knickerbocker* was given up, Mr. Clark held for some years a position in the New York Custom-House. He continued to contribute to periodical literature till a few weeks before his death, but of late not with his earlier ability and success.

CLARK, WILLIAM W., an American scientist; born in Livingston County, N. Y., in 1824; died in Rochester, N. Y., August 10, 1873. He entered the New York State Normal School in 1844, very thoroughly prepared in the physical sciences, and capable even then of giving instruction in them. He graduated in 1845, and was immediately appointed Professor of Chemistry in the Normal School, and in 1847

Professor of the Natural Sciences. In 1849 he assisted in the State geological survey, and in 1852 was associated with the late Prof. Ebenezer Emmons in making a similar survey in North Carolina. He was the author of the law fixing the standard of weights and measures in the State, and had taken a great interest in the introduction of the metrical system. For several years he was occupied in geological and geodetic surveys, and did not, we believe, engage in teaching after resigning his position in connection with the State Normal School. Of late he had been a great sufferer from ill-health, and had resided for some years at Honeoye Falls, whence he removed to Rochester not long before his death.

COAL, ANTHRACITE, PRICES OF. The prices of Schuylkill white-ash lump-coal, by the cargo, at Philadelphia, during a period of forty-seven years, have been gathered in the *Bulletin* of the Iron and Steel Association, from the average monthly and weekly quotations, with the following results, the ton being of 2,240 pounds:

YEAR.	Jan'y.	Feb'y.	March.	April.	May.	June.	July.	August.	Sept.	Oct.	Nov.	Dec.	Average for year.

Price of Lehigh coal in Philadelphia, from Grotjan's Public Sale Report: 1822, May to December, \$8.40; 1823, January to August, \$10.00; September, \$9.50; October to December, \$8.40; 1824, January to April, \$8.40.

* Uncertain.

† Lowest average for year, \$3.20 = 1844.

‡ Rise, due to freshest.

\$ Lowest average for month, \$2.78 = April and May, 1862.

§ Highest average for month, \$10.75 = August, 1864.

¶ Highest average for year, \$8.25 = 1864.

** Owing to the long strike, there was no coal in first hands for sale during these months.

COFFIN, JAMES HENRY, LL. D., an American scientist, meteorologist, and mathematician, born in Williamsburg, Mass., September 6, 1806; died in Easton, Pa., February 6, 1873. He received his early training for college from Rev. Moses Hallock of Plainfield, Mass. He entered Amherst College in 1824, and graduated with distinction in 1828. After receiving his degree he continued to teach a private school in Berkshire County, which he had taught during a considerable part of the last two years of his college course. In September, 1829, he established in Greenfield the Fellenberg Academy, the first manual-labor school incorporated in New England, and conducted it until March, 1837. While there, he published his first book, a volume of fifty-two pages, on "Book-Keeping by Single and Double Entry." After teaching a few years in Ogdensburg Academy, N. Y., he was appointed tutor in Williams College in 1840. While in this position, he published a treatise on "Solar and Lunar Eclipses, with Tables," which was extensively used. During the same period, he advised and superintended the building of the Greylock Observatory on Saddle Mountain, in which he placed the first combined, self-registering instrument ever constructed for determining the direction, velocity, and moisture of winds. An improved instrument, for the same purpose, he presented many years later to the Emperor of Brazil. On severing his connection with Williams College in 1843, he became Principal of Norwalk Academy, Conn., and remained there until September, 1846, when he was elected Professor of Mathematics in Lafayette College, Easton, Pa., and held that position until his death. As Professor of Mathematics at Lafayette, Dr. Coffin won much celebrity, but his name will, perhaps, be more widely known throughout the country as a contributor to the reports of the Smithsonian Institution, and for his investigations on the subjects of winds and atmospheric changes. In this field he was a pioneer. For thirty years he pursued his investigations with an energy which never flagged, and succeeded in gathering a large mass of valuable and interesting information on the subject by correspondence with all parts of the world. At the college, instruments of the most delicate and accurate construction measured the force and direction of the currents of air. The investigations of such a mind as Professor Coffin's, carried on with such vigor and constancy throughout so long a series of years, could not but result in the collection of an immense amount of new information. In 1851 the Smithsonian Institution published a large quarto volume of Professor Coffin's, on "The Winds of the Northern Hemisphere." For some years he had been engaged on another work, on "The Winds of the Globe," which at the time of his death was nearly ready for publication. He also published a treatise on "The Conic

Sections," and a pamphlet on "The Meteoric Fire-Ball of 1870." The merits and learning of Dr. Coffin were not unrecognized. He was one of the first elected members of the National Academy of Science, and was a prominent member of the American Association for the Advancement of Science. In 1859 he received the degree of LL. D., from Rutgers College. He was appointed in 1872, by the United States Government, in conjunction with Prof. Stephen Alexander, of Princeton, to represent the United States, as to mathematical and astronomical instruments, at the World's Exposition at Vienna. Throughout the community Dr. Coffin was known as a remarkably conscientious man and a sincere and devout Christian. At an early age he made a profession of religion, and was for many years a ruling elder in the Brainerd Presbyterian Church at Easton.

COINS OF THE UNITED STATES. Laws were passed at the third session of the Forty-second Congress declaring what shall be hereafter the standard denominations of the coins of the United States.

The standard for both gold and silver coins shall be such that of one thousand parts by weight nine hundred shall be of pure metal and one hundred of alloy; and the alloy of the silver coins shall be of copper, and the alloy of the gold coins shall be of copper, or of copper and silver; but the silver shall in no case exceed one-tenth of the whole alloy.

The gold coins of the United States shall be a one-dollar piece, which, at the standard weight of twenty-five and eight-tenths grains, shall be the unit of value; a quarter-eagle, or two-and-a-half dollar piece; a three-dollar piece; a half-eagle, or five-dollar piece; an eagle, or ten-dollar piece; and a double-eagle, or twenty-dollar piece. And the standard weight of the gold dollar shall be twenty-five and eight-tenths grains; of the quarter-eagle, or two-and-a-half dollar piece, sixty-four and a half grains; of the three-dollar piece, seventy-seven and four-tenths grains; of the half-eagle, or five-dollar piece, one hundred and twenty-nine grains; of the eagle, or ten-dollar piece, two hundred and fifty-eight grains; of the double-eagle, or twenty-dollar piece, five hundred and sixteen grains; which coins shall be a legal tender in all payments at their nominal value when not below the standard weight and limit of tolerance provided by the law for the single piece; and, when reduced in weight below said standard and tolerance, shall be a legal tender at valuation in proportion to their actual weight; and any gold coin of the United States, if reduced in weight by natural abrasion not more than one-half of one per centum below the standard weight prescribed by law, after a circulation of twenty years, as shown by its date of coinage, and at a ratable proportion for any period less than twenty years, shall be received at their nominal value by the United States Treasury and its offices,

under such regulations as the Secretary of the Treasury may prescribe for the protection of the Government against fraudulent abrasion or other practices; and any gold coins in the Treasury of the United States reduced in weight below this limit of abrasion, shall be recoined.

The silver coins of the United States shall be a trade dollar; a half-dollar, or fifty-cent piece; a quarter-dollar, or twenty-five-cent piece; a dime, or ten-cent piece; and the weight of the trade dollar shall be four hundred and twenty grains, troy; the weight of the half-dollar shall be twelve grams (grammes) and one-half of a gram (gramme); the quarter-dollar and the dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment.

The minor coins of the United States shall be a five-cent piece, a three-cent piece, and a one-cent piece; and the alloy for the five- and three-cent pieces shall be of copper and nickel, to be composed of three-fourths copper and one-fourth nickel; and the alloy of the one-cent piece shall be ninety-five per centum of copper and five per centum of tin and zinc, in such proportions as shall be determined by the Director of the Mint. The weight of the piece of five cents shall be seventy-seven and sixteen hundredths grains, troy; of the three-cent piece, thirty grains; and of the one-cent piece, forty-eight grains; which coins shall be a legal tender, at their nominal value, for any amount not exceeding twenty-five cents in any one payment.

No coins, either of gold, silver, or minor coinage, shall hereafter be issued from the Mint, other than those of the denominations, standards, and weights, herein set forth.

Upon the coins of the United States there shall be the following devices and legends: Upon one side there shall be an impression emblematic of liberty, with an inscription of the word "Liberty" and the year of the coinage; and upon the reverse shall be the figure or representation of an eagle, with the inscriptions "United States of America" and "E Pluribus Unum," and a designation of the value of the coin; but on the gold dollar and three-dollar piece, the dime, five, three, and one-cent piece, the figure of the eagle shall be omitted; and on the reverse of the silver trade dollar, the weight and fineness of the coin shall be inscribed. The Director of the Mint, with the approval of the Secretary of the Treasury, may cause the motto "In God We Trust" to be inscribed upon such coins as shall admit of such motto; and any one of the foregoing inscriptions may be on the rim of the gold and silver coins.

COLBY, ANTHONY, A. M., a distinguished and esteemed citizen of New Hampshire, Governor of the State 1846-47, and often placed in situations of honor and trust, born in New London, N. H., in 1793; died there,

July 20, 1873. His early opportunities for education were limited, but, by great diligence and extensive reading and observation, he had made himself one of the best-informed men in the State, and was a zealous friend and patron of education. He was thoroughly familiar with the civil and political history of the State and nation. Early in life he was prominently identified with the State militia, and passed through every grade of officer from captain up to major-general. He was first elected to the Legislature in 1828, and served ten or twelve terms there. He was a consistent Whig during the lifetime of the Whig party, and often a prominent candidate for Governor or Congress while that party was in the minority. In 1846, taking advantage of a division in the ranks of their opponents, his friends pushed him forward for Governor and he was elected, and made a most excellent chief magistrate. In 1861 he was appointed adjutant-general, and held that office for a portion of the most critical period in the modern history of the State. Toward the close of the war he was Provost-Marshal of New Hampshire. Both these offices he filled with rare ability and prudence. His zeal for education was manifested in his earnest labors as a trustee of Dartmouth College for many years; in his founding the academy at New London, N. H., and procuring the transfer of the Baptist Literary and Theological Institution from New Hampton to New London; in the endowment of that and other institutions by himself and family, and in the frequent and timely aid which he extended to young men who were struggling to obtain an education or business positions. He was greatly beloved and esteemed by all classes.

COLOMBIA (REPÚBLICA DE COLOMBIA), an independent state of South America, extending from latitude 11° 25' north to 1° 37' south, and from longitude 69° 30' to 83° west. Its boundaries are: north, the Caribbean Sea; east, Venezuela and Brazil; south, Ecuador; and west and northwest, the Pacific Ocean and Costa Rica. The dividing line with Brazil at the extreme southeast has not yet been definitively drawn, but it is understood that toward the end of 1873 the Brazilian Government resolved to send commissioners to Bogotá for that purpose.

The territory of the republic is divided into nine States, which, with the population (in 1870) and areas, are as follows:

STATES.	Area in square miles.	Population.
Antioquia.....	22,790	265,974
Bolívar.....	27,027	237,349
Boyacá.....	33,349	463,874
Cauca.....	257,451	435,078
Cundinamarca.....	79,845	409,602
Magdalena.....	26,950	85,255
Panamá.....	31,921	220,542
Santander.....	16,238	425,427
Tollma.....	18,476	230,891
Total.....	514,102	2,894,592

There are, besides, the following national territories, administered directly by the central Government:

	Population.
San Andrés y San Luis de Providencia	3,581
Bolívar	7,751
San Martín	4,056
Total	15,337

We are not in possession of definite information respecting the population of the other territories—Casanare, Guajira, Sierra Nevada, and Motilones.

About 1,600,000 of the inhabitants are whites and mestizos, with a large proportion of European blood; some 500,000 mestizos more strongly marked with the Indian type, 500,000 zamboas, and the remainder Africans. There are, besides, about 126,000 independent Indians not included in the foregoing figures.

In the annexed table are enumerated the State capitals, with their populations:

	Population.
Bogotá, capital of the republic	60,000
Medellín	30,000
Cartagena	7,500
Tunja	8,000
Popayan	16,000
Santa Marta	3,500
Panamá	18,378
Socorro	20,000
Guamo	7,000
Total	170,678

The President of the republic is General J. Trujillo, elected provisionally in 1873.

The members of the Supreme Court of Bogotá are elected by the Legislative Chambers of the nine States, and are: The President, C. Conto; four members in ordinary, J. M. Rojas Garrido, J. M. Perez, J. M. Villa-

CITY OF BOGOTÁ.

mizar Gallardo, and M. M. Ramirez; the Procurator-General is A. Cenon.

V. Arbaleaz is the present Archbishop of Bogotá.

The governors of the different States are as follows: Antioquia, J. M. Berrio; Bolívar, R. St. D. Vila; Boyacá, V. Rueda; Cauca, J. C. Mosquera; Cundinamarca, J. Barriga; Magdalena, J. M. Campo Serrano; Panamá, Domingo Cervera; Santander, N. Cadena; Tolima, J. N. Leiva.

There being a governor of the city of Panamá, the State executive is called president.

The army is 1,420 strong in time of peace; in case of war, each of the States furnishes a contingent of one per cent. of its population.

According to a report of President Murillo, under date April 4, 1873, the national debt was made up of the following elements:

FOREIGN DEBT.	Nominal capital.	At the present rate.
Old debt	\$14,837,250	\$2,819,077 = 19 per ct.
New debt	2,887,000	1,360,450 = 35 "
Suspended debt	14,638,000	1,317,465 = 9 "
Home debt	\$33,622,250	\$5,496,992
	9,839,716	2,667,521
Total debt	\$43,261,966	\$8,164,513

In January, 1873, a contract was signed by the Secretary of the Treasury and Mr. O'Leary (commissioned for the purpose by the foreign bondholders), transforming the foreign debt into one of \$10,000,000, at four and a half per cent. per annum (say \$450,000), which interest is covered by about thirty-seven and a half per cent. of the customs receipts.

The following note was addressed by the Secretary of the Treasury, on August 4th, to the Colombian ministers resident in England

and France: "I inform you that you may make it known to whom it may concern, that during the six months ending on the 31st of July last, there have been paid to the agent of the foreign creditors, in Bogotá, three hundred and six thousand seven hundred and eighty dollars (\$306,780), as follows:

Six monthly installments, January to July, inclusive, paid on the date fixed by agreement of January 1, 1873.....	\$225,000
Difference of exchange between dollars and pounds sterling on the above.....	4,900
Back interest, according to the Paris agreement.....	75,000
Exchange on the above sum.....	1,875
Total.....	\$306,780

"Nothing, therefore, is now due to the foreign creditors, and you can assure the committee that the coming installments shall be paid with the same punctuality and in the same form."

The following table serves to exhibit the national income for the year ending July 31, 1873, with the sources from which it was derived:

Gross customs receipts.....	\$2,039,450
Salt monopoly.....	788,190
Panama Railway.....	253,150
Post-Office Department.....	61,975
Telegraphs.....	4,181
Public lands.....	81,500
Total.....	\$3,178,446

The income for 1870-'71 was \$3,573,570, and that for 1869-'70 \$2,883,758.

The receipts and expenditures of the different States in 1870 were as follows:

STATES.	Receipts.	Expenditures.
Antioquia.....	\$343,546	\$342,546
Bolívar.....	234,350	227,366
Boyacá.....	104,392	105,376
Cauca.....	212,847	251,169
Cundinamarca.....	341,330	290,168
Magdalena.....	70,349	68,142
Panamá.....	296,939	343,945
Santander.....	190,550	220,044
Tolima.....	117,995	174,937
Total.....	\$1,910,928	\$2,029,702

The national income for the year ending July 31, 1873, was estimated at \$3,400,000.

A system was adopted by Congress of guaranteeing seven per cent. interest per annum on capital employed for the construction of railways in the republic, and it has given very satisfactory results.

According to the report of the Director of Public Instruction in Boyacá, there are in that State 169 schools, viz., 124 public (97 for males and 27 for females) and 39 private; the total number of children in all of them being 6,588.

By virtue of a law passed by the Legislative Assembly of Boyacá, in December, 1872, every district in that State with an annual income exceeding \$800 is to send, at its own expense, a pupil to the normal school established in the capital, Tunja. Non-compliance with this law will be followed by a fine of \$120.

In Cundinamarca both Liberals and Conservatives are in favor of compulsory education.

In Tunja, conferences were held in April to inquire into the progress made in that school. The Archbishop of Bogotá visited the estab-

lishment, and was much pleased; but, before leaving, he enjoined upon the professor, who is a German, to abstain from meddling with the religion of the pupils, and requested the latter to inform against him if he should interfere.

A Bogotá journal published in July an official letter, stating that the parish priest at Palmira had been preaching from the pulpit against the public schools, insisting that the teaching given in them was calculated to make the pupils disbelieve in the Catholic religion, and to otherwise corrupt their morals. The director of a school invited the public to witness an examination, and showed the priest to be falsely informed, as well as that the moral and religious training was particularly attended to.

The commerce of Colombia, though fast increasing, is still far below the capacity of the country, the principal cause being the lack of adequate means of transport in the interior, and from the interior to the coasts. As will be seen in the proper place, there are but two railways in the republic: the Panama Railway, and a short line from Barranquilla to Sabanilla, 18 miles in length. How much may be accomplished for the extension of commerce by the introduction of railways, is already evident from the rapid strides trade has taken since the establishment of the Barranquilla line: shipping at that port has become more extensive, and an entirely new line of steamers has been put on for the traffic with New York alone. The navigation of the Magdalena River is becoming every year more difficult for the steamers, and but little progress can be made by merely multiplying the *bongos*, or large barges, hitherto commonly employed in carrying freight. Commerce will not be really prosperous before the Magdalena Valley Railway is completed.

The exports consist mainly of cotton, cinchona, coffee, India-rubber, raw-hides, tobacco, silver-ore, cochineal, indigo, other dye-stuffs, and emeralds; and the imports, of cotton, linen, woolen, and silk fabrics; clocks and watches, hardware, machinery, fire-arms, gunpowder, fermented liquors, etc. The value of the exports for the year ending August 31, 1872, were—

Countries.	Value.
Great Britain.....	\$2,752,147
Germany.....	1,875,981
United States.....	1,268,285
France.....	1,077,208
Venezuela.....	868,423
Other countries.....	1,517,210
Total.....	\$9,253,804

The chief articles exported, with the value of the quantities sent out of the country, in the same year, are as follows:

Articles.	Value.
Tobacco.....	\$1,516,088
Coffee.....	1,264,122
Cinchona.....	1,297,766
Gold.....	1,279,522
Silver.....	414,932
Panama hats.....	296,375
Cotton.....	273,866
Indigo.....	402,302
India-rubber.....	595,842
Total.....	\$7,210,622

The following table exhibits the total imports and exports for the years ending August 31, 1868, 1869, 1870, 1871, and 1872:

YEARS.	Imports.	Exports.
1868.....	\$5,392,467	\$7,376,997
1869.....	7,255,096	8,137,000
1870.....	5,842,451	8,077,153
1871.....	5,302,711	8,247,817
1872.....	8,427,375	8,250,806

The total value of the exports to Great Britain, which in 1870 was \$4,681,395, reached \$5,211,695 in 1871, and in 1872 amounted to \$5,096,175.

Fully one-half of the trade is carried on through the Isthmus, the exports and imports of which *in transitu* average each about \$50,000,000.

The direct exports and the imports for 1873 show an increase of 75 per cent. as compared with those of 1870; owing, in the first place, to the recent additions made to the steamship lines running to Colon (Aspinwall); in the second place, to the dispatch and facilities offered during certain periods of the year by the Panama line, and which are greater than those presented by any other route for transit to the Pacific; and in the third place, to the gradual development of the resources and needs of the other Spanish-American republics on the Pacific.

About 75 per cent. of the exports *via* Aspinwall are for the United States.

The proportions of India-rubber taken by the principal countries are:

United States.....	75 per cent.
Germany.....	9 per cent.
France.....	8 per cent.
Great Britain.....	8 per cent.

Total... 100 per cent.

Boots and shoes are for the most part imported from Germany and France, where they are made lighter and of better shape, and so more suitable for the Colombian market, than those of American or English manufacture.

The shipping returns for 1872 were as shown in the annexed table:

ENTERED.		
Steamers.....	360 with an aggregate of..	309,668 tons.
Sailing-vessels..	945 with an aggregate of..	59,047 tons.
Total.....	1,305 with an aggregate of..	368,735 tons.

CLEARED.		
Steamers.....	250 with an aggregate of..	307,709 tons.
Sailing-vessels..	938 with an aggregate of..	57,997 tons.
Total.....	1,188 with an aggregate of..	365,706 tons.

Steamers run weekly from Panama to the principal Pacific ports south, and to San Francisco and intermediate ports north. To Aspinwall there are American steamers tri-monthly, and several British and French lines; and in 1873 an American line was inaugurated between New York, Santa Marta, Sabanilla, and Cartagena. Steamers ply on the Magdalena, but the navigation is gradually growing more and more difficult, tardy, and perilous; the

greater part of the internal carrying-trade is done by the *bongos* (already alluded to) on the rivers, and by mules. Many new roads are in process of construction, but much has yet to be done in this respect.

Besides the railways from Panama to Colon (48 miles), and from Sabanilla to Bananquilla (18 miles), both in prosperous operation, proposals were made in 1873 to build other lines to the extent of 800 miles, the whole to be completed in twelve years, at a nominal cost of \$85,000,000. Some surveying and grading has already been performed.

The general direction of the lines and their branches are as follows: The line from Cartagena to Magangué, leaving the first city, will pass through Ternera, Turbaco, Arjona, Gambote, Sincerin, San Basilio, San Cayetano, San Juan Nepomuceno, San Jacinto, El Carmen, Ovejas, Corozal, and end at Magangué.

The line from Garrapata to Antioquia will pass through Marinilla, Rio Negro, and Medellin, the total length being 147 miles.

The line from Puerto Nacional to Bogotá, 350 miles in length, will touch at Aguachica, San Antonio, Oafia, Salazar (from which point will be a branch, 28 miles long, to Cúcuta), Suratá, Rio Negro, Bucaramanga, Socorro (whence will run a branch through Confines, Charatá to Loatá, in all 86 miles long), Guadalupe (from which a branch line will run by Suaita, Moniquirá, Leiva, Tunja, to Sogamoso, the distance being 100 miles), Velez, Puente Nacional, Chiquintirá, Ubaté, Nemocoro, Cipaquirá, and, lastly, Bogotá. The more important intermediate stations only have been mentioned.

Thus it is seen that these various lines will pass through the principal agricultural and mining centres, and will become more efficient in developing the material interests of the republic than any other means which could be devised therefor.

The estimated cost of these railways is £12,000,000, which, with the interest upon the loan, would raise the capital to the nominal sum of £17,000,000.

Congress has already authorized the appropriation of \$15,000,000 to be applied in payment of the interest, the rate of which is seven per cent.

It may not be uninteresting to give here the cost of freight from the coast to Bogotá by the old system of carriage—mules, river-steamers, and *bongos*. One ton of merchandise costs \$126, or about 17 cents per mile for the whole distance of 750 miles.

From the coast to Velez the distance is 550 miles, and the cost per ton \$86.50.

The cost to many other places equal in importance, but reached by more difficult routes, is of course much higher still.

The rates by railway, according to estimates already made, would be little more than half the foregoing.

The cost per mile of the lines above alluded to, including tunnels, viaducts, large bridges

over the rivers Sube, Sanjil, Oiba, Lenguaraca, Togui, and Onzaga, three bridges over the Nare, and one over the Cauca, together with wharves, slips, etc., is estimated at £16,683.

A Colombian writer, in one of the leading journals of the capital, gave in January, 1873, the following rapid sketch of the improvements in internal communication in the different provinces: "Cauca expects soon to see completed a railway across its territory; Tolima seeks to realize the navigation by steam of the Upper Magdalena; Bolivar is taken up with her canals; Magdalena is about putting the most important of her bays into communication with the river which runs through the States of the interior; Antioquia is leveling her mountain-passes; and Santander, considered the most industrious of all the States, is constructing a carriage-road to unite with that which leads from Medellín to the Magdalena. Cundinamarca and Boyacá look to the realization of the Northern Railroad to increase their industry and the value of their productions."

Thanks to the untiring efforts of Señor Pereira Gamba, and his liberal outlay of capital, neither danger nor difficulties are any longer to be apprehended from the rapids of the Magdalena near Honda, easy communication having been opened up between that town and the river port of Pescaderías.

Under the invigorating influence of railway and steamers, the port of Barranquilla is rapidly improving; a new street is opened there every year; and capital invested in real estate gives one per cent. per month interest.

Antioquia is also fast progressing, especially in the development of her mining interests, while commerce and agriculture are likewise in a flourishing condition. Banking business is on the increase, and the State bank-notes circulate freely to the amount of \$100,000.

A thirty years' privilege was conceded, in December, 1872, by the State of Tolima, for the construction of a railway to establish communication between the Upper and Lower Magdalena, and for a suspension-bridge to span the same river.

The Bolivar Railway profits for the month of October, 1872, amounted to \$2,515.80; the goods traffic having been 27,057 packages exported, and 22,800 imported, in eleven steamers and eight schooners.

Certain disputes concerning the contract of this line were satisfactorily settled, it having been agreed that the ownership would remain with Messrs. Hoeningberg, Weasels & Co., the representatives of the company in Bremen.

A contract was given to R. A. Jay for the construction of a railway from Lake Paturia to a place in the neighborhood of Bucaramanga; and also for another line from that lake to Cúcuta.

A carriage-road is in course of preparation to Sucre; and a portion—from Sucre to Venado, 2½ leagues—was opened to the public in May.

With the telegraphs along the two railways now running, and that from Bogotá to Buenaventura, completed on December 10, 1873, there were at the end of the year 1,500 miles of wires established; the submarine cable from Aspinwall to Kingston, Jamaica, would, it was expected, be completed by the end of 1873.

A circular was issued on May 3d to the shareholders of the West India and Panama Telegraph Company Limited inviting subscriptions at par, in shares of £10 each, for the £250,000 preference share capital bearing 10 per cent. recently authorized, to restore and complete the company's property. The circular called special attention to the facts that the ordinary share capital issued and fully paid up is £571,910; that the only debenture capital authorized is £50,000; that the company's system extends altogether to about 1,800 miles, and possesses subsidies amounting to £18,500 annually; that the gross earnings on an incomplete system, besides these subventions, amounted in 1872 to £27,000, and that large receipts may be anticipated when the connection between Jamaica and Colon is completed. The new issue, besides its preference, will be entitled to participate in all profits on the entire capital above 10 per cent., but may either be paid off at the end of five years at 10 per cent. premium, or the holders may convert it into ordinary shares at £110 for every £100.

A telegraph-line is to be constructed between Palmira and Popayan at the expense of the Government.

On the 18th of January, 1873, a severe storm caused damage among the shipping and to the mole of the port of Aspinwall, to the extent of half a million dollars.

In March last, the relations between Colombia and Venezuela were not on a satisfactory footing. Judging from the tenor of a note from Señor Colunje, Secretary of Foreign Affairs, to the Secretary of State of Santander, it would appear that news of an alarming nature had been received a short time before from Venezuela. Negotiations concerning the boundary question, so long pending between the two republics, had been suspended, Venezuela having refused to accept the proposal of Colombia to refer the matter to arbitration. Subsequently, Señor Colunje was instructed to await the decision of the Senate before taking further steps. Meantime, President Guzman Blanco offered to meet Dr. Murillo at the town of Barranquilla for the purpose of arriving at an amicable solution. The Senate disapproved of the step, and refused to grant permission to the President. It may be here mentioned that, in February, General Manuel Quesada, who not long ago took so active a part in the Cuban revolution, had arrived at Bogotá, charged with a mission to obtain the coöperation of the Colombian Union to deliver Cuba from the dominion of Spain, and had been cordially received in certain circles, while the opposi-

tion journals of the capital became clamorous against the policy of interference. "Colombia is likely," says the *Tradicionalista*, "to have before long three serious affairs on hand: the foreign debt; intervention in Cuban matters; and the question of limits with Venezuela." On the 14th of March, a bill was laid before the House of Representatives, containing a single article, to the following effect: "If, during the war for Cuban independence, the families of Carlos Manuel Oéspedes and Manuel Quesada will come and reside in Colombia, a pension of \$200 per month will be assigned to each of them by the public Treasury." A bill proposing to aid the cause of Cuba by advancing \$500,000 to General Quesada was disapproved in the House of Representatives, which approved, however, at the same time, another bill for the appropriation of \$125,000 to purchase the steamer *Virginina*. General Quesada afterward received a grant of \$25,000.

The Secretary of Foreign Affairs, in his report to Congress concerning the affairs of the republic, stated that, during the present Liberal Executive Administration, the country had enjoyed uninterrupted peace, with the exception of two brief local perturbations in the State of Cauca. Panama, in April, furnished, however, another instance of such political movements, in the case of the overthrow of President Neira, and the placing of Damaso Cervera in his stead. Such sudden and capricious changes of government are considerably facilitated in the State just alluded to, the inhabitants of which, according to the *Panama Star and Herald*, are disposed to abuse the license extended to them by the law of April 16, 1867, by the terms of which, "when, in any State, part of the citizens combine for the purpose of putting down the existing government and organizing a new one, the Government of the Union shall observe the strictest neutrality toward the belligerents." Some Federal troops, stationed at the time in Panama, interfered, in the present instance, taking sides with one of the parties. Here follows the proclamation issued on the 5th of April, by Rafael Aizpuru:

In the name of the Capital of the Sovereign State of Panama: To the Colombian nation, and more especially to the inhabitants of the Isthmus.

The liberal portion of the people of the State elected to the first magistracy Citizen-General Gabriel Neira, whose services in the cause of the people made him at the time worthy of it.

This same people, in the exercise of their sovereignty and absolute rights, have to-day resolved to withdraw their confidence from him as their chief Governor, but retaining for him all respect for his patriotism.

A bloodless revolution has been necessary to carry this measure into effect. This is what patriotism calls for, and makes us worthy of the name of republicans.

I neither pretend to, nor will I accept any thing which might compromise my personal independence. Yesterday, I resigned my appointment as commander-in-chief of the State troops, and to-day that of the post of fourth substitute, to exercise the executive power, in order not to give place to the belief that an immoderate ambition was my motive, at a sacrifice of somewhat of the interests of the people.

This political revolution can in no way affect either constitutional order or any social or commercial interests whatever. Every thing will go on as usual, because the people, always desirous of peace, cannot sacrifice it on any account.

As true republicans, we have followed the path pointed out by our reason; as soldiers, in defense of our cause, we will hold responsible for the events arising out of this revolution all those who forget the fulfillment of their duty.

Let us salute together, then, fellow-citizens, the citizen in charge of the executive power, Señor Damaso Cervera, with the cry of "Hurrah for the Liberal party!"

(Signed)

RAFAEL AIZPURU.

A committee of the Senate of Bogotá, in the session of March 12th, reported favorably on the project of authorizing the Executive to promote the convocation of an international congress, composed of representatives from all the American republics. One of the principal objects of the congress would be the determination of all questions of limits between the Spanish-American republics, based on a system of just compensations and reciprocal convenience.

About the beginning of April, the United States Exploring Expedition had finished their labors of survey of the regions of Darien and Cauca, for the purpose of discovering, if possible, a convenient route for a ship-canal from the Atlantic to the Pacific Ocean. A Peruvian corps of engineers arrived about the same time at Panama, with orders from their Government to take part in the same exploration. It will be remembered that, as early as 1865, the same regions were explored by a M. de Puydt, for account of the French International Colombian Company; and that that engineer declared the problem of the union of the two oceans by a canal without tunnels or locks to be solved. The canal would open to the eastward in Port Escondido, follow the valley of the Turgandi, Tanaela, and Tanela Paya, pass thence into the upper waters of the Puerto, and then by the immense flood of the Tuyra into the Pacific by the Gulf of San Miguel.

The Cauca Valley Mining and Constructing Company, who have undertaken to build the Cauca railway, issued a public invitation to the ceremonies of turning the first sod in the building of the railroad, on the 18th of May. There was a numerous assemblage of people, with firing of cannon, bands of music, and the Colombian and American flags carried in procession. The ceremony of turning the first sod was performed by Colonel Croz, a veteran of the war of independence. The first portion of this line will ultimately connect the Pacific and Atlantic Oceans, *via* the Cauca and Magdalena Rivers. The contractors have to spend \$7,000,000, build a mole at Buenaventura, and have the road finished in four years. Among the large number of speakers on the occasion was Mr. R. Smith, vice-president, who delivered an eloquent and lengthy discourse.

The year 1878 was a stormy one in political

circles, owing to the excitement caused by the election for President. The candidates were Carlos Martin, Rafael Nuñez, Justo Arosemena, Rojas Garrido, and Santiago M. Serez, the last-named having gained the victory over his competitors.

In the month of June, the columns of some of the opposition journals of the capital teemed with bitter criticisms on the outgoing administration. We transcribe, from the *Igualdad*, the following charges against President Murillo: "Dr. Murillo does not practise what he preached before being elected President. He was then a friend of universal suffrage, sectional and individual autonomy, and an enemy of nepotism, etc., etc. Now he wishes to name his successor, to divide the Liberal party; keeps the nation amused by the prospect of railroads everywhere, and employs \$30,000 in causing his favorite candidate to succeed by main force. He disarms the Conservatives in Tolima, fails to arrange the question of limits with Venezuela, and authorized his nephew to interfere, with armed force, in the affairs of Panama."

Some important modifications were made in the tenth article of the treaty of amity and commerce between Colombia and Peru, under date February 10, 1870.

The President of the republic decreed that honors should be paid to the memory of José Antonio Paéz, both as a general of Colombia in active service and with full pay, and as one who contributed by so many acts of heroism to the triumph of the cause of independence in the first Colombian Union.

Remington rifles to the number of 10,000 were received in August. They had been ordered under the apprehension of war with Venezuela.

To the picture of prosperity for the future of Buenaventura drawn by advocates of railways and other agents of material development, is presented a saddening contrast by a journal of that town, in its lamentations over the immorality prevalent among the colored population, and mainly attributable to the abuse of strong drinks, and to the absence of churches, schools, and industrial establishments.

COMMERCE OF THE UNITED STATES. For the fiscal year ending June 30, 1878, the general commerce of the country shows the sum of \$663,410,597 (gold value), being a gain of \$23,071,831 on the total imports for the corresponding period of 1871-'72. The total exports for the fiscal year ending June 30, 1873, amounted (gold estimate) to \$578,938,988, being a gain of \$67,653,614 on the total exports of the previous fiscal year. Re-exports for the same period, to June 30, 1873, were \$28,148,481, or an increase of \$5,378,732 over those of the fiscal year of 1871-'72. The value of foreign commodities remaining in warehouse, June 30, 1873, was \$77,646,579, as compared with \$122,211,266, June 30, 1872—a difference of \$42,564,685. The following are summaries of the two fiscal years:

PERIOD.	Imports.	Domestic exports, specie value.	Re-exports.
Twelve mo's ending June 30, 1873.	\$663,410,597	\$578,938,988	\$28,148,481
Twelve mo's ending June 30, 1872.	640,338,766	501,285,377	22,769,749

The amounts of the foregoing, which consisted of specie, bullion, and merchandise respectively, were as follows:

COMMODITIES.	Imports.	Domestic exports, specie value.	Re-exports.
Specie and bullion, 1873.....	\$21,490,937	\$73,905,546	\$10,708,028
Merchandise, 1873.....	641,929,660	505,033,439	17,445,453
Specie and bullion, 1872.....	18,743,639	72,798,240	7,079,294
Merchandise, 1872.....	626,595,077	428,487,131	15,690,455

Allowing for the difference in the warehouse accounts, the imports for the last fiscal year were in excess over the domestic and foreign exports combined, to the extent of \$100,887,818; while, for the fiscal year previous, the excess of imports over exports was only \$62,897,039.

The values of imports and exports carried in American and foreign vessels, and in cars and other land conveyances, are thus reported for the two fiscal years:

1873.	Imports.	Domestic exports, mixed values.	Foreign exports.
American vessels.....	\$174,536,454	\$163,110,634	\$8,455,094
Foreign vessels.....	471,803,505	414,236,854	16,679,029
Land vehicles.....	17,070,548	7,785,075	3,014,355
1872.			
American vessels.....	177,286,302	161,310,860	6,722,462
Foreign vessels.....	445,416,793	381,620,622	13,311,855
Land vehicles.....	17,635,661	6,279,167	2,735,932

These latter show that, during the fiscal year ending June 30, 1873, more than 73 per cent. of the total trade by water was carried in foreign vessels, and that the value of the same trade so carried in the fiscal year previous was about 76 per cent.

The number and tonnage of vessels engaged in the foreign trade which entered and cleared during the last two fiscal years, are given as follows:

VESSELS.	ENTERED.		CLEARED.	
	Number.	Tons.	Number.	Tons.
American vessels, 1873.....	11,286	3,612,881	11,559	3,756,564
Foreign vessels, 1873.....	20,379	8,068,087	20,493	8,065,181
Total.....	31,645	11,695,718	32,052	11,821,695
American vessels, 1872.....	10,624	3,711,846	10,492	3,689,809
Foreign vessels, 1872.....	18,657	7,094,577	18,759	7,051,425
Total.....	29,281	10,806,423	29,251	10,738,734

The *Journal of Commerce* publishes full comparative tables of the commerce of the port of New York for the entire year of 1873.

The total imports for the year (including the specie) are \$998,565,886, or \$38,540,850 below the total for 1872; but, deducting the specie for the two years, the decrease in merchandise imports for the past year amounts to \$46,552,258. The relative totals of imports for the last ten years are thus presented:

FOREIGN IMPORTS AT NEW YORK.

YEAR.	Dutiable.	Free Goods.	Specie.	Total.
1861...	\$21,128,296	\$11,731,909	\$2,365,622	\$35,225,760
1862...	\$12,304,301	\$10,410,937	\$2,123,281	\$24,738,419
1863...	\$21,031,667	\$13,001,568	\$3,578,629	\$37,611,864
1864...	\$28,267,955	\$11,044,181	\$3,306,339	\$42,618,475
1865...	\$24,344,418	\$11,764,927	\$7,085,399	\$43,194,744
1866...	\$25,779,976	\$14,789,235	\$5,788,462	\$46,357,673
1867...	\$28,635,878	\$17,716,530	\$11,801,644	\$58,153,052
1871...	\$44,635,338	\$24,878,294	\$6,918,608	\$76,432,240
1872...	\$69,083,458	\$37,429,020	\$5,591,205	\$112,103,683
1873...	\$63,035,318	\$6,934,877	\$18,605,611	\$88,565,806

"Dutiable" includes goods entered directly for consumption, and those entered for warehousing. The following are tables of monthly summaries for five years:

Foreign Imports entered at New York during the Years 1870, 1871, 1872, and 1873.

It will be noticed that the imports of specie at New York, during the year 1873, exceeded those of either of the three previous years, and that during the last three months of that year, after the financial panic in September, the amount of the imports was comparatively enormous, having exceeded \$14,000,000.

The subjoined tables, showing the export movement monthly for the past four years, complete the general statistics of commerce for the port of New York. The shipments of goods are mostly counted at their tale value, but all others, with trifling exceptions, at their market value in paper-money at the time of shipment:

Exports from New York to Foreign Ports during the Years 1870, 1871, 1872, and 1873.

These statistics exhibit a clear gain of nearly \$64,000,000 in the export of merchandise and produce from the port of New York—the most gratifying return ever made.

The total foreign trade at the port of New York is usually about two-thirds of its imports, and 40 per cent. of the exports, of the whole country.

Below is a quarterly summary of the exports hence to foreign ports, exclusive of specie and bullion. This includes the reshipments of foreign products, but is chiefly made up of domestic produce and manufactures:

Exports from New York to Foreign Ports, exclusive of Specie.

CONGREGATIONALISTS. The twentieth anniversary meeting of the *American Congregational Union* was held in the city of New York on the 8th of May. The report of the treasurer showed the receipts for the year ending May 1, 1873, to have been \$60,308.96. The disbursements had been: for building churches, \$43,812.96; for pastors' libraries, \$390.90; miscellaneous expenditures, \$10,444.87. A balance was left in the treasury of \$5,655.23. Fifty-two churches had been helped. Pledges of help had been given to about fifty other churches, which, it was expected, would more than absorb the balance on hand.

The annual meeting of the *American Home Missionary Society* took place on the 7th of May. The receipts for the year had been \$267,691.42; the expenditures, \$278,830.24. The sum of \$23,530.33 was yet due to missionaries for labor performed. The Society had employed during the year 251 missionaries for the supply of congregations and missionary stations in thirty different States and Territories. Eighty-nine churches had been organized, thirty-four of which had become self-supporting. The number of additions to the membership of the churches of the Society during the year had been 5,725.

The twentieth annual meeting of the *American Congregational Association* was held May 27th. The greater part of the report related to the new Congregational Homes: \$50,000 were needed to liquidate the debt of \$25,000 on the home, and perfect the library. The receipts during the year had been \$114,786.25, and the expenditures \$113,735.32. The library contained 15,880 bound volumes and 60,000 pamphlets, 588 volumes and 5,270 pamphlets having been added during the year.

The annual meeting of the *American Board of Commissioners for Foreign Missions* began at Minneapolis, Minn., September 23d. The treasurer reported the total receipts during the year ending on the 31st of August to have been \$421,331. The receipts for missions "in nominally Christian lands," the accounts of which were kept separate, were \$19,506. The expenditures were, for the general missions, \$435,016, of which \$401,209 represented the cost of missions, and the remainder of the sum the expense of agencies, publication, and administration; for missions "in nominally Christian lands," \$39,116. The Board was in debt on the account of the two funds together, \$26,086. A comparison of the entire receipts of the Board for several years past showed that the falling off since 1870, when the separation was made from the Presbyterians, had been only \$29,218. This was regarded as very small, especially when it was considered that the great fires at Chicago and Boston, both of which directly affected many large contributors, had taken place since that time. A new mission had been established in Western Mexico. The mission at Monterey, in Northern Mexico, formerly conducted by the American and Foreign Christian Union, had been received under the care of the Board. The mission of the American and Foreign Christian Union in Italy had been transferred to the Board, and the work in that country had been extended. The mission in the Austrian Empire had been reinforced, and a native agency had been organized in connection with it. A new station had been organized in Macedonia, and at Pauting Foo, in North China. A native mission had pushed into the interior from Foo Choo, in South China. Home missionary societies had been organized and set to work in the Zulu, Ceylon, Madura, and Mi-

cronesian missions. In the aggregate, the additions were 25 churches, 10 native pastors, about 800 church members, 66 students for the ministry, and upward of 1,600 children and youths in the mission and boarding-schools. The following general summary of the mission was presented:

MISSIONS.	
Number of missions.....	19
Number of stations.....	70
Number of out-stations.....	406
LABORERS EMPLOYED.	
Number of ordained missionaries (5 being physicians, and including 13 still supported at the Sandwich Islands).....	143

THE PRESS.	
Pages printed, as far as reported.....	5,653,870
THE CHURCHES.	
Number of churches.....	197
Number of church-members, so far as reported.....	9,435
Added during the year, so far as reported.....	794
EDUCATIONAL DEPARTMENT.	
Number of training and theological schools.....	12
Number of boarding-schools for girls.....	21
Number of common schools.....	496
Number of pupils in common schools.....	17,126
Number of pupils in training and theological schools and station classes.....	264
Number of pupils in boarding-schools for girls.....	627
Other adults under instruction.....	531

The twenty-seventh annual meeting of the *American Missionary Association* was held at Newark, N. J., November 5th and 6th. The total receipts for the year were reported to have been \$345,277.03. Of this amount, \$47,340.55 had been received by the Hampton Normal and Agricultural Institute, Hampton Roads, Va., and \$22,835 by Berea College. The report of the Association acknowledged also a gift of nearly \$100,000 of Agricultural College land scrip from the State of Virginia to the Hampton Institute, and a gift of \$8,000 from the State of Georgia to the Atlanta University. The expenditures of the Association had been \$340,837.71. Of this amount, \$278,018.67 had been expended in the Southern States, \$5,618.76 among the Chinese, \$2,999.72 among the Indians, \$15,743.96 on foreign missions, and the rest in office expense and for publications. A balance remained against the Association of \$55,481.26. The Association had property not required for its work which had been given for its uses, and remained unsold, which was estimated to be worth \$35,000. Its real estate in the South was valued at \$408,000, and was incumbered to the amount of \$3,100. The amount of \$43,893.40 was inverted as an endowment fund. The Association had employed during the year in its American work 251 missionaries and teachers, of whom 309 had labored in the South, 14 among the Chinese, and 28 among the Indians.

The whole number of pupils enrolled during the year in the various secular schools of the Association, was 14,048; in church and mission Sunday-schools, 8,098. Among the schools were 4 colleges and 21 normal schools. Already nearly 3,000 colored teachers had gone out from these schools, and 60 colored churches had been established through their agency. The Association had sustained 4 foreign missions in Siam, the West Indies, the Sandwich Islands, and West Africa. Connected with these missions were 14 stations, 8 ordained missionaries, 9 male and 11 female assistants and teachers, 10 churches, and 580 church-members.

Two meetings of the *Congregational Union of England and Wales* were held during the year. At the spring meeting the pastors' retiring fund was reported to lack only about £4,000 of reaching the proposed amount of £100,000. The Union account showed a deficit of £459, 9s., 3d., but the publication account had a surplus of £1,329, 10s., 8d. The following resolution on the subject of education was unanimously adopted:

That this Union, while recognizing the great merits of the endowed schools act of 1899, and admitting the value of the educational work accomplished by the commissioners, yet deeply regrets that there should have been any appearance of sectarian bias displayed in the administration of the act, especially in the principles upon which the governing bodies are constituted, which are likely to perpetuate for an indefinite period the exclusiveness the act was intended to remove. This Union trusts that any legislative initiation by her majesty's government may still further nationalize the educational endowments of the country, and that, in any redistribution of the commission, due regard may be had to the principle of religious equality.

The following resolution was adopted at the autumnal meeting, by a large majority:

Resolved, That, in the judgment of this meeting, it is desirable that the Congregational churches of England and Wales should seek to draw closer the bonds of fellowship which unite them to each other; and that with this view they should, with due regard to any circumstances which may distinguish their position from that of the Congregational churches of New England, imitate the example of those churches by taking counsel, in a systematic and regulated way, with each other in all weighty matters of common concern, as well as on matters in which individual churches may stand in need of the sympathy and advice of their sister churches.

A letter was submitted to the Union from a "vigilance committee" who were appointed at a conference of churchmen and non-conformists, which was held on the 10th of July, to take measures against the advance of ritualism in the national church, and with it an address from the same committee, "To the Christian People of England." The following resolutions were adopted in reference to these papers:

The Assembly, having before it a letter from the vigilance committee appointed at a conference of churchmen and non-conformists held on July 10, 1873, in which the aid of Congregationalists is requested in an endeavor to rouse the country to some

common action in regard to the advance of ritualism, and the practice of the confessional in the Church of England, and having also the address of the vigilance committee "To the Christian People of England:—"

Resolved, 1. That it agrees with the vigilance committee in regarding with grave concern the efforts of some of the clergy and other members of the Church of England, to revive in the services of that church the characteristic doctrines and usages of the Church of Rome; that it recognizes in the zeal and pertinacity with which these efforts are maintained, and the success which has thus far attended them, a real danger to the religious life and to all the higher interests of the nation; and that it acknowledges the duty of earnest coöperation with Christians of all denominations who may seek, by enlightening the minds of the people, to protect them against endeavors which are being made to corrupt their faith.

2. That while the Assembly condemns, as contrary to Christian truth and simplicity, the conduct of those clergymen of the Church of England who are seeking to undo the work of the Reformers, which they are appointed to maintain, it cannot, consistently with its views of the rightful relation of the National Legislature to the Church of Christ, unite with the vigilance committee in any political action which contemplates the strengthening of the discipline of the Church of England by means of new laws, or which assumes that it is desirable that that church should continue to exist as a national establishment.

3. That the Assembly regards with earnest and respectful sympathy the endeavors made by the Protestant portion of the national clergy to maintain scriptural truth by their own teachings, and is not unmindful of the painful sacrifices demanded by any constant policy on their part in the present state of ecclesiastical affairs.

4. That while the Assembly regards with pain the defection of so considerable a portion of the clergy, and of so many of the congregations of the Church of England from the doctrines and usages of the Reformed churches, it cannot but regard this defection as a natural result of the retention in the formularies of that church of some of the cardinal errors of the Church of Rome, and it remembers with satisfaction that the fathers of English Non-conformity elected rather to separate themselves from the national church than to lend their sanction in any degree to these errors.

5. The Assembly further regards the doctrinal anarchy which at present obtains in the Church of England as furnishing an argument in favor of the policy of disestablishment and disendowment for which, on other grounds, Non-conformists have long contended, and is hopeful that Non-conformists will ultimately be supported in their efforts to promote this policy by those who, though not disapproving the principle of an established church, are convinced that the Church of England can no longer be regarded as the guardian of a pure and scriptural faith.

The anniversary of the *London Missionary Society* was held May 12th. The report showed that the ordinary income for the year had been £103,454. Besides this, the sum of £11,615 had been contributed for special objects. Adding this, gave the total income £115,070. Of this amount £21,000 were raised at the foreign stations.

The *Congregational Year-Book* for 1873 gives the following statistical summary of the denomination in the British Empire: *County Associations and Unions*, 75 (England, 40; Wales, 16; Scotland, 3; Ireland, 1; Colonies,

9; Madagascar, 1). *Churches*, 3,609 (England, 2,120; Wales, 760; Scotland, 101; Ireland, 27; Islands of the British Seas, 17; Canada and British North America, 107; Australia, 145; New Zealand, 15; South Africa and Demerara, 17; mission churches, 300). *Pastors*, 2,716 (England, 1,551; Wales, 336; Scotland, 86; Ireland, 21; Continent, 5; Colonies, 488; heathen lands, 155; natives, 74). *Colleges and institutes*, 29 (England, 12; Wales, 8; Scotland, 1; Colonies, 8; foreign lands, 10). *Students in colleges*, 587.

The following are the statistics of the Congregational churches in the United States and North America, as given in the *Congregational Quarterly* for January, 1874:

STATES, ETC.	Churches.	Ministers.	Church-Members.
Alabama.....	5	6	258

Jamaica.....	3	3	498
Total in North America....	3,421	3,377	330,180

The foreign missionaries, 115 in number, besides three missionaries in Jamaica, are not included in this table. The number of licentiates (also not included in the table) is 239. Of the churches in the United States, 655 are without pastoral supply; in North America, 676. Of the ministers, 898 in the United States, 955 in North America, are pastors of churches; 1,306 in the United States, 1,404 in North America, are "acting pastors;" while 944 in the United States, 968 in North America, are not in pastoral work.

The Congregational Union of Ontario and Quebec, which held its annual meeting in 1873 at Brantford, reported, in 1871, 86 churches, 51 pastors, and 18 ministers without pastoral charge. Seventy-four of the churches reported 136 regular stations, 14,205 hearers, 5,052 members, 686 Sunday-school teachers, 5,638 Sunday-school scholars, 528 in the pastors' Bible-classes, 81 church-buildings, with 20,753 sittings; 16 parsonages, together valued at \$286,852; contributions to religious objects, \$70,447. There is another Congregational Union for Nova Scotia and New Brunswick, which has 12 ministers in Nova Scotia, 4 in New Brunswick, and 1 in Newfoundland. The membership of the churches in Nova Scotia was 1,085. The "Canada Congregational Missionary Society" has for its object to aid feeble Congregational churches in sustaining their ministers, to spread the Gospel by means of missionaries among all classes of inhabitants, and to promote other general missionary objects of the Congregational body. It is in connection with the "Colonial Missionary Society" of England, and received in the year 1871-'73, from the churches of Canada, \$4,136; from the Colonial Missionary Society, \$2,422; and expended \$7,804. The "Canada Congregational Indian Missionary Society" was established at Owen Sound in 1860. It employs three missionaries at three fields of labor, and receives many calls for more laborers.

In the Australian colonies there are Congregational Unions in Victoria, New South Wales, South Australia, Queensland, Western Australia, Tasmania, and New Zealand. There are Congregational colleges at Melbourne and Sydney. In New South Wales, the Congregationalists, according to the census of 1871, occupied 19 churches, 11 of which were in the city of Sydney or its suburbs: the ministers numbered 25; there was accommodation for 7,680 persons, and an average attendance of 4,950. The total population in connection with the Congregational churches was 9,253, or 1.8 per cent. of the total population. In Victoria, the Congregationalists had 63 chapels, 20 school-houses, and 12 dwellings or public buildings used for public worship, with sittings for 15,860 persons, and an average attendance of 8,974. The population connected with the Congregational churches was 18,191. In South Australia the Congregationalists have 29 chapels and 14 temporary places of worship, and 28 ministers. There is accommodation for 8,603. The Congregational population in Western Australia, according to the census of 1871, was 882. The Congregationalists of Tasmania have 11 ministers, 54 chapels, and 4,500 attendants, and 84 Sabbath-schools, with 250 teachers and 2,050 scholars. The Congregational population was 3,931. In Queensland there were 12 Congregational churches and 11 preaching-places. In New Zealand there were 15 churches.

CONGRESS, UNITED STATES. The third session of the Forty-second Congress* commenced at Washington on December 2, 1872. (For the President's Message, see PUBLIC DOCUMENTS, ANNUAL CYCLOPEDIA, 1872.) The Vice-President, Schuyler Colfax, presided in the Senate, and James G. Blaine presided as Speaker of the House.

In the Senate, on the same day, Mr. Sumner, of Massachusetts, introduced a bill to regulate

the Army Register and the regimental colors of the United States. It was as follows:

Whereas, The national unity and good-will among fellow-citizens can be assured only through oblivion of past differences, and it is contrary to the usage of civilized nations to perpetuate the memory of civil war: therefore—

Be it enacted, etc., That the names of battles with fellow-citizens shall not be continued in the Army Register or placed on the regimental colors of the United States.

* The following is a list of members at the second session of the Forty-second Congress:

SENATE.

Alabama—George E. Spencer, William Goldthwaite.
Arkansas—Benjamin F. Rice, Powell Clayton.
California—Cornelius Cole, Eugene Casserly.
Connecticut—Orris S. Ferry, William A. Buckingham.
Delaware—Thomas F. Bayard, Eli Saulsbury.
Florida—Thomas W. Osborn, Abijah Gilbert.
Georgia—Joshua Hill, T. M. Norwood.
Illinois—Lyman Trumbull, John A. Logan.
Indiana—Oliver P. Morton, Daniel D. Pratt.
Iowa—James Harlan, George G. Wright.
Kansas—Samuel C. Pomeroy, Alexander Caldwell.
Kentucky—Willis B. Matchett, John W. Stevenson.
Louisiana—John Ray, J. R. West.
Maine—Hannibal Hamlin, Lot M. Morrill.
Maryland—George Vickers, William T. Hamilton.
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Thomas W. Ferry.
Minnesota—Alexander Ramsey, William Windom.
Mississippi—Adelbert Ames, James L. Alcorn.
Missouri—Carl Schurz, Frank P. Blair.
Nebraska—Thomas W. Tipton, P. W. Hitchcock.
Nevada—James W. Nye, William M. Stewart.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—John P. Stockton, F. T. Frelinghuysen.
New York—Roscoe Conkling, Reuben E. Fenton.
North Carolina—John Pool, Matt. W. Ransom.
Ohio—John Sherman, Allen G. Thurman.
Oregon—Henry W. Corbett, James K. Kelley.
Pennsylvania—Simon Cameron, John Scott.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Frederick A. Sawyer, Thos. J. Robertson.
Tennessee—William G. Brownlow, Henry Cooper.
Texas—J. W. Flanagan, Morgan C. Hamilton.
Vermont—Justin S. Morrill, George F. Edmunds.
Virginia—John F. Lewis, J. W. Johnson.
West Virginia—Arthur I. Boreman, Henry G. Davis.
Wisconsin—Timothy O. Howe, Matthew H. Carpenter.

HOUSE.

Alabama—Benjamin S. Turner, Charles W. Buckley, W. A. Handley, Charles Hays, Peter M. Dox, Joseph H. Sloss.
Arkansas—James M. Hanks, O. P. Snyder, Thomas Bales.
California—S. O. Houghton, A. A. Sargent, J. M. Coglian.
Connecticut—Joseph E. Hawley, S. W. Kellogg, H. H. Starkweather, Wm. H. Barnum.
Delaware—Benjamin T. Bligg.
Florida—Josiah T. Walls.
Georgia—A. T. McIntyre, Richard H. Whitley, John S. Bigby, Erasmus W. Beck, D. M. DuBose, William T. Price, Pierce M. B. Young.
Illinois—Charles B. Farwell, John F. Farnsworth, Horatio C. Burchard, John B. Hawley, Bradford N. Stevens, Henry Snapp, Jesse H. Moore, James C. Robinson, Thompson W. McNeely, Edward Y. Rice, Samuel S. Marshall, John B. Hay, John M. Creba. At large, John S. Beveridge.
Indiana—William E. Niblack, Michael C. Kerr, William S. Holman, Joseph M. Wilson, John Coburn, Daniel W. Voorhees, Mahlon D. Manson, James N. Tyner, John P. C. Shanks, William Williams, Jasper Packard.
Iowa—George W. McCrary, A. B. Cotton, W. G. Donnan, Melham M. Walden, Frank W. Palmer, Jackson Orr.
Kansas—D. P. Lowe.
Kentucky—Edward Crossland, Henry D. McHenry, Joseph H. Lewis, William B. Read, Boyd Winchester, William E. Arthur, James B. Beck, George M. Adams, John M. Rice.
Louisiana—J. Hale Sypher, Lionel A. Sheldon, C. B. Darrell, Aleck Boorman, Frank Morey.
Maine—John Lynch, William P. Frye, James G. Blaine, John A. Peters, Eugene Hale.
Maryland—Samuel Hamilton, Stevenson Archer, Thomas Ewans, John Ritchie, William M. Merrick.

† Appointed by the Governor.

Massachusetts—James Buffinton, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, Constantine C. Esty, George F. Hoar, Alvah Crocker, Henry L. Daves.

Michigan—Henry Waldron, William L. Stoughton, Austin Blair, Omar D. Conger, Jabez G. Sutherland, W. D. Foster.

Minnesota—Mark H. Dunnell, John T. Averill.

Mississippi—George E. Harris, J. L. Morphis, Henry W. Barry, George C. McKee, Le Grand W. Perce.

Missouri—Erastus Wells, G. A. Finkenburg, J. B. McCormick, H. E. Havens, Samuel S. Burdett, A. Comingo, Isaac C. Parker, James G. Blair, Andrew King.

Nebraska—John Taffe.

Nevada—C. W. Kendall.

New Hampshire—Ellery A. Hibbard, Samuel N. Bell, Hosea N. Parker.

New Jersey—John W. Hazelton, Samuel C. Forker, John T. Bird, John Hill, George A. Halsey.

New York—Dwight Townsend, Thomas Kinsella, Henry W. Slocom, Robert B. Roosevelt, William R. Roberts, Samuel S. Cox, Smith Ely, Jr., James Brooks, Fernando Wood, Clarkson N. Potter, Charles St. John, John H. Ketcham, Joseph H. Tuthill, Eli Perry, Joseph M. Warren, John Rogers, William A. Wheeler, John M. Carroll, Eliza H. Prindle, Clinton L. Merriam, Ellis H. Roberts, William E. Lansing, R. Holland Duell, John E. Seely, William H. Lamport, Milo Goodrich, Horace B. Smith, Freeman Clarke, Seth Wakeman, William Williams, Walter L. Seesions.

North Carolina—Clinton L. Cobb, Charles R. Thomas, Alfred M. Waddell, Sion H. Rogers, James M. Leach, Francis E. Shober, J. C. Harper.

Ohio—Ozro J. Dodds, Job E. Stevenson, Lewis D. Campbell, J. F. McKenney, Charles L. Lamson, John A. Smith, Samuel Shellabarger, John Beatty, Charles Foster, Erasmus D. Peck, John T. Wilson, Philadelphia Van Trump, George W. Morgan, James Monroe, William P. Sprague, John A. Blingham, Jacob A. Ambler, William H. Upson, James A. Garfield.

Oregon—Joseph H. Slater.

Pennsylvania—Samuel J. Randall, J. V. Creely, Leonard Myers, William D. Kelley, A. C. Harmer, E. L. Acker, Washington Townsend, J. Lawrence Getz, Oliver J. Dickey, John W. Killinger, John B. Storm, L. D. Shoemaker, J. D. Strawbridge, John B. Packer, Richard J. Haldeman, B. F. Meyers, R. Milton Spear, Henry Sherwood, Glenn W. Scofield, Samuel Griffith, Henry D. Foster, James S. Negley, Ebenezer McJunkin, William McClelland.

Rhode Island—Benjamin T. Farnes, James M. Pendleton, Robert B. Elliott, Alexander S. Wallace.

Tennessee—Roderick E. Butler, Horace Maynard, A. E. Garrett, John M. Bright, E. J. Golladay, W. C. Whitthorne, Robert P. Caldwell, W. W. Vaughan.

Texas—Wm. S. Herndon, John C. Conner, D. C. Giddings, John Hancock.

Vermont—Charles W. Willard, Luke P. Poland, Worthington C. Smith.

Virginia—John Critcher, James H. Platt, Jr., Charles H. Porter, W. H. H. Stowell, R. T. W. Duke, John T. Harris, Elliott M. Braxton, William Terry.

West Virginia—John J. Davis, Frank Hereford, James C. McGrew.

Wisconsin—Alexander Mitchell, Gerry W. Hazelton, J. Allen Barber, Charles A. Eldredge, Philletus Sawyer, Jeremiah M. Rusk.

DELEGATES.

Arizona—Richard C. McCormick.

Colorado—Jerome B. Chaffee.

Dakota—Moses K. Armstrong.

District of Columbia—N. T. Chipman.

Idaho—Samuel A. Merritt.

Montana—William H. Craggett.

New Mexico—José M. Gallegas.

Utah—William H. Hooper.

Washington—Solucius Garfield.

Wyoming—William T. Jones.

The bill was read and ordered to be printed.

In the House, on the same day, Mr. Blaine, of Maine, said: "Mr. Speaker, I rise to a question of the highest privilege, to one that concerns the integrity of members of this House and the honor of the House itself. It is quite generally known to the members of this House that during the recent presidential campaign there was a wide-spread accusation of bribery of members; that members of this House were bribed to perform certain legislative acts for the benefit of the Union Pacific Railroad Company by presents of stock in a corporation known as the 'Credit Mobilier.' Without obtruding myself as one of eminent station, I may say that the charge struck in high places. It included the Vice-President of the United States, the Vice-President-elect of the United States; it included three Senators of the United States, two of them ex-Senators from Tennessee and Delaware, and a present Senator from New Hampshire; it included the Secretary of the Treasury of the United States; it included honorable and prominent members of this House—my friend the chairman of the Ways and Means (Mr. Dawes); my friend the chairman of the Appropriations Committee (Mr. Garfield); the gentleman from Pennsylvania (Mr. Kelley), the chairman of the Civil Service Committee; the gentleman from Ohio (Mr. Bingham), the chairman of the Judiciary Committee; the gentleman from Pennsylvania (Mr. Scofield), the chairman of the Naval Committee; on the other side of the House, the prominent and distinguished member of the Ways and Means Committee from New York (Mr. Brooks), and a member from Pennsylvania (Mr. Boyer) not now in this House; and besides these, a gentleman from Massachusetts (Mr. Eliot) no longer among the living, but sleeping in what was considered an honored grave. These accusations are that the several persons received bribes from the hands of a Representative from Massachusetts (Mr. Ames). A charge of bribery of members is the gravest that can be made in a legislative body. It seems to me, sir, that this charge demands prompt, thorough, and impartial investigation, and I have taken the floor for the purpose of moving that investigation. Unwilling, of course, to appoint any committee of investigation to examine into a charge in which I was myself included, I have called you, sir, to the chair, an honored member of the House, honored here and honored in the country; and when on Saturday last I called upon you and advised you of this service, I placed upon you no other restriction in the appointment of a committee than that it should not contain a majority of my political friends.—I therefore send to the Clerk's desk, for adoption by the House, a preamble and accompanying resolution."

The Clerk read as follows:

Whereas, Accusations have been made in the pub-

lic press, founded on the alleged letters of Oakes Ames, a Representative from Massachusetts, and upon the alleged affidavit of Henry S. McCombs, a citizen of Wilmington, in the State of Delaware, to the effect that members of this House were bribed by Oakes Ames to perform certain legislative acts for the benefit of the Union Pacific Railway Company by presents of stock in the Credit Mobilier of America, or by presents of a valuable character derived therefrom: therefore—

Resolved, That a special committee of five members be appointed by the Speaker *pro tempore*, whose duty it shall be to investigate and ascertain whether any member of this House was bribed by Oakes Ames in any matter touching his legislative duty.

Resolved further, That the committee have the right to employ a stenographer, and that they be empowered to send for persons and papers.

The question was upon the adoption of the preamble and resolutions.

Mr. Butler, of Massachusetts: "I would suggest to the mover of the resolution to modify it, or I will move to amend it, so that it will read 'bribed by Oakes Ames or any other person.'"

Mr. Blaine: "I will modify the resolution so that it will read, 'bribed by Oakes Ames, or any other person or corporation.'"

The Speaker *pro tempore*, Mr. Cox: "The question is upon the adoption of the preamble and resolutions, which have been read."

Mr. Randall, of Pennsylvania, said: "I hope that this resolution will be adopted. I had hoped that it would be adopted with unanimity. I trust that, in the language of the Speaker, this investigation will be full, thorough, and searching. Less than that will not meet the expectation or the requirements of the people of the country. There has been a dark cloud of scandal raised over this House. It is due to such members as have not in any manner whatever been involved in any such proceedings that their characters should be lifted above suspicion; and, further, that the heavy thunder-bolt of public opinion should fall upon those few, if any, who are implicated in voting for bills in which they were directly or indirectly interested."

Mr. Holman, of Indiana, said: "It seems to me very proper that this resolution should be adopted and this committee raised. It seems to me that the House, without dissent, with that unanimity which will arrest the attention of the country, should adopt this resolution. I think the House owes this to itself, to the individual members composing this body, and to the country. I trust this resolution will be adopted without a dissenting voice."

The preamble and resolutions, as modified, were agreed to.

The Speaker *pro tempore*: "The present occupant of the chair having been advised beforehand that he would be called upon to act on this matter, has had time enough to select a committee, which he submits as the result of his best judgment, having in view the securing of a fair and impartial investigation, as follows: Luke P. Poland, of Vermont,

Nathaniel P. Banks, of Massachusetts, William M. Merrick, of Maryland, William E. Niblack, of Indiana, and George W. McCrary, of Iowa."

In the House, on the same day, Mr. Dawes, of Massachusetts, offered the following resolution, which was adopted unanimously:

Resolved by the Senate and House of Representatives, (the Senate concurring), That in view of the recent death of Horace Greeley, for whom at the late election more than three million votes were cast for President, a record be made in the Journals of Congress of appreciation for the eminent services and personal purity and worth of the deceased, and of the sad impression created by his death following keen family bereavement.

In the House, on December 9th, the bill supplemental to an act entitled "An act to protect all citizens of the United States in their civil rights, and to furnish the means for their vindication," passed April 9, 1866, was on its passage to be engrossed, pending which the gentleman from Wisconsin (Mr. Eldredge) moved that it be laid upon the table.

The bill, which was read, in the first section provided that no citizen of the United States should, by reason of race, color, or previous condition of servitude, be excepted or excluded from the full and equal enjoyment of any accommodation, advantage, facility, or privilege furnished by innkeepers; by common carriers, whether on land or water; by licensed owners, managers, or lessees of theatres or other places of public amusement; by trustees, commissioners, superintendents, teachers, and other officers of common schools and other public institutions of learning, the same being supported by moneys derived from general taxation, or authorized by law; by trustees and officers of cemetery associations and benevolent institutions incorporated by national or State authority. But private schools, cemeteries, and institutions of learning established exclusively for white or colored persons, and maintained respectively by voluntary contributions, should remain according to the terms of the original establishment.

The second section provided that any person violating any of the provisions of the foregoing section, or aiding in their violation, or inciting thereto, should, for every such offense, forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered in an action on the case, with full costs; and should also, for every such offense, be deemed guilty of a misdemeanor, and, upon conviction thereof, should be fined not less than \$500 nor more than \$1,000, or should be imprisoned not less than thirty days nor more than one year; provided that the party aggrieved should not recover more than one penalty; and, when the offense was a refusal of burial, the penalty might be recovered by the heirs at law of the person whose body has been refused burial.

The third section provided that the same jurisdiction and powers be conferred and the

same duties enjoined upon the courts and officers of the United States in the execution of the act as are conferred and enjoined upon such courts and officers in sections three, four, five, seven, and ten of an act entitled "An act to protect all persons in the United States in their civil rights, and to furnish the means of their vindication," passed April 9, 1866, and these sections are made a part of that act; and any of the aforesaid officers failing to institute and prosecute such proceedings herein required should, for every such offense, forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered by an action on the case, with full costs; and should, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not less than \$1,000 nor more than \$5,000.

The fourth section provided that no citizen, possessing all other qualifications which were or might be prescribed by law, should be disqualified for service as juror in any court, national or State, by reason of race, color, or previous condition of servitude; and any officer or other persons charged with any duty in the selection or summoning of jurors, who should exclude or fail to summon any citizen for the reason above named, should, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not less than \$1,000 nor more than \$5,000.

The fifth section provided that every discrimination against any citizen on account of color by the use of the word "white" in any law, statute, ordinance, or regulation, be hereby repealed and annulled.

The question was taken; and there were—yeas 74, nays 118, not voting 54; as follows:

YEAS—Messrs. Acker, Archer, Arthur, Erasmus W. Beck, James B. Beck, Bell, Biggs, Bird, James G. Blair, Boardman, Braxton, Bright, Carroll, Comingo, Cox, Crebs, Critcher, Crossland, Davis, Dodds, Dox, DuBose, Duke, Henry D. Foster, Giddings, Griffith, Hancock, Handley, Hanks, Harper, John T. Harris, Herford, Herndon, Hibbard, Holman, Kerr, King, Lamson, Manson, Marshall, McClelland, McCormick, McHenry, McKinney, Merrick, Benjamin F. Meyers, Mitchell, Morgan, Niblack, Potter, Price, Read, John M. Rice, Ritchie, Robinson, John Rogers, Sherwood, Shober, Sloss, Spear, Stevens, Storm, Swann, Terry, Tuthill, Van Trump, Vaughan, Waddell, Warren, Wells, Whitthorne, Winchester, Wood, and Young—74.

NAYS—Messrs. Ambler, Ames, Banks, Barber, Barry, Beatty, Bigby, Bingham, Boles, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, Clarke, Cobb, Coburn, Coglian, Conger, Cotton, Crocker, Dawes, Dickey, Donnan, Duell, Dunnell, Eames, Esty, Finkelnburg, Charles Foster, Wilder D. Foster, Frye, Garfield, Goodrich, Hale, Harmer, George E. Harris, Havens, John B. Hawley, Joseph R. Hawley, Hay, Hill, Hoar, Hooper, Houghton, Kelley, Kellogg, Ketcham, Lamport, Lansing, Lowe, Lynch, Maynard, McCrary, McGrew, McKunkin, Merriam, Monroe, Moore, Morey, Morriss, Leonard Meyers, Negley, Orr, Packard, Parker, Palmer, Hosea W. Parker, Isaac C. Parker, Peck, Pendleton, Perce, Peters, Platt, Poland, Porter, Ellis H. Roberts, William R. Roberts, Rusk, Sargent, Sawyer, Seefeld, Sessions, Shanks, Sheldon, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Snapp, Sprague, Starkweather, Ste-

verson, Stoughton, Stowell, Sypher, Taffe, Thomas, Washington Townsend, Turner, Twitchell, Tyner, Upson, Wadman, Walden, Waldron, Wallace, Walls, Wheeler, Whiteley, Willard, Williams of Indiana, and Jeremiah M. Wilson—118.

NOT VOTING—Messrs. Adams, Averill, Barnum, Beveridge, Austin Blair, Brooks, Buckley, Caldwell, Campbell, Connor, Creely, Darrall, De Large, Eldredge, Elliott, Ely, Farnsworth, Farwell, Forker, Garrett, Getz, Golladay, Haldeman, Halsey, Hambleton, Hays, Gerry W. Hazelton, John W. Hazelton, Kendall, Killinger, Kinsella, Leach, Lewis, McIntyre, McKee, McNeely, Perry, Prindle, Rainey, Randall, Edward Y. Rice, Sion H. Rogers, Roosevelt, Seeley, Slater, Slocum, Worthington C. Smith, Snyder, St. John, Sutherland, Dwight Townsend, Voorhees, William of New York, and John T. Wilson—54.

So the House refused to lay the bill on the table.

Mr. Scofield: "I ask the unanimous consent of the House to allow this bill to be referred to the Committee on the Revision of the Laws."

The Speaker: "That there may be no misunderstanding, the gentleman from Pennsylvania will state, in its modified form, the request he makes of the House."

Mr. Perce called for a division.

The House divided; and there were—yeas 120, nays not counted.

So, two-thirds having voted in the affirmative, the rules were suspended, and the bill was referred to the Committee on Revision of the Laws of the United States.

On the same day, Mr. Acker, of Pennsylvania, moved that the rules be suspended to introduce and pass a bill to remove all political disabilities, and to grant general amnesty.

The bill, which was read, provides (two-thirds of each House concurring) that from and after its passage all disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States should be removed, and that a general amnesty should be granted to all persons for political offences incurred in the late war; provided all such persons shall support the Constitution of the United States.

The question upon suspending the rules and passing the bill was then taken, and resulted as follows:

YEAS—Messrs. Acker, Adams, Archer, Arthur, Banks, Barry, Erasmus W. Beck, James B. Beck, Bell, Biggs, Bird, Austin Blair, James G. Blair, Bowman, Boles, Braxton, Bright, Burdett, Coghall, Conango, Cox, Creels, Critcher, Crossland, Davis, Dix, DuBose, Duke, Farnsworth, Farwell, Fickelburg, Henry D. Foster, Garfield, Giddings, G. Stick, Griffith, Haldeman, Hancock, Hamley, Hanks, Harper, George E. Harris, John T. Harris, Hay, Hersford, Herndon, Hubbard, Holman, Kellogg, Kerr, King, Lamson, Manson, Marshall, McClelland, McHenry, McKee, McKimsey, Merrick, Benjamin F. Meyer, Mitchell, Moore, Morey, Morgan, Morphis, Nichols, Boosa W. Parker, Perce, Perry, Peters, Platt, Potter, Price, Read, Ritchie, Robinson, John Rogers, Sheldon, Sherwood, Sticher, Spear, Stevens, Stevenson, Storm, Stowell, Swann, Sypher, Terry, Thomas, Turbill, Van Trump, Vaughan, Waddell, Woodman, Warren, Walls, Whiteley, Whitthorne, Winchester, Wood, and Young—101.

NAYS—Messrs. Ambler, Ames, Barber, Beatty, Beveridge, Bingham, Buffinton, Burchard, Benjamin F. Butler, Roderick R. Butler, Clarke, Cobb, Coburn, Conger, Cotton, Crocker, Dawes, Dickey, Donnan, Duell, Dunnell, Eames, Esty, Charles Foster, Wilder D. Foster, Frye, Hale, Harmer, Havens, John B. Hawley, Joseph R. Hawley, Gerry W. Hazelton, Hill, Hoar, Houghton, Kelley, Ketcham, Lampert, Lansing, Lowe, Lynch, Maynard, McCrary, McGrew, McJunkin, Merriam, Monroe, Leonard Myers, Negley, Orr, Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Poland, Porter, Ellis H. Roberts, Rusk, Sargent, Sawyer, Scofield, Sessions, Shanks, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Snapp, Sprague, Starkweather, Stoughton, Washington Townsend, Turner, Twitchell, Tyner, Upson, Walden, Waldron, Wallace, Walls, Wheeler, Willard, Williams of Indiana, and Jeremiah M. Wilson—86.

NOT VOTING—Messrs. Averill, Barnum, Bigby, Brooks, Buckley, Caldwell, Campbell, Carroll, Connor, Creely, Darrall, De Large, Dodds, Eldredge, Elliott, Ely, Forker, Garrett, Getz, Golladay, Halsey, Hambleton, Hays, John W. Hazelton, Hooper, Kendall, Killinger, Kinsella, Leach, Lewis, McCormick, McIntyre, McNeely, Prindle, Rainey, Randall, Edward Y. Rice, John M. Rice, William R. Roberts, Sion H. Rogers, Roosevelt, Seeley, Slater, Slocum, Sloss, Worthington C. Smith, Snyder, St. John, Sutherland, Taffe, Dwight Townsend, Voorhees, Williams of New York, and John T. Wilson—54.

So (two-thirds not voting in favor thereof) the rules were not suspended.

In the House, on December 13th, the bill re-imburse the College of William and Mary in Virginia for property destroyed during the war of the rebellion, was reported with an amendment.

The amendment was read, as follows:

Provided, That no part of said sum of \$65,000 shall be paid or delivered, or a warrant or order issued therefor, under the provisions of or for the purposes named in this act until, in a regular meeting, the stockholders or equivalent corporate authority of said College of William and Mary, after proper consideration, have adopted and caused to be entered on the records of said corporation a resolution declaring such college to be open, and that it shall in all time thereafter remain open, for the admission on equal terms, and with equal privileges, of all persons, without respect to race, color, or previous condition of servitude; and that a copy of said records, duly certified by the proper authorities of said corporation, shall be first filed with the Secretary of the Treasury of the United States, and entered upon the records of his office.

The question was taken on the adoption of the amendment, and it was decided in the affirmative, as follows:

YEAS—Messrs. Ambler, Barber, Barry, Beatty, Beveridge, Bingham, Boles, Buffinton, Burchard, Benjamin F. Butler, Coburn, Conger, Cotton, Crocker, Dawes, Dickey, Donnan, Duell, Dunnell, Eames, Esty, Finkelnburg, Charles Foster, Wilder D. Foster, Frye, Garfield, Hale, George E. Harris, John B. Hawley, Joseph R. Hawley, Gerry W. Hazelton, John W. Hazelton, Hill, Hoar, Hooper, Houghton, Kelley, Kellogg, Ketcham, Lampert, Lowe, Lynch, Maynard, McCrary, McGrew, McJunkin, Merriam, Monroe, Moore, Orr, Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Platt, Poland, Porter, Ellis H. Roberts, Rusk, Sawyer, Scofield, Sessions, Shanks, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Snapp, Sprague, Starkweather, Stevenson, Stoughton, Stowell, St. John, Taffe,

Washington Townsend, Turner, Twichell, Tyner, Upson, Wakeman, Walden, Waldron, Wallace, Wheeler, Willard, Williams of Indiana, and Jeremiah M. Wilson—90.

NAVS.—Messrs. Adams, Aroher, Arthur, Barnum, Erasmus W. Beck, James B. Beck, Biggs, James G. Blair, Boorman, Braxton, Bright, Roderick R. Butler, Carroll, Cobb, Comingo, Conner, Critcher, Crossland, Davis, Dox, Duke, Eldredge, Henry D. Foster, Getz, Giddings, Griffith, Hancock, Handley, Hanks, Harper, Hereford, Herndon, Hibbard, Holman, Kerr, King, Lamson, Leach, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McIntyre, McKinney, Merrick, Morgan, Niblack, Perce, Price, Randall, Read, John M. Rice, William B. Roberts, Robinson, John Rogers, Sion H. Rogers, Sargent, Sherwood, Shober, Slater, Sloss, Speer, Storm, Swann, Terry, Thomas, Van Trump, Waddell, Warren, Wells, Whiteley, Whitthorne, Winchester, and Wood—76.

NOT VOTING.—Messrs. Acker, Ames, Averill, Banks, Bell, Bigby, Bird, Austin Blair, Brooks, Buckley, Burdett, Caldwell, Caupbell, Clarke, Coghlan, Cox, Creba, Creely, Darrall, De Large, Dodds, DuBose, Elliott, Ely, Farnsworth, Farwell, Forker, Garrett, Golladay, Goodrich, Haldeman, Halsey, Hambleton, Harmer, John T. Harris, Havens, Hays, Hays, Kendall, Killinger, Kinsella, Lansing, McKee, McNeely, Benjamin F. Meyers, Mitchell, Morey, Morphis, Leonard Meyers, Nexley, Hosea W. Parker, Perry, Peters, Potter, Prindle, Rainey, Edward Y. Rice, Ritchie, Roosevelt, Seeley, Sheldon, Slocum, Worthington C. Smith, Snyder, Stevens, Sutherland, Sypher, Dwight Townsend, Tutill, Vaughan, Voorhees, Walls, Williams of New York, John T. Wilson, and Young—75.

So the amendment was adopted.

The question recurred on ordering the bill as amended to be engrossed and read a third time.

The question was taken; and it was decided in the negative, as follows:

YEAS.—Messrs. Banks, Barber, Barry, Bingham, Boles, Burdett, Roderick R. Butler, Cobb, Crocker, Eaty, Farwell, Wilder D. Foster, Griffith, Harmer, George E. Harris, Hill, Hoar, Kelley, Maynard, McGrew, Morey, Morphis, Leonard Myers, Perce, Platt, Porter, Sargent, Sheldon, Snapp, Stevenson, Stowell, St. John, Sypher, Turner, Twichell, and Wallace—36.

NAVS.—Messrs. Adams, Ambler, Aroher, Arthur, Barnum, Beatty, Erasmus W. Beck, James B. Beck, Bell, Beveridge, Biggs, Austin Blair, James G. Blair, Braxton, Bright, Buffinton, Burchard, Carroll, Coburn, Comingo, Conger, Conner, Cotton, Cox, Crossland, Davis, Dawes, Diekey, Donnan, Dox, Duell, Duke, Dunnell, Eames, Eldredge, Farnsworth, Finkelnburg, Charles Foster, Garfield, Getz, Giddings, Hale, Handley, Hanks, Harper, Havens, John B. Hawley, Joseph R. Hawley, Hay, Gerry W. Hazelton, John W. Hazelton, Hereford, Herndon, Hibbard, Holman, Houghton, Kerr, Ketcham, King, Lampart, Lansing, Leach, Lowe, Lynch, Manson, Marshall, McClelland, McCormick, McCrary, McHenry, McIntyre, McJunkin, McKinney, Merriam, Merrick, Benjamin F. Meyers, Monroe, Moore, Morgan, Negley, Niblack, Orr, Packard, Packer, Hosea W. Parker, Isaac C. Parker, Peck, Perry, Poland, Price, Randall, Read, John M. Rice, Ellis H. Roberts, Robinson, Sawyer, Seefield, Shellabarger, Sherwood, Shoemaker, Slater, Sloss, H. Boardman Smith, Speer, Sprague, Starkweather, Storm, Stoughton, Swann, Taffe, Terry, Tyner, Upson, Van Trump, Waddell, Wakeman, Walden, Waldron, Warren, Wells, Wheeler, Whiteley, Whitthorne, Willard, Jeremiah M. Wilson, Winchester, and Wood—127.

NOT VOTING.—Messrs. Acker, Ames, Averill, Bigby, Bird, Boorman, Brooks, Buckley, Benjamin F. Butler, Caldwell, Campbell, Clarke, Coghlan, Creba,

Creely, Critcher, Darrall, De Large, Dodds, DuBose, Elliott, Ely, Forker, Henry D. Foster, Frye, Garrett, Golladay, Goodrich, Haldeman, Halsey, Hambleton, Hancock, John T. Harris, Hays, Hooper, Kellogg, Kendall, Killinger, Kinsella, Lamson, Lewis, McKee, McNeely, Mitchell, Palmer, Pendleton, Peters, Potter, Prindle, Rainey, Edward Y. Rice, Ritchie, William R. Roberts, John Rogers, Sion H. Rogers, Roosevelt, Rusk, Seeley, Sessions, Shanks, Shober, Slocum, John A. Smith, Worthington C. Smith, Snyder, Stevens, Sutherland, Thomas, Dwight Townsend, Washington Townsend, Tutill, Vaughan, Voorhees, Walls, Williams of Indiana, Williams of New York, John T. Wilson, and Young—78.

So the bill was rejected.

In the Senate, on December 18th, a bill was introduced and considered to allow a drawback on certain building materials imported at Boston.

Mr. Thurman, of Ohio, said: "Mr. President, this bill is one on which there is some danger of the heart running away with the head, and that may be said of all such bills. There is certainly a very grave constitutional question involved in this bill. It is one that has engaged the consideration of Congress, I admit, repeatedly, in principle. If my memory is not at fault, the first bill passed by Congress that bears any analogy to this was a bill for the relief of people in Venezuela, a foreign country. I think Congress made an appropriation for the relief of sufferers by fire or by earthquake—I do not remember now which it was—in Venezuela. The subject was very much discussed in 1846 or 1847 on a bill for the relief of the sufferers from famine in Ireland, not a bill proposing a direct appropriation by Congress, but a proposition to send a national vessel to bear to that suffering country the individual contributions of the people of America. Then came the Portland fire, then the Chicago fire, and now comes this great calamity at Boston. I am quite sure that every Senator is disposed to exercise any constitutional power we possess to afford relief to the people of Boston. But there is a fundamental rule in regard to the Constitution, and that is that where a power is doubtful the Legislature ought to abstain from attempting the exercise of it; but when the Legislature has passed a law, then the judiciary will not hold that to be unconstitutional unless it is manifestly so. The rule of action, therefore, in the Legislature and in the courts is to some extent different. The Legislature ought not to pass a law unless its constitutionality be clear; the judiciary ought not to set aside a law unless its unconstitutionality be clear. Now, for one, I wish more light than I have on this subject. Other Senators may have considered this question so fully that their minds are made up on the constitutional point. I confess that mine is not; and I should be very glad, therefore, before another precedent of this kind is set, that this subject should receive careful judicial consideration. Fires occur, calamities occur every year in the country, and as the settle-

ments extend they will be more numerous. It will be very difficult to draw any line of distinction between a calamity by fire or by a tornado or by an earthquake or by a great flood. I do not see how any distinction can be drawn; and if Congress is to intervene with relief in every case in which any community, however large or however small, in the great extent of territory belonging to the United States, shall be a sufferer, I do not know where will be the end of our benevolence, the example being once fully set.

"Now, it does seem to me that, before any more precedents are built up on this subject, this matter should receive a careful legal consideration; and I hope, therefore, that the Senators who favor this bill will consent to the motion I am about to submit, and that is that the bill be referred to the Committee on the Judiciary for report."

Mr. Trumbull, of Illinois, said: "Mr. President, having voted for the bill for the relief of Chicago, I shall vote for this bill. This constitutional argument, as it is called, was started then, first under one clause of the Constitution and then under another. Congress decided that it had authority to pass the bill, and of course that the Constitution was not violated in its passage. And although the Senator from Wisconsin (Mr. Carpenter) speaks with very great confidence that this is a palpable and clear violation of the Constitution, and the Senator from Ohio (Mr. Thurman) seems to have great doubts about it, for my own part I cannot see what clause of the Constitution is to be violated by the passage of the bill.

"But, then, what is the bill? The bill provides that plate-glass, if you please, or other articles going into the construction of certain buildings in a certain locality, shall have a drawback of the amount of duty that is paid. Is that a new provision in this country? Why, sir, from the beginning we have had a drawback upon salt, and the Constitution is not violated, because when salt is imported into this country the same duty is collected upon it whether at New Orleans or at Boston; but in case that salt is used in the curing of fish, then there is a remission of the amount or a drawback of the amount that has been paid."

Mr. Carpenter, of Wisconsin, said: "I do not claim that this bill violates the provision of the Constitution to which the Senator last refers about ports; but here is a provision that 'all duties, imposts, and excises shall be uniform throughout the United States.' It is well known that the object of that provision was to put all the States on the same footing. It was seen at once that without such a provision the Western States would have to pay tribute to New York and other seaboard States. The latter might levy such excessive rates of duties as to destroy the commerce of the West. It was inserted, therefore, to put all States on the same footing. It is not that it shall bear uniformly upon all the people

of the United States, but it shall be uniform throughout the United States; that is, territorially.

"Now, I desire to put this question: suppose a law should be passed by Congress that every man who was engaged in manufacturing in the State of Massachusetts for the next five years should have a drawback upon all articles which he imported, and which should be manufactured in the State of Massachusetts, what would be the effect of such a provision? To harry all the manufacturers of the Union into Massachusetts. That is one of the very things which this section of the Constitution was designed to prevent. Uniformity throughout the United States would prevent one State building itself up by legislation which applied only to that State. But if the Senator's theory is a sound one, if such a bill is constitutional because all the people of the United States may go to Boston and have the benefit of it, then Congress might to-morrow establish a monopoly in the manufacturing business of any article in any State by providing that every man who should import a raw material to be manufactured in that State should have a drawback. That is the very thing, or at least one of the important things, which this provision of the Constitution was intended to prevent."

Mr. Morton, of Indiana, said: "Mr. President, the questions presented are not so clear as the Senator from Illinois would intimate. How a distinction can be made between the case where a law imposing a duty would except from its operation such articles as are to be used, for example, in the city of Boston, or, failing to make that exception, should contain a provision that on such articles as are used in the city of Boston a drawback shall be allowed, I cannot very well understand. The Senator from Illinois says there is a difference; but is it not a difference in name instead of in principle? To except from the operation of the tariff law the goods consumed in Boston, or to give a drawback for the goods consumed in Boston, it seems to me is pretty much the same thing. If the object of the Constitution is to put the people of the United States on the same footing and treat all alike, is not the purpose violated as effectually whether you except the people of Boston from the operation of the law in the first place, or give them a drawback for all they have paid?"

Mr. Bayard, of Delaware said: "Mr. President, the present bill proposes, under the method of a drawback of duty, to enable a special class, and a very limited class of land-owners in one of the cities of one of the States of this Union, to import materials to be used in the construction and improvement of their property at a less rate than other citizens even in that city may do, and certainly less than others can do in other parts of the country. It confines the importation of these

materials to a single port of entry, although it is proposed now by one of the friends of the bill to amend it by striking out that objectionable clause, for it seems, after all the argument we have heard here this morning, that it is now confessed that this is a clear violation of that clause of the Constitution which forbids any preference being given by any regulation of commerce or revenue to the ports of one State over those of another. Therefore, sir, as by the amendment proposed by one of the friends, perhaps the chief friend of the bill, that discrimination is to be removed, we are now left to consider the proposition of the power of Congress to allow certain dutiable commodities to be imported practically free of duty; because, as was stated by the honorable Senator from Indiana, the payment of duty which is intended to be refunded is a mere formality, and an expensive one at that. We are now to consider the proposition of allowing certain dutiable commodities to be imported in a manner that is equivalent to being free of duty, in any part of the United States, provided they are used in the improvement of certain private property in the State of Massachusetts. How it can be said that this is not a destruction of the uniformity of the duties throughout the country, surprises me."

Mr. Sumner, of Massachusetts, said: "Mr. President, I was about to present this point: that when the Constitution was adopted, and ever since, duties have had associated with them notoriously a system of drawbacks. When duties were authorized it was with the idea that there might be drawbacks. The Constitution, without even reading between the lines, might be read in this way: 'But all duties, imposts, and excises, *with proper drawbacks*, shall be uniform throughout the United States.' The drawback does not in any respect interfere with the uniformity of the duties. The drawback is an incident to duties in every civilized country. The drawback has been recognized in our country from the beginning. It studs the pages of our statute-book; but who has ever insisted that authorizing a drawback in a specific case interferes with the uniformity of the duty?"

"The term 'drawback' has a well-known signification in commerce. I read from the best authority on the subject, McCulloch's 'Dictionary of Commerce and Commercial Navigation,' under the head of 'Drawback: 'A term used in commerce to signify the remitting or paying back of the duties previously paid on a commodity on its being exported.' That is the primitive or first signification of the term: a remitting or paying back of duties previously paid on a commodity on its being exported; the theory being that, as the article is exported, it ought not to contribute to the Treasury of the country. Every one feels how reasonable is that rule. No one, I suppose, would interfere with

it. Now, by a very slight expansion, the theory of the drawback has been applied to cases where property has been destroyed so that it has not been used in the country. It was applied in the case of the fire in New York; also, as I understand, in the case of fire or destruction of property in San Francisco; the theory in each case being that the owners of the destroyed property ought not to pay a duty where they have not been able to use the property.

"The application of this rule to the present case is ample; a large portion of the commercial part of Boston has been destroyed by fire. Here were spacious warehouses, Venetian in architecture, with plate glass, with other materials of building imported and which had already paid large duties to the national Treasury. All these are destroyed; they have ceased to exist; and now it is proposed that those who undertake to restore these structures, to put in place again these destroyed materials, shall not pay a duty on what they employ; in other words, the destroyed property is to find a substitute in new importations which shall pay no duty because this property has already paid duty once.

"The whole theory of that provision is that these importations are a substitute for those which have already paid duty, but which have been destroyed by fire. That is why it is called a drawback. It is a drawback in principle and in fact; and who will say that the recognition of such a drawback interferes with the uniformity of duties throughout the United States? Congress may, if it sees fit, apply the same rule hereafter in a similar case. Should, unhappily, another conflagration visit another metropolis, I trust Congress would not hesitate, nor should I listen to the suggestion which I heard several times that here is favoritism. Sir, I know no such thing as favoritism in the present case. There is nothing but justice. It is simply recognizing the duties already paid to the United States. It says to the losing proprietors; 'You shall not pay duties on these articles twice; you have paid once. By the act of God these articles have passed out of existence; renew them and we shall not require a second duty; the duty already paid suffices.'

"Such I take it is the principle of the present bill. It seems to me entirely reasonable; it seems to me a principle on which we can stand; and hereafter, if any case arises of sufficient importance to justify the intervention of Congress, it is a principle on which I think Congress ought to act."

Mr. Casserly, of California, said: "I think it very desirable that, in the obvious conflict of views which exists in this body among some of the ablest and most experienced Senators, we should have the aid of the Judiciary Committee in arriving at a proper conclusion upon this bill. For myself, I ought to

say in candor that I see no way of avoiding the constitutional objection which has been urged here, first, I believe, by the Senator from Wisconsin (Mr. Carpenter), and afterward sustained by other Senators on each side of the Chamber.

"The Senator from Massachusetts (Mr. Sumner) argued with great earnestness and much force of illustration, that the bill is not a bill in conflict with the provisions of the Constitution; first, that all duties shall be uniform; and next, that Congress shall give no preference by any regulation of revenue or commerce to the ports of one State over the ports of any other. I cannot agree with him. What does this bill do? It provides that all materials of a certain description imported into the port of Boston for a certain period shall be entitled to a drawback. What is the result? That all that import business of the class and for the period specified in this bill will seek the port of Boston rather than any other port. In other words, all such business will give a preference to that port as against any other port. Why? Because Congress has given that port a preference by allowing a refund of duties on all such imports brought there. In the next place, how can you say that you make 'duties uniform,' when the same imports which pay duties at all other ports, without any drawback, are entitled to a drawback at Boston? When you do this, is it not true, as it was so well put by the Senator from Indiana, (Mr. Morton), that you undertake to exempt a particular port as to a particular class of articles from the operations of your general tariff law. That is just what it is; no more, no less. Who will say that such a thing can be done?

"When you refund all duties paid on a certain class of imports at the port of Boston, you do in effect make Boston as to such imports a free port. If you can do that as to one class of imports, you can as to all. I sum up the whole in one word. Can you make a free port in one State of the Union to the exclusion of all ports in the other States? Unless Congress can do that under the Constitution, Congress cannot pass this bill."

The President *pro tempore*: "The question is on the motion to refer the pending bill to the Committee on the Judiciary."

The result was announced, as follows:

YEAS—Messrs. Alcorn, Ames, Bayard, Buckingham, Cantriss, Carpenter, Casserly, Chandler, Clayton, Cole, Conkling, Cooper, Corbett, Davis, Ferry of Connecticut, Fredlinghausen, Gilbert, Goldthwaite, Hamilton of Maryland, Harlan, Hitchcock, Howe, Johnston, Kelly, Machen, Morrill of Vermont, Morton, Norwood, Osborn, Pratt, Sanlbury, Stevenson, Tipton, West, and Windom—35.

NAVS—Messrs. Anthony, Brownlow, Cragin, Edmunds, Fenton, Ferry of Michigan, Flanagan, Hamlin, Logan, Patterson, Pomeroy, Sumner, Trumbull, Vickers, and Wilson—15.

ABSENT—Messrs. Blair, Boreman, Caldwell, Hamlin of Texas, Hall, Kellogg, Lewis, Morrill of Maine, Nye, Pool, Ramey, Ransom, Rice, Robertson, Saw-

yer, Schurz, Scott, Sherman, Spencer, Sprague, Stewart, Stockton, Thurman, and Wright—24.

So the motion to refer was agreed to.

In the Senate, on December 16th, Mr. Windom, of Minnesota, offered the following resolution:

Whereas, The productions of our country have increased much more rapidly than the means of transportation, and the growth of population and products will in the near future demand additional facilities and cheaper ones to reach tide-water; and whereas in his recent message the President of the United States invites the attention of Congress to the fact that it will be called upon at its present session to consider "various enterprises for the more certain and cheaper transportation of the constantly increasing surplus of Western and Southern products to the Atlantic seaboard," and further says: "The subject is one that will force itself upon the legislative branch of the Government sooner or later; and I suggest, therefore, that immediate steps be taken to gain all available information to insure equitable and just legislation. * * * I would therefore suggest either a committee or a commission to be authorized to consider this whole question, and to report to Congress at some future day for its better guidance in legislating on this important subject;" therefore—

Resolved, That a committee of seven be appointed, to whom shall be referred that part of the President's message relating to the transportation routes to the seaboard.

Mr. Windom: "The object is simply to ascertain what remedy, if any, there is for the evil mentioned in the President's message, in order that the thinking minds of the country who are now discussing that subject may have a medium through which they may communicate their views to the Senate, and that some committee may have it in charge whose attention will be given to the subject. I do not desire to discuss the resolution. It is plain on its face, I think. There is no special scheme or route intended by it, but it is prompted simply by a desire, on the part of myself and those whom I have consulted, to investigate this question and ascertain whether something cannot be done to remove the evils under which the people are suffering, especially in the inland and Southern States. I ask the action of the Senate on the resolution."

Mr. Stevenson, of Kentucky, said: "If we are going to have a commission or a committee, on this subject, let us have all the questions involved in it considered. The question which lies at the root of the whole thing would be the constitutional power of this Government to make a canal or any water communication through the States, they not asking it, from the seaboard to the Ohio. A great many of us would desire it, deeming it important, and would concur in the policy of it if the constitutional power were vested in Congress."

Mr. Stewart, of Nevada, said: "I think the subject is of sufficient gravity to entitle it to the prominence that a separate committee will give it. It seems to me that the question of cheaper transportation between the interior and the seaboard is a question that must be

met. But, sir, the subject is crowding itself upon the attention of the country as to how this great object shall be accomplished, how cheaper transportation can be secured between the interior and the seaboard. Something must be done. There is no doubt about that. It is important to ascertain just how far Congress should go, just what the powers of Congress are in the matter, and then it is important to collect information as to what means it would be best to use.

"Now, I am one of those who think railroads are in their infancy; that, when railroads are perfected, canals will be disused between the West and the Atlantic. I believe the transportations will be altogether by iron eventually. I believe that railroads will reach a point where they can compete with water transportation. These, however, are questions that ought to be examined; and, if there was a committee which made this subject prominent, it would receive information all over the country from men who have investigated and are investigating it. There are a great many thinking minds in the country investigating this great question, and I think we should give it sufficient prominence by appointing a committee that would receive communications from those who had reflected on the subject, and in that way Congress, if it takes no action by way of legislation, may be of use in the way of disseminating information. I hope the resolution will pass."

Mr. Thurman, of Ohio, said: "Mr. President, I do not know that I have any objection to the raising of this committee, or to any disposition the Senate may see fit to make of that portion of the President's message that is embraced in the resolution; but, so far as the constitutional question is concerned, I must say that, if there is any question at all to be found in the Constitution upon which it is utterly impossible for any committee to shed more light than has already been shed upon it, it is precisely this question of the power of the General Government to construct works of internal improvement. If there is any question upon which the argument on both sides is completely exhausted, and on which no new light can be shed, it is precisely that question. Not only is it discussed in the speeches that have been made in Congress upon the subject, but in papers that have emanated from the most distinguished statesmen of the country, beginning with the celebrated report of Hamilton on manufactures in 1791, and coming down to the present time, so that there is not, to the student of the constitutional history of this country and of the Constitution itself, one single idea left to advance on the one side or the other. Not that people have agreed about the true interpretation of the Constitution; they have not, and they never will, and no report that you can have from a committee will make them agree upon it."

Mr. Casserly, of California, said: "I wish to

say, sir, that I shall vote for this resolution, and in doing so I do not consider that I commit myself to any view of the constitutional question which has just been mentioned by the Senator from Ohio (Mr. Thurman). The question of cheap, prompt transportation to tide-water of the persons and the products of the United States, and most especially of the products of the United States, is, of the many leading questions of the day, perhaps one of those most pressing for a solution. Whether the existing means of transportation as controlled by the railroads of the country under the present system of management, or any system which we are likely to obtain for a long time to come while the same control continues, will present the desired solution of that great problem, is a very serious question. For myself I wish I could think of it as a question presenting much more favorable prospects in the future than it does to my mind."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Alcorn, Ames, Anthony, Bayard, Brownlow, Buckingham, Caldwell, Cameron, Carpenter, Casserly, Chandler, Clayton, Conkling, Cooper, Corbett, Cragin, Davis, Edmunds, Fenton, Ferry of Connecticut, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Harlan, Hill, Hitchcock, Howe, Johnston, Kelly, Lewis, Logan, Machen, Morrill of Maine, Morrill of Vermont, Morton, Norwood, Osborn, Patterson, Pomeroy, Pratt, Ramsey, Rice, Robertson, Saulsbury, Scott, Sherman, Stevenson, Stewart, Sumner, Thurman, Tipton, Trumbull, Wilson, and Windom—56.

NAYS—Messrs. Cole, Hamilton of Maryland, and Vickers—3.

ABSENT—Messrs. Blair, Boreman, Goldthwaite, Hamilton of Texas, Kellogg, Nye, Pool, Ransom, Sawyer, Schurz, Spencer, Sprague, Stockton, West, and Wright—15.

So the resolution was adopted. But no further action was taken on the subject.

In the Senate, on December 17th, the following resolution was read the second time. It had previously been adopted in the House:

Whereas, The national unity cannot fail to be strengthened by the remembrance of the services of those who fought the battles of the Union in the late war of the rebellion: therefore—

Be it resolved by the Senate and House of Representatives in Congress assembled, As the expression of the sentiment of Congress, that no measures be taken toward removing from the Army Register or the regimental colors of the United States the names of the battles of the rebellion.

The Vice-President: "The Senator from Vermont asks unanimous consent for the consideration of this joint resolution at the present time. Is there objection?"

Mr. Sumner: "I object."

The Vice-President: "This resolution will lie on the table."

In the Senate, on January 22d, the motion was made to proceed to the consideration of the bill to abolish the franking privilege and

provide for the transmission of official documents and other public matter.

The question was on agreeing to the motion, and, on being taken, resulted as follows:

YEAS—Messrs. Alcorn, Boren, Buckingham, Cole, Conkling, Corbett, Ferry of Connecticut, Flanagan, Frothinghuyson, Hamlin, Harlan, Hitchcock, Kelly, Morrill of Maine, Morrill of Vermont, Patterson, Pratt, Ramsey, Schurz, Scott, Sherman, Sprague, Stewart, Stockton, Thurman, West, Wilson, Windom, and Wright—29.

NAYS—Messrs. Ames, Bayard, Carpenter, Edmunds, Hamilton of Maryland, Hill, Johnston, Lewis, Machen, Norwood, Pool, Robertson, and Stevenson—13.

ABSENT—Messrs. Anthony, Blair, Brownlow, Caldwell, Cameron, Casserly, Chandler, Clayton, Cooper, Cragin, Davis, Fenton, Ferry of Michigan, Gillbart, Goodthwaite, Hamilton of Texas, Howe, Logan, Morton, Nye, Osborn, Pomeroy, Ransom, Rice, Saulsbury, Sawyer, Spencer, Sumner, Tipton, Trumbull, and Vickers—31.

So the motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill to abolish the franking privilege and to provide for the transmission of official documents and other public matter.

The first section abolished the franking privilege from and after the 1st day of July, 1873, and declared that thenceforth all official correspondence, of whatever nature, and other mailable matter sent from or addressed to any officer of the Government, or person now authorized to frank such matter, should be chargeable with the same rates of postage as may be lawfully imposed upon like matter sent by or addressed to other persons.

The second section provided that there should be prepared and issued by the Post-Office Department to the President of the United States, to each head of Department, and to the Secretary of the Senate and the Clerk of the House of Representatives, proper stamps, which should print or impress the name of the Department or officer using the same, respectively, and the nature of the matter to be sent thereunder, as "Department of the Interior, Mechanical Report," "Executive Office, President's Message," and the like, and the date or other proper device, as the Postmaster-General may direct, which stamps should be used by the Department or officer to whom the same may be issued, respectively, only for the purpose of stamping all books, documents, and other official matter issued from such Department or office, respectively, including in the use of the same, by the Secretary of the Senate and Clerk of the House of Representatives, all reports and other documents printed by order of their respective Houses. Such stamps shall be used for no other purposes than that stated, and all matter so stamped shall thereupon pass through the mails without requiring further stamps or charge, and the postage upon all books, documents, and other public matter so stamped shall be charged by the Post-Office Department to the Department or office issuing the same,

respectively, and the amount so charged shall be defrayed by such Departments and officers out of appropriations to be made therefor by Congress as part of the incidental expenses of the Government.

Section three provided for the punishment of any person who should forge or counterfeit any such official postage-stamp or stamping-machine, or who should counterfeit any die or plate therefor, or who should make or print, or knowingly use or sell, or have in his possession with intent to use or sell any such false, forged, or counterfeit die-plate, stamp, or stamping-machine, or any paper wrapper or envelope stamped by any falsed, forged, or counterfeit die-plate, postage-stamp, or stamping-machine, or who should authorize or procure to be made any such official die-plate, stamp, or stamping-machine, without the special direction of the Post-Office Department, or who, after the same have been prepared, should, with intent to defraud the revenue of the Post-Office Department, deliver any such official dies, plates, stamps, or stamping-machines, to any person or persons other than such as should be authorized to receive the same, by instrument of writing duly executed under the hand of the Postmaster-General and the seal of the Post-Office Department.

Mr. Morrill, of Vermont: "I desire to offer an amendment, to come in after line twenty-seven, on page 2, as a proviso:

Provided, That no compensation or allowance shall now or hereafter be made to Senators, or members and Delegates of the House of Representatives, on account of postage.

"If this was really an earnest attempt to abolish the franking privilege, there should be some appropriate legislation in relation to what is to be done to take its place. Now, I apprehend that most Senators who vote for the bill are doing it in an entirely disinterested manner, and that they mean to lessen the expenditures of the Government in consequence of this bill, and if they do so mean, then it is not the purpose hereafter to support an amendment that will give each one of us two or three times the amount of postage that we pay out.

"I therefore offer this amendment, taking it for granted that the Senators who vote against it reserve to themselves the privilege of obtaining compensation that certainly is an equivalent and perhaps more than an equivalent for it, and if they do vote for it, then hereafter they will oppose all propositions to put money in their pockets in consequence of the abolition of the franking privilege."

Mr. Hamlin, of Maine, said: "I do not think the amendment of my friend from Vermont will prove very effective. Whenever a Congress subsequent to this shall see fit to appropriate money to pay its own postage it will do so, and what will become of the Senator's amendment? It is an unnecessary amendment.

"I want to call the attention of the Senate

to one provision in this bill which to me is very objectionable. I have sincerely been in favor of abolishing the franking privilege from the first, I am so now, and shall vote for the bill if it be not amended; but I think it ought to be amended. I have been sincerely in favor of abolishing the franking privilege because I believed it would be one means of retrenching the expenses of our Government, in the vast, in the astonishing amount of useless public printing that is done and that has swelled now to the proportions of two or three million dollars a year. This bill does not touch it at all, but it provides that all matter printed by the Government shall go free through the mail precisely as it goes now, only that it shall be paid for out of the Treasury. It provides for the distribution of all your public printed matter, not your speeches, not your own private correspondence; but for all public printed matter stamps are to be furnished to the Secretary of the Senate, and by him furnished to members. You therefore fail to accomplish what I regard as the greatest good to be done by the abolition of the franking privilege; you fail to apply that remedy which in my judgment has become necessary to stop this gigantic expenditure in the way of public printing. I am not able to say—perhaps the chairman of the Committee on Printing can tell me—but I think the expenditures for public printing last year were between two and three million dollars. I do not think in ordinary years they amount to that; and how many and how worthless are the documents that are printed, that go back to the paper manufacturer, again to be manufactured into material upon which printing is again to be made.

"Now, if the Senate are disposed to still continue that, you are then reduced simply to this proposition: an abolition of the private franking privilege of members of Congress, leaving every other abuse under existing law, leaving all the vast expenses of your printing department to go on precisely as they have been going on and are going on now."

Mr. Frelinghuysen, of New Jersey, said: "Mr. President, I shall vote for the amendment of the Senator from Vermont. For why should we vote money into the Treasury as postage if we are afterward to vote it to ourselves to pay postage with? But it is not in reference to this amendment that I have a word to say.

"I am opposed, as is the party with which I am associated, to the abuses of the franking privilege, and they should be corrected; but I am not opposed to the franking privilege properly guarded and administered. This bill does not attempt to correct abuses, but abolishes franking. This is a representative Government, a Government by the people, and I hold it, sir, eminently undesirable that there should be a tax imposed upon the most free and unrestrained communication between the people and their representatives. Thus is the popular will made known, the petitions of those injured

heard, and information disseminated. The franking privilege has done much to promote human rights and liberty. So far as I am personally concerned, it would be a relief to be free of the franking privilege. To me it is a burden and no privilege. But it is a most valuable right to those that I represent. It belongs to my constituents. I know that the people of this country, however, have not that view of the subject. They fail to appreciate the benefits of the franking privilege because of its abuses. The bill we ought to pass is one correcting the abuses of the privilege and not abolishing it. Let me briefly and without due consideration state what the bill should be."

Mr. Stewart, of Nevada, said: "I have heretofore voted against the repeal of the franking privilege. I propose to vote for it now, and I will give the reason for my vote. I had hoped that the abuses complained of would be remedied without the repeal of the law; but no legislation of that character has been proposed. I think if we repeal the law, and I should prefer an absolute repeal to any other, whatever may be necessary for the transaction of the public business will then be done, and it will be done by a perfectly fair bill. I do not believe that we shall ever get that legislation which we ought to have on this subject until the law is repealed and the question is brought directly before Congress.

Mr. Edmunds, of Vermont, said: "The bill itself is an utter delusion, and I for one am not afraid to say so. In the first place, it is not honest. As the Senator from Maine has said, it does not begin to do what it pretends to do, what the people are taught to suppose it is going to do. On the contrary, it puts the Treasury Department to the expense of printing a vast number of highly-engraved and elegantly-gotten-up stamps, got out through the intervention of the Post-Office Department, not through the Bureau of Engraving and Printing in the Treasury Department, which we have to do that very thing.

"Mr. President, is it not a good thing for a party and for the Senate to be tolerably candid with the people of the United States? If we have told the people of the United States in our convention at Philadelphia that we were going to abolish the franking privilege, where is the use of saying to them we have abolished it when we have not? Where is the use of leading them to believe that we have accomplished a reform when we have gone backward? The people whom I have the honor in part to represent do not have much faith in that sort of thing; and I presume it is so with the people of other States; and therefore the Legislature of the State of Vermont at its last session refused to pass a resolution in favor of the abolition of the franking privilege, but did pass a resolution, calling upon her Representatives to take every means they could to redress any abuses that might exist in it, because they believed, as the Senator from New Jersey has

so well stated, that the franking privilege, as it is called, is the privilege of the people, and not the privilege of their agents, in signing their names to information that is communicated to the people. It is a burden upon us, a duty upon us, and it is the privilege or right of the people; and the people pay for it, as they ought to do."

Mr. Hill, of Georgia, said: "Mr. President, I shall make no point upon the amendment proposed, however I may vote upon it, but I think it not inopportune at this stage of proceeding to give notice to the Senate that I shall move, when the appropriation bill for the legislative, executive, and judicial expenses of the Government, which has come to us from the House, is under consideration, to amend it by striking out lines ten and eleven, which read, 'for compensation and mileage of Senators, \$405,000,' and inserting in lieu thereof, 'for compensation and mileage of Senators, \$627,000.' That computation adds \$3,000 for each Senator to the sum named in the House bill. I shall also move to strike out the sum named in line one hundred and twenty-one, which now reads, 'for compensation and mileage of members of the House of Representatives and Delegates from Territories, \$1,650,000,' and insert in lieu thereof, '\$3,409,000,' which is, upon a computation of the present number of members and Delegates in the House, an addition of \$8,000 to their salaries also. The amendment will go to this extent: that the compensation of Senators and Representatives in Congress, and Delegates from the Territories, shall be \$8,000 per annum—that will be another and distinct amendment, or form part of one of the first named—to be paid as at present provided by law, and to commence from the beginning of the Forty-second Congress.

"Those are the amendments that I shall offer to that bill at the proper time. I rather wish that the appropriation bill had precedence of the bill we are now considering, because it might influence materially the views of Senators upon the expediency of passing the bill now before us. Independent of the increased compensation which is proposed by the amendment that I have suggested, I should hardly suppose there is a single Senator who would be willing to sit here at the present compensation of \$5,000 a year and mileage, and deprive himself of the poor benefit of the franking privilege.

"I know how much the country has been made to believe this privilege has been abused. No doubt in some instances it has been abused, grossly abused. That, evidently, is the fault of whoever chooses to abuse it. It is a great convenience, one that I have always exercised myself, and as I suppose most gentlemen have done, with a very strict regard to the law."

Mr. Morrill, of Vermont, said: "A single word. I would be much more in favor of a bill that merely reformed the abuses of the

franking privilege than the one that is now pending; and yet, despairing of getting any such bill, I propose to vote for this one after it shall be improved by such amendments as seem to me just and pertinent. Most members regard the franking privilege as a burden. If it is a burden, they can forego any compensation for its surrender. So far as the Government itself is concerned, it is a blunder to suppose that the Government is to be benefited one single penny by this measure. The mails will not be carried any cheaper, whether the matter is free or paid for. The idea that this bill will tend to increase the revenues of the Government I think will be found to be an entire mistake. But I trust that those of us who really mean to reform an abuse, and not to perpetrate a greater one, will stand by this amendment."

The Presiding Officer: "The question is on the amendment, on which the yeas and nays have been ordered."

The question being taken, resulted as follows:

YEAS—Messrs. Alcorn, Ames, Bayard, Boreman, Buckingham, Carpenter, Casserly, Corbett, Cragin, Edmunds, Frelighuysen, Hamilton of Maryland, Harlan, Hill, Howe, Johnston, Kelly, Machen, Morrill of Vermont, Norwood, Patterson, Pool, Pratt, Robertson, Sawyer, Schurz, Spencer, Sprague, Stevenson, Stewart, West, Wilson, and Wright—33.

NAYS—Messrs. Anthony, Chandler, Cole, Conkling, Fenton, Ferry of Connecticut, Ferry of Michigan, Flanagan, Gilbert, Hamlin, Hitchcock, Ramsey, Scott, Sherman, and Tipton—15.

ABSENT—Messrs. Blair, Brownlow, Caldwell, Cameron, Clayton, Cooper, Davis, Goldthwaite, Hamilton of Texas, Lewis, Logan, Morrill of Maine, Morton, Nye, Osborn, Pomeroy, Ransom, Rice, Saulsbury, Stockton, Sumner, Thurman, Trumbull, Vickers, and Windom—25.

So the amendment was agreed to.

Mr. Carpenter, of Wisconsin, said: "I move further to amend the bill, by striking out the second and third sections. The effect of the amendment is to leave it simply a bill abolishing the franking privilege right square out. I shall vote for the amendment, of course."

The Presiding Officer: "The question is on the amendment of the Senator from Wisconsin, striking out the second and third sections of the bill."

The amendment was agreed to—yeas 33, nays not counted.

Mr. Carpenter: "Now I move to amend the first section."

The Chief Clerk: "The bill as amended now reads:"

Be it enacted, &c., That the franking privilege be, and the same is, hereby abolished, from and after the 1st day of July, A. D. 1873, and that thenceforth all official correspondence of whatever nature, and other mailable matter sent from or addressed to any officer of the Government or person now authorized to frank such matter, shall be chargeable with the same rates of postage as may be lawfully imposed upon like matter sent by or addressed to other persons.

Mr. Morrill, of Vermont: "May I ask if the amendment just adopted has stricken out the amendment proposed by me?"

The Presiding Officer: "Certainly it has."

Mr. Morrill: "Then I offer it again, to be inserted as a proviso."

Mr. Conkling and others: "Oh, no."

The Presiding Officer: "The Senator from Vermont offers an amendment:—"

Provided, That no compensation or allowance shall now or hereafter be made to Senators or members and Delegates of the House of Representatives on account of postage.

The amendment was agreed to.

Mr. Bayard, of Delaware, said: "I think it pretty certain that an equal amount of humbuggery has never connected itself with any matter that ever came before Congress as is connected with this proposed abolition of the franking privilege. It has been a joke pretty much for the last hour in the Senate, perhaps a serious one for the people of the country; and, in order that the Senate may take time to consider this matter a little more discreetly, I move that the Senate do now adjourn."

The motion to adjourn was not agreed to.

The bill was reported to the Senate as amended; and the amendments made as in Committee of the Whole were concurred in:

The amendments were ordered to be engrossed, and the bill to be read a third time.

On its passage the yeas and nays were ordered; and, on being taken, resulted as follows:

YEAS—Messrs. Alcorn, Anthony, Boreman, Casserly, Chandler, Cole, Conkling, Cragin, Fenton, Ferry of Connecticut, Ferry of Michigan, Flanagan, Hamlin, Harlan, Hitchcock, Howe, Johnston, Kelly, Lewis, Pratt, Ramsey, Sawyer, Schurz, Scott, Sherman, Sprague, Stewart, Stockton, Thurman, West, Wilson, Windom, and Wright—33.

NAYS—Messrs. Ames, Bayard, Buckingham, Carpenter, Corbett, Edmunds, Frelinghuysen, Gilbert, Hill, Maehen, Norwood, Pool, Robertson, Spencer, Stevenson, and Tipton—16.

ABSENT—Messrs. Blair, Brownlow, Caldwell, Cameron, Clayton, Cooper, Davis, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Logan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Ransom, Rice, Saulsbury, Sumner, Trumbull, and Vickers—24.

So the bill was passed.

Mr. Ramsey: "The title of the bill should be amended so as to read, 'A bill to abolish the franking privilege.'"

Mr. Carpenter: "I suggest to my friend from Minnesota that it should be, 'A bill to abolish the franking privilege, and not to transmit official documents and other public matter through the mails of the United States.' I suggest that to him."

The Presiding Officer: "The question is on the amendment to the title proposed by the Senator from Minnesota."

The title was so amended.

In the House, on January 27th, the above-mentioned bill was considered with the amendments of the Senate:

Mr. Farnsworth, of Illinois, said: "The bill as amended by the Senate abolishes the franking privilege pure and simple. We passed such a bill once, and the Senate did not act upon it:

Last summer, shortly after the Philadelphia Convention, I reported this bill from the Committee on the Post-Office and Post-Roads. It passed the House and went to the Senate, the day on which it was to go into effect being the 1st of December. The Senate have altered that to the 1st of July next. The Senate have cut off the provisions of the bill which were then in it, providing for the stamping of official documents, and have sent us back the bill abolishing the franking privilege, and containing nothing else.

"I propose now to ask the House to take the Senate at their word, adopt the amendment and pass the bill in accordance with the platforms of all political parties, and with what the House has professed its willingness to do so many times. Hereafter Congress may make such provision by supplementary legislation as it may deem best for the transmission of official documents. But for the present I desire to have a vote agreeing to the Senate amendments and adopting the bill in the form in which they have returned it to us."

Mr. Farnsworth: "I call for the yeas and nays on the motion to suspend the rules."

The yeas and nays were ordered.

The question was taken, and resulted as follows:

YEAS—Messrs. Acker, Ambler, Ames, Banks, Barnum, Beatty, Bell, Biggs, Bingham, Bird, Austin Blair, Braxton, Bright, Buckley, Buffinton, Bunnell, Burehard, Burdett, Carroll, Cobb, Coburn, Coghlan, Conger, Cotton, Cox, Crebs, Crossland, Davis, Dawes, Donnan, Dox, Duell, Duke, Eames, Ely, Esty, Farnsworth, Farwell, Finkelnburg, Charles Foster, Wilder D. Foster, Frye, Garfield, Garrett, Griffith, Hale, Halsey, Hambleton, Handley, Harper, John T. Harris, John B. Hawley, Joseph B. Hawley, Hay, Gerry W. Hazelton, Hereford, Hibbard, Hill, Kellogg, Kerr, Ketchum, Killinger, Lamison, Lamport, Lansing, Lynch, MacIntyre, Manson, Marshall, McClelland, McCormick, McCrary, McGrew, McHenry, McKunkin, McKee, McKinney, McNeely, Merriam, Merrick, Benjamin F. Meyers, Mitchell, Monroe, Moore, Morgan, Morphis, Niblack, Orr, Packard, Packer, Palmer, Isaac C. Parker, Pendleton, Perry, Peters, Poland, Porter, Rainey, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, Ellis H. Roberts, William R. Roberts, Robinson, Sion H. Rogers, Roosevelt, Ruek, Sargent, Scofield, Sessions, Shanks, Shellabarger, Shoemaker, Slater, Slocum, H. Boardman Smith, John A. Smith, Spear, Sprague, Starkweather, Stevens, Stevenson, Storm, Stoughton, Taft, Terry, Tyner, Upson, Van Trump, Vaughan, Voorhees, Waddell, Wakeman, Walden, Waldron, Warren, Wells, Wheeler, Willard, Williams of Indiana, John T. Wilson, and Winchester—144.

NAYS—Messrs. Adams, Arthur, Averill, Barber, Barry, Erasmus W. Beck, Boorman, Roderick E. Butler, Caldwell, Comingo, Critcher, DuBose, Dunnell, Eldredge, Elliott, Henry D. Foster, Getz, Giddings, Hancock, Hanks, Harmer, George E. Harris, Hays, John W. Hazelton, Herndon, Hoar, Kelley, Kendall, King, Leach, Lewis, Maynard, Morey, Leonard Myers, Platt, Price, Sawyer, Sheldon, Shober, Worthington C. Smith, Snapp, Stowell, St. John, Turner, Tuthill, Wallace, Whiteley, Whitthorne, and Wood—49.

NOT VOTING—Messrs. Archer, James B. Beck, Bigby, James G. Blair, Boles, Brooks, Benjamin F. Butler, Campbell, Clarke, Conner, Creely, Crocker, Darraill, Dickey, Dodds, Forker, Golladay, Goodrich,

Hableman, Haven, Holman, Hooper, Houghton, Kissam, Lowe, Negley, Hosea W. Parker, Peck, Perce, Potter, Prindle, John Rogers, Seeley, Sherman, Sloss, Snyder, Sutherland, Swain, Sypher, Thomas, Dwight Townsend, Washington Townsend, Twissell, Walls, Williams of New York, Jeremiah M. Wilson, and Young—47.

So (two-thirds voting in favor thereof) the rules were suspended; and the amendments of the Senate were concurred in, and the bill was subsequently passed.

On February 12th, the Senate at 1 p. m. proceeded to the House of Representatives for the purpose of counting the electoral vote for President and Vice-President of the United States.

The Vice-President took his seat as Presiding Officer of the joint convention of the two Houses, the Speaker occupying a chair on the left of the Vice-President.

Senator Sherman, of Ohio, the teller appointed on the part of the Senate, and Messrs. Dawes, of Massachusetts, and Beck, of Kentucky, the two tellers appointed on the part of the House, took their seats at the Clerk's desk, at which the Secretary of the Senate and Clerk of the House also occupied seats.

The Vice-President: "The Senate and House of Representatives having met under the provisions of the Constitution for the purpose of opening, determining, and declaring the votes cast for President and Vice-President of the United States for the term of four years commencing on the 4th of March next, and it being my duty, in the presence of both Houses thus convened, to open the votes, I now proceed to discharge that duty."

The Vice-President then proceeded to open and hand to the tellers the votes of the several States for President and Vice-President of the United States, commencing with the State of Maine.

Senator Trumbull, of Illinois: "I think the Governor's certificate should be read as the evidence of the election of the electors."

The Vice-President: "The tellers will report the certificate."

Senator Sherman (as one of the tellers) read the certificate of the Governor of Maine.

Senator Trumbull said: "I would inquire if that certificate bears the signature of the Executive of the State of Maine?"

Senator Sherman: "The signature of Sydney Perham, as Governor, is in the centre of the paper, under the great seal of the state."

Senator Trumbull: "It is not material where it is, if the signature of the Executive is there."

The Vice-President: "The chair will state that upon several occasions of the counting of the electoral vote, after the first certificate had been read in full, the reading in full of the subsequent certificates has been dis-

pensed with by general consent, unless some Senator or Representative in a particular case called for the reading of the entire certificate. If no person objects, therefore, the tellers will report the material part of the subsequent certificates, subject, however, to the demand of any Senator or Representative that the document shall be read in full."

The tellers proceeded to announce the electoral votes of the several States, it being mentioned in each case that the certificate of the election of the electors was signed by the Governor and countersigned by the Secretary of State. When the State of Georgia was reached—

Mr. Beck, of Kentucky (one of the tellers), announced the electoral vote for President as follows:

B. Gratz Brown, of Missouri, six votes; Horace Greeley, of New York, three votes; Charles J. Jenkins, of Georgia, two votes.

The vote for Vice-President was announced, as follows:

B. Gratz Brown, of Missouri, five votes; Alfred H. Colquitt, of Georgia, five votes; Nathaniel P. Banks, of Massachusetts, one vote.

Mr. Hoar, of Massachusetts, said: "I desire to make the point that the three votes reported by the tellers as having been cast for Horace Greeley, of New York, cannot be counted, because the person for whom they purport to have been cast was dead at the time of the assembling of the electors in that State."

The Vice-President: "The gentleman from Massachusetts (Mr. Hoar) having made the point which has been stated by him, the Chair will read from the twenty-second joint rule of the two Houses: "

If, upon the reading of any such certificate by the tellers, any question shall arise in regard to counting the votes therein certified, the same having been stated by the Presiding Officer, the Senate shall thereupon withdraw, and said question shall be submitted to that body for its decision; and the Speaker of the House of Representatives shall in like manner submit said question to the House of Representatives for its decision; and no question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurrent votes of the two Houses, which being obtained, the two Houses shall immediately reassemble, and the Presiding Officer shall then announce the decision of the question submitted; and upon any such question there shall be no debate in either House. And any other question pertinent to the object for which the two Houses are assembled may be submitted and determined in like manner.

The Vice-President: "If there is no objection, the gentleman from Massachusetts will be understood as reserving the point which he has made, to be presented at the close of the counting, or whenever the two Houses may be required under the rule to meet in their respective Chambers. Will that suit the gentleman from Massachusetts?"

Mr. Hoar: "I have no objection."

The tellers resumed the reading of the cor-

tificates. When the vote of the State of Mississippi was announced—

Mr. Senator Sherman (one of the tellers) said: "As the form in this case is somewhat different from the others, I will read the certificate of the Governor."

The Vice-President: "The Senator from Illinois (Mr. Trumbull) objects to counting the vote of the electors of the State of Mississippi, on the ground that there is no certificate; they voted by ballot, but for the present he reserves that point."

Senator Trumbull: "At the suggestion of a Senator who thinks it would be a bad precedent when an objection is raised to pass it over and go through with the vote in a matter of such grave importance as this, I will present the question now."

The Vice-President: "Under the twenty-second joint rule the Presiding Officer now submits to the Senate and House of Representatives in joint convention the objection of the gentleman from Massachusetts (Mr. Hoar). It will be reported."

The Secretary of the Senate read as follows:

Mr. Hoar objects that the votes reported by the tellers as having been cast by the electors of the State of Georgia for Horace Greeley, of New York, cannot legally be counted, because said Horace Greeley, for whom they appear to have been cast, was dead at the time said electors assembled to cast their votes, and so not a person within the meaning of the Constitution, this being an historical fact of which the two Houses may take notice.

The Vice-President: "Two copies will be made of this objection, one for the Senate, and one for the House of Representatives, to be submitted to each House after the Senate repairs to its Chamber."

The Senator from Illinois (Mr. Trumbull) makes the following point, which the Presiding Officer now submits to the two bodies in joint convention.

The Secretary of the Senate read as follows:

Mr. Trumbull objects to counting the votes cast for President and Vice-President by the electors in the State of Mississippi, for the reason it does not appear from the certificate of said electors that they voted by ballot.

Senator Trumbull: "I should like to have read again the certificate of the Governor of Mississippi, both the original and supplemental papers."

The Vice-President: "That will be done."

Senator Trumbull: "It is suggested by my colleague it would be well, as these papers cannot be before both Houses when we separate, that for the information of both Houses the papers be read in full at this time."

The Vice-President: "The Chair will state in this case, as in all other cases, there are two copies in possession of the Presiding Officer, one sent by mail, and one brought by messenger. In this case they appear to be the same."

The papers were again read.

The Vice-President: "The Presiding Offi-

cer will state that in the duplicate copies sent by messenger the Governor's certificate does not appear to have been included; but the substantial point made by the Senator from Illinois (Mr. Trumbull) lies against both papers, that they do not state the electors voted by ballot."

The Vice-President: "The objection of the gentleman from New York (Mr. Potter) will be read as modified:"

The Clerk read as follows:

Mr. Potter objects to one vote of the State of Mississippi, because the certificate declaring that J. J. Spellman was appointed an elector in the stead of A. T. Morgan, absent, by the electoral college of that State, in accordance with the laws of that State, is not signed by the Governor of that State.

And, further, that the certificate of the Secretary of State read does not certify any thing of his own knowledge, but only states he has been so notified as he certifies.

The Vice-President: "Three questions having arisen in regard to the counting of the votes for President and Vice-President, the Senate will now withdraw to their Chamber."

The Senate accordingly retired.

The Speaker, having called the House to order, said: "In the joint convention for counting the electoral votes, an objection was made by the gentleman from Massachusetts (Mr. Hoar) against counting the return from the State of Georgia. The Clerk will read the objection."

The Clerk read as follows:

Mr. Hoar objects that the votes reported by the tellers as having been cast by the electors of the State of Georgia for Horace Greeley, of New York, cannot be lawfully counted, because said Horace Greeley, for whom they appear to have been cast, was dead at the time said electors assembled and cast their votes, and so not a person within the meaning of the Constitution, this being an historic fact of which the two Houses may properly take notice.

The Clerk then read the resolution as modified by Mr. Hoar, as follows:

Resolved, That, in the judgment of the House of Representatives, the votes reported by the tellers as having been cast by the electors of the State of Georgia for Horace Greeley, of New York, for President of the United States, ought not to be counted, the said Horace Greeley having died before the said votes were cast.

The question was taken; and it was decided in the affirmative—yeas 101, nays 99, not voting 40.

So the resolution was agreed to.

The Speaker: "The Clerk will now read the point certified to the House from the joint convention, and which was raised by Mr. Trumbull, a Senator from the State of Illinois."

The Clerk read as follows:

Mr. Trumbull objects to counting the votes cast for President and Vice-President by the electors in the State of Mississippi, for the reason that it does not appear from the certificate of said electors that they voted by ballot.

Mr. Dawes: "I submit the following resolution:"

Resolved, That in the judgment of this House the eight votes reported by the tellers as cast by electors in and for the State of Mississippi ought to be counted as reported by them.

So the resolution of Mr. Dawes was adopted.

The Speaker: "The Clerk will read the objection made in the joint convention by Mr. Potter, a Representative from the State of New York."

The Clerk read as follows:

Mr. Potter objects to the counting of one vote of the State of Mississippi, because the certificate declaring that J. J. Spellman was appointed an elector in the stead of A. T. Morgan, absent, by the electoral college of that State, in accordance with the laws of that State, is not signed by the Governor of the State; and, further, that the certificate of the Secretary of State read does not certify any thing of his own knowledge, but only states he has been so notified as he certifies.

Mr. Banks: "I offer a resolution upon that point."

The Speaker: "The Chair will be compelled to recognize the gentleman (Mr. Potter) who raised the point in the joint convention."

Mr. Eldredge: "I raise a point of order. My point is that the House has just passed a resolution that the eight votes of Mississippi are to be counted, and that this proposition is incompatible with the resolution just adopted."

The Speaker: "That is not a point of order. It is a matter for the House, not the Chair, to decide."

Mr. Potter submitted the following resolution:

Resolved, That, as one of the eight votes certified by the electoral college of the State of Mississippi as cast for Ulysses S. Grant, as President, appears not to have been cast by A. T. Morgan, who appears by the certificate of the Executive of that State to have been an elector of that State, but by James J. Spellman, and there being no certificate from the executive authority of that State certifying the appointment of said James J. Spellman as an elector of such State, one of the electoral votes be rejected, and seven electoral votes only be counted for that State.

Mr. Banks: "I offer the following resolution as a substitute for the resolution just read: "

Resolved, That the electors of the State of Mississippi, having been appointed in the manner directed by the Legislature of that State, were legally elected, and the vote of the State as cast by them should be counted; and that the certificate of the Governor of that State of the electoral vote cast, and the certificate of the Secretary of State of that State in regard to the choice of electors, is in compliance with the Constitution and laws of the United States.

The question first recurred on the substitute of Mr. Banks for the resolution of Mr. Potter.

The House divided; and there were—yeas 109, nays 88.

So the substitute was agreed to.

The resolution as amended was then adopted.

At three o'clock and thirty-five minutes P. M. the Senate in a body reentered the Hall.

The Vice-President (having resumed the chair): "The Chair will read a part of the twenty-second rule: "

And no question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurrent votes of the two Houses; which being obtained, the two Houses shall immediately reassemble, and the Presiding Officer shall then announce the decision of the question submitted.

Upon the first point raised by the Representative from Massachusetts (Mr. Hoar) the Senate decided as follows:

Resolved, That the electoral votes of Georgia, cast for Horace Greeley, be counted.

The House of Representatives decided as follows:

Resolved, That the votes reported by the tellers as having been cast by the electors of the State of Georgia for Horace Greeley, of New York, as President of the United States ought not to be counted, the said Horace Greeley having died before said votes were cast.

Upon this question there is a non-concurrence of the two Houses.

On the question submitted by the Senator from Illinois (Mr. Trumbull) in regard to the votes of the State of Mississippi, the Senate adopted the following resolution:

Resolved, That the electoral vote of the State of Mississippi be counted.

And the House of Representatives adopted the following resolution:

Resolved, That in the judgment of this House the eight votes reported by the tellers as cast by the electors in and for the State of Mississippi ought to be counted as reported by them.

On this question the votes of the two Houses are concurrent.

On the third point raised by the Representative from New York (Mr. Potter), which was in regard to the election of one elector from Mississippi, the Senate adopted the following resolution, which is covered also by its action on the full vote of the State:

Resolved, That the vote cast by James J. Spellman, one of the electors for the State of Mississippi, be counted.

The House of Representatives adopted the following resolution:

Resolved, That the electors of the State of Mississippi having been appointed in the manner directed by the Legislature of the State and in accordance with the provisions of the Constitution of the United States, were legally elected, and that the vote of the State as cast by them should be counted, and that the certificate of the Governor of that State of the electoral vote cast, and the certificate of the Secretary of State of that State in regard to the choice of electors, is in compliance with the Constitution and laws of the United States.

Therefore, by the twenty-second joint rule, there being a non-concurrence between the two Houses upon the three votes cast in the State of Georgia, for Horace Greeley for President of the United States, they cannot be counted. And, in accordance with the same joint rule, the votes of the State of Mississippi will be counted.

Senator Trumbull: "I object to the reception of the vote of Texas, because there is no certificate of the executive authorities of that

State to show that the persons who voted for President and Vice-President were appointed as electors of that State, as required by act of Congress."

The Vice-President: "The Chair would suggest that any other objection to the counting of the vote of Texas be now submitted to the joint convention."

Mr. Dickey: "I object to the counting of the electoral vote of the State of Texas because four of the electors, less than a majority of those elected, undertook to fill the places of other four electors who had been elected and were absent."

The Vice-President: "These two objections to counting the vote of Texas having been made, the Senate will now withdraw to their Chamber."

The Senate accordingly retired from the Hall of the House.

The Speaker resumed the chair, and called the House to order.

The Clerk read the following, from the joint convention of the two Houses:

Mr. Trumbull objected to the vote of Texas because there is no certificate by the executive authority of that State that the persons who voted for President and Vice-President were appointed as electors of that State as required by the act of Congress.

Mr. Dawes submitted the following resolution:

Resolved, That, in the judgment of this House, the vote of Texas should be counted as reported by the tellers.

The question being taken on the resolution of Mr. Dawes, it was agreed to; there being—yeas 107, nays 22.

The Speaker: "The Clerk will now report the next objection which comes from the joint convention."

The Clerk read as follows:

Mr. Dickey objected to the counting of the electoral vote of the State of Texas because four electors, less than a majority of those elected, undertook to fill the places of other four electors, who had been elected and were absent.

Mr. Dickey: "I offer the following resolution:"

Resolved, That, in the judgment of this House, the electoral vote of the State of Texas for President and Vice-President ought not to be counted, for the reason that four electors, less than a majority of those elected, undertook to fill the places of other four electors, who had been elected and were absent.

Mr. Banks: "I move to amend the resolution by striking out all after the word 'resolved' and inserting the following:"

That a quorum is an arbitrary number, which each State has a right to establish for itself; and, as it does not appear that the choice of electors was in conflict with the law of that State as to a quorum for the transaction of business, the vote of the electors for President and Vice-President should be counted.

Mr. Banks: "I call for the previous question."

The previous question was seconded and

the main question ordered; and under the operation thereof the amendment of Mr. Banks was agreed to, and the resolution as amended adopted.

At five o'clock and five minutes p. m. the Senate in a body reentered the Hall.

The Vice-President (having resumed the chair): "Two objections having been made to the counting of the votes of the electors of the State of Texas, the Senate upon the first objection, made by the Senator from Illinois (Mr. Trumbull), resolved as follows:"

Resolved, That the electoral vote of the State of Texas be counted, notwithstanding the objection raised by Mr. Trumbull.

"And the House of Representatives resolved as follows:

Resolved, That, in the judgment of this House, the vote of Texas should be counted as reported by the tellers.

"On the second objection, by Mr. Dickey, the Senate resolved as follows:

Resolved, That the objection raised by Mr. Dickey to counting the electoral vote of the State of Texas be and the same is overruled.

"And the House of Representatives resolved as follows:

Resolved, That a quorum is an arbitrary number, which each State has the right to establish for itself, and, as it does not appear that the choice of electors was in conflict with the law of Texas as to a quorum for the transaction of business, the vote of the electors for President and Vice-President be counted.

"So (the two Houses having concurred) the electoral vote of Texas, under the twenty-second joint rule, will be counted."

The Vice-President: "The Chair in presenting the electoral vote of the State of Arkansas states it was received by him by mail on the 11th of December, 1872, and by messenger at the Department of State, and in the absence of the Vice-President by the President *pro tempore* of the Senate on the 28th of December, 1872. On the 4th or 5th day of February, that is, during the present month, a person, claiming to be the messenger commissioned to bring the electoral vote of the State of Arkansas, presented himself at the Vice-President's room with a paper, not in the form of law, but addressed to him as President of the Senate, and stated to him what he alleged to be its contents, representing himself to be commissioned as messenger to bring the vote. The Vice-President said he would open the paper, as it was addressed to him, but he would not receive it even informally. After reading its contents, he found that it did not in any respect comply with the requirements of the law on the subject."

Senator Rice: "I object to counting the vote of Arkansas, and will reduce my objections to writing."

Senator Hamlin: "While the Senator from Arkansas is reducing his objections to writing, I propose we proceed to the electoral vote of the State of Louisiana."

The Vice-President: "From Louisiana there have been received two returns sent by mail and two by messenger, each of the last having been received by the Secretary of State, in the absence of the Vice-President and the President of the Senate *pro tempore* from the seat of government. The first return, made by L. C. Roudanez, was received on the 31st of December, within the time required by the Constitution. The second return was received on the 2d of January, being one day within the time required by the Constitution. What appeared to be the duplicates were received by mail on the 10th and 14th of December. The Chair will first submit those returns which reached the office of the Secretary of State, in accordance with law, on December 31st.

"On the 10th of December last the Chair received an envelope by mail, certifying on the outside that it contained the vote, for President and Vice-President, of the State of Louisiana, signed by eight other persons. On the 2d day of January, being the first Thursday after the first Wednesday in January, a messenger arrived with a sealed envelope signed by the same persons, which was received by the Department of State in the absence from the city of the Vice-President and the President *pro tempore* of the Senate, which was represented to contain the same vote of the State of Louisiana. There have been seven objections made in regard to receiving the votes of Louisiana, some of them against receiving any vote from that State. The Chair would suggest that in taking up these objections the two Houses might act first upon those which lie to the counting of the vote of Louisiana at all."

Senator Rice: "I object to the counting of the votes of the State of Arkansas, because the official returns in said State, made according to the laws of said State, show that the persons certified to by the Secretary of State as elected, were not elected as electors for President and Vice-President at the election held November 5, 1872; and, secondly, because the returns read by the tellers are not certified according to law."

The Senate retired from the hall.

The House was again called to order.

The Clerk read the objection made in joint convention by the Senator from Arkansas (Mr. Rice) to the counting of the vote from that State.

Mr. Kellogg, of Louisiana: "I offer the following substitute:"

Resolved, That the electoral vote of Arkansas be counted.

Mr. Dawes: "It ought to be 'that in the judgment of the House the electoral vote be counted.'"

Mr. Kellogg: "I will modify my resolution in that way, 'that in the judgment of this House the electoral vote of the State of Arkansas, as reported by the tellers, be counted.'"

The question was taken, and it was decided in the affirmative—yeas 103, nays 26, not voting 111.

So the resolution as amended by Mr. Kellogg was adopted.

Mr. Garfield, of Ohio: "I offer the following resolution:"

The Clerk read as follows:

Resolved, That, in the judgment of this House, none of the returns reported by the tellers as the electoral vote of the State of Louisiana should be counted.

At seven o'clock and forty-five minutes P. M. the Senate in a body reentered the Hall.

The Vice-President (having resumed the chair) said: "The objection made by the Senator from Arkansas to the counting of the electoral vote of that State as declared by the tellers, having been considered by the two Houses, the Senate has resolved as follows:

Resolved, That the electoral vote of Arkansas should not be counted.

"And the House has resolved as follows:

Resolved, That the electoral vote of the State of Arkansas, as reported by the tellers, be counted.

"There being a non-concurrence of the two Houses on this question, the vote of Arkansas, in accordance with the provisions of the twenty-second joint rule, will not be counted. That rule provides that—

No question shall be decided affirmatively, and no vote objected to shall be counted, except by the concurrent votes of the two Houses.

"The several objections made on various grounds to the counting of the electoral votes from Louisiana having been considered by the two Houses, the Senate has resolved as follows:

Resolved, That all objections presented having been considered, no electoral vote purporting to be that of the State of Louisiana be counted.

"And the House has resolved as follows:

Resolved, That, in the judgment of this House, none of the returns reported by the tellers as electoral votes of the State of Louisiana should be counted.

"On this question there is a concurrence of the Houses; and the electoral votes of Louisiana will not be counted. The tellers will now announce the result of the vote."

The result was announced by them.

The Vice-President then said: "The whole number of electors to vote for President and Vice-President of the United States, as reported by the tellers, is 366, of which the majority is 184. Of these votes 349 have been counted for President, and 852 for Vice-President of the United States. The result of the vote for President of the United States, as reported by the tellers, is, for Ulysses S. Grant, of Illinois, 286 votes; for B. Gratz Brown, of Missouri, 18 votes; for Thomas A. Hendricks, of Indiana, 42 votes; for Charles J. Jenkins, of Georgia, 2 votes; and for David Davis, of Illinois, 1 vote. The result of the vote, as reported by the

tellers, for Vice-President of the United States, is, for Henry Wilson, of Massachusetts, 286 votes; for B. Gratz Brown, of Missouri, 47 votes; for Nathaniel P. Banks, of Massachusetts, 1 vote; for George W. Julian, of Indiana, 5 votes; for Alfred H. Colquit, of Georgia, 5 votes; for John M. Palmer, of Illinois, 3 votes; for Thomas E. Bramlette, of Kentucky, 3 votes; for William S. Groesbeck, of Ohio, 1 vote; and for Willis B. Machen, of Kentucky, 1 vote.

"Wherefore, I do declare that Ulysses S. Grant, of the State of Illinois, having received a majority of the whole number of electoral votes, is duly elected President of the United States for four years, commencing on the 4th day of March, 1873; and that Henry Wilson, of the State of Massachusetts, having received a majority of the whole number of electoral votes for Vice-President of the United States, is duly elected Vice-President of the United States for four years, commencing on the 4th day of March, 1873.

"The object for which the House and Senate have assembled in joint convention having been accomplished, the Senate will retire to its chamber."

The Senate accordingly retired from the Hall of the House of Representatives.

In the House, on February 24th, the Appropriation Bill being under consideration, Mr. Butler, of Massachusetts, moved to amend the amendment reported from the Committee of the Whole, and to substitute for it the following:

The Clerk read as follows:

That on and after the 4th day of March, A. D. 1873, the President of the United States shall receive for his services during the term for which he shall have been elected the sum of \$50,000 per annum in full for his services, to be paid quarterly at the Treasury; the Vice-President of the United States shall also receive for his services during the term for which he shall have been elected the sum of \$10,000 per annum in full for his services, to be paid quarterly at the Treasury; and the Chief-Justice of the Supreme Court of the United States shall receive the sum of \$10,500 per annum, and the justices of the Supreme Court of the United States shall receive the sum of \$10,000 per annum each, to be paid quarterly at the Treasury; the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of the Interior, the Attorney-General, and the Postmaster-General, shall receive \$10,000 per annum each for their services; and each Assistant Secretary of the Treasury, State, and Interior Departments shall receive as annual compensation, to be paid quarterly, \$3,500; and the Speaker of the House of Representatives shall receive compensation at the rate of \$10,000 per annum, and Senators and Representatives in Congress and Delegates from the Territories admitted to a seat in Congress, including Senators, Representatives, and Delegates in the Forty-second Congress, shall receive compensation at the rate of \$7,500 per annum each, and in lieu of mileage there shall be allowed to each Senator, Representative, and Delegate, including those of the Forty-second Congress, his actual expenses from his place of residence to Washington City, at the commencement of each session of Congress, and return, to be certified in a bill of items, to

be filed as a voucher; and the sum of \$1,200,000, or so much thereof as may be necessary, is hereby appropriated therefor.

Mr. Hawley, of Connecticut: "I raise the point of order on the amendment of the gentleman from Massachusetts (Mr. Butler), that it is not germane to the amendment reported from the Committee on Appropriations."

Mr. Holman, of Indiana, said: "I raise the point of order that it is new legislation."

The Chairman: "One point of order only can be entertained at a time. The Chair overrules the point of order of the gentleman from Connecticut (Mr. Hawley), that this amendment is not germane. The Chair will now hear the point of order of the gentleman from Indiana (Mr. Holman).

Mr. Holman: "I raise the point of order that each one of the salaries enumerated in this proposed amendment is fixed by law; and the effect of this amendment is to change existing law."

The Chairman: "The Chair rules that so much of this amendment as provides for an increase of existing salaries is in order."

Mr. Butler, of Massachusetts, said: "I desire to say a few words on this amendment. The first part of it raises the salary of the President of the United States. When that matter was first brought before the Committee on the Judiciary I was opposed to it, because I thought that although the salary of the President has never been directly increased, yet that we had by legislation at various times added to the furniture of the White House and the perquisites of the President so as to make a substantial increase of salary. I took great pains to ascertain the facts on this point, and I obtained a copy of an inventory of property furnished to the White House for the use of the President in the time of John Adams. I find by this inventory, which I shall make a part of my remarks, that we not only in those days provided liberally for the furniture of the White House, but that we stocked the President's stable. Among the items in this inventory I find the following:

Stable—Seven well-looking horses, chiefly advanced in years, one set elegant plated harness, for four horses, in good order, one set brass harness for four horses, one elegant chariot, one good coach, one saddle and holsters, one market-wagon.

"Thus it appears that at that time it was thought proper and right for the Government not only to provide furniture for the Executive mansion, but to provide the President with his horses and his carriages.

"Twenty-five thousand dollars in 1801 was a much greater sum than \$50,000 now. One thing further. It has been said everywhere what an outrage that the present Congress should raise their own salary—I mean by said everywhere, said in several newspapers which think they go everywhere. Now, I want to state this fact. Every increase of salary of members of Congress which ever has been made, since

this Government existed, always included the House of Representatives and the Congress in which the increase was made. We are only following the precedent without exception, for the plain reason we are supposed by experience to have found out our salaries are insufficient, and, finding that out, we increase for our successors as well as for ourselves."

Mr. Garfield, of Ohio, said: "I desire to answer some of the points which have been made in support of this amendment. Some of the salaries referred to in the amendment, I doubt not, are too low—perhaps all of them. But I feel it to be my duty to call the attention of the committee to the movement of salaries in the last twelve years. I hold in my hand a statement of salaries other than legislative as they were paid in 1860. The total amount of salaries of officers of this Government in the several Executive departments here in Washington in 1860 was \$809,864.67. The war so greatly increased our civil service that now in the year just closed, in the calendar year 1872, the total for the same classes of salaries with the increase of bureaus that have been put on the various departments, was \$3,598,978.35; being an increase of \$2,789,113.68.

"Now, the fact that the salaries of the officers of the Government other than legislative have been thus increased in the twelve years is a fact that the House ought to know. And when it is proposed to increase the salaries by a sum I think somewhere in the neighborhood of a million and a half or two millions of dollars in one amendment, I feel it to be my duty to show them what the total of the salaries will be. I of course believe that the propositions in this amendment ought to be separated. Some of them gentlemen ought doubtless to vote for. But to pass that amendment in the lump, as laid before the committee now, I do not think it just, I do not think it equitable, and I do not think the House will do it; it ought not to be done."

Mr. Dawes, of Massachusetts, said: "I offer this as a substitute for the amendment proposed by my colleague."

The Clerk read as follows:

That from and after the 1st day of January, 1873, there shall be paid, in addition to their compensation now fixed by law, twenty-five per cent. of the same in addition thereto as compensation to all officers in the several custom-houses of the United States, whose annual compensation as now fixed by law does not exceed \$2,500 per annum.

Mr. Burchard, of Illinois, said: "I should be pleased to hear what plea can be urged by gentlemen at this time in favor of an increase of salaries. Is it because the purchasing power of money in 1873 is less than it was in 1864 and 1866, when our currency was depreciated? Is it because there is more business to be done by the employes of the Government and by members of Congress than there was at that time? Is it because the Treasury is now flusher than it has been? What do you see? Why,

that only during the month of January the Treasury balance had decreased; and perhaps, if you go on appropriating increased millions, you will find that, instead of having any surplus to apply to a reduction of the debt, your Treasury will fall short. Is this the proper time to increase salaries?

"I admit that there is force in the proposition to increase the President's salary, but unfortunately the Constitution does not permit it. The first section of article two of the Constitution provides that—

The President shall, at stated times, receive for his services a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

"He has been elected President for his second term. He may not have been inaugurated, but he has already been elected, and that would prevent our increasing his salary."

Mr. Dawes said: "I desire only to complete what I was saying when I last occupied the floor. I oppose this amendment because it begins at the wrong end, and raises the compensation of those who now have the highest compensation:

"I do it because, upon looking into the receipts and expenditures of the Government, I see that it is utterly impossible for us to raise all these salaries. I have a statement of the receipts and expenditures of the last quarter of the years 1871 and 1872. From that statement I learn that in that last quarter alone we have fallen behind in our receipts the sum of \$8,585,169.94. And although we last year paid \$100,000,000 of the public debt, each month for the last quarter we have been running behind, and the public debt is being increased. Yet with the public debt being increased, with the receipts over the expenditures this year falling short of the receipts of last year at the rate of some \$27,000,000, we propose to increase not only the salaries of members of the next Congress, but of members of this Congress.

"We propose the first thing after the presidential election not only to increase the salaries of members of the next Congress and of this Congress at the rate of \$3,000 a year each, but we leave all these under officers of the Government who need this increase of compensation without the slightest provision for it. Now, I call the attention of the members of the House, and of those who are looking on this night, to the fact that the first thing we do is to take care of our own salaries, while we leave the salaries of those upon whose integrity and fidelity the whole revenue service of this country depends entirely uncared for and unprotected."

Mr. Butler, of Massachusetts, said: "As my colleague (Mr. Dawes) has offered his amendment as a substitute for mine, I must antagonize it. If he had offered it simply as an ad-

dition to my amendment, I do not know what I would have done.

"Now, I wish to call the attention of this Committee of the Whole to this fact: the leader of this House, the Chairman of the Committee of Ways and Means (Mr. Dawes), knowing the existence of this great evil of the low salaries of these custom-house officers, during the whole of the two years of the term of this Congress, with the control of the business of this House in his hands, has waited until within the last seven working days of this session before he has brought in an amendment which at the proper time I should have been very glad to vote for. I agree that the salaries of those officers are too small. But why antagonize my amendment with one to increase their salaries?

"I want to call attention to gentlemen to one or two things in relation to the amendment I have offered. It proposes to throw off our mileage and the mileage of members of future Congresses. It cuts off what has been a wrong, and substitutes in its stead a just method of paying the actual expenses of members coming here. That cuts off \$133,000 a year.

"And this Congress has gone further, and thrown off the franking privilege, which was a great expense to the country and was of no benefit to any member of Congress. Ever since I have been in Congress the franking privilege has cost me at least \$2,500 a year. I have had to pay \$1,500 a year for a clerk to take care of my books and documents, and I have paid out of my own pocket about \$1,000 a year for the speeches of my fellow-members and for other valuable documents to send to my constituents.

"Now, in raising our salaries, not to \$8,000 a year, as some gentlemen seem to suppose, but to \$7,500, this amendment cuts off from the expenses of succeeding Congresses some \$300,000. But, without going into any calculation of the amount saved by this amendment, it only increases the amount appropriated by this bill some \$1,200,000, by raising all the salaries that are now too low.

"Now, I am willing to be pretty liberal in raising salaries. A dollar to-day does not go more than one tenth as far as a dollar went in 1801, when the most of these salaries were fixed. In my district in 1801 a man could buy the best mutton for two cents a pound; he could buy the best cow for ten dollars; the best woman-help in the family, better than we can now get for any money, could be obtained then for seventeen cents a week. The best horse in the country could be purchased for fifty dollars; the best men, such as would now make good superintendents of railroads, could be obtained to superintend farms for fifty dollars a year each."

The Chairman: "Objection being made to the withdrawal of the amendment, the question will be taken upon it."

The question was taken; and the amendment was not agreed to.

Mr. Hawley, of Connecticut, said: "I have no extended speech to make; I do not care for more than two minutes out of the five allowed me under the rule. But I want to say, because I believe it, that these gentlemen here who profess to belong to the dominant political party, and are supporting this proposition, are digging the grave of that party. I am perfectly well aware that they are not alone in this respect; that one party already has its grave dug, and the other wants to lie side by side with it. Back of these political parties, or the men who nominally represent them, are the American people, who will have something further to say on this question.

"For one, I care so little about parties or elections that, if this is to be the style of legislation, I am willing, if not to assist in digging the grave, to attend the funeral. I do not care what party may come afterward, we cannot, in my opinion, have one worse than a party which, six months after the most ardent professions of economy, begins, in the last few hours of a session, the work of raising in this House the salaries of its members, so that we may put into our pockets five or six thousand dollars which we never dreamed of having until two or three weeks ago.

"That is my idea of the action of this House to-night. I say the country will not approve it; our own party will not approve it. There is no good reason for it. Nothing but parliamentary etiquette restrains me from characterizing this proposition as in my heart I believe it ought to be characterized. If gentlemen really believe these salaries ought to be raised as a matter of abstract right, if there is no selfish, money-loving spirit in the movement, if there is no dishonorable motive at the root of the matter, let us then make a reasonable addition to these salaries which shall take effect after this Congress adjourns."

Mr. Randall, of Pennsylvania, said: "Mr. Chairman, I do not think there is any occasion for an exhibition of excessive virtue on this question; nor is there any good cause for a flutter. It may not be amiss for me to recall at this time a little experience I have had in this connection. I was here in 1865-'66, and, upon a call of the yeas and nays, I was one of three men on this floor who voted to increase the congressional salary from \$3,000 to \$5,000. I did so for the reason (which I told my people at home) that I thought I was worth the increased sum; that I knew I spent more. Every Republican paper in my district commended my vote, and said that I had more courage than all the men who voted on the other side. What was the result? The seeds we sowed upon that occasion ripened into a vast harvest; and within a few days afterward both Houses of Congress voted to make the increase from \$3,000 to \$5,000. I never had a constituent who objected to my course upon that question.

"I am in favor of the increase now proposed.

One of my reasons is that, if you will put members of Congress beyond temptation by giving them an adequate salary, you will pass fewer subsidy bills. I believe we earn the \$7,500 for which I propose to vote; if I did not so believe I would not vote for it. I remember another incident in connection with the increase made four or five years ago. At that time there was one member so pure that he refused to take from the Treasury the money Congress voted him; and his constituents voted that they wanted no such man to represent them.

"Now, Mr. Chairman, on that particular principle I believe I am right; I believe I earn that money; and if my constituents are not willing to pay me what I earn they had better find some other Representative."

Mr. Hoar, of Massachusetts, said: "Mr. Chairman, I oppose so much as relates to the increase of the salary of the members of the House and Senate. I do not do it from any fear of my own constituents. They are willing to pay their representative generously; and they will deal generously with anything I shall do; and they will accuse me of no selfish motive in doing it I am sure, whether my opinion shall be in accord with theirs or not. But, sir, I have been long of the opinion there are some classes of public servants which must derive compensation from conscientious discharge of public duty."

Mr. Whitthorne, of Tennessee, said: "I believe that in the present condition of the country, embarrassed with a heavy debt, and that debt increasing the burden resting upon the shoulders of the people, who are now complaining of the weight of that burden, it is our duty to take it off instead of adding to its weight, more especially adding to its weight in the direction of benefiting ourselves. I might admit that there are some officers of the Government who now receive inadequate pay; but, when the measure of their relief is so framed as to be coupled with one in which I and others like myself on this floor are interested, I do not believe that I ought to, or that I can conscientiously, support the other measure, though I might favor it if placed before us on its own merits. I am therefore opposed to the amendment."

The Chairman: "The question is next on the amendment of the gentleman from Massachusetts (Mr. Dawes)."

The question being put, there were—yeas 44, nays 109.

So the amendment offered by Mr. Dawes, in the nature of a substitute for the amendment of Mr. Butler, of Massachusetts, was not agreed to.

Mr. Upson, of Ohio, said: "I offer the following amendment to the amendment:

Strike out the words "including Senators, Representatives, and Delegates in the Forty-Second Congress," and the words "including those of the Forty-second Congress."

"I am opposed to the increase which has

been proposed by the gentleman from Massachusetts (Mr. Butler) to the salaries of members of Congress, whether members of the present Congress or of any future Congress. I am opposed to that proposition, because I believe that the salary now provided by law for members of Congress is as large as it ought to be, and no reason for the proposed increase has been given which has been satisfactory to my mind or which in my judgment will be satisfactory to the people of this country.

"But certainly, whatever reason there may be for the increase of the salaries of future members of Congress, no reason has been given why that rule should be applied to the members of the present Congress. We are now within about a week of the close of this Congress. The abolition of the franking privilege, which is stated as one reason why the salaries should be increased, has not yet taken effect, and does not take effect until the 1st day of July next. We, therefore, who are members of the present Congress, have lost nothing by the abolition of the franking privilege. And, among all the other reasons which have been given, there is no one I think which will commend itself to the judgment of the people of this country. I believe that their deliberate judgment will be that this proposed increase, so far especially as it relates to the present Congress, has no excuse or justification whatever, and that they will place the seal of their condemnation upon every member of this Congress who votes for such a measure as that. I believe it will be regarded by the people as simply disgraceful."

Mr. Butler, of Massachusetts, said: "I am sorry to trespass once more upon the House, but I can suggest a remedy to every gentleman who does not think this increase of salary is right and proper: let him come up and sign a pledge that he will not take the increase. Virtuous men and true, come up and sign it. I am simply endeavoring to fix the rate of pay at what I know a man, economically living here with his family, can live upon. My amendment covers nothing more and a little less. I do not believe that a man is bound to come to Congress and get into a back-room in the third story of a boarding-house, climbing up two or three flights of stairs at night when his duties for the day are done. I think he ought to live as he does at home and receive enough to pay his family expenses and to educate his children. Now, that cannot be done on less than \$7,500. I am certain every man here ought to have his living expenses, and that is my experience of the cost of living here. I am ready to go to my constituents on that, and I know that they get their money in the hardest way.

"I know that the people of this country are not half so much troubled about what salaries we get as about what we do. If we can be in a condition so that we can feel easy here to do

our duty we can better serve our constituents. I do not want to put this amendment upon any other grounds than the fair and just considerations which should influence members. And I call attention to this great fact: that by this amendment we cut off mileage and stationery and other allowances, so that, even with economical living, \$7,500 a year will not be more than enough to enable members to make both ends meet."

The question was then taken upon the amendment of Mr. Upson, to strike out of the amendment moved by Mr. Butler, of Massachusetts, all in relation to Senators, members of Congress, and Delegates of the Forty-second Congress, and upon a division there were—yeas 60, nays 76.

The question recurring on the amendment of Mr. Butler, of Massachusetts,

Mr. Potter moved to amend the amendment by striking out "\$7,500" and inserting "\$6,500."

The amendment was not agreed to.

The question again occurred on the amendment of Mr. Butler, of Massachusetts.

Mr. Coburn, of Indiana, said: "I move to amend by striking out so much of the amendment as provides for increasing the pay of the President, Vice-President, and members of the Senate and House of Representatives. Mr. Chairman, I do not think I undervalue the services of members of Congress. I believe that no member of Congress, unless he practices strict economy and has a small family, can live upon \$5,000 a year comfortably."

The question recurred on Mr. Coburn's amendment; which was disagreed to.

The question then recurred on the amendment of Mr. Butler, of Massachusetts.

The committee divided; and the tellers reported: yeas 81, nays 66.

So the amendment was agreed to.

Mr. Butler, of Massachusetts: "I now offer the following amendment, which is in main the amendment reported by the Committee on Appropriations:

Add to the amendment the following:

And there is hereby appropriated a sum sufficient to make the annual salaries of such of the clerks in the office of the House of Representatives as receive \$2,500 and upward (including the petition clerk and printing clerk), and not increased in this act, \$3,000 each; and of such as receive \$2,160, the sum of \$2,500 each; and of such as receive \$1,700, the sum of \$2,160 each; and of the clerks of the following committees, namely: Claims, Judiciary, Public Lands, Military Affairs, and elections, \$2,500 each; the Doorkeeper of the House \$3,000; and additional pay to the chief-engineer \$360 (so as to equalize his pay with that of the chief-engineer of the Senate), and additional pay to the foreman of laborers, \$120 per annum. And it is hereby provided that the increase of compensation of the officers, clerks, and others in the employ of the Senate and House of Representatives shall apply to the present Congress, and a sum sufficient therefor is hereby appropriated.

Mr. Burdett, of Missouri, said: "I offer the following amendment to the amendment of the gentleman from Massachusetts (Mr. Butler)."

The Clerk read as follows:

Add the following words:

And the messenger in charge of the documents in the office of the Clerk of the House the sum of \$2,160 per annum; and such as now receive \$1,440, the sum of \$1,800 each per annum; and such as now receive \$8.00 per day, the sum of \$1,800 each per annum.

Mr. Burdett: "I submit to the House that it is not the just course merely to begin at the head and select out a few of the better-paid employes, although I do not antagonize them, for I believe it is just to give them an increase of pay. But, while we are doing that, let us be equally just to the men who are receiving a less salary for a larger amount of work than many of those to whom the amendment which has been submitted in this printed slip, and which is now offered by the gentleman from Massachusetts, applies. I hope the committee will agree to the amendment I have offered."

The question was taken on the amendment to the amendment offered by Mr. Burdett; and it was agreed to.

The question recurred on the amendment of Mr. Butler, of Massachusetts, as amended.

Mr. Sargent: "I move that the committee rise."

The amendments proposed were concurred in by the Committee of the Whole, and the bill was reported to the House, which refused to concur in all the amendments made in the Senate to the bill. A committee of conference was then appointed on the disagreeing votes of the two Houses.

In the Senate, on March 1st, the Appropriation Bill was considered with the amendments made in the House.

Mr. Edmunds, of Vermont, said: "I move to amend the amendment of the House by striking out all after the provision for the salary of the President of the United States. If I may be pardoned for one single moment, my object in making that distinction is, that as to the President of the United States the Constitution provides that his salary shall not be increased during the term for which he is elected. If the same rule applied to the Vice-President, then I should make the motion to strike out all after 'Vice-President.'"

Mr. Sherman, of Ohio, said: "I believe that the President of the United States ought to have, and I am willing to vote that he shall have, an increase of salary, a salary of \$40,000 or \$50,000, for reasons that are manifest. I do not wish to discuss them. I think some of the heads of the Departments, perhaps all of them, for they ought all to be on the same footing, ought have some increase; but I am opposed to and desire a separate vote upon the increase of the salaries of members of Congress. This is a question that all of us understand; every man has made up his mind about it, made up his opinion upon it; and therefore I think we ought definitely to take our course upon these various propositions."

Mr. Hamilton, of Maryland, said: "I am opposed generally to this whole proposition, for the reason assigned by an honorable Senator from New York, to some extent, and that is that it is certainly a bad example for us to set to the people that at the close of a session we should hurry through these two Houses of Congress a bill not only increasing our own salaries, but the salary of nearly every leading officer of this Government, when we have no chance of discussing the necessity for the increase of some of them at all events. The reason for increasing some may be apparent, but of others it is not so."

Mr. Carpenter, of Wisconsin, said: "Mr. President, whenever a bill is brought in to increase the salary of any particular officer, it is said that the salaries of all our officers ought to be increased, but it ought to be done by a general bill. This comes the nearest to a general bill that I have ever known in the Senate, and now it is said this is not the time to increase the salaries, though all admit that they are wholly inadequate."

"This is much more important than the amount of money involved. The real question is whether poor men shall be allowed to participate in the administration of the Government. Rich men are all opposed to increasing salaries. That is after their kind. They would abolish salaries altogether if they could, and then only rich men could hold the offices. They would be quite willing to take and administer this Government, make its laws, fill the bench, and take care of the people, without a cent of salary. Take a Senator worth his million or two, what does he care whether the pay of a Senator is five or ten thousand dollars. The difference would not make a ripple on his bank account; but it would settle the question with a poor man whether he could be a Senator or not."

"The most perfect equality between the sons of the rich and the sons of the poor that I ever saw was in the Military Academy at West Point twenty-five years ago. The pay of every cadet was the same, and no cadet was allowed to receive a cent from any relative or source whatever except the government. He was credited with his pay, and charged with the things he was permitted to buy. I was there two years, and the only cent of money I saw during that time was a ten-cent piece that I picked up on the pavement one morning. As I could not spend it, I threw it into my trunk, and it remained there till I went on furlough. The result of that system was that merit, industry, brains alone, determined the standing of a cadet. And not unfrequently the cadet who graduated at the head of his class was the son of a poor and obscure man."

"Increase the pay of members of Congress so as to pay the reasonable expense of living and a fair compensation for the labor we perform, and you open Congress to brains. Re-

duce the pay and you open it to men of wealth. Men will fill these seats not for what they are, but for what they have. The rich will run the Government without pay in the form of salary. Then will be realized the old idea of the rich taking care of the poor; taking care of them as the wolf takes care of the lamb."

Mr. Cameron, of Pennsylvania, said: "I shall vote for this amendment mainly because I think the salary of the President ought to be increased. I think besides that a number of officials here ought to have higher salaries. As to the pay of members of Congress, I do not care a button about it myself. I came here first at eight dollars a day, and that pay covered all my expenses then. After a while I got \$3,000 a year, and it took all of that to pay them; and now I get \$5,000 a year, and, although I have no family here except my wife and myself, it costs me twenty-five dollars a week more than I receive from the Government for my board. But to me it makes no difference what the pay is. There are other gentlemen, however, who come here to serve the country and who ought to be paid a fair and reasonable compensation. When a man gets as old as I am it makes very little difference what salary he gets. If he cannot live himself, somebody will take care of him and help him to live. But a member of Congress certainly ought to be paid as much here as he can make at home, and so ought all of these officials."

"The truth is that the expenses of living have grown every year for the last fifty years in the city of Washington. I said when I first came here I got eight dollars a day; but I made a mistake. That was when I came to the Senate. When I first came to this city I got ten dollars a week, and I boarded then for four dollars a week. Afterward I got eight dollars a day, and I had the best living that there was in Washington. I boarded at Gadsby's, and we had canvas-back ducks on the table every day in the season, and every thing else in proportion, and I only paid ten dollars a week board. Mr. Buchanan, my predecessor, paid nine dollars for his board. Now members of Congress pay from forty-five to seventy-five dollars a week; and why should they not receive a salary sufficient at least to pay their expenses?"

Mr. Wright, of Iowa, said: "I am opposed to the entire amendment as it comes from the House of Representatives. I am opposed to it in all its parts. I state my reasons for this opposition on two grounds. If there is any one thing that the party to which I belong is committed more than another it is economy in the administration of this Government. We went to the people of this nation upon that as a part of our platform. The people of this nation had a right to believe that we were honest, and now, the first opportunity that we have to give evidence of that honesty, we pro-

pose to increase the salary of every leading officer in this nation. Not alone the Republican party of this country, but the other party as well, was committed to the same doctrine. Now, I believe that all parties in this nation should act honestly with the people, and in proportion as they fail to act honestly with the people in the same degree must they fail, and they ought to.

"In the next place, Mr. President, I am opposed to this proposition for the reason that, in my judgment, this is of all times the most inopportune for it. Now while I am talking to you, and since we have commenced this session, every day we have had evidence of the difficulty of the Government in absolutely paying for the actual wants of the Government in its actual and necessary administration. We know that so far as the taxes are concerned, as now assessed, it is almost impossible to pay the actual running expenses of the Government in connection with the interest upon our public debt. All over this land there is a complaint of taxation, and want, and suffering. Every day the cry comes to us from the people. I recognize this as a Government of the people. I recognize it as our bounden duty to remember who they are, and their condition. I say no man is guiltless who stands here and forgets that this is a Government of the people and their condition, and, when we ignore that and stand here and take counsel from our feelings or our own interests instead of the interests of the people, we are untrue to them and the high trust that devolves upon us."

The Vice-President: "The question is on the amendment of the Senator from Vermont to the amendment to strike out all of the House amendment except that which increases the salary of the President."

The question being taken, resulted—yeas 20, nays 88; as follows:

YEAS—Messrs. Borman, Buckingham, Caldwell, Casserly, Chandler, Cole, Corbett, Cragin, Edmunds, Frelinghuysen, Hamlin, Harlan, Howe, Morrill of Maine, Morrill of Vermont, Pratt, Sherman, Thurman, Wilson, and Wright—20.

NAYS—Messrs. Ames, Bayard, Blair, Brownlow, Cameron, Carpenter, Clayton, Conkling, Cooper, Davis, Fenton, Ferry of Michigan, Flanagan, Gilbert, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Kelley, Lewis, Logan, Machen, Morton, Norwood, Nye, Pool, Ramsey, Ransom, Rice, Robertson, Sawyer, Schurz, Spencer, Stevenson, Stewart, Trumbull, Vickers, and West—88.

ABSENT—Messrs. Alcorn, Anthony, Ferry of Connecticut, Hitchcock, Johnaton, Osborn, Patterson, Pomeroy, Saulsbury, Scott, Sprague, Stockton, Sumner, Tipton, and Windom—15.

The Vice-President: "The Senator from Maine moved a non-concurrence in all the amendments of the House. The Senator from Ohio demands a separate vote on this amendment, and the question will be taken on concurring, which is the converse of non-concurrence."

Mr. Morton, of Indiana, said: "I move to

strike out so much of this amendment as refers to Senators and Representatives in Congress and Delegates from the Territories. If I am to have the name of having my salary increased, I want it substantially increased; I want it increased in such a way as to amount to something. The increase here, giving \$8,500 for salary in lieu of mileage, stationery, and newspapers, would be an increase to me of \$800. I prefer to let it stand as it is rather than to have such a change as that makes."

Mr. Corbett, of Oregon, said: "If I am going to vote for an increase of salary, I should like to have it sufficient to make it an increase and not a decrease. In the case of those from the Pacific coast this is a reduced salary. My friend from Pennsylvania says, why should the man from California receive more than a man residing nearer? I think there is a very good reason. When a member lives at the distance of California from the seat of Government it is impossible for him to attend to his business. Saying nothing of my own case, I know others from the Pacific coast who leave their business entirely and come here to attend to the public business. They have to leave every thing there, and cannot return to supervise or look after business. They ought to have something to compensate them for it. Those living nearer can return to their homes and supervise their business to some extent. Those living at a greater distance are compensated to some extent by the mileage; but of course their expenses are greater. I am opposed to this measure, and in opposing it I am not representing myself but those who are to come after me. I represent those that are to take my place, and this decreases their salary. Therefore, I do not think it a fair bill."

The Presiding Officer: "The Senator from Indiana withdraws his amendment."

Mr. Buckingham, of Connecticut, said: "I offer the following amendment, to insert after the word 'therefor,' in the provision for Senators, Representatives, and Delegates, the following proviso:

Provided: That the increase in the salaries of Senators, members, and Delegates in Congress shall not take effect until on and after March 4, 1877.

"I merely propose that so that we shall not be charged with 'voting ourselves a farm.'"

The Presiding Officer: "The question is on the amendment of the Senator from Connecticut."

The Presiding Officer (Mr. Anthony in the chair): "The question is on the amendment offered by the Senator from Connecticut."

The amendment was rejected.

Mr. Edmunds: "I renew the motion made by the Senator from Indiana, which he withdrew, to strike out in this House amendment all that relates to Senators and members of Congress, and Delegates, on which question I ask for the yeas and nays."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Anthony, Boreman, Buckingham, Casserly, Chandler, Cole, Corbett, Cragin, Edmunds, Ferry of Michigan, Frelinghuysen, Hamilton of Maryland, Hamlin, Harlan, Howe, Morrill of Maine, Morrill of Vermont, Morton, Pratt, Schurz, Sherman, Thurman, Windom, and Wright—24.

NAYS—Messrs. Alcorn, Ames, Blair, Brownlow, Caldwell, Cameron, Carpenter, Clayton, Conkling, Cooper, Davis, Fenton, Flanagan, Gilbert, Goldthwaite, Hamilton of Texas, Hill, Kelley, Lewis, Machen, Norwood, Nye, Pool, Ramsey, Ransom, Rice, Robertson, Sawyer, Spencer, Stevenson, Stewart, Stockton, Tipton, Trumbull, Vickers, and West—86.

ABSENT—Messrs. Bayard, Ferry of Connecticut, Hitchcock, Johnston, Logan, Osborn, Patterson, Pomeroy, Saulsbury, Scott, Sprague, Sumner, and Wilson—13.

So the amendment was not agreed to.

Mr. Edmunds: "I am so well satisfied from the votes of the Senate that they are in favor of this amendment, that I move that the Senate concur in it, and we will try it that way."

The Presiding Officer: "The Senator from Vermont moves that the Senate concur with the amendment of the House, and the question therefore recurs on the motion of the Senator from Vermont (Mr. Edmunds) to concur in the amendment of the House of Representatives."

Mr. Edmunds: "The amendment in which I move to concur, as some gentleman asks, is this very salary amendment. I make the motion not because I am in favor of it. I am entirely against it; but, as the Senate has refused to strike out the very part of it that seemed most objectionable, I wish to have the Senate brought to a direct vote on the question of concurring, so as not to mislead the conferees of the House unless we want to concur, and if we do we had better say so and not mislead the conferees of the House, from our negative votes in refusing to strike out, into the idea that we are for the amendment."

Mr. Casserly, of California, said: "I heard the Senator from Vermont in regard to his own purpose in offering this motion. I understood him to say that the object of it really was to prevent a disagreement between the Senate and the House as to this business of an increase of salaries, and thus to deprive a conference committee of any power to increase them. I am as much opposed as any one can be to the great powers claimed and exercised, improperly as I think, by committees of conference in really legislating instead of simply reconciling differences between the two Houses. The purpose of the Senator from Vermont, however laudable in itself, is, however, one which takes up too much time to explain to the common mind, and, as I am against this increase of salaries for the most part, though not entirely, and have so voted, not only to-night, but on a previous occasion when the same question or part of it was before the Senate, I shall not be able to vote for the motion of the Senator from Vermont to concur in this amendment. Were I

to do that, I should seem to stultify myself; I should be voting against all the votes I have thus far given at this session on this subject."

The Presiding Officer: "The question is on the motion of the Senator from Vermont (Mr. Edmunds) to concur in the amendment of the House of Representatives to the amendments of the Senate, upon which the yeas and nays have been ordered."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Bayard and Stockton—2.

NAYS—Messrs. Alcorn, Ames, Anthony, Blair, Boreman, Brownlow, Buckingham, Cameron, Carpenter, Casserly, Chandler, Conkling, Cooper, Corbett, Cragin, Davis, Edmunds, Fenton, Ferry of Michigan, Flanagan, Gilbert, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Hitchcock, Howe, Kelley, Lewis, Logan, Machen, Morrill of Maine, Morrill of Vermont, Morton, Norwood, Pool, Pratt, Ramsey, Ransom, Robertson, Saulsbury, Sawyer, Schurz, Scott, Sherman, Spencer, Stevenson, Thurman, Tipton, Trumbull, Vickers, West, Wilson, Windom, and Wright—55.

ABSENT—Messrs. Caldwell, Clayton, Cole, Ferry of Connecticut, Frelinghuysen, Hamlin, Harlan, Johnston, Nye, Osborn, Patterson, Pomeroy, Rice, Sprague, Stewart, and Sumner—16.

So the Senate refused to concur in the amendment of the House.

In the House, on March 8d, the report of the committee of conference was made. It recommended that the Senate recede from its disagreement to the amendment of the House, to the first amendment of the Senate, etc.

Mr. Morrill, of Maine: "I now move that the Senate insist on all its remaining amendments disagreed to by the House of Representatives, non-concur in the amendments of the House to the amendments of the Senate, and ask for a committee of conference on the disagreeing votes of the two Houses."

The motion was agreed to.

Mr. Morrill, of Maine: "I move that the committee of conference on the part of the Senate be appointed by the Chair."

The motion was agreed to.

Mr. Morrill, of Maine, Mr. Carpenter, and Mr. Stevenson, were appointed the conferees on the part of the Senate.

The Presiding Officer (Mr. Anthony) subsequently said: "The Senator from Kentucky (Mr. Stevenson) desires to be excused from serving on the committee of conference on the legislative, etc., appropriation bill. If there be objection he will be excused, and the Chair appoints the Senator from Delaware (Mr. Bayard) in his place."

Mr. Garfield, of Ohio, said: "I now call the previous question on agreeing to this report of the committee of conference."

The question being, "Shall the main question be now put?"

It was then taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Adams, Averill, Banks, Erasmus W. Beck, Bigby, Biggs, Bingham, James G. Blair,

Boorman, Boles, Buckley, Burdett, Benjamin F. Butler, Roderick R. Butler, Caldwell, Campbell, Carroll, Cobb, Coghlan, Conner, Critcher, Crocker, Darvall, Dickey, Dodds, DuBose, Duell, Duke, Eldridge, Elliott, Henry D. Foster, Garrett, Getz, Giddings, Golladay, Griffith, Haldeman, Hancock, Hanks, Harmer, Harper, George E. Harris, Hays, John W. Hazelton, Herndon, Houghton, Kelley, Kendall, King, Lamison, Lampert, Lansing, Leach, Maynard, McHenry, McKee, McNeely, Benjamin F. Meyers, Morey, Morphis, Leonard, Myers, Negley, Silas L. Niblack, Puckard, Peck, Perry, Peters, Platt, Price, Prindle, Rainey, Randall, John M. Rice, Robinson, John Rogers, Sion H. Rogers, Sargent, Shanks, Sherwood, Slater, Sloss, Worthington C. Smith, Snapp, Storm, Stoughton, Stowell, St. John, Sutherland, Sypher, Taft, Thomas, Dwight Townsend, Turner, Tutill, Twichell, Voorhees, Waddell, Wakeman, Wallace, Whiteley, Williams of Indiana, Winchester, and Young—108.

Nays—Messrs. Ambler, Arthur, Barber, Barnum, Beatty, Bell, Bird, Austin Blair, Butrinton, Burchard, Clarke, Coburn, Conger, Cotton, Cox, Crebs, Davis, Dawes, Donnan, Dox, Dunnell, Eames, Ely, Farnsworth, Finkelburg, Wilder D. Foster, Frye, Goodrich, Hambleton, Handley, John B. Hawley, Joseph R. Hawley, Hay, Gerry W. Hazelton, Hereford, Hibbard, Hill, Hoar, Holman, Kellogg, Kerr, Ketchum, Kinsella, Lewis, MacIntyre, Manson, Marshall, McClelland, McCormick, McCrary, McGraw, McJunkin, Merriam, Merrick, Monroe, William E. Niblack, Packard, Palmer, Hosea W. Parker, Potter, Ellis H. Roberts, Rank, Scofield, Sessions, Shellabarger, Shoemaker, Slocum, John A. Smith, Spear, Sprague, Starkweather, Stevens, Stevenson, S. Vann, Terry, Washington Townsend, Upson, Walden, Waldron, Warren, Wells, Wheeler, Willard, and John T. Wilson—84.

Not Voting—Messrs. Acker, Ames, Archer, Barry, James B. Beck, Braxton, Bright, Brooks, Bunnell, Comingo, Creely, Crossland, Esty, Farwell, Forker, Charles Foster, Garfield, Hale, Halsey, John T. Harris, Havens, Hooper, Killinger, Lowe, Lynch, McKinney, Mitchell, Moore, Morgan, Orr, Isaac C. Parker, Pendleton, Perce, Poland, Porter, Read, Edward Y. Rice, Ritchie, William R. Roberts, Roosevelt, Sawyer, Seelye, Sheldon, Shober, H. Boardman Smith, Snyder, Tyner, Van Trump, Vaughan, Whitthorne, Williams of New York, Jeremiah M. Wilson, and Wood—58.

So the main question was ordered.

The Speaker: "The previous question having been seconded and the main question ordered, the gentleman from Ohio (Mr. Garfield) who submits this report is entitled to one hour."

Mr. Garfield: "Mr. Speaker, if I can have the attention of the House I will explain the points embraced in this report, in reference to the salaries of the President, Vice-President, Cabinet officers, members of the Supreme Court, and members of the two Houses of Congress; the amendment known as the Butler amendment was agreed to by the Senate in every thing except the provision in reference to the salary of members of Congress. I wish to state in a few words the condition of that question in the conference. In the first place the Senate voted directly on the proposition to strike out the provision increasing the salary of members of Congress, and by a large vote refused to strike it out. The Senate conferees insisted that the \$6,500 clause, cutting off mileage, actually reduced the pay of some eighteen members of the Sen-

ate. They refused therefore to submit to an amendment which cut down the salary of so many Senators. The Senate conferees were unanimous in favor of fixing the salary at \$7,500 and cutting off all allowances except actual individual traveling expenses of a member from his home to Washington and back again once a session, and cutting off all other allowances of every kind. That proposition was agreed to by a majority of the conferees on the part of the House. I was opposed to the increase in conference as I have been opposed to it in the discussion and in my votes here; but my associate conferees were in favor of the Senate amendment, and I was compelled to choose between signing the report and running the risk of bringing on an extra session of Congress. I have signed the report and I present it as it is, and ask the House to act on it in accordance with their best judgment."

Mr. Hibbard, of New Hampshire, said: "I desire to ask the gentleman how much plunder will be taken from the Treasury if this raising of salaries is adopted?"

Mr. Garfield, of Ohio: "I am glad the gentleman has asked me that question. The report presented here, taking into account the changes made with reference to the salaries of members and officers of both Houses and other increases of salaries in this bill, will, according to the best estimate I have been able to make, involve an annual increase of expenditure of about three quarters of a million dollars."

Mr. Hibbard: "How much for the present Congress?"

Mr. Garfield: "For the present Congress it involves an additional expenditure of about one and a quarter million. I think the House ought to know all the facts."

Mr. Farnsworth, of Illinois, said: I desire to place upon record my earnest protest against the adoption of the conference report, and if possible to awaken the House and the country to what it involves—that within less than twelve hours of the close of this Congress we are gravely proposing to vote to ourselves some five or six thousand dollars each out of the public Treasury of the United States, and at the same time to double the President's salary, and to increase the salaries of nearly all the *attachés* of this House and of other officials of the Government who now receive high salaries.

"Sir, I appeal, if not to the manhood, to the sense of justice of members of this House not to adopt this report. It is disgraceful, and will greatly help to render this Congress infamous—a Congress already without the confidence of the people. Let us have the manhood and decency to stamp upon this scheme for raising our own salaries and purchasing favors of a President by increasing his, in clear violation of the spirit if not the letter of the Constitution."

Mr. Niblack, of Indiana, said: "A large majority of those coming here can live decently upon the amount of compensation they now receive. This is especially true of the gentlemen from the interior or rural districts. The number, therefore, which is really in need of more pay and is fairly entitled to it is comparatively small. If we make the increase proposed, gentlemen in the first place will only spend more money to get here, and in the second place, when they get here they will spend more money in living while here. We can get along decently without any increase of compensation. Therefore I think it is better for the country, better for ourselves, better for the politics of the country especially, better from every stand-point from which I can view the question, that we should allow the matter of compensation to remain as it is for the present. It does seem to me most extraordinary indeed to vote ourselves back pay for the past two years when we have already received the compensation allowed us by law. Others may do this, but I cannot and will not.

Mr. Randall, of Pennsylvania, said: "When I went into the conference on this bill I found that there were three overshadowing questions beyond all others which were in controversy between the two Houses. The first one that met us in committee was this question of salaries. Upon that question I have uttered no doubtful sound and have made no doubtful record in this House. I have declared to the country and to my constituents that I believed I have earned \$7,600 a year since I have been in this Congress, and that I could not live here for less with my family with any sort of decency. I do not know how it may be with members from the rural districts, to whom my friend from Indiana (Mr. Niblack) has referred, but I could not go into a conference and suggest that there should be any difference in this respect between rural members and those who come from cities.

"There is another consideration upon this question of salaries; almost all members of Congress are compelled, like myself, to keep up a residence here while at the same time retaining their residences within the State from which they come.

"The gentleman from Illinois (Mr. Farnsworth) has talked about the 'manhood' of this report. Why, sir, I would like to ask him whether it is not more manly to stand here and vote deliberately in the face of the whole country for this increase than it is for a member to raise his voice in a demagogical strain against such a proposition and then, as soon as the law takes effect, to go and draw the money from the Treasury. Any man here who raises his voice against this increase should not, in my judgment, take the money if the measure passes."

Mr. Hawley, of Connecticut, said: "I have but one word to say on this subject. I have

been among those who sincerely hoped that this Congress would take some steps toward resumption of specie payments, and the restoration of a sound currency to this country. The Government of the United States is to-day in a condition of practical bankruptcy and repudiation, with a currency promising to pay money, which promise is not fulfilled at the Treasury. Should this currency ever be restored to a sound basis (and it is the duty of the Federal Government to provide a sound currency), it would then have at least twenty-five per cent. greater purchasing power than it has now. I then respectfully submit to the members of this House whether it is not their duty, in accordance with the sound principles of political economy, first to give this country an honest currency, and in that way legitimately increase the salary they already have.

"Upon the general proposition I have already expressed my opinion with as much vehemence and decision as I could muster at the time. I protested against it then as I especially protested against that which gives members of Congress \$5,000 to put into their pockets for past services. I continue to protest against it. I am not willing to vote for it whether it defeats this bill or not and whether it makes one or half a dozen extra sessions. That is all."

Mr. Butler, of Massachusetts, said: "It is said that this is an inauspicious time to raise salaries. In my judgment it is a most auspicious time. The presidential election has taken place, determining the policy of the country for four years, so that no miserable demagogue can make any political capital out of it. Both sides of the House are voting for it; and he is a mean man that objects to it, and I am satisfied he cannot find men mean enough to reflect him. I put myself upon that prophecy, and you will see how it comes out; and it will not be a great time till it is determined.

"We have just had a presidential election; and do gentlemen reflect that if we refuse to raise the President's salary at this time it cannot be raised under the Constitution for four years?"

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Adams, Averill, Banks, Bigby, Bingham, James G. Blair, Boardman, Boies, Buckley, Burdett, Benjamin F. Butler, Roderick R. Butler, Caldwell, Carroll, Cobb, Coghlan, Conner, Critcher, Crossland, Darrall, Dickey, DuBose, Duell, Duke, Eldridge, Elliott, Henry D. Foster, Garfield, Garrett, Getz, Giddings, Golladay, Griffith, Hancock, Hanks, Harmer, Harper, George E. Harris, Hays, John W. Hazelton, Herndon, Houghton, Kendall, Kling, Lamson, Lampert, Lansing, Leach, Lowe, Maynard, McHenry, McJunkin, McKee, McKinney, McNeely, Benjamin F. Meyers, Morey, Morphis, Leonard Myers, Noyes, Silas L. Niblack, Packard, Isaac C. Parker, Peck, Perce, Perry, Platt, Price, Prindle, Rainey, Randall, John M. Rice, Robinson, John Rogers, Sion H. Rogers, Sargent, Shanks, Sheldon, Sherwood, Sloss, Snapp, Snyder, Storm, Stoughton, Stowell, St. John, Sutherland, Sypher, Taffe, Thomas, Dwight Townsend, Turner, Tutbill, Twichell, Voorhees, Waddell, Wallace, Whiteley,

Williams of Indiana, Jeremiah M. Wilson, Winchester, and Young—102.

YAYS—Messrs. Ambler, Archer, Arthur, Barber, Barnum, Beatty, Bell, Bird, Austin Blair, Bright, Buffinton, Bunnell, Burehard, Campbell, Clarke, Coburn, Conger, Cotton, Cox, Crebs, Crocker, Davis, Dawes, Donnan, Dox, Eames, Ely, Farnsworth, Finkelnburg, Charles Foster, Wilder D. Foster, Frye, Goodrich, Hale, Hambleton, Handley, John T. Harris, Havens, John B. Hawley, Joseph R. Hawley, Hay, Gerry W. Hazelton, Hereford, Hibbard, Hill, Hoar, Holman, Kellogg, Kerr, Ketcham, Killinger, Lewis, Lynch, Macfytire, Marshall, McClelland, McCormick, McCrary, McGrew, Merriam, Merrick, Monroe, William E. Niblack, Orr, Paeker, Palmer, Hosea W. Parker, Pendleton, Poland, Ellis H. Roberts, Rusk, Sawyer, Seefield, Sessions, Shellabarger, Shoemaker, Slater, Slocum, H. Boardman Smith, John A. Smith, Worthington C. Smith, Spear, Sprague, Starkweather, Stevens, Stevenson, Terry, Washington Townsend, Upson, Walden, Waldron, Warren, Wells, Wheeler, Willard, and John T. Wilson—96.

NOR VOTING—Messrs. Acker, Ames, Barry, Erasmus W. Beck, James B. Beck, Biggs, Braxton, Brooks, Comingo, Creely, Dodds, Dunnell, Esty, Farwell, Forker, Haldeman, Halsey, Hooper, Kelley, Kinsella, Manson, Mitchell, Moore, Morgan, Peters, Porter, Potter, Read, Edward Y. Rice, Ritchie, William R. Roberts, Roosevelt, Seeley, Shober, Swan, Tyner, Van Trump, Vaughan, Wakeman, Whitthorne, Williams of New York, and Wood—42.

So the report of the committee of conference was adopted.

In the Senate, on March 3d, a report of the committee of conference was made.

Mr. Morrill, of Vermont, said: "I make the point of order that the committee of conference have transcended any matter that was committed to their jurisdiction in this: that whereas the House had fixed the salaries of members of Congress at \$6,500, the Senate rejected the proposition almost unanimously, but two voting against its rejection; that there was no matter of difference between the two Houses except the difference between the present salary and \$6,500. I therefore make the point of order that they have transcended their jurisdiction and that the report should be rejected."

Mr. Carpenter, of Wisconsin, said: "The Senator from Vermont, in stating the facts of this case, overlooked one very important fact, and that is, that the Senate voted down the proposition to concur, upon the ground, as expressed by at least half a dozen Senators who spoke on the subject, that the sum fixed by the House was too small. I rose in my place and inquired of the Chair whether, if the matter was sent to a committee of conference, the committee would have power to raise as well as decrease the sum, and I was informed that undoubtedly such power existed. That took place in open Senate while we were discussing the question of concurring in the amendment of the House."

Mr. Morrill, in reply, said: "I should like to know what plain common people would understand by our voting down a proposition for \$6,500? Does not the country understand

that it was rejected? I do not understand any jugglery by which we voted down \$6,500 on the ground that it was not enough."

The Vice-President: "The Chair overrules the point of order. The House of Representatives sent to the Senate an amendment to this bill changing salaries in various ways. The Senate refused to concur. They also refused to strike out the provision in regard to the salaries of members of Congress. They refused to strike out all of the amendment except that portion relating to the salary of the President. They therefore left the salary question an open question and referred it to the conference committee. It may be a good argument against voting for the conference report that the salaries are not in accordance with what the Senator from Vermont thinks they should be; but to restrict the conference committee in a free conference to the differences between the present salary and the salary fixed by the House of Representatives under their amendment, the Chair thinks, would be limiting the conference more than conference committees have ever been. Therefore the Chair decides that the report is not subject to the objection and the point of order made by the Senator from Vermont."

Mr. Wright, of Iowa, said: "Accepting, then, the decision of the Chair, I move that the report be recommitted to the committee of conference, with instructions to strike out all that is contained in the amendment reported back on the subject of salaries, except so much as relates to the salary of the President. I do not remember the number of the amendment, but I refer to that portion of the report that relates to the salaries of the President and members of the Senate and House of Representatives, and the officers mentioned in that connection. My motion is, that the report be recommitted, with these instructions."

The Presiding Officer: "The Senator from Iowa (Mr. Wright) moved to recommit the report to the committee of conference, with instructions. A point of order being raised, the Chair ruled the motion to be in order. From that decision an appeal was taken, and the question is, 'Shall the decision of the Chair stand as the judgment of the Senate?'"

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Anthony, Boreman, Chandler, Ferry of Michigan, Hamilton of Maryland, Harlan, Howe, Pratt, Sherman, Sprague, and Wright—11.

NAYS—Messrs. Alcorn, Bayard, Blair, Brownlow, Buckingham, Caldwell, Cameron, Carpenter, Casserly, Clayton, Cole, Conkling, Cooper, Cragin, Davis, Flanagan, Goldthwaite, Hamilton of Texas, Hamlin, Hill, Hitchcock, Kelly, Lewis, Logan, Machen, Morrill of Maine, Norwood, Nye, Osborn, Patterson, Pool, Ramsey, Ransom, Rice, Robertson, Saulsbury, Sawyer, Schurz, Scott, Stevenson, Stewart, Tipton, Trumbull, Vickers, West, and Windom—46.

ABSENT—Messrs. Ames, Corbett, Edmunds, Fenton, Ferry of Connecticut, Frelinghuysen, Gilbert, Johnston, Morrill of Vermont, Morton, Pomeroy,

Spencer, Stockton, Sumner, Thurman, and Wilson—16.

So the decision of the Chair was overruled.

The Presiding Officer: "The question recurs on agreeing to the report of the committee of conference."

Mr. Wright: "I now move to recommit the report without instructions."

Mr. Edmunds, of Vermont, said: "Mr. President, I wish to call the attention of the Senate particularly to the fact (because I feel sure that no Senator can have noticed it, and it must have escaped the observation of our respected representatives, the conferees on the part of the Senate) that this bill by a mere inadvertence undoubtedly provides that we shall pay the members of this present Congress for the two years that have now expired an additional salary of \$2,500 per annum, which for the two years amounts to \$5,000 for each of us for the past. If you suppose that the number of Senators and Representatives is altogether three hundred, and it is somewhat more than that, I believe, you have a million and a half dollars which you propose to take from the Treasury of the United States to pay us salaries for the time we have served under the existing laws where the salaries have been fixed by law, and we propose to change the law backward for two years in order to put into our pockets this additional compensation."

"As I said, I am bound to presume that that circumstance has escaped the notice of Senators and the notice of the committee, and that the conferees of the two Houses could not have intended that we should make a special exception in favor of ourselves, and violate the principle that we impose upon every other servant of the Government, by changing the law retrospectively for two years in order that we may pocket a million and a half of the money of the people. You do not do that for the President of the United States, whose salary has been the most meagre. You do not do it for the Vice-President of the United States; you do not do it for the Secretary of the Treasury; you do not do it for the Secretary of War, or any of the other Secretaries; you do not do it for the poor clerk, whose services you vote \$1,200 a year to pay. Say the law-makers, 'Because we have it in our power we will make a special exception in favor of ourselves, and will reverse every principle of legislation that ought to be practised in a civilized community and pocket a million and a half of the money of the people.'"

Mr. Carpenter said: "Mr. President, the Senator from Vermont (Mr. Edmunds) judges other men entirely by himself. As nothing ever escapes his notice, he supposes that nothing ever escapes the notice of anybody else, except by accident."

"Mr. President, this proposition is right or wrong. If it is wrong to put up the salary of members of Congress, it of course should not be raised. If it is right to raise it, it was just

as proper to have raised it five years ago as it is to-day. And this Congress which has been serving two years has been serving with insufficient pay if the next Congress would serve with insufficient pay at the present rates. There is no constitutional objection, none will be pretended, to this Congress doing justice to itself as well as to the next and all succeeding Congresses. We might, if we pleased, commence on the first day of the term and give a monthly pay, enough to pay our cigar-bills and our hack-hire from the Capitol to our boarding-houses, and save it all till the very last day and then vote a reasonable compensation for the two years' service. That would be constitutional and perfectly regular."

"How is it with the precedents? I understand in every instance in which the pay of Congress has been raised it has been made to date back to the Congress that raised it. And, upon this same principle, if the Senator from Vermont can show that we ought not to increase the salary, that \$5,000 is ample pay for the work we do, then he makes out a good case against this bill. If he cannot show that, he makes out no case against dating its provisions with the commencement of this Congress. There has been no change in the condition of things, no change in the expenses of living, no change in the value of services within the last two years. If it is right now, it has been right all these two years for us to have more pay, and we violate no provision of the Constitution in granting it, and if we are authorized to raise it for other Congresses we violate no principle of right or justice in raising for this Congress."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Anthony, Boreman, Buckingham, Chandler, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Frelinghuysen, Hamilton of Maryland, Hamlin, Harlan, Kelly, Morrill of Vermont, Pratt, Schurz, Scott, Sherman, Sprague, Thurman, Windom, and Wright—24.

NAYS—Messrs. Alcorn, Ames, Bayard, Blair, Brownlow, Caldwell, Cameron, Carpenter, Casserly, Clayton, Cooper, Davis, Flanagan, Gilbert, Goldthwaite, Hamilton of Texas, Hill, Hitchcock, Howe, Lewis, Logan, Maehen, Morrill of Maine, Norwood, Nye, Osborn, Patterson, Pool, Ramsey, Ransom, Robertson, Saulsbury, Sawyer, Spencer, Stewart, Stockton, Tipton, Trumbull, Vickers, and West—40.

ABSENT—Messrs. Fenton, Ferry of Connecticut, Johnston, Morton, Pomeroy, Rice, Stevenson, Sumner, and Wilson—9.

Mr. Cragin, of New Hampshire, said: "And in about a month the election takes place in the State of Connecticut, and about the same time in the State of Rhode Island; and I predict here to-night that every one of them will go against the Republican party. I put that prediction on record, and within two months I shall call the attention of the Senate to that fact. I begin to believe that this Congress will never learn wisdom until the people shall teach them."

Mr. Thurman, of Ohio, said: "Mr. President,

there have been some very extraordinary things about this bill and about this raising of salaries. I think there has been about the greatest legerdemain in the way of legislation that I have ever seen, and now at this late hour for the Senator from New Hampshire to get up and make an argument, apparently against the bill, but really to carry all the Democratic votes for it, is the most extraordinary of all."

Mr. Hamilton, of Texas: "I hope the Senator from New Hampshire will possess his soul in peace. The Republican party has survived worse things than this."

The Vice-President: "The question is on concurring in the report of the committee of conference."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Alcorn, Ames, Bayard, Blair, Brownlow, Caldwell, Cameron, Carpenter, Clayton, Cooper, Davis, Flanagan, Gilbert, Goldthwaite, Hamilton of Texas, Hill, Hitchcock, Lewis, Logan, Machen, Morrill of Maine, Norwood, Nye, Osborn, Pool, Ransom, Rice, Robertson, Sawyer, Spencer, Stewart, Stockton, Tipton, Trumbull, Vickers, and West—36.

NAYS—Messrs. Anthony, Boreman, Buckingham, Casserly, Chandler, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Frelinghuysen, Hamilton of Maryland, Hamlin, Howe, Kelly, Morrill of Vermont, Patterson, Pratt, Ramsey, Saulsbury, Schurz, Scott, Sherman, Sprague, Thurman, Windom, and Wright—27.

ABSENT—Messrs. Cole, Fenton, Ferry of Connecticut, Harlan, Johnston, Morton, Pomeroy, Stevenson, Sumner, and Wilson—10.

So the report was concurred in.

In the Senate, on February 3d, the bill supplementary to an act entitled "An act to provide a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof," approved June 3, 1864, and to secure an elastic currency, to appreciate national obligations, and to reach specie payments without commercial embarrassment, was considered.

Mr. Thurman, of Ohio, said: "The bill contemplates a resumption of specie payments on the 1st day of January next, because, if the United States is to pay coin on the 1st of January next on United States legal-tender notes, and the banks are to be bound to redeem either in coin or in United States legal-tender notes, that is equivalent to a resumption of specie payments by all the banks. It is necessarily so. It is so because if the United States is to pay specie on its legal tenders upon presentation, then there will be no material difference in value between the legal-tender dollar and the gold dollar. There may be some slight difference, but it will be almost immaterial. Then you will have the United States legal-tender notes, a specie-paying currency, at par with specie; and if, therefore, the banks are to pay either in coin or in legal-tender notes, if they are to pay in specie or

what is equivalent to specie, it is a complete resumption of specie payments on the 1st day of January next throughout the whole length and breadth of the United States.

"Now, Mr. President, I am very apprehensive that that is too radical a measure. I am very apprehensive that such a resumption as that would end in one of two things: either in crushing no small number of these banks which would be unable to pay specie, or in Congress relaxing the law after it had passed it, and legalizing by some means or another the suspension of specie payments on the part of the banks, or else in repealing the very act which is before us requiring the Government to pay specie in redemption of legal-tender notes."

Mr. Cole, of California, said: "The bill provides that the Government shall pay in coin or something else."

Mr. Thurman: "But what I say is, this is said to be a bill to resume specie payments; if it is a bill to resume specie payments, then it contemplates the resumption on the 1st day of January next. If that is not the object, if the purpose is not to resume specie payments on the 1st of January next, then it is simply a bill to convert greenbacks into interest-bearing bonds. If that is the case, are we prepared to do that? Are we prepared to convert the \$300,000,000 or \$400,000,000—what is the exact amount?"

Mr. Sherman, of Ohio: "Three hundred and fifty-six million dollars."

Mr. Thurman: "Three hundred and fifty-six million dollars of greenbacks into interest-bearing bonds?"

Mr. Sherman: "The bill provides that they shall be paid out again."

Mr. Thurman: "I know it provides that they shall be paid out again, but then they can be converted again into interest-bearing bonds, and where are you going to stop? Every time they are paid out they may be reconverted into bonds, and where is to be the end of the public debt if this process of paying them out and reconvertng them into bonds is to go on from time to time at the pleasure of the Secretary of the Treasury?"

Mr. Sherman: "If my colleague will allow me, I will state that they can only be paid out for the extinguishment, purchase, and payment of the public debt, or for the payment of the current expenses of the Government. As a matter of course, the revenues of the Government being sufficient to pay the expenses of the Government, a sufficient revenue both in gold and paper money will come into the Treasury. Any of the notes received for bonds may be paid out for current expenses. Now, the revenue is supplied from the current receipts of the Government. It may be that the gold revenues may be used to purchase and pay the public debt, while the paper revenue might be used to pay the current expenses of the Government, our currency reve-

nue now being considerably less than enough to pay the expenses of the Government, while our gold revenue is considerably in excess of the gold demands upon the Treasury. That is the answer. It could not increase the public debt. But, to meet a criticism of that kind, we propose, or did propose, that we should expressly provide that it should not increase the public debt, although that is not necessary. I do not think it is necessary, and I do not think it would be of any avail; but the bill can be very easily amended in that way if it is desired. I will simply say that the money that is received for these bonds will only be used for the purpose of extinguishing a portion of the public debt, or for the purpose of paying and meeting the ordinary expenses of the Government. To that extent it would relieve so much of the revenues of the Government, which might be applied to the payment of the public debt."

Mr. Thurman: "Yes; but we cannot forget that within the last few months we have seen the Secretary of the Treasury reissue four or five millions of money when nobody pretended that the revenues of the Government were insufficient to pay its expenses. He thought there was warrant for it, and reissued them because there was a tight money market, because there was a corner in money in New York; and I cannot tell upon what pretext he might not reissue these notes; and thus the public debt might be increased.

"Nor do I know to an absolute certainty that the revenue of the Government will be sufficient to meet the expenses, especially if we are to go on in the way some Senators favor, of appropriating money for every conceivable purpose for which money can be used. If we are to give away all the proceeds of the sales of the public lands with one stroke of the pen; if we are to go into an enlarged system of subsidizing steamships or other vessels; if we are to provide, as was attempted not long ago in a certain other place, to give a large amount for every ton of every vessel built in the United States—a money subsidy—if we are to go on in that way, I am not at all certain that the revenue of the country will be sufficient to meet its expenses.

"But, Mr. President, I suppose the effect of this really would be that the Secretary of the Treasury, if he found himself unable to pay specie, would see fit to convert these greenbacks into bonds, and that before any great while the whole \$350,000,000 would be converted into interest-bearing bonds. Why should we do that? It is said that the Government is bound in honor to do it. It is said this is a debt of the Government, a forced loan, and that the Government ought to be willing to pay interest on its debt. And that is said when a bill is before us to enable private individuals to issue their promises to pay,

and pay no interest on them, but get interest from everybody that borrows them or uses them. The paper of a national bank is as much a forced loan as is a greenback. You compel the people to take that and use it for money, and the bank pays no interest upon it. It is of no use to say that there may be ultimately a payment in specie of that note. That does not alter the case. The circumstances of the country are such that business is not done upon a specie basis entirely. The great bulk of circulation is paper, and has been for a great many years; and the consequence of making the currency of the country consist of the notes of private institutions, called banks, is simply to enable them to loan their own credit, upon which they pay no interest whatever; and it is as much a forced loan as is any loan that ever could be issued by the Government.

"Now, which of the two is the best currency—the bank-notes or the Government greenbacks? In the estimation of the people, the greenbacks are the best; in the estimation of the law, the greenbacks are the best, because it is provided that the bank-note may be redeemed by a greenback. Why, then, should you compel the retiring of the greenbacks to make room for just an equal amount of national bank currency? The people do not complain of the greenback currency at all. The people do not say that the greenbacks are less valuable than bank-notes; on the contrary, they prefer them. Why, then, should you retire all the greenbacks to make room for just an equivalent amount of the notes of private individuals, upon which they draw interest, although they are their debts? It does not look to me to be very good financiering. It does not strike me to be so.

"I know this goes very deep. It goes to the question whether or not a bank-note circulation is an advisable thing. I know very well that a bank-paper circulation is a means by which the annual products of the country are distributed in a most unequal manner. I know that it is a monopoly and a favoritism which enables one class of men to draw interest upon what they owe, while all other men have to pay interest on what they owe; and I never, therefore, have been very much in favor of such a currency. But when we have a currency which by the law itself is made not only the equivalent, but better than the bank-note currency, with which the people are better satisfied, I do not very well see why we should retire that currency and substitute for it an interest-bearing bond of the United States.

"I cannot see at present any thing of substance in this bill except two things: one to enable the holders of the greenbacks to convert them into interest-bearing bonds, and make the Government pay interest on that debt, when the people are perfectly well content with the greenbacks as a currency, and

do not regard them as a forced loan at all; and the next thing is that it enlarges the bank currency of the country, to enable more of the national banks to be set up. That strikes me to be about the whole of this bill; and I cannot think that it is very likely to result in a return to and the maintenance of specie payments very soon, because whenever you authorize the greenbacks to be reissued from time to time, I do not think, if we have a pressure, but that Congress will come in and compel their reissue if necessary. And here I may say, in regard to this greenback currency, that the objection to it is that a greenback currency is said to be synonymous with an inconvertible currency, and that if we are to maintain a greenback currency it means that we are to have no resumption of specie payments at all. Another objection is that a Government currency is liable to inflation, because it is subject to the popular demand upon the Legislature; and when that demand is very strong the Legislature always gives way to it and increases the amount of the currency.

"But, sir, so far as inflation is concerned you may have just as much inflation by means of the national banks. The public cry for more currency operating upon Congress will make us authorize these banks to issue more currency just as soon as it would make us provide for the issuing of more greenbacks. When you have the national banks all in the power of Congress, and Congress has taken possession of the whole subject of the currency of the country, the Congress in one way or the other, whether you have greenbacks or whether you have national bank currency alone, will in obedience to that popular demand inflate the currency, or retire it or compel its retirement, just as the clamor of the day may require; and it may do so just as well in the one case as it may in the other.

"As at present advised, Mr. President, I cannot vote for this bill. I would like to see a specie-paying currency in the country as much as any man. I believe in a specie-paying currency, but I do not believe that it is of much use to call this a specie-paying currency when a national bank can redeem either in gold or in greenbacks, and we thus make greenbacks better than the currency of the national banks and provide for maintaining a greenback currency to some extent at least."

Mr. Buckingham, of Connecticut, said: "I am very anxious to have that accomplished which the Committee on Finance have in view by the introduction of this bill, and I think their bill, with certain amendments which may be adopted, will aid in that object. That is to say, we can secure an elastic currency, which we have never yet secured, and in securing it we may make an amendment which will appreciate the national obligations, and that will be in the direction of specie payments, although, do what you will, specie payments are yet in

the distance. But I desire to have this bill so amended that it shall be an improvement, and that we shall be improving in the right direction; and therefore I approve of the suggestions and the amendment proposed by the honorable Senator from Ohio (Mr. Sherman) in regard to striking out the word 'which.' I think it means a good deal as it stands. It leaves any banking association to determine, as they may will, to resume specie payment and pay coin according to the requirements of the law, and if they do they are relieved from keeping a reserve. They may say that and do it to-day and relieve themselves of their reserve to-morrow, and the next day be wholly unable to comply with the requirements of the law. Therefore I think the word 'which' should be removed, and they should be compelled, as under the law now, to meet their obligations.

"But the honorable Senator farthest from me (Mr. Thurman) has placed this provision in its true light. It is simply a question whether the Congress of the United States is ready to relieve the banks from holding a reserve. That is all there is in the section if the amendment be carried. I know there is a great difference in the judgment of men in regard to the propriety of such a provision. I know you will find eminent business men who will assure you that this is a matter of no importance, because men who understand business and who mean to be true and meet their obligations will, as a matter of necessity, hold themselves in a position to meet all their obligations. But my observation is that there are many men who when associated together as directors of banks have not that wisdom or ability, if you please, to manage their banks in such a manner that they will hold the reserve necessary to enable them to meet their obligations.

"Now, we want a law to meet those who have not this sound judgment, those who would put aside their obligations, if you please; and it appears to me it is a question of very great moment whether the Congress of the United States ought to relieve the banks as a whole from holding a reserve. What is the value of the reserve? To-day it is to enable banks to meet their obligations, and it requires them to cease discounting when their reserve is below a certain line; but, if you remove this reserve and then come to the very position which is suggested by my friend from Ohio, the reserve is gone, and you are just as much unable to meet a cornering operation as though you had the twenty-five per cent. reserve; you have only gone a little further. But, when you have reached that distant point further from you, where the bank's reserve is gone, they have no more ability to meet a pressure than they had with twenty-five per cent. reserve, and this would let loose the entire reserve now of fifteen or twenty-five per cent., as the case may be, and would for the moment create a superabundance of currency."

Mr. Morrill, of Vermont: "Mr. President,

when it comes to the question whether we are saving any money by the redemption of the greenbacks, it resolves itself into this: is this great Government to go on forever and never resume? Are we to confess our utter imbecility in relation to a paper currency, and have it fastened upon our country and upon the business of the country now and forever? Then there is the argument that the greenbacks are better than the national bank currency; but would they be better if we were to double the amount? Who does not know that the very moment we substitute greenbacks for the national bank currency the value of the greenbacks would fall, inevitably fall, both on account of the amount that would be issued and the proclamation that it was not only not the intent of the Government to redeem greenbacks but to issue them indefinitely.

"Now, Mr. President, there is this other point in relation to the reserve: the bill does not provide that the banks shall be released from keeping a reserve until they are compelled to redeem either in specie or in greenbacks. The very moment they do that, on the day prescribed, they are to be relieved from keeping any reserve.

"The idea of a reserve does not amount to any thing except in this, that the banks have so much less in circulation; they cannot use it, but if they shall be compelled on the 1st of July, 1874, to pay their bills either in coin or in greenbacks, that will cause a healthy circulation of the currency and it will not all of it be dammed up at New York. It will be held by the banks where they are located, and the banks will be compelled to make discounts in their localities at home in order that they may have funds to redeem their bills when they come to the place of redemption or at their counter.

"Under the circumstances, I do not believe that it is wise for us to keep up this reserve for another reason. We do want some elasticity about our circulation, and a bank may be able at certain times to trench a little upon this reserve, and to do it with entire safety if the provision shall be repealed. They may have funds that they can command that are specie funds, and yet are not greenbacks. Therefore, for the purpose of having our currency more elastic than it is at the present time, in my judgment this provision ought to be repealed, and it should be made obligatory upon all the banks either to pay in coin or in greenbacks, or be wound up, and under the present law they would be."

The question recurred on the amendment of the Committee on Finance as amended, to strike out all of the original bill after the enacting clause, and in lieu thereof to insert:

That on the 1st day of January, 1874, the Secretary of the Treasury is authorized and required to pay, on demand, at the office of the Assistant Treasurer in the city of New York, to any holder of United States notes to the amount of \$1,000, or any multiple thereof, in exchange for such notes, an equal amount

of the gold coin of the United States; or, in lieu of coin, he may, at his option, issue in exchange for said notes an equal amount of coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of fifty dollars, or some multiple of that sum, redeemable in coin of the present standard value, at the pleasure of the United States, after ten years from the date of their issue, and bearing interest, payable quarterly in such coin, at the rate of five per cent. per annum. And the Secretary of the Treasury may release the United States notes so received, or, if they are canceled, may issue United States notes to the same amount, either to purchase or redeem the public debt, or to meet the current payments for the public service. And the said bonds and the interest thereon shall be exempt from the payment of all taxes or duties of the United States as well as from taxation in any form by or under State, municipal, or local authority; and the said bonds shall have set forth and expressed upon their face the above specified conditions, and shall, with their coupons, be made payable at the Treasury of the United States.

SEC. 2. That, from and after the 1st day of July next, the limit of the aggregate circulation of national banks now prescribed by law is repealed. And all banks thereafter organized shall deposit as security for their circulating notes bonds of the United States, issued under this act, or under the act entitled "An act to authorize the refunding of the national debt," approved July 14, 1870.

SEC. 3. That all banking associations shall, on and after January, 1874, redeem their notes at such localities as are now or may be hereafter designated by law, either in coin or in United States legal-tender notes, and shall be exempt from the requirement under existing law as to holding a reserve of lawful money of the United States: *Provided*, That nothing herein contained shall authorize any national gold bank established under an act entitled "An act to provide for the redemption of three per cent. temporary loan certificates, and for an increase of national bank notes," approved July 12, 1870, to redeem their circulating notes in any thing but gold coin of the United States.

SEC. 4. That section six of an act entitled "An act to provide for the redemption of the three per cent. temporary loan certificates, and for an increase of national bank notes," approved July 12, 1870, be, and is hereby, repealed.

SEC. 5. That banks without circulation may be organized under the provisions of an act entitled "An act to provide a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof," approved June 3, 1864, upon the deposit with the Treasurer of the United States of not less than \$10,000 of United States registered bonds, as provided in section sixteen of that act.

Mr. Thurman, of Ohio, said: "I move an amendment: in line sixteen of section one I move to strike out the word 'five' and insert 'two.' As the bill now stands it proposes that the greenbacks may be redeemed either in gold or in bonds of the United States, bearing interest at five per cent. I wish to test whether the Senate is willing to convert the greenbacks—with which the people are perfectly satisfied, and which this bill treats as better money than the bank-notes that the bill proposes shall be issued—into an interest-bearing debt at five per cent., or whether it will not be content with two per cent. For the purpose of testing the sense of the Senate on that question, I move to strike out 'five' and insert 'two,' so that the bonds which may be issued

in redemption of the greenbacks shall bear interest only at the rate of two per cent."

Mr. Bayard, of Delaware, said: "Mr. President, the discussion of this bill yesterday disclosed a vast amount of difference in opinion, not simply upon the professed objects of the bill and upon the policy which this bill is intended to affirm, but upon the meaning of the provisions of the bill itself. I have regarded it from the first as a step, but not a long or a decisive step such as I would wish to see taken, toward the resumption of specie payments.

"In the consideration of our national finances the chief and ruling object in view should be a resumption of specie payments, not so much as affecting the convenience of the moneyed classes of the country as affecting the morals of the entire country. A return to specie payments should be held a return to honesty in individual dealings; and the sooner an honest currency, a currency of intrinsic value, is restored to the people of this country the better, because until that is done we cannot hope for a discontinuance of all those practices of bad faith and illegitimate speculation which are the natural result and outgrowth of paper money.

"I say, therefore, that a return to honest money is a crying demand of the present hour. A departure from the currency of honest money, from money of value, was a cardinal error, a vast blunder, in my opinion, originally. Not only was it without warrant, as I believe, in the Constitution of the United States, but, even had this not been so, then it was a terrible mistake in government, and I believe will be so recognized and admitted when the events of the last twelve years come to be considered calmly and by the light of experience. It was a repeated blunder. We had the sad experience of our own colonial Revolution. We had the shame, the sorrow, and the suffering, that flowed from the adoption then of inconvertible paper issues. The same history was written all over the terrific struggle in France in 1793. It has been repeated with like results in the affairs of the late Southern Confederacy. Its evils were felt and are now made manifest by the developments of to-day, in the present tone of what may be termed the pecuniary morals of the people—sad developments made at the present day and hour which no man can fail to recognize as the legitimate results of the adoption of an inconvertible paper currency founded solely upon credit, without a particle of intrinsic value, and which therefore became the mere foot-ball of speculators—at the cost of the producer and laborer—each speculator cultivating, as Mr. Webster well said, his field by the sweat of the poor man's brow. Not only so, but I believe that the people of this country to-day groan under a debt \$1,000,000,000 greater than they would have had if this mistake in finance had not been followed

and the nation embarked upon a system of inconvertible paper issues depending solely upon credit, and therefore necessarily affected by every breath of suspicion and of fluctuations in success or failure.

"But, Mr. President, is this a practical measure, a really decisive step toward the resumption of specie payments? I am disposed to think it has that tendency, but I do not think such are to be its certain results. There are many things in the present bill which caused me surprise when I came to examine it. It will be observed that there is no limitation whatever in the bill upon the increase of the public debt, and at the same time there is no limitation upon the issues which are authorized by the second section of the act.

"Then it provides that the bonds shall be exempt from local or Federal taxation. Now, I ask would not the public funded debt be indefinitely increased under the provisions of this bill, which allows bonds without limit to be issued in exchange for United States notes, which notes are again issued by the Government for its current expenses, which pass into the Treasury to-day in exchange for a bond, the next day are issued for some public expense, and the day following are presented for a new bond at the Treasury, and so on, *ad infinitum*? You see the result upon the basis of your \$328,000,000 of United States notes, coming in to-day for bonds, paid out to-morrow for expenses, brought back the third day for a new bond. Where is the limitation upon the amount of your funded debt? And yet this bill is open to that objection. I shall propose an amendment at the proper time, to come in as an additional section, which will prevent, or will be intended to prevent, any increase in the public debt, funded or not funded."

Mr. Sherman: "If the Senator will allow me, I will ask him whether, assuming as a fact that the current receipts of the Government are equal to the current expenditures, it is possible that under this bill the public debt can be increased?"

Mr. Bayard: "Certainly, it seems to me very palpable, because of this ebb and flow. The flow of money into the Treasury, which is instantly exchangeable for a bond, will place the notes in the Treasury, and when the expenses of the Government do not call for their use there will be a simultaneous use of the money for redeeming a bond. One bond puts the notes into the Treasury to pay expenses, and when they are paid out they are instantly presented again for another bond, and all this system of the circular motion of this money will be constantly increasing; there will be an issue of bonds as fast as the notes are presented for them, and yet there will remain in the public Treasury money sufficient for the expenses of the Government. Such I think is to be the actual result.

"I have my doubts as to the practical work-

ing of this law, the option being left with the Secretary of the Treasury to issue either bonds or coin in redemption of notes. I have my doubts as to the practical result of forcing paper to an equal value with gold; but I have no fears that there would be a stringency created in money by the adoption of this law. On the contrary, is it not plain that it will prevent such a stringency, because, in the first place, the purchasing power of money would necessarily be increased? In the next place, it would add the coined money of the country to the bulk of the currency of the country, by that means giving ease. And in the third place, the money then being honest money, of value in itself, we should have the coinage of the world to draw upon as other nations have now, and the money of the United States being of value in coined metal would not, as our present notes called money do, shrivel up like dry leaves the moment it comes in contact with the currency of value of any other nation.

"I cannot doubt that the bulk of currency would be increased just as much as the coin added to it, and not only that, but, as I said, being a money of value it would hold its own with the money of other nations; and, being money of value, that would cure any result that might come from any apprehended stringency on account of the contraction in the value of commodities.

"Then this bill contains another provision which I think would remedy that entirely; and that is in section two, the free banking feature of the law. These new banks would have not only the effect of preventing any stringency in currency, because of course their issues would come to be redeemed, but they would have another effect most desirable at the present day, of equalizing the amount of currency between the different sections of the country, which at present is most inequitably and unjustly distributed. The South and West are suffering to-day, as they have been for the last nine years, under a grossly inequitable distribution between them and the New England States. The free banking feature will have at least the effect of remedying that injustice and equalizing the distribution of currency.

"Such would be, in my opinion, stated very plainly, some of the practical results of the passage of the proposed law. There is an objection in my mind to it that it looks too much to the interest of the national banks, never at any time a favorite of mine, and not more so as I perceive the practical results of the system. The effect of bringing the banking system of the country entirely under the control of the central Government, and especially under the control of the Secretary of the Treasury, tends to further the creation of that which I believe to be a growing vice in our system of government, and that is the habit of bureaucratic government, instead of

government by law. We had from the honorable Senator from Ohio (Mr. Sherman) the statement yesterday that it was in the power of the Secretary of the Treasury to derange and utterly crush the business interests of the country, should he, from caprice, or interest, or corruption, feel disposed to do it. It is for that reason that I do not favor, and cannot contemplate with any degree of satisfaction, the continuance of a system which tends to throw this power into the hands of the central Government, and at the same time equally to deprive the people of the States and of the local districts from that control over their own finances which their own convenience, their sufferings, or their profit, would teach them themselves properly to regulate."

Mr. Morton, of Indiana said: "I feel, Mr. President, a deep interest in regard to this bill, as it is one which must affect the people for weal or for woe very seriously. I differ with great reluctance from the chairman of the Committee on Finance and from the judgment of the distinguished Senators who are on that committee. I do not pretend to have very much faith in my own judgment on the subject of finance; but I think it my duty to express the opinions I have.

"In the first place, Mr. President, this bill does not carry out the theory which has been announced by the chairman of the Committee on Finance in regard to greenbacks. That theory is that they are a promise to pay a dollar in gold for the dollar expressed on the face of the greenbacks; and I think that is true. This bill does not carry out that principle, because it authorizes the Secretary of the Treasury to pay in gold or to pay in five per cent. bonds, giving not the bill-holder, but giving the Secretary of the Treasury the option to pay in coin or to pay in other promise which may or may not be equivalent to coin. Therefore it does not carry out the theory that is maintained in regard to the obligation of the Government created by greenbacks."

Mr. Scott, of Pennsylvania, said: "Will the Senator permit me to call his attention to the fact that the bill does not impose any obligation on the holder of the greenback to take a five per cent. bond in case the Secretary of the Treasury is not able to pay in gold, and therefore he would be in no worse position than he is at present?"

Mr. Morton: "I agree to that. The bill-holder is not bound to take the coin, nor is he bound to take the five per cent. bond, but you cannot call that bill a bill to resume specie payments which gives not to the bill-holder but to the Secretary of the Treasury the privilege to pay him in a bond or not to pay him at all. Therefore, I say that this is not a bill to resume specie payments, but it is a bill to give the Secretary of the Treasury the option to pay in coin or to pay in another promise, a five per cent. bond, and does not approach the

realization of the principle which it is claimed the greenback involves.

"Now, Mr. President, I wish to examine for a moment the provisions of this bill. In the first place, the notes of the United States are to be redeemed only in the city of New York. Whenever the Government begins the resumption of specie payments, there ought to be other places to redeem aside from the city of New York. If it is important for the people of the West to have the right to convert their greenbacks into coin, they ought to have that advantage without going to the city of New York. That requirement gives superior advantages to that money centre, already having advantages enough in that way, and places it out of the power of the holder of the greenbacks in the remote parts of the country to get either coin or five per cent. bonds without sending his bills to the city of New York—a great inconvenience. It is objectionable on that score. Whenever the Government begins the work of resuming specie payments, there ought to be facilities for redemption in the West and in the South, and not confined simply to the city of New York, which would give advantages to the brokers and the bankers in that city which can be very readily comprehended, and increase their business.

"Then again it is provided that they may have a right to demand redemption by presenting the sum of \$1,000 or any multiple thereof. Is that right? Whenever the Government begins the work of redeeming greenbacks, they ought to be redeemed in any amount that may be presented. It may be just as important for the poor man who can raise but \$500 to get the coin for his \$500, as it is for the rich man to get the coin upon his \$10,000. Therefore, no man is entitled to the benefits of this bill, at all, who has not greenbacks to the amount of \$1,000. I think the statement of that proposition is sufficient without a single argument upon the subject.

"The Secretary is authorized to pay in five per cent. bonds instead of the coin. Let us assume for the sake of the argument that this bill will have the effect to raise the greenbacks to par in the course of eleven months from this time, by the 1st of January, 1874. If it does have that effect, it has the effect of increasing the value of every debt that is now owing in the country twelve per cent. It makes it twelve per cent. more difficult for every debtor to pay his debts, and adds twelve per cent. to the value of every debt that has been contracted in the ordinary way, and which may be paid in the currency of the country. I know something of that kind most take place whenever we resume specie payments; but I suggest to the distinguished Senator from Ohio that it is too sudden; the time is too short; the country cannot endure such a change as that in the short period of eleven months. It must result in producing great derangement and disturbance in the financial

affairs of this country. You cannot make such a change as that in the short period of eleven months without interfering vastly with all the business of this country; without great danger of financial panic and convulsion. Therefore, whenever this plan is adopted, the time ought to be extended. I respectfully suggest to the chairman of the Committee on Finance that it ought not to be less than two years; that this change of values should not be more than six per cent. in the course of one year.

"What is the effect of this proposition? If it has the effect of making the greenback equal to coin in eleven months, hoarding greenbacks is the most profitable business that any man can engage in in this country for the next eleven months. Legitimate business will not pay twelve per cent. in this country. I know some men make more than that, but legitimate business does not pay twelve per cent. as a general thing in this country. Therefore, the most profitable thing that any man can do, should this bill pass, in view of the effect intended by it that greenbacks are to be made equal with gold at the end of eleven months, is to hoard the greenbacks, because they will be worth twelve per cent. more at the end of eleven months than they are now.

"If greenbacks are hoarded, what is to be the consequence? The contraction of the money in circulation, all those consequences that ordinarily result from contraction. We make it the interest of men who have money not to loan it out; we make it their interest to hold on to it, not to invest it in property, because that money at the end of eleven months is to be worth twelve per cent. more than it is now.

"The Senator from Connecticut (Mr. Buckingham) talked—and I think I have heard the Senator from Ohio (Mr. Sherman) talk—about an elastic currency, a flexible currency. I have never believed in such a currency. I have always regarded it as a financial fallacy. I think it is one of the worst things that can happen. I believe the strongest element in the financial stability of this country for the last few years has been the fact that our country has had a fixed amount of currency—an amount that everybody knows. We all know how much currency there is in circulation, how many greenbacks there are, how many bank-notes there are. Every commercial man understands that, and he knows that that amount cannot be increased except by an act of Congress. It does not depend now upon the will of private persons. Speculators in New York, bankers and brokers might, for the very purpose of making a financial panic, run in \$50,000,000 of greenbacks and get five per cent. bonds and be prepared to take advantage of the contraction and of the necessary depression following it. It is another mode of making a corner in money, and would have precisely the same effect, only it furnishes

increased facilities for it. How? Now, when a corner in money is made, it is locked up for the time being; no interest is drawn upon it at all; but under this bill they may put their money in five per cent. bonds, and get a good living interest upon it, and produce the contraction that is desired.

"Mr. President, we have had unparalleled prosperity in this country for the last four or five years. There has been less speculation in the last four years, I undertake to say, than in any period in the history of this country since 1837."

Mr. Sherman: "Far more."

Mr. Morton: "Because business has vastly extended, and it is ten times what it was twenty-five years ago; but I speak of speculation in products. I say there has been less of it, and there has been more stability in the prices of the breadstuffs of this country, of the necessities of life, in the last five years, than there has been in any preceding five years in our history. I have no hesitancy in saying that. Of course there are fluctuations; but they are created by demand and supply. A short crop may produce them; an increased foreign demand may produce them; but there has been less of fluctuation resulting from speculation, I undertake to say, in this country during the last four years, than in any five years since 1837."

"Why is it that there has been such stability? Why is it that there has been such prosperity? And why is it that there is so much confidence now in the finances of the country? There is more confidence now than there ever has been before. Why? One great leading cause is that the whole country knows how much currency there is abroad, and that that currency cannot be increased except by an act of Congress, which must advertise the whole country in regard to it. Now, if that currency may be contracted by allowing a man to fund greenbacks in five per cent. bonds, how shall the business men of the country know any thing about it? The mischief is done before they know it. The first news they get of it is in the contraction of the currency. If ten millions are funded this week, how will the country know it? They will be first advised of it by its effect upon business; but, if it is done under an act of Congress, everybody knows of it weeks and months before it takes place."

"I do not know that I shall make objection to free banking when specie payments are absolutely and certainly restored beyond all peradventure; but it never ought to be ventured upon before that time, and I am not sure that it should then. Why? Because, when banking is free and everybody can bank that desires to do so, the currency may be inflated scores of millions before the country knows scarcely any thing about it. Now, banks are formed here and there; they throw out their currency; the volume of it is increased; the country is not advised of it; and the first intel-

ligence they get is from its influence on business. That is one of the very evils I am arguing against."

"Now, I desire to call the attention of the Senate to the amendment offered to this bill by the Senator from Ohio (Mr. Thurman). He proposes to strike out 'five per cent.' and insert 'two per cent.' so that the Secretary of the Treasury shall have the option of redeeming the greenbacks in coin or in two per cent. bonds as he pleases. Does the Senator from Ohio think that would bring about specie payments? Does he believe that two per cent. bonds will be at par in this country? They will be when the rate of interest is no greater than that, and money is only worth two per cent.; but that is not the case now. The issuing of two per cent. bonds, or authorizing the Secretary of the Treasury to redeem greenbacks in two per cent. bonds, is making no provision whatever for a return to specie payments. If the issue of bonds in the redemption of greenbacks is to be a means of resuming specie payments, that bond must be put at such a rate of interest as will make it equal to par value in gold, so that when the Secretary offers to the holder of the greenbacks a bond, that bond is equal in value to the gold for which it is offered as a substitute."

"Let me say one thing further, Mr. President. If this proposed resumption of specie payments is not to depend entirely, or almost entirely, upon the issue of five per cent. bonds, there should be some provision for getting gold into the Treasury in sufficient quantities to redeem these notes. This bill makes no provision for that. It does not provide for reserving the gold in the Treasury until the time comes when redemption shall begin."

The Presiding Officer (Mr. Nye in the chair): "The question is on the amendment offered by the Senator from Ohio (Mr. Thurman) to strike out the word 'five' and insert the word 'two.'"

Mr. Morrill, of Vermont, said: "Obviously the proposition of the Senator from Ohio is intended to defeat the whole bill, and therefore those who shall vote for it will vote for it with a view of killing the bill. The chief point in the bill is to have something that will be better than the present legal tender, and a two per cent. bond or a two per cent. certificate would hardly be better than the present greenbacks. The amendment would destroy the symmetry of the bill so far as the five per cent. bonds are concerned which it is proposed to issue in order to have a uniformity of bonds that may be issued in the new series. I trust, therefore, that the amendment will not prevail. I ask for the yeas and nays upon it."

The yeas and nays were ordered; and being taken, resulted—yeas 11, nays 81.

So the amendment to the amendment was rejected.

Mr. Buckingham: "I now move to amend

the amendment of the committee in section one, line nineteen, by striking out the words 'to the same amount either to purchase or redeem the public debt or,' and inserting after the word 'service,' in line twenty-one, the words 'and the principal of any United States bonds bearing interest payable in coin shall, on demand by the holder thereof, be paid by the Secretary of the Treasury in legal-tender notes and the interest thereon in coin.'

"I have but a very few words to say on this amendment, because I have presented my ideas on the question of this amendment to the Senate before. The first part of this section requires the Secretary of the Treasury to issue bonds when they are demanded by men holding currency to the amount of \$1,000. That is a contraction of the currency; it is a funding of a portion of the public debt. Now, my judgment is that, while there should be contraction or the power of contraction, there should also be ability to expand; and this amendment proposes that whenever men have bonds, and they want currency more than they want bonds bearing interest, they shall have the privilege of going to the Treasury and obtaining currency. It is an interchangeability between coin and bonds and between bonds and coin."

Mr. Morrill, of Vermont, said: "Mr. President, the proposition submitted by the Senator from Connecticut is not entirely new to the Senate. So far as its practical operation would go, it would not advance us a single step in the resumption of specie payments. It would give as much opportunity for going backward as for going forward. The object to be attained, as stated by the Senator from Connecticut, is, to enable a manufacturer, who finds he wants more currency, to go to the Treasury Department and exchange bonds for it. Let me say to the Senator from Connecticut that any man who has bonds to give for security can obtain money in any quarter of our country at one, two, three, and four per cent. less than anybody else. There is absolutely no difficulty whatever for a man, who has bonds to give as security, in obtaining money."

Mr. Fenton, of New York, said: "Mr. President, I ask the consent of the Senate, if agreeable to the chairman of the Committee on Finance, who reported this bill, to consider the amendment of the Committee on Finance as the bill before the Senate."

The Presiding Officer: "Is there any objection to the proposition of the Senator from New York? The Chair hears no objection, and that course will be taken."

Mr. Fenton: "I move to amend the amendment of the Senator from Connecticut by adding:

"*Provided*, That twenty per cent. of the notes so received for the said bonds shall be retained and permanently retired from circulation: *Provided also*, That said twenty per cent. shall not exceed in the aggregate the sum of \$3,000,000 a month.

"One word only, Mr. President. This bill, with the amendment of my friend from Connecticut, ignores the vital consideration in the work of resuming specie payments. Senators do not seem to have in view that the value of currency depends upon its volume and the value is determined by its exchangeability into coin. Believing, then, that it is impossible within any reasonable period to reach specie payments and maintain them without a moderate reduction of the currency of the country, I have offered this amendment in good faith to that end. This amendment incorporated into the bill, with the postponement of the period when it will take effect, as suggested by the honorable Senator from Indiana (Mr. Morton), it would doubtless in time accomplish the work of resumption which we all so much desire."

Mr. Schurz, of Missouri, said: "Mr. President, I have followed this debate with a good deal of attention, and I discover that the further we go the oftener we strike upon rocks. The Senator from Connecticut offered an amendment which is to obviate a great danger, consisting in the discretion of the Secretary of the Treasury to flood the market with currency whenever currency has accumulated in the Treasury of the United States—the same topic to which I took the liberty of calling attention yesterday. The Senator from Vermont sees in the amendment offered by the Senator from Connecticut another danger, which consists in putting it into the power of Wall Street speculators to empty the Treasury of greenbacks and to use them for their own speculative purposes.

"I think both these difficulties exist; but there seems to be still another one which affects the whole system as designed by the author of this bill, the honorable chairman of the Committee on Finance. If I understand him correctly, he wants to bring us back to specie payments, an object in which I sincerely sympathize with him. In his speech he described to us the dangers and inconveniences arising from irregular fluctuations of value. His aim and object are very laudable indeed. The bill provides that on the 1st of January, 1874, you or I may go to the Treasury of the United States and present legal tenders there and receive coin in return. That is specie payments. It will also put gold and silver into circulation again. But the bill provides also that when the gold in the Treasury is exhausted, or when the Secretary of the Treasury deems it wise not to redeem in gold any longer, he may use the interest-bearing securities of the United States and may redeem the legal tenders with bonds. That, if I may say so, is no longer specie payments, but that is a suspension of specie payments again, is it not? The chairman of the Committee on Finance nods assent; he has said so in his opening speech. In fact, the whole bill seems to have been devised to institute specie pay-

ments, but at the same time to provide for an organic method by which at any convenient moment we may suspend specie payments again.

"Now, I would ask the Senator from Ohio, as soon as he arrives at that point where the specie in the Treasury is exhausted, when he redeems legal tenders with bonds, thus suspending specie payments again, whether the gold and silver that has been put in circulation by the original resumption of specie payments, now again suspended, will not at once hide itself again and be hoarded by speculators? In other words, whether the second provision of this bill will not defeat the first, and whether it will not lead to more dangerous and greater fluctuations in values than we have had hitherto; whether it will not facilitate corners, and in fact increase the embarrassment under which we so far have been laboring, instead of removing or diminishing them?"

Mr. Sherman: "Mr. President, the question of the Senator from Missouri undoubtedly touches the difficulty of this whole problem. Shall we undertake peremptorily to establish specie payments? Is it possible for us to do so? If it were possible, I would say amen. My friend will agree with me that it is impossible in the present condition of our money affairs, with over \$700,000,000 of currency afloat, to establish peremptorily specie payments; that is to say, that the Government of the United States will, under all circumstances, redeem its notes in specie. We must, then, devise some mode by which, in a time of stringency, specie payments can be suspended. I think my friend will go that far. Now, what mode should we adopt? There have been three different modes suggested and practised by civilized nations. The first mode, and perhaps the most natural mode, is that, in order to maintain specie payments, we should sell our bonds at whatever they might be worth in gold and use that gold to maintain specie payments. That is, if our notes are flowing in upon us so fast that we cannot pay them in coin, we should sell our bonds in the market for whatever they are worth, and maintain specie payments at all hazards.

"That is a common idea of people who do not investigate the matter very closely; and if we were disposed to sacrifice the public securities, probably that would be the natural solution of the problem; but would it be right? Would it be just? Why, sir, the authority to sell a ten per cent. bond of the United States in time of panic would not maintain specie payments. I have myself witnessed the time when bonds of the United States bearing ten per cent. interest were sold by the Government of the United States. I have witnessed the time when to maintain specie payments the bonds of the State of Ohio were sold for fifty cents on the dollar. It is not wise for us to provide for the sale of

the securities of the United States on such terms in order to get coin to maintain specie payments. I ask my friend if he thinks it would be wise to provide such a remedy?"

"Now, to answer the question of the honorable Senator from Missouri, I will state that for a time, during the temporary panic in the case I have supposed, gold would necessarily be retired, held by the persons who had it and would only be sold as an article of merchandise; but that would pass away as the clouds pass away before the sun. A temporary panic would pass away, a temporary stringency in the money market would pass away, and in ten days after this great stringency in the money market there might be an easy time, an easy money market, just as to-day the money market is easy both here and in all the countries of the world, while last October it was very stringent, not only here but in all commercial centres. These times of stringency are like temporary passing clouds, and we must provide for them."

Mr. Fenton: "My position is this: that if the bill of the honorable Senator from Ohio will bring about the resumption of specie payments not only without reducing the volume of currency, but with some addition to it, then let us have it at once. Do not postpone the day. On the other hand, if the volume of the currency is now too great to resume and maintain specie payments, then let it be gradually reduced until we reach the specie condition. I think it should be diminished, but if it is not—which seems more probable—I suppose there may be some improvement, if we avoid further redundancy, as the population and business interests of the country rise up and require the present volume, or rather until the country in its future prosperity and progress can maintain it upon a specie basis. But I do not see that the bill helps us; I am sure it does not take one step toward specie payments."

The Vice-President: "The question is on the amendment of the Senator from New York (Mr. Fenton) to the amendment of the Senator from Connecticut (Mr. Buckingham)."

The amendment to the amendment was rejected.

The Presiding Officer (Mr. Anthony in the chair): "The question is on the amendment proposed by the Senator from Connecticut (Mr. Buckingham)."

The question being taken by yeas and nays, resulted—yeas 9, nays 84.

So the amendment was not agreed to.

Mr. Saulsbury, of Delaware, said: "The aim of this bill, or rather the amendment of the Finance Committee, is, to bring about a resumption of specie payments. That object, if it can be attained, and attained in a proper way, is certainly a very desirable object; for, so long as we have an irredeemable paper currency, there must be fluctuations in value; there must at times be depression in business arising from those fluctuations. Until we re-

turn to a currency which is based upon coin, there can be no permanency in values; there must be fluctuations; there must be expansions and depressions in the money market. But the question is, Will the measure proposed effect the object contemplated? I have some misgivings upon that point. What is the provision? The provision is to retire the greenbacks, or the legal-tender notes, by the payment of coin when the Treasury is in receipt of coin sufficient for that purpose, and, when not in sufficient receipt of coin to do that, to substitute the bonds of the Government bearing five per cent. interest.

"Now, let us look and see whether there is any probability that sufficient coin will be substituted in place of the greenbacks to render the currency of the country much better than it is at present. There is, I believe, about \$350,000,000 of greenbacks now in circulation. Within twelve months, under the operations of this bill, those greenbacks will be presented to the Treasury for redemption. Will the Secretary of the Treasury have a sufficient amount of gold on hand to redeem any large proportion of that amount? I apprehend at farthest that he could not appropriate exceeding \$50,000,000 toward the redemption of the \$350,000,000 of greenbacks, and as a consequence there must be about \$300,000,000 of bonds issued as a substitute for the greenbacks which are canceled or redeemed. There will then be \$50,000,000 that will be in gold that will be furnished in lieu of the \$350,000,000 of greenbacks which are taken up. The bonds which are issued as a substitute for them will not become a part of the circulating medium. They will be held as investments; and thus the circulation of the country will be curtailed by the amount of bonds which are issued in lieu of the gold.

That must be the effect if the operation stops there. If there is no reissue of these greenbacks, the consequence must be to curtail the circulating medium to the amount that bonds are issued in their place. That must be one of the effects of this bill, I say, if it stops there; but there is a provision in the bill for a reissue of these greenbacks. I am aware of that. What is to be the effect of that? Suppose you issue those greenbacks; will they form, after they are issued, a part of the circulating medium? I think not. Though they may be issued a dozen times by the Secretary, they will not become a part of the circulating medium of the country, but will be bought up for the purpose of being carried to the Treasury with a view of demanding new bonds; and this operation will be repeated time and again. The notes will be returned to the Treasury and the gold demanded for them, or if not gold then bonds must again be reissued, and thus this process must necessarily go on until there is an accumulation of the public debt of the country.

"Now, I think a better measure for the relief

of the people, and which will at the same time protect the Government against an increase of indebtedness, could have been devised; and, though it may subject me to the criticism of being a novice in financial affairs, I shall venture to say that if the Finance Committee had brought in a bill providing for the retirement of a certain amount annually of the national banking currency, leaving the greenback currency to stand as at present—to retire annually a certain amount of the national banking currency by replacing it with gold, and thus mixing up gold with the national banking currency—it would have had certainly the effect of relieving the Government from any increase of indebtedness, and it would have had another effect: it would have, with proper provisions, curtailed the obligation of the Government to the national banks. For instance, if they had called in one-eighth or one-tenth from each bank annually of its circulation of the notes which have been furnished to them by the Government, giving them gold at their relative values, and crediting the Government by that amount upon the bonds which she holds, you would have reduced the amount of interest paid to the national banks, and you would have prevented any possibility of an increase of the indebtedness of the country. That would virtually, as I think, furnish all the circulation which we at present have, while it would curtail the obligation of the Government to pay interest to the national banks in proportion to the amounts of their circulation which she had redeemed."

Mr. Thurman: "Believing that this bill cannot pass, and that it cannot be perfected in open Senate so that it ought to pass, and that any further discussion of it will only be a loss of time, for the purpose of testing the sense of the Senate I move that the bill lie on the table, and I ask for the yeas and nays on that motion."

The Presiding Officer: "The Senator from Ohio moves that the bill lie on the table."

The yeas and nays were ordered; and being taken, resulted as follows:

YEAS—Messrs. Alcorn, Blair, Cole, Davis, Edmunds, Fenton, Gilbert, Goldthwaite, Hamilton of Texas, Harlan, Hill, Hitchcock, Johnston, Kelly, Machen, Morton, Norwood, Pool, Ramsey, Ransom, Rice, Robertson, Schurz, Sprague, Stevenson, Thurman, Tipton, West, and Windom—29.

NAYS—Messrs. Ames, Bayard, Boreman, Buckingham, Casserly, Chandler, Clayton, Cooper, Corbett, Cragin, Ferry of Connecticut, Ferry of Michigan, Flanagan, Hamilton of Maryland, Hamlin, Morrill of Maine, Morrill of Vermont, Nye, Patterson, Pratt, Saulsbury, Scott, Sherman, Stewart, Vickers, Wilson, and Wright—37.

ABSENT—Messrs. Anthony, Brownlow, Caldwell, Cameron, Carpenter, Conkling, Frelinghuysen, Howe, Lewis, Logan, Osborn, Pomeroy, Sawyer, Spencer, Stockton, Sumner, and Trumbull—17.

So the motion was agreed to, and the bill was ordered to lie on the table.

In the House, on December 16th, Mr. Cox,

of New York, moved to suspend the rules and adopt the following resolution:

Whereas, The State government of Louisiana is now administered by orders from the Federal courts supported by Federal bayonets, which condition of things is subversive of the civil government of said State and dangerous to liberty: therefore—

Resolved, That the President of the United States is hereby requested to inform this House at the earliest day possible why the Executive of the United States interfered in the affairs of the State of Louisiana, giving all the facts; and he is further requested to give to this House all the information he has on this subject relative to the conduct of E. H. Durell, one of the judges of the United States in Louisiana; so that this House may determine what steps, if any, should be taken in consequence of his interference in the political affairs of said State.

Mr. Cox: "With the permission of the House I will strike off the preamble, and will insert in the resolution after the word 'requested,' the words 'if not incompatible with the public interest.' If gentlemen on the other side cannot vote for personal or public liberty without some scruples, I wish to accommodate them."

Mr. Eldridge, of Wisconsin, said: "I hope the gentleman from New York (Mr. Cox) will not insert in his resolution the words 'if not incompatible with the public interest.' It seems to me there can be no such incompatibility in a matter of this kind. Congress must be entitled to know by what right or authority the President interferes in such a case as this. The Constitution points out the only manner in which the President can intervene in such cases; and it should appear to us and to the country by what authority he does so."

Mr. Cox: "I have inserted in the resolution the words 'if not incompatible with the public interest,' so that the resolution may pass without any partisan or acrimonious discussion. What I want is that the facts shall come out. I think that with the resolution, as now couched, we may get the facts. We do not want a simple expression of opinion from this or the other side of the House. We want the whole basis for the action of the President in this most important matter."

Mr. Sypher, of Louisiana, said: "We deny that the President has interfered in any way in Louisiana matters, except to order the execution of the mandates of the United States courts. That is the whole question."

The question was taken; and it was decided in the negative as follows:

YEAS—Messrs. Acker, Adams, Archer, Arthur, Barnum, James B. Beck, Bell, Austin Blair, Bearman, Bohan, Braxton, Bright, Brooks, Carroll, Combs, Cox, Critcher, Crossland, Davis, Dodds, Doo, DuBose, Duke, Eldridge, Farnsworth, Henry D. Foster, Getz, Giddings, Griffith, Hancock, Handley, Harper, John T. Harris, Hereford, Herndon, Hibbard, Holman, Kendall, Kerr, King, Lamson, Leach, Lewis, Manson, Marshall, McKean, McCracken, McHenry, McIntyre, McKinney, Merrick, Benjamin F. Meyers, Morgan, Niblack, Hosen W. Parker, Perry, Price, Read, John M. Rice, W. R. Roberts, John Rogers, Sam H. Rogers, Sherwood, Slater, Slater, Spooner, Stevens, Storr, Swann, Terry, Tutthill, Van Trump, Waddell, Wells, Whitthorne,

Williams of New York, Winchester, Wood, and Young—79.

NAYS—Messrs. Ambler, Ames, Barber, Beveridge, Bingham, Buffinton, Burchard, Burdett, Roderick R. Butler, Clarke, Cobb, Coghlan, Conger, Cotton, Crocker, Dawes, Donnan, Duell, Dunnell, Eames, Esty, Farwell, Finkelburg, Charles Foster, Wilder D. Foster, Frye, Garfield, Hale, Harmer, George E. Harris, Havens, John B. Hawley, Joseph R. Hawley, Gerry W. Hazelton, John W. Hazelton, Hoar, Hooper, Houghton, Kelley, Kellogg, Ketcham, Lampert, Lansing, Lowe, Lynch, Maynard, McCrary, McGrew, McJunkin, McKee, Merriam, Monroe, Moore, Morey, Leonard Myers, Negley, Orr, Packard, Packer, Palmer, Peck, Pendleton, Force, Peters, Platt, Poland, Porter, Rainey, Ellis H. Roberts, Rusk, Sargent, Sawyer, Scofield, Sessions, Shanks, Sheldon, Shellabarger, H. Boardman Smith, John A. Smith, Snapp, Sprague, Starkweather, Stevenson, Stoughton, Sypher, Taffe, Washington Townsend, Turner, Twichell, Tyner, Upson, Wakeman, Waldron, Wallace, Walls, Wheeler, Willard, Williams of Indiana, and Jeremiah M. Wilson—90.

NOT VOTING—Messrs. Averill, Banks, Barry, Beatty, Erasmus W. Beck, Bigby, Biggs, Bird, James G. Blair, Buckley, Benjamin F. Butler, Caldwell, Campbell, Coburn, Conner, Crebs, Creely, Darvall, De Large, Dieck, Elliot, Ely, Forker, Garrett, Golladay, Goodrich, Haldeman, Halsey, Hambleton, Hanks, Hay, Hays, Hill, Killinger, Kinsella, McNeely, Mitchell, Morriss, Isaac C. Parker, Potter, Prindle, Randall, Edward Y. Rice, Ritchie, Robinson, Roosevelt, Seeley, Shoemaker, Slocum, Gloss, Worthington C. Smith, Snyder, Stowell, Vaughan, Voorhees, Walden, Warren, Whiteley, and John T. Wilson—63.

So (two-thirds not voting in the affirmative) the House refused to suspend the rules and pass the resolution.

Mr. Stevenson, of Kentucky, said: "I move to suspend the rules to pass the following resolution.

The Clerk read as follows:

Resolved, That the President of the United States is hereby requested, if not in his judgment incompatible with the public interest, to communicate to this House such information as he may have relative to the condition of affairs in Louisiana; and what, if any, action he has taken with regard thereto.

In the Senate on January 7th the Vice-President said: "The Senator from Ohio moves to take up the resolution offered by him. The Secretary will report the resolution."

The Chief Clerk read the resolution, as follows:

Resolved, That the Committee on Privileges and Elections is directed to inquire and report to the Senate whether the recent election of electors for President and Vice-President has been conducted in the States of Louisiana and Arkansas in accordance with the Constitution and laws of the United States, and what contests, if any, have arisen as to who were elected as electors in either of said States, and what measures are necessary to provide for the determination of such contests and to guard against and determine like contests in the future election of electors for President and Vice-President. That for the purpose of speedily executing this resolution the said committee shall have power to send for persons and papers, to take testimony, and at their discretion to send a sub-committee of their own number to either of said States with authority to take testimony; and, if the exigency of this service de-

mands, the said committee may appoint and employ suitable disinterested and unprejudiced persons not resident in either of such States, with authority to take such testimony as may be material in determining any pending contest growing out of the election of electors in either of said States.

Mr. Thurman, of Ohio, said: "This resolution seems to imply that there is a broader jurisdiction in Congress over the subject of the election of President than I have been accustomed to suppose is vested in Congress. It requires the committee to inquire whether these electors have been elected pursuant to the Constitution and laws of the United States. I know of no power in Congress to pass any law on this subject except a law fixing the time when the electors shall be chosen. The only power vested expressly by the Constitution in Congress is the power to fix that time. The provision is not as it is in regard to the election of Senators and Representatives, that the Congress may by law prescribe the time and manner of election, but it is simply that Congress may fix the time in respect to the election of electors themselves."

Mr. Trumbull, of Illinois, said: "I have always doubted the authority of the Senate of the United States to inquire into the proper election of a member of a State Legislature or of its constitution. If the Legislature exists and is the recognized Legislature of the State, I question whether Congress has any authority to go behind that and inquire into the constituent members composing that legislative body to determine whether they are rightly there or not. That is for the Legislature of each State to determine for itself; and although it may be true that there may be one or half a dozen members that ought not to have been in that Legislature in our opinion, if the State Legislature under its State organization has organized and it is the recognized Legislature of the State, if we find that to be the case, and it has then made the election in pursuance of the Constitution of the United States, I question if we are not bound by the election. If there are two Legislatures, then we must determine which is the proper one. Unquestionably that will present the question.

"Some years ago—I do not remember the date, but I understand the Senator from Indiana to say it was in 1865; I do not find the date given in the book before me—the two Houses of Congress agreed upon a rule in regard to canvassing the votes for President and Vice-President."

Mr. Edmunds, of Vermont, said: "There is no denying the fact that the passage or rejection of this resolution involves a determination of a certain right in the Senate and in the House of Representatives over this subject of the election of President—a jurisdiction, as the Senator from Illinois has styled it. Now, what is that jurisdiction? Where are you to go? Both the Senator from Ohio and the Senator from Illinois, and I believe the Senator from New Jersey—I was called out while he

was speaking—maintain that we have no right to go behind the election of the elector, behind his certificate. If that is true, then there is no use of sending down to Louisiana to ascertain what is the certificate of these gentlemen. Those certificates on both sides are in your possession. They are subject to investigation and inquiry here on the spot, and when you have yourselves looked at the State seal and verified the signature of the Governor, it is a question of law, according to the idea of these gentlemen, which certificate represents the sovereign and conclusive evidence that the State sends you as to what she has done."

The Vice-President: "The question is on the adoption of the resolution."

The resolution was adopted.

In the House, on January 13th, Mr. Sheldon, of Louisiana, moved that the rules be suspended in order to pass the following resolution:

Resolved by the House of Representatives (the Senate concurring therein), That a joint special committee, consisting of three Senators and six Representatives, be appointed, whose duty it shall be to inquire into the election for State officers and members of the Legislature held in the State of Louisiana on the 4th day of November, A. D. 1872, and report the result of their investigation to the two Houses of Congress at the earliest practicable moment; that said committee is hereby especially charged to inquire whether, as a result of said election, there is any legal and established government in said State, and, if there be two sets of persons or organizations, each claiming to be the government of said State, which should be recognized by Congress; that said committee be authorized to employ a clerk and stenographer, to send for persons and papers, to administer oaths, and take testimony, and to hold sessions by sub-committees in the city of Washington, or in the State of Louisiana, at their discretion; the expenses of said committee to be paid out of the contingent fund of the House.

The rules were then suspended so as to allow debate on the resolution for one hour.

Mr. Sheldon: "Mr. Speaker, I suppose by this hour two Governors have been inaugurated in Louisiana. For one week past there has been in session there two Senates and two Houses of Representatives, each claiming to be a part of the legal Legislature of that State. The House of Representatives should by law be constituted of one hundred and seven members, but we have now in the two Houses there one hundred and forty members, each body claiming a quorum; and at the same time there are forty-five Senators in the two bodies, while under the constitution of the State there can be but thirty-six Senators. Thus it will be seen that we really have in fact or in appearance two State governments as the result of the election held on the 4th day of November last.

"This resolution simply looks to an inquiry into the facts of that election, to ascertain which of these organizations claiming to be the State government shall be recognized by the Congress of the United States. The Supreme Court in the case of *Luther vs. Borden*

decided pointedly (and the decision was given by Chief-Justice Taney) that what constitutes a State government is a political question to be decided by Congress, under the Constitution of the United States. All that the resolution seeks is to determine that question."

Mr. Butler, of Massachusetts, said: "Mr. Speaker, I have given some attention to this matter of the troubles in the State of Louisiana as a part of my official duty as a member of the Committee on the Judiciary, and I desire that the House will bear with me for a moment while I state the reasons why I shall oppose this resolution for investigation, while I think it is the duty of Congress to do that which in it lies under the Constitution to arrest the existing state of things in Louisiana.

"There was an election held in Louisiana on the 4th of November last. I have no doubt that one government has the majority of the honest votes. I have no doubt that the returns show the Warmoth government, as it is called, elected. I have no doubt that set of returns is the only legal method provided by the constitution of Louisiana of ascertaining, when they are corrected by the proper tribunal, which is the true government. On the other side, the men who claim to be known as the Pinchback Legislature have organized themselves upon affidavits and certificates of supervisors, not returns, which are not the legal machinery by which an election in a State is determined. Then, on a bill to perpetuate testimony, the United States Court, Judge Durell presiding, took jurisdiction and issued a temporary injunction for the purpose of obtaining testimony in regard to those elected, and keeping the returns where they could be got at. But he went further, and interfered with the action of the parties who were not acting under those returns, to wit, the Pinchback government. While I do not pass an opinion on the action of Judge Durell, yet, being the action of an organized court, it left but one duty to the President to do—that is, to sustain the judgment and orders of the court. And that is all I understand he has done. But the effect has been to bring two governments, both illegal in my judgment, into action in the State of Louisiana, so that the State of Louisiana to-day is in the exact state described by the Greek word *anarchia*, without government, as Milton personified chaos as anarch.

"What is our duty? Our duty is under the clause of the Constitution to guarantee a republican government in form, which has always been construed to be to guarantee a republican government in fact; to give to Louisiana, to see she has, to take care she has, a republican government in fact representing the wishes of the people clearly shown through an honest and fair election. Now, this state of public affairs in Louisiana is known to everybody, and these facts are a sufficient basis on which this Congress can act."

Mr. Sheldon: "The dispute is this: the returns have been in the hands of one returning board appointed by Governor Warmoth and they have made a return. An additional fact is this: that every United States supervisor—and there were two at each poll in the whole of that State—did make returns to the chief supervisor; and I am told that twenty-two of the State supervisors have sent to the Lynch board, which you may call the Pinchback board, duplicate returns from those parishes. Now, it so happens that both of those boards have examined their respective election returns and have made returns to the Legislature, and both agree to a quorum in both Houses as having been returned. There is no dispute about that. Another fact is, that the Pinchback government, so far as Pinchback is acting as Governor, does not depend on this election at all, but on the previous election of the State Senate, and his election by the State Senate, under the constitution, as Lieutenant Governor; and on the impeachment of Governor Warmoth he becomes by the constitution acting Governor of that State."

Mr. Butler: "Then the fundamental difficulty is this: the State government depends upon who reads and interprets the returns and certificates on the one side or the other. And this is intensified by the fact that every man in the Legislature sits in judgment in his own cause, because he not only claims his election under these returns as he interprets them, but the very body itself to which he is elected depends on his interpretation of those returns. And therefore, on the one side and on the other, the two bodies do not decide the question which sometimes comes before this House and other legislative bodies, whether a particular member is elected. But they decide the question whether the Legislature itself has any existence as a governing body as against another body which also claims to be a Legislature."

Mr. Farnsworth, of Illinois, said: "I doubt very much myself, and it is my opinion that there is scarcely a member of this House who does not doubt the propriety and the possibility of putting any such bill through this House as the gentleman from Massachusetts refers to until we do get the facts in an authentic form which will warrant it.

"The uprooting of the established government of a State is no trifling matter. These chickens may come home to roost in another quarter. These proceedings, by which it is proposed to overturn a State government by congressional action before you take pains to ascertain whether or not they have a legitimate government—why, sir, gentlemen may regard it as a trifling matter as applied to the State of Louisiana, but it will be no trifling matter when in some future era it may be thought proper to apply it to the State of Massachusetts or the State of New York.

"But whether there is such anarchy and such absence of a legitimate government as to

warrant the Congress of the United States in overthrowing the pretended and professed governments there and establishing one for them is another thing. Our reconstruction acts were based upon the fact of the rebellion, upon the fact that those States had abolished all the governments which were in harmony with the Government of the United States; that there were perfect anarchy and absence of any State government in relation with the Government of the United States. That was my doctrine. That doctrine was sustained by the decisions of the court. Congress then put forth its power under the fourth article of the Constitution, which provides that Congress shall guarantee a republican form of government, and provided by enabling acts for the formation of State governments; and in Louisiana they have had that government for years; that State is now represented in both Houses of Congress. Why, sir, before you take the ground that there is no government in the State of Louisiana, and propose to establish one for that State, you must turn out the Senators and members of Congress from that State.

Mr. Kerr, of Indiana, said: "Mr. Speaker, what will be the effect of the appointment of this committee? Will it bring peace or justice to Louisiana? Will it undo the wrongs her people now suffer? Will it remove the Federal manacles that now enslave her? The gentleman who moved this resolution said that this investigation was due to Judge Durell and due to the President of the United States. For their condemnation? No, sir, no. For their vindication? I think so. The purpose of the investigation is to 'whitewash' these gentleman and others who have interposed by their own lawless exercise of power to overthrow a rightful, constitutional, and regular government of a State of this Union. I am opposed to any more whitewashing committees. I confess I have voted for a few in my day in this House, but I propose never to do so again."

Mr. Dawes, of Massachusetts, said: "I would be glad if the gentleman would answer a single question, an honest inquiry on my part. What remedy does he propose for the existing state of things?"

Mr. Kerr: "Mr. Speaker, the remedy is as clear to me as the light of the sun; and it consists alone in the Federal Government keeping its hands of lawless power off the people of Louisiana and suffering them to go on in the exercise of their own powers under their constitution to reestablish order in their State. That is all they need. The revolutionists in Louisiana would never have dared to do what they have but for the hope of countenance and aid from Washington."

Mr. Poland, of Vermont, said: "As I look at this matter, however much information we may get upon this subject it will not authorize us to act at all. The gentleman from Louisi-

ana said that we were authorized to act upon this question, and that it was the duty of Congress to act upon it in consequence of the doctrine laid down in the Supreme Court of the United States in the Rhode Island case of *Luther vs. Borden*. That was a case where there were two distinct and independent State governments set up in the State of Rhode Island."

Mr. Sheldon: "And that is precisely the case in Louisiana to-day."

Mr. Poland: "That is precisely where the gentleman is mistaken, where the fundamental error lies. There is but one constitution and there is but one government in the State of Louisiana. They all agree that the same constitution is binding upon the State, and these men all claim to have been elected at the very same election. The point is that it is a mere question of contest as to the result of that election, and if Congress is to interfere in this case in Louisiana, why, whenever there is a contest in any State in relation to who was elected, Congress must interfere to decide that question. The truth is that it is a purely judicial question that is to be determined. Here was an election held, and here are two sets of men, both of whom claim to have received a majority of votes in that election for State offices. Now, is that a question for us? Do gentlemen claim, does the gentleman from Massachusetts (Mr. Butler) claim that that is a question to be decided by this House? Not at all; it is purely a judicial question, and it is the duty of both sides to resort to the judicial tribunals of the State to decide it. One side has resorted to a judicial tribunal and got a decision in its favor. Judge Durell decided in favor of one set of claimants to the office of Governor and other State offices, and the President of the United States very properly said to them, 'You have got a judicial decision in your favor; it is not for me to inquire whether that decision was right or wrong; it is the duty of the Executive to see that you do not get into civil war and anarchy, and to stand by the decision of the court, until somebody reverses that decision or decides the other way.'"

Mr. Eldredge, of Wisconsin, said: "I look upon the question presented to this House by the resolution and this discussion as one of the most important which can possibly engage its attention. The interference of the Federal Government with the affairs of a State, and particularly with State elections, it seems to me, is a matter of very great delicacy, and ought not to be attempted without the clearest warrant and authority for it that can be found in the Constitution. To my mind no such case, no such state of affairs, no such circumstances have arisen as will warrant this Congress in interfering with the affairs of Louisiana as proposed in the resolution before the House. Let us stop; let us hesitate; let us consider."

"Upon what ground do gentlemen seek to justify themselves in this intervention in State affairs? There are provided for, in and by the Federal Constitution, two cases where the United States have the express right to interfere. Those are clearly written in language about which there need be no mistake. They are in the fourth article, and are as follows:

The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence."

Mr. Garfield, of Ohio, said: "It seems to me that the shortest, the plainest, the only proper settlement of that question at this time is to order that the message of the President, with all the accompanying documents now lying upon your table, Mr. Speaker, shall be referred to the Committee on the Judiciary, and that that committee shall be directed to examine and report to this House at as early a day as possible, and that they shall be empowered to report at any time.

"I shall, therefore, at the proper time ask the House to give me an opportunity to offer a resolution I have prepared, and I hope the House will adopt it in place of the resolution of my friend from Louisiana (Mr. Sheldon), so that we may not rush into the middle of this question until we have taken the necessary steps to inform ourselves of all the facts within our reach. I ask the Clerk to read, as a portion of my remarks, the resolution I have prepared, in order that the House may see what I desire as to disposing of this case."

The Clerk read as follows:

Resolved, That the message of the President and the accompanying documents, now on the Speaker's table, relating to the existing condition of affairs in the State of Louisiana, be printed and referred to the Committee on the Judiciary; that the said committee be ordered to report to the House at as early a day as possible what facts, if any, there are in the case that require any action on the part of Congress, and that said committee have leave to report at any time by bill or otherwise.

The Speaker: "A majority may adopt the substitute, but a two-thirds vote will be necessary to adopt the resolution finally."

The question first occurred on the substitute of Mr. Garfield, of Ohio; and it was agreed to.

The resolution as amended was then adopted under the suspension of the rules, two-thirds having voted in favor thereof.

In the Senate, on January 16th, Mr. Morton, of Indiana, asked the unanimous consent to offer the following resolution and for its immediate consideration:

Resolved, That the Committee on Privileges and Elections be instructed to inquire and report to the Senate whether there is a legal State government in Louisiana, and how and by whom it is constituted.

The Presiding Officer: "Is there objection to the consideration of the resolution? The Chair hears none, and the question is on its passage.

Mr. Thurman, of Ohio, said: "I do not know that I shall vote against this resolution; on the contrary, my first impression is to vote for it; but I think it had better be considered a little. Let us see, in general, what we know on the subject. We know that there are two individuals each of whom has been inaugurated as Governor of Louisiana. We know that there are two bodies each of whom claims to be the Legislature of Louisiana. We know, therefore, that there is a question, which is the State government of Louisiana, who is the Governor, and who are the Legislature. Now, as I understand it, the President of the United States has recognized one of these Governors and one of these Legislatures, but that recognition by the executive department is not binding upon Congress. Nothing can be clearer than that. We are not bound by his recognition. It may be good so far as the executive department is concerned until Congress shall act, or it may not be; but, assuming that it may, it is not in any degree whatsoever binding upon Congress. Nothing can be clearer than that. Indeed, to Congress more than to the President must belong the determination of which is the proper State government where there are two governments or so-called governments in a State, each claiming to be the government of that State.

"I am not, however, prepared to say that because Congress has passed that act which provides for a particular case where a call is made on the President for the armed forces of the Government, that authorizes the President, where there is no such call at all, voluntarily and officiously (if I may so say without disrespect) to undertake to decide between two rival governments in a State. I do not undertake to say that he can do so. In fact I do not quite understand these proceedings in Louisiana. I do not quite understand how without any call by the State Executive of Louisiana, the troops of the United States are employed there, in the language of General Emory's dispatch, "to preserve the peace." I thought that it was the business of the State to preserve the peace, and that it was not the business of the United States to interfere to preserve the peace until it was called upon either by the Legislature, if it was in session, or by the Executive when the Legislature was not in session."

Mr. Edmunds, of Vermont, said: "The Senator has taken occasion to enlarge a little upon what he does not understand, using his own language, in the way of criticising the President of the United States as the head of the Army in doing what he has done. I suppose, from what the Senator from Ohio says, that he would wish the President of the United States to shut up his eyes and stop up his ears and fold up his hands in respect to carrying on his public duties until the cataclysm, to use a geological expression, had come, until the city of New Orleans or the State of Louisiana was

imbruing itself in the blood of citizens, and then he was to wake up and find that something had happened, and take a fortnight or three weeks to find out which was the apparently true government for the time being, and then act. That does not comport with my ideas of executive duty. I think it is the duty of the President of the United States to foresee that there is a possibility of collisions between rival claimants to the administration of power, and to be ready to meet that. What the dispatches that the Senator speaks of mean, if he would inform himself thoroughly, I think would be only that a part of the army being there, as it must be somewhere, without offense to Louisiana or to Ohio either, the President of the United States has directed his subordinate officer, in the event of a disturbance, to interpose on the call of the proper authorities; and it being necessary to decide in advance on the moment who they are, just so far as the act of Congress authorizes him to interfere; that is to say, if there is a commotion arising suddenly in the city of New Orleans between conflicting claimants to executive or legislative power, the general in charge is instructed in advance: 'You will for the time being take this side to be the side representing the State, and you will exercise the power that the law confers upon you to keep people in a state of quiet.' But when gentlemen go beyond that, what the marshal has done and what his *posse* of assistants did was in obeying the mandates of the courts, in which my friend from Ohio and his associates, I think, have expressed the greatest possible confidence as the true tribunals to determine the rights of citizens to whatever they may claim to have."

Mr. Thurman: "If the President of the United States has done nothing but what is authorized by the act of Congress, I am the last man to censure him, and I have not censured him, because we have not the facts before us; at least, I have not the facts before me. I say again, however, that so far as I know there has been no call upon the President of the United States, either by the Executive of Louisiana, or by the Legislature of Louisiana, to interfere with the military power of the General Government. If there has been I shall be glad to be corrected, and very glad to make the acknowledgment that is due. But if there has not been any such call, then I quite deny that the President of the United States can anticipate that there will be trouble in a State without any call by anybody purporting to be the Governor or Legislature of that State, can interfere with the military arm of the Government. Not at all, sir, can he do any such thing."

"And as to executing the decisions of the courts of the United States, I do not know any authority that a general of the Army of the United States or that the United States marshal has to call upon the troops of the United States to execute them except in cases in which

it is expressly given to him by act of Congress. And if this is such a case then I again confess that I have overlooked any such act.

"And furthermore, when it comes to the question of respect for judicial authority, my friend says that we Democrats have had very great respect for judicial authority—"

Mr. Edmunds: "No; I did not say that. I said professed to have."

Mr. Thurman: "Professed to have! Very well, sir; when he will show any case in which we have ever professed that a district judge of the United States had power to overturn a State government and set up a State government according to his own will, that upon an injunction bill he had power to take possession of the State, and in direct violation of an act of Congress inaugurate legislators and set up a Legislature—when he shows we have professed any such thing as that, then I will be willing to take his rebuke, but not till then."

"No, sir, that will not do at all. There was a time when the Supreme Court of the United States made a decision, a solemn decision, upon a most interesting question of the interpretation of the Constitution of the United States, and I remember full well that there was a mighty party in this country, which has since become the dominant party, that condemned that decision, and paid no manner of respect to it, and undertook to consign the judge who delivered that opinion to eternal infamy. It will not do, therefore, to talk about this decision of this judge at New Orleans, this district judge, who assumes to overturn a State and to set up a State government upon an injunction bill!"

Mr. Edmunds: "The Senator from Ohio says that he does not object to the President executing acts of Congress in the use of the Army. We are very much obliged to him for that; but he says he does not know where the President gets authority before there is any call upon him by a Legislature or a Governor, whichever one may be the true one, to interfere. So say I. When the President does interfere in such a case as that, it will be time enough to inquire. The Army of the United States, under the command of the President, has not interfered in the way that the Senator seems to imply that it has, unless it is interference to be quartered in the city of New Orleans rather than in the city of Columbus, Ohio."

"I should like to know where this Army of ours is going to stay, if every State sets up its dignity and says, 'You must not be with us.' Suppose New England says, 'We do not want any army; get out of our way;' the Middle States say, 'You cannot stay here; you are infringing on State rights here;' and the Southern States say the same thing. What, then, is to become of the poor people serving in the Army?"

Mr. Thurman: "Allow me to ask a question. Did not the Army of the United States

take possession of 'the Mechanics' Institute?' I believe that is the name of the building which was temporarily the State-House of Louisiana."

Mr. Edmunds: "I will come to that."

Mr. Thurman: "Did they not take possession of it and keep possession of it before any recognition of any government was made by the President of the United States?"

Mr. Edmunds: "It may be; but the Senator from Ohio, with his usual adroitness, chooses to confound two distinct and separate things. One thing about which he was speaking and about which I am speaking is, the action of the President under the Constitution to protect the States from domestic violence on the call of the Governor or the Legislature, and under the act of Congress which authorizes him to carry that out. That is one thing. The duty of the President of the United States to see that the laws of the United States are faithfully executed and that the mandates of the courts of the United States are carried out is an entirely different thing. I do not doubt that the Senator from Ohio understands the difference. I have too much respect for his intelligence and his learning to doubt it for a single moment. It is better, therefore, not to run the two things together, I would suggest to him.

"Let us speak but of one for a moment. What has the President of the United States done in the way of interference, forcible interference, armed interference, with the affairs of the State of Louisiana, under this first branch of the subject? Nothing at all, unless it is a crime that he should have a portion of the Army at a military post in the city of New Orleans, and unless it is a crime that, in order to be ready for emergencies, he should have commanded his officers, under the act of 1792 that I have referred to, that, if a dispute did arise, to recognize one set of men as the true State government.

"When you turn over to the other thing of which the Senator speaks, you have the mandate of a court, you have the execution of a law. Perhaps the court is wrong; I express no opinion about it; I am not hasty in expressing opinions—at least I do not mean to be—about judicial proceedings until they in some way come under consideration; because I think we are sometimes a little too hasty in going off about what a court has done before we see the papers and hear both sides argue the matter before us. That is thought to be usually advisable in regard to judicial proceedings. The marshal of the United States is commanded to execute a particular mandate. The Senator from Ohio says he does not know where the marshal gets his authority to call upon the people composing the Army of the United States to assist in the execution of that mandate. The Senator's memory is pretty short, and I am not sure but mine would be if I had had the same political views

and been brought up in the same faith as my friend.

"In the fugitive slave law—a pretty extreme case, I admit, but it is extreme in the line of my argument in favor of my proposition—it was provided by the act of Congress that the warrant of the commissioner issued to the marshal should be authority in a certain case for him to seize the person of a colored man alleged to be a fugitive from labor, and to bring him before the commissioner, and, upon the decision of the commissioner, to carry him to the place where it was claimed his service was due. The President of the United States—I believe it was in the city of Boston—was called upon through the marshal for military assistance to execute such a mandate. The people of Massachusetts were a little notional on the subject of seeing men expedited in that way and for that cause, in which I confess I sympathized with them; and thereupon the opinion of a Democratic Attorney-General, in good old solid Democratic times when there was a Democratic party, was taken by the President of the United States upon that very question. Here is his opinion:

This authority—

"That is, the authority of the marshal to summon the entire able-bodied force of his precinct as a *posse comitatus*—

This authority comprehends not only by-standers and other citizens generally, but any and all organized armed forces, whether militia of the State, or officers, soldiers, sailors, and marines of the United States; and, if the object of resistance to the marshal be to obstruct and defeat the execution of the provisions of the Constitution or of acts of Congress, the expenses of such *posse comitatus* are properly chargeable to the United States.

"That opinion will be found in the sixth volume of the opinions of the Attorneys-General. I do not suppose that there was at that time, even on the part of Republican or Whig lawyers, whatever they may have been called, any doubt as to the legal soundness of that proposition, and that the Army of the United States could not fold up its arms and stand silently by when the marshal was calling on them to assist him in the execution of process emanating from a court, and say: 'We think the court has made a mistake, and we will not assist you; we must be the judges;' because that would give to the people who compose the Army a higher right than the citizen himself has. Then, as I say, I do not think anybody questions the legal soundness of the proposition that the Army might be employed as a *posse comitatus* in the execution of such process. Now, whether this judicial process was wise or unwise, whether it was erroneous or whether it was correct, the Senator will not claim is a question that the general must decide. That would overturn all government. That is all there is of it."

Mr. Thurman: "Mr. President, if the Senator from Vermont lays down the proposition as broadly as his language imports, that

a marshal of the United States can, where he has a process of a Federal court to execute, call upon the Army of the United States or any portion of that Army as a *posse comitatus* to execute that process, I deny the proposition. I deny that any law of Congress, at least any that I have ever seen or heard of, authorizes any such proposition.

"Why, sir, that would break up military operations. What would have been said if during the war, when a body of the troops of the United States were marching through the State of Ohio, marching to the defense of Cincinnati, which was menaced by the Confederate troops, the marshal in the city of Columbus could have summoned a thousand, or two thousand, or three thousand of those men to execute some little process issuing out of the District Court of the United States for the southern district of Ohio and they were bound to obey, because where there is power to summon a man as a part of a *posse comitatus* he is bound to obey, and is guilty of contempt of court if he does not obey? That will not do at all. This right to summon the Army can only be exercised where there is a statute that confers the right. You might interfere with all the military operations of the Government if a marshal in his discretion could stop the march of an army, divert it from its military operations, and employ it in the execution of some process; it may be an execution in a case between A B and C D. Take this very case: what was it? It was a suit that professed to be between A B and C D, two private individuals. It was not a case to which the State of Louisiana, as a State, was a party. It could not be a party in any such case. Now, it is said that in any case whatever—"

Mr. Carpenter, of Wisconsin, said: "Is there not a great distinction between the case he supposes that might have occurred in Ohio and the case which he is considering? Is it not one thing to say that the marshal of the United States can, against the commanding general of the Army or against the President, detach from a marching column three thousand troops and take them to enforce civil process, and another to hold that the President of the United States may say to the marshal, 'There is a portion of the Army; if you need them as a *posse*, use them.'"

Mr. Thurman: "In respect to that, I am extremely doubtful whether that can be done without the authority of an act of Congress. But I will not go into that, because I do not understand such to be the facts here. I understand that these troops were used without any direction from the General of the Army, or without any direction whatsoever from the President of the United States; but that, under a midnight order of the judge of the District Court forsooth, for the District of Louisiana, the State-House for the time being was taken possession of by troops of the United States, and nobody allowed to enter that State-

House, however perfect his title might be, there to be and there to act officially, except by leave of the troops that held it in possession. If there is any statute of Congress that authorizes such a thing as that I confess my ignorance. I never saw any such thing."

Mr. Edmunds: "Mr. President, one word in reply to my good friend from Ohio (Mr. Thurman). The fugitive slave law of 1850 provided in precisely the same terms that the enforcement act under the fifteenth amendment provides, that the marshals in the execution of the process of the court should have power to summon and call to their aid the by-standers or *posse comitatus* of the proper county when necessary. That is the authority conferred upon the marshals. I have before me the instance to which I referred in *extenso*. Here is the opinion of Mr. Caleb Cushing, rendered to the President of the United States in 1854, upon the subject of paying the expenses of that portion of the Army which was employed by him as a *posse comitatus* in enforcing the extradition of a fugitive from labor. I will not take up the time of the Senate in reading the whole of this opinion, which is somewhat long and very exhaustive, but will merely read an extract or two going to show precisely the opposite of what I understand the Senator from Ohio to claim, that the marshal of the United States is empowered to call upon the people composing the Army to assist him as a *posse comitatus*, and that it is part of their duty to obey. I do not mean a part of their duty to obey against the orders of the President of the United States, or of the commanding general, when some extreme necessity of public affairs requires them to do another thing. There would be merely a conflict of duty, and you cannot perform both duties at the same time, and therefore somebody must judge as to which should be first performed. That would be plain enough. But that does not meet the point. Here is a case where there is no other public exigency which requires the immediate employment of these people who are called upon to act as a *posse comitatus*, and that raises the question. This opinion goes on to say:

I repeat, the *posse comitatus* to aid the officer of the law in the execution of his duty is in the service of the Government, not in the service of the individual who sues out the process of the law to have the justice of the nation administered to him, which administration is of the duty of the Government. To guard against violence by wrong-headed, misguided, disloyal citizens, or by foreign force, is an important obligation of every Government—the grand purpose and consideration, indeed, for which it is instituted. Hence, when the officer of the law deems it necessary and proper to raise the *posse comitatus* to aid and assist him in executing the process of the law, the extraordinary expense thereby incurred is properly payable by the Government. * * * These considerations apply as well to the military as to the civil force employed, for the *posse comitatus* comprises every person in the district, or county, above the age of fifteen years ("Watson's Sheriff," p. 60), whatever may be their occupation, whether

civilians or not, and including the military of all denominations, militia, soldiers, marines, all of whom are alike bound to obey the commands of a sheriff or marshal. The fact that they are organized as military bodies, under the immediate command of their own officers, does not in any wise affect their legal character. They are still the *posse comitatus*. (XXI. Parl. Hist., pp. 672, 678, per Lord Mansfield.)

"There is an eminent English authority, which undoubtedly the Senator from Ohio respects, as to the nature of the *posse comitatus*, that it does include the armed bodies of citizens, who are the very conservators and guardians of order, the very persons who above all others ought to be first called upon; because it is a part of their mission to execute the law, and to execute it by force if it cannot be executed otherwise. So that I propose, against the opinion, and doubt, and difficulty, of my friend, the action of a Democratic administration in a case of extreme hardship indeed, against liberty and for slavery, and the solemn determination of Lord Mansfield and the English courts as an offset to him. It may be that I am wrong; but when I have drunk in my inspiration as to what the law is (not as to the uses to which it is to be applied in fugitive slave cases) from such sources, I do not think it is quite the thing for the leader of the Democrats, what there is left of them, to be assailing the President of the United States for assisting to execute the mandates of this court, be they right or wrong."

Mr. Thurman: "Mr. President, I shall not enlarge this debate by an inquiry, 'What is left of the Democratic party?' although the Senator from Vermont has twice used that expression. I think there are some three millions of them voters in the United States, and if three millions of the voters of the United States are only persons to be spoken of contemptuously, let it be so. That is a matter of taste."

Mr. Edmunds: "The Senator will excuse me; I did not mean to speak of them with contempt, only with pity."

Mr. Thurman: "Well, sir, when they demand the pity of the Senator from Vermont, when they ask for it, it will be time enough for him to show the benevolence of his nature. My friend from California suggests that then they will be very poor. It is very easy indeed for a person to be contemptuous in extending his pity. When they need the pity of the Senator from Vermont and ask for it, it will be time enough for him to extend it."

"The only general law that I know of on this subject is the act of July 29, 1861; a very brief section indeed, and in these words: "

That the marshals of the several districts of the United States, and their deputies, shall have the same powers in executing the laws of the United States as sheriffs and their deputies in the several States have, by law, in executing the laws of their respective States.

Mr. Edmunds: "Will my friend allow me to give him a little further information on that point?"

Mr. Thurman: "Certainly."

Mr. Edmunds: "I will read to him the twelfth section of the act of the 28th of February, 1871, entitled 'An act to amend an act approved May 31, 1870, entitled "An act to enforce the rights of citizens of the United States to vote in the several States of this Union, and for other purposes," under which act this very suit was instituted, wherein the marshal had the assistance of the Army, as it is said. Here is the twelfth section:

That the marshal, or his general deputies, or such special deputies as shall be thereto specially empowered by him, in writing, and under his hand and seal, whenever he or his said general deputies, or his special deputies, or either or any of them, shall be forcibly resisted in executing their duties under this act, or the act hereby amended, or shall, by violence, threats, or menaces, be prevented from executing such duties, or from arresting any person or persons who shall commit any offense for which said marshal, or his general or his special deputies, are authorized to make such arrest, are, and each of them is hereby, empowered to summon and call to his or their aid the by-standers or *posse comitatus* of his district.

"The Senator will observe that it is not confined merely to making arrests, but extends to any duty the marshal has to perform under that act."

Mr. Thurman: "Now I will try to answer the Senator upon that law."

Mr. Edmunds: "I will also read to the Senator, at the suggestion of my friend from New Jersey (Mr. Frelinghuysen), the ninth section of the act of April 9, 1866, under the fourteenth amendment, the civil rights bill, so to speak, which declares—

That it shall be lawful for the President of the United States, or such person as he may empower for that purpose, to employ such part of the land or naval force of the United States, or of the militia, as shall be necessary to prevent the violation and enforce the due execution of this act.

"That was under the fourteenth amendment, the amendment of equality and of civil rights; and under that I would suggest to my friend also, as well as under this special voting act, the authority of the President is perfectly clear to support the courts in their proceedings."

Mr. Thurman: "I should like to see that too. I will take up these acts now in their order. The first in point of time is the act I had spoken of, and which I have already read, an act in three lines:

That the marshals of the several districts of the United States, and their deputies, shall have the same powers in executing the laws of the United States as sheriffs and their deputies in the several States have, by law, in executing the laws of the respective States.

"That was approved July 29, 1861, approved in the midst of the war. If there was this general power that it is claimed there was, according to the opinion of Mr. Cushing as understood by the Senator from Vermont, where was the necessity for this act of 1861?"

Mr. Edmunds: "What does the Senator

mean by saying that I claimed there is a general power without authority of law?"

Mr. Thurman: "What I understand the Senator to claim, and he reads Cushing's opinion for the purpose of maintaining it, is that a marshal of the United States having any process to execute, issued under any law of the United States, or in execution of any decree of any court of the United States, has power to call upon the military arm of the Government."

Mr. Edmunds: "Yes, as part of the *posse comitatus*."

Mr. Thurman: "As part of the *posse comitatus*."

Mr. Edmunds: "Not that he has the power essentially because he is marshal, but because the statutes of the United States confer upon him the authority in many instances, as in this very instance, to summon the *posse comitatus*, and in the general way the Senator has read to have any power that the sheriffs have in the States, and their power, I suppose, my friend will hardly question includes that of summoning the *posse comitatus*."

Mr. Thurman: "Where does he derive his power? He has read nothing but the provision in the fugitive slave act which authorized the marshal to summon the *posse comitatus*, but which says nothing whatever in regard to any power to summon a soldier of the United States as a part of the *posse comitatus*."

"Now, I say to him that it will take some higher authority than the opinion of an Attorney-General of the United States to make me subscribe to that doctrine. Why, what is it? If the marshal in the southern district of New York, for instance, has the right to summon the troops of the United States as a part of his *posse comitatus*, and they are bound, in the language of Mansfield, to obey that summons, he may take every soldier out of every fort there is in New York and use them as a part of the *posse comitatus* at his election, and they are bound to obey, and the same way in any other State you may mention. You may absolutely compel the vacation of Fort Lafayette, or Fort Hamilton, or Fort Schuyler, of every fort in the southern district of the State of New York upon the mere command of a United States marshal. No, sir, I do not agree to that proposition at all.

"As I said, the only general provision that I know of is that which I have read, passed in 1861. Before that there were special provisions, like the special provision in the fugitive slave law; but this is the first general provision that I recollect giving such extended power to the marshal. What power does this give? No more power than a sheriff possesses; and who pretends that a sheriff of a State has a right to summon a part of the Army of the United States as a *posse* to execute process? It cannot be done; and as a sheriff has not that power, so the marshal has not that power."

Mr. Carpenter: "Will my friend allow me to interrupt him a moment to ask a question?"

Mr. Thurman: "Certainly."

Mr. Carpenter: "Now, what I want to ask is this: does the Senator maintain that the President must go in person to use the Army and enforce these decrees? Not at all; that cannot be necessary, because in the very nature of things he never could do it. If he says, for instance, in the State of Louisiana that he apprehends the laws are not being faithfully executed, that he apprehends that the decree of a court will be resisted, and if he says to the marshal of that district, 'There is a company of infantry; if you have occasion for a *posse comitatus* use them,' may he not do that apart from any provision of a statute? A statute is not necessary to clothe the President with this power. A statute cannot take it from him, because the Constitution gives it to him. When the Constitution says the President is to take care that the laws be faithfully executed and he is made commander of the Army and the Navy, is it not intended by the Constitution that in a case where a necessity requires it he is to avail himself of the Army and Navy to execute the laws? And here in this case, where the law has passed through the judicial crucible, received an authoritative construction and come forth in the form of a decree, may he not say to the marshal of the district apart from any statute whatever, 'If you have occasion to use a *posse*, there is a company of infantry at your disposal?'"

Mr. Thurman: "I am perfectly willing to answer him, although I prefer to go on with these statutes, as I have them before me, to show that not one of them justifies the interpretation that is claimed.

"But the Senator from Wisconsin says that it does not need any statute, that the Constitution is sufficient, that the President, under the authority and duty which rest upon him to see that the laws are faithfully executed, may put the Army in the way of some marshal of the United States who has process to execute, and that the marshal may thereupon summon the Army, and that that is what is meant by the Constitution in providing that the President shall see that the laws are faithfully executed. That is to say, whenever a court of the United States renders a decree, no matter what it is, whether it is a decree for the recovery of land, whether it is a decree for the specific execution of a contract for the sale of stocks, or the like, no matter what it is, a mere private controversy between individuals, or whether it is a contest in relation to a State office, the lowest that there may be in the State, wherever there is a decree of a Federal court the President may put the Army of the United States into that locality for the express purpose of being called upon and subjected to the orders of the marshal of the district who has the process to execute. I deny the proposition out and out. I say it is not the law."

Mr. Morton: "Will the Senator allow me to read him a section from the act of 1807?"

In all cases of insurrection or obstruction to the laws, either of the United States or of any individual State or Territory, where it is lawful for the President of the United States to call forth the militia for the purpose of suppressing such insurrection or of causing the laws to be duly executed, it shall be lawful for him to employ for the same purpose such part of the land or naval forces of the United States as shall be judged necessary, having first observed all the prerequisites of the law in that respect.

"That covers it exactly."

Mr. Thurman: "I cannot answer two or three questions at the same time. My friend from Wisconsin says no statute is necessary, and then my friend from Indiana wants me to pay attention to a statute. I can only do one thing at a time, and that very imperfectly, in this debate which has sprung up without any expectation on my part or any preparation for it, which perhaps would be the very best reason why I should have said nothing at all upon it. But I do deny the proposition of my friend from Wisconsin, that, under the constitutional obligation of the President to see that the laws are duly executed, he can, at his mere will and volition, employ the Army and Navy of the United States as a part of the *potest comitatus* by simply putting them within the reach of the marshal of the United States, a civil officer. I say that such a construction as that might be utterly destructive of liberty, and utterly destructive of the true execution of the laws and of the Constitution, and our forefathers never intended any such thing as that. If so, why were all these statutes passed? There are a great many things that the President by the Constitution might seem to have authority to do that yet he cannot do without an act of Congress. He is made the Commander-in-Chief of the Army and the Navy. Have we no power over the Army and the Navy?"

Mr. Carpenter: "Certainly, and over him in that capacity."

Mr. Thurman: "Yes, sir, he is commander of the Army and Navy, but he cannot send the Army against our will to any place where we say he shall not send it. He can send it where we say he shall send it, and the same thing of the Navy. His power to see that the laws are executed is a power to see that they are executed pursuant to the law and with the means which the law gives him. It is a power to execute them as the law says he shall execute them, not a power to execute them without any provision of law to enable him to execute them."

Mr. Carpenter: "If that were the theory of the thing, the proper way to have conferred that power in the Constitution was, to have authorized Congress to authorize the President to execute the laws. It is not a power of Congress. The power is conferred by the Constitution on the President to take care that the laws be faithfully executed. I do not

mean to maintain that the President can go out on a general mission of construing statutes and calling out the military; but I say after a case in court has passed into judgment it ceases to be a case between citizens; the United States have called their citizens to the bar, have determined what shall be done between them; for instance, that the defendant shall render up possession of forty acres of land; the process of the court issues to compel that surrender; it meets with resistance; the process is in the name of the United States; all process goes in the name of the President of the United States, and when the question comes, shall that decree of the court be obeyed or not, the issue is not between A B and C D, but it is between the United States and all comers. And that is precisely the case where the Constitution says—and it needs no act of Congress to make it any stronger, and no act of Congress can take the power away—that the President shall take care that the laws be faithfully executed."

Mr. Thurman: "He shall take care that the laws are executed in the manner provided by law. But now let us test this matter a little more. Suppose we were to abolish the Army to-day (we may disband it, so that there will not be a man in it from the general to a private), and here rests upon the President this obligation to see that the laws are executed, can he thereupon raise an army of his own mere motion? Can he involve this Government in \$1,000,000 of expense by raising an army and marching it from the State of New York to the State of Louisiana to execute Judge Durell's decree, without any act of Congress authorizing any such thing? No, sir, he cannot do it, because if Congress will not give him the means to do it he is powerless to do it."

"Now, sir, I will not prolong this debate upon that subject. If you look into these acts, the act last read by the Senator from Indiana is an act in relation to insurrection."

Mr. Morton: "Oh, no; it expressly extends to enforcing decrees of courts."

Mr. Thurman: "If the Senator will send it to me, I will thank him. I do not think any general act can be found that authorizes the Army or the Navy of the United States to be summoned in this manner. There are certain cases, I think, in some of the enforcement acts, where it is so provided. If so, why was the general law passed in 1861—and I am now coming to it—which clothed the marshals with the same power that the sheriffs had? Is it to be supposed that right in the midst of the war it was intended to clothe the marshals with power to summon an army in the field, or an army on its march, and divert it from its military operations to execute some civil process to put John Doe into the possession of a tract of land that he had recovered from Richard Roe? Was that the meaning of Congress? No, sir, nothing of that kind. It

never was intended that the Army of the United States was to be used in that manner. If it had been, Congress would have provided for it.

"But, sir, this debate may be premature. I have admitted myself, as one of the most painful circumstances connected with this transaction, that we are left so much in the dark as to what are the real facts of the case. I do know one thing; I do know that the rights of the States of this Union, the preservation of our Government, is not worth the pen with which the Constitution was written, if one single little judge of a district court can overturn a State government or set up what State government he pleases. I know furthermore, that, so far as my knowledge extends, the idea of any judge upon an injunction bill undertaking to set up and inaugurate a government of a State is a thing that no man ever heard of before this was done, and that no man ever dreamed of as possible until it was actually achieved in this very case. And I know that I shall not, under any blind respect for courts, for one moment tolerate any such proposition as that. When a court has jurisdiction to do a thing, I cannot help it if it has erred; the only way to rectify its error is in the mode that is provided by law; but when a court has no jurisdiction whatever to do any such thing, when a little judge of an inferior court of the United States, a court that may be abolished to-morrow if Congress sees fit to abolish it, assumes the power to destroy one State government and set up another State government according to his will and his judgment, I deny that his opinion is entitled to respect anywhere or upon any occasion."

Mr. Carpenter: "I entirely concur with the honorable Senator from Ohio, that a Federal court has no right to overturn one government and set up another, and I simply desire to put in a protest here that no such thing has been done in this case. Whether A or B has been duly elected Governor of a State is one thing and a totally different thing from the question whether that State government shall stand or fall. We had a few years ago a contested election between candidates for the governorship in the State of Wisconsin. Our Supreme Court decided that the man who had received a certificate and entered upon the discharge of his duties was not elected, and rendered a judgment in favor of the contestant, and the man who had received the certificate vacated the executive chamber and his opponent took the place. That decision did not disturb the State government. It was a mere question between A and B as to who was entitled to exercise the office of Governor. Now, I understand the question to be precisely the same in Louisiana—not between rival governments, but between rival candidates as to who has been elected to office.

"One word in regard to the jurisdiction of that court. I am not going into the details

of the matter at all, because such a discussion is entirely premature, and I only do it by way of protesting against what might seem to be implied as the facts of the case from silence on this side of the Chamber when the Senator from Ohio has denounced such a condition of things.

"Under the fifteenth amendment, for instance, which provides that no State shall abridge or deny the right of citizens of the United States to vote on account of race, color, or previous condition of servitude, and that the Congress of the United States shall have power by appropriate legislation to enforce the provisions of that article, it is manifest that the right to vote means the right to have the vote canvassed and counted, and effectual for the purpose for which votes are cast. Then, in execution of that provision of the Constitution which says that Congress shall legislate to carry it into effect, Congress has passed an act saying that no man shall be deprived of an office, with certain specified exceptions, in consequence of the State canvassers or State officers having refused to receive and canvass a vote offered by a person in the condition mentioned in the amendment to the Constitution, and that the party claiming to be elected may have an appropriate action in the Circuit Court of the United States to obtain the office. What that appropriate action is to be, whether it shall be a suit in equity for an injunction to restrain a canvass which would put the wrong man in, or whether he must wait until his rival, who was not elected, has been installed in office, and then bring a *quo warranto* against him, is a fair question for judicial determination. It does not go to the jurisdiction of the court over the subject. The question is merely what is the appropriate form of action. You might as well say, when a court had taken possession of property, for instance, in an action of replevin, because the action of replevin could not be maintained and some other form of action must, the court had no jurisdiction over the subject-matter. That cannot be maintained."

Mr. Thurman: "A word or two more. First, let me speak of this section of the act of 1897, read by the Senator from Indiana, and it is only necessary to pay attention to it to see that it has nothing in the world to do with this case. It reads as follows:

In all cases of insurrection or obstruction of the laws either of the United States or of any individual State or Territory where it is lawful for the President of the United States to call forth the militia for the purpose of suppressing such insurrection, or of causing the laws to be duly executed—

"What is the case in which it is lawful for him to call forth the militia for the suppressing of such insurrection, or of causing the laws to be duly executed? It is when he is called upon by the Executive of the State, the Legislature not being in session, or by the Legislature if it is in session—

it shall be lawful for him to employ for the same purposes such part of the land or naval forces of the United States as shall be judged necessary, having first observed all the prerequisites of the law in that respect.

"What are those prerequisites of the law before he may call forth the militia? They are, that he shall make proclamation to the insurgents to disperse, before he can do it at all under the act of 1795 to which this act of 1807 is an amendment. Why, sir, this act has nothing to do with a case like this. The Constitution says that Congress shall have power to provide by law for calling forth the militia to suppress insurrection. That is a power granted to Congress, and in the exercise of that power it has provided by law in what cases the militia may be called forth, and those are cases in which the Legislature of a State, if in session, or the Executive of the State when the Legislature is not in session, shall represent to the President that the insurrection cannot be put down by State authority, and therefore invokes the aid of the Federal Government to put it down. The language of the Constitution is that Congress shall have power to provide for calling forth the militia."

Mr. Carpenter: "No."

Mr. Thurman: "Yes, it is."

Mr. Carpenter: "The Constitution says that the United States shall guarantee to every State a republican form of government, and protect them against invasion, and, when called upon in a certain way, against domestic violence. It does not say the President shall do it; it does not say Congress shall do it."

Mr. Thurman: "I will turn to the provision of the Constitution. It is that Congress shall have power to provide for calling forth the militia."

Mr. Carpenter: "It is not a power given to Congress. It is a general power conferred on the United States."

Mr. Thurman: "No matter upon whom it is conferred. I say it is conferred upon Congress, but no matter whether it is conferred upon the Government at large. But here is the provision as I said:

The Congress shall have power to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

"That is paragraph fifteen of section eight of the first article of the Constitution. The Congress is to have power to do that. You will observe it only says, 'provide for calling forth the militia,' and a question was made whether, under that power given to Congress, the regular Army or the Navy might be used. Congress saw fit to decide that question in favor of the employment of the Army and the Navy, and therefore provided for it by this act of 1807, that wherever it should be lawful to call forth the militia, it might be lawful to use the regular Army or the Navy of the United States. That is the act of 1807; but they can only be used in the same cases in which it is

lawful to call forth the militia; that is, to execute the laws of the United States, suppress insurrections, and repel invasions. That is a power that belongs to Congress, and Congress has provided for its exercise by several statutes that are upon our statute-book, but none of which reach such a case as this.

"So much for the statute cited by the Senator from Indiana. Now, a word with respect to the argument of my friend from Wisconsin. He says that the enforcement act of March, 1871—I believe that is the act he referred to—"

Mr. Carpenter: "I think it is."

Mr. Thurman: "That the enforcement act of 1870 or 1871 (for there were two of those acts) gives jurisdiction to the Federal courts to do certain things in regard to elections, and that it provides that a man's vote shall not be lost because he was improperly excluded from the right to vote, but that his vote shall be counted, and that here was a question whether or not men had not been improperly excluded from the right to vote, and therefore whether their votes should not be counted, and that that was a question which might be drawn within the jurisdiction of a Federal court. I grant that there are provisions in that act to that effect. I objected to them at the time the act was under consideration. I believed them to be unconstitutional then under any of the amendments of the Constitution, as well as the original Constitution. I believe so this day. But I call the attention of my friend to the point that that very act itself excluded from the jurisdiction of the court any question about the election of members of a State Legislature and members of Congress. That very act itself did not permit that question to be tried in the court of the United States, and therefore it is that I say that when a Federal judge undertakes to decide what is the Legislature of a State, whether he undertakes to do it directly by saying that A B or C D or E F is a member of that Legislature, or whether he undertakes to do it indirectly, in either case he acts without jurisdiction and in direct violation of the act of Congress under which it is claimed he has the power to act."

Mr. Morton: "If the Senator will allow me, for I do not wish to reply to him at length, I will say a word about this act."

Mr. Thurman: "Which act?"

Mr. Morton: "The act of 1870."

Mr. Thurman: "I am perfectly willing to give way for a moment, but before I do that let me call the attention of the Senator from Indiana to what these acts of Congress are. I read from the noted Pascal:

By the first act of Congress to secure this guarantee (February 28, 1795, 1 Statutes at Large, 494), it is provided that in case of insurrection in any State against the government thereof it shall be lawful for the President of the United States, on application of the Legislature of such State, or of the Executive when the Legislature cannot be convened, to call forth such number of the militia of any State or

States as may be applied for as he may judge sufficient to suppress such insurrection.

"That is the general law, and that is in force yet, and the section which has been read by the Senator is simply to authorize the President to employ the regular forces instead of the militia."

Mr. Morton: "I think this debate premature, but as I referred to this statute I will say one word about it for the purpose of vindicating the reference to it, and I will say to my friend that if he will compare the statute of 1795 and that of 1807 I think he will find he has no room to doubt in regard to the power of the President. In the first place the act of 1795 provides:

That in case of an insurrection in any State against the government thereof it shall be lawful for the President, on application of the Legislature, or of the Executive, when the Legislature cannot be convened, to call forth such number of the militia, etc.

"That power extends only to the militia. The next section of the act of 1795 applies to a case of obstruction of the laws where there is no insurrection, but where there is a combination too powerful for the decree of the court or of the law to be enforced in the ordinary way.

Whenever the laws of the United States shall be opposed—

"it does not refer to insurrection at all—

or the execution thereof obstructed in any State by combinations too powerful to be suppressed by the ordinary course of judicial proceeding or by the powers vested in the marshals by this act, it shall be lawful for the President of the United States to call forth the militia of such State or of any other State or States as may be necessary to suppress such combinations and to cause the laws to be duly executed; and the use of the militia so to be called forth may be continued, if necessary, until the expiration of thirty days after the commencement of the then next session of Congress.

"Here the power is conferred upon the President clearly and conclusively to call forth the militia of a State without any call from the Legislature, having no reference to insurrection, to enforce the law wherever it is obstructed or threatened to be obstructed. These are the sections of the act of 1795. I pass on to the third section:

Whenever it may be necessary in the judgment of the President to use the military force hereby directed to be called forth—

"that is, the militia—

the President shall forthwith by proclamation command such insurgents to disperse and retire peaceably to their respective abodes within a limited time.

"Now I come to the act of 1807, which is intended to cover both sections of the act of 1795; first, insurrection, and next, resistance or obstruction of the law, and authorizing the Army to be used in either case:

In all cases of insurrection or obstruction of the laws,

"it is in the disjunctive, not the conjunctive—either of the United States or of any individual

State or Territory where it is lawful for the President of the United States to call forth the militia for the purpose of suppressing such insurrection or of causing the laws to be duly executed—

"as provided by the act of 1795—

it shall be lawful for him to employ for the same purpose such part of the land or naval forces of the United States as shall be judged necessary, having first observed all the prerequisites of the law in that respect.

"In other words, here is a general power conferred on the President of the United States to use the Army to suppress insurrection where he has been called upon by the Legislature or the Executive of a State, or to enforce the laws in the other case, where there is no insurrection, but where the laws are resisted, or likely to be resisted; a direct and broad power to employ the Army of the United States, covering every possible case of resistance or threatened resistance to the laws of the United States. My friend from Ohio is able and he is learned, but he cannot possibly take this New Orleans case out from under the operation of this act of 1807."

Mr. Thurman: "What page is that?"

Mr. Morton: "Page 440 of the Digest."

Mr. Edmunds: "Under the head of 'Insurrection.'"

Mr. Morton: "Yes, sir; under the head of 'Insurrection.'"

Mr. Thurman: "Mr. President, leaving my friend from Wisconsin for the time being, and going back to the Senator from Indiana, let us see what the act of 1795 was.

"Its first section reads:

In case of an insurrection in any State against the government thereof, it shall be lawful for the President of the United States, on application of the Legislature of such State, or of the Executive when the Legislature cannot be convened, to call forth such number of the militia of any other State or States as may be applied for as he may judge sufficient to suppress such insurrection.

"It cannot be pretended for a moment that this Louisiana case falls within this section; for if it could be said that there was any insurrection against the State government at all, one thing is certain, that the President is only authorized to call forth the militia when called upon by the Legislature of the State; or, if it cannot be convened, by the Governor; and I do not understand any such call to have been made in this case. If it has been, very well. That section, therefore, does not cover it. Then comes the second section:

Whenever the laws of the United States shall be opposed, or the execution thereof obstructed in any State by combinations too powerful to be suppressed by the ordinary course of judicial proceeding, or by the power vested in the marshals by this act, it shall be lawful for the President of the United States to call forth the militia of such State, or of any other State or States as may be necessary to suppress such combinations and to cause the laws to be duly executed; and the use of the militia so to be called forth may be continued, if necessary, until the expiration of thirty days after the commencement of the then next session of Congress.

"It is true that this section refers to opposition to the laws of the United States, and the first section refers to an insurrection against the State government. There is no doubt about that. But when is it that the President can call forth the militia? In the first case, that is, the case of an insurrection against the laws of the State, he is to call forth the militia of some other State, not of the State in which the insurrection exists, and that for very wise purposes indeed, in order that you may not perpetuate the animosities of civil war in that very State in which the insurrection takes place. But when it comes to an obstruction of the laws of the United States, then the President may in the given case call forth the militia of the State in which the opposition to the law exists, or he may call forth the militia of some other State, but he can only do it when the execution of the laws is obstructed 'by combinations too powerful to be suppressed by the ordinary course of judicial proceeding, or by the powers vested in the marshals by this act.' If the marshals have the power to summon the *posse comitatus*, as has been claimed for them, and to execute these laws, then has there been any such combination here which was 'too powerful to be suppressed by the ordinary course of judicial proceeding, or by the powers vested in the marshal by this act?' Those questions must both be answered in the affirmative before the President is authorized to call forth the militia, or to use the Army or the Navy."

"What next follows? Then comes section three:

Whenever it may be necessary in the judgment of the President to use the military forces hereby directed to be called forth—

"Mark it: 'hereby directed to be called forth'; that is, directed by either the first or second section of this act."

Mr. Morton: "No, no."

Mr. Thurman: "Yes, sir, that is the third section: 'Whenever it may be necessary'—"

Mr. Morton: "It does not apply to the second section at all."

Mr. Thurman: "Yes, sir, it does apply to the second section. The Senator is greatly mistaken—"

Whenever it may be necessary in the judgment of the President to use the military force hereby directed to be called forth, the President shall forthwith, by proclamation, command such insurgents to disperse and retire peaceably to their respective abodes within a limited time.

"I say that does apply to both the preceding sections. What has been the practice of the Government? What is the interpretation placed on that act? The first occasion for the exercise of the powers vested here in the President arose in your own State, sir (Mr. Scott in the chair), arose in the western part of Pennsylvania, on account of the resistance to the excise laws—what was called the whiskey insurrection. What did the President

do in that case? That was an opposition not to the government of the State, but was distinctly an opposition to the execution of the laws of the United States, to an act of Congress imposing excises upon stills for the manufacture of spirituous liquors. What did the President do? He issued his proclamation reciting this very act, and in pursuance of the provisions and requirements of this very act required those insurgents to disperse within a limited time before he ever ventured to call one single militiaman to put down that insurrection."

Mr. Morton: "Will the Senator allow me to ask him a question on that point?"

Mr. Thurman: "Certainly."

Mr. Morton: "I ask him if 'insurgents' are not those engaged in insurrection, and if a man who simply resists a marshal in the execution of process is in legal language ever called an 'insurgent'?"

Mr. Thurman: "Ah, that will not do, to talk about a single individual. What does this second section say? It says:

Whenever the laws of the United States shall be opposed or the execution thereof obstructed—

"not by one individual—

in any State by combinations too powerful to be suppressed by the ordinary course of judicial proceeding or by the powers vested in the marshals by this act, etc.

"By a combination that the ordinary course of judicial proceedings and all the powers vested in the marshals of the United States cannot suppress. Is not such a combination as that a combination of insurgents? Was it not decided in regard to these very whiskeymen that they were guilty of treason? Was not one of them convicted of treason by way of making a test case, and, though he was not executed, did not that conviction take place in order to vindicate the supremacy of the national Government? They were not only insurgents but traitors, according to the solemn decision of the United States. Therefore it will not do to speak of one single individual. No, sir, it must be a combination of individuals, and a combination so powerful that the ordinary course of judicial proceedings and the power vested in the civil officer, the marshal of the United States, cannot suppress it. And then in reference to those combinations, as well as in reference to the case of an insurrection against the States, the act expressly declares that the President of the United States must first issue his proclamation before he calls forth the militia. Now, what does the fourth section do? The fourth section does nothing more than to authorize him to use the Army as well as to call forth the militia, but the cases in which he may use the one or the other are identically the same. That is all there is of that.

"Now, Mr. President, I have said all that I desire to say, and a great deal more than I expected to say, for I did not expect any such

debate to arise or any such question to come up in the Senate to-day. I repeat, in answer to my friend from Wisconsin, all I have to say is that by your own act, the enforcement act of 1871, if you say it is constitutional, but which with great respect for you I do not believe is constitutional at all, you vested certain jurisdiction in the Federal courts, and you expressly exempted from that jurisdiction the case of members of a State Legislature; and yet this judge in New Orleans by his decree and his action there has inaugurated a Legislature in that State, without official returns of their election, confessedly without votes cast which elected them, and that government is said to be the government of one of the States of this Union. In other words, one man there, whose court you can abolish to-morrow if you see fit to do it, has undertaken to set up by his own sovereign will and power just such a government as he sees fit to inaugurate in that State."

Mr. Carpenter: "I am not keen enough to know precisely what is the point in dispute between that Senator and myself in regard to these two provisions of the Constitution; but I know there is a serious difficulty between us from the zeal and warmth with which he encountered what I said on the subject. Without attempting to answer his argument on that point, which I certainly did not understand, and do not now, I will simply content myself with restating the provisions of the Constitution to which I referred. I understood him to be referring to the provision of the Constitution which guarantees a State against domestic violence, and to say that the provision was that Congress might legislate to call out the militia for such purpose; and that I stated to be a mistake."

Mr. Thurman: "I was not referring to that provision at all."

Mr. Carpenter: "Well, I understood that. At all events that provision of the Constitution is in these words:

The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence.

"It is not there referred either to Congress or the President, nor are the means indicated by which it is to be done. It is simply laid as a general duty upon the United States to protect a State, when its interference is called for, against domestic violence. Whether it is to do it by the Army or by the militia, or by what other means, is not at all referred to. Congress of course has power to legislate on this subject, because the Constitution laying this general duty upon the Government, the last clause of the legislative article empowering Congress to pass all laws needful and proper to carry into execution all the powers conferred upon the General Government, the case

is complete. But the section to which the Senator did refer, I submit to him, does not refer to that case at all. Here, in the first place, in the legislative article, Congress has power to raise armies and provide a Navy, etc. Then comes an additional provision:

To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

"Insurrections against whom, and invasions of what? The United States; to suppress an insurrection in the District of Columbia, to suppress an insurrection in unorganized territory beyond the Mississippi, anywhere subject to our jurisdiction. When it has swollen to such dimensions that the Army and all the means in the power of the President are unequal to meet it, Congress may provide for calling forth the militia. That has no reference whatever to the domestic violence against a State, which is provided for in a different place and under different circumstances.

"I do not know that there is anything in this statement that the Senator controverted, and I did not understand at the time how his view of the subject differed from mine, but I saw they were very different, from the warmth with which he encountered what I said."

Mr. Conkling, of New York, said: "The Senator from Ohio says there was a mistake on a jurisdictional question and he proposes to rebel on that against the court; he proposes not only rebellion for himself, but that even the parties and privies in the suit shall refuse to abide by it. Who were the parties to this bill? Who were the persons upon whom the decree is to act? Who is the officer to execute the mandates of the court? The officer is the marshal with his subordinates, and the parties to the suits and their privies are the persons whom the Senator refers to when he talks about upsetting one government and erecting another. The argument of the Senator from Ohio comes to this: the decree or interlocutory order of a Circuit Court of the United States is not to be respected even by the ministerial officers of that court and not to be binding upon the parties and privies to the suit, because, he says, the judge has made a mistake upon a jurisdictional question, not arising fundamentally, not as if he had taken jurisdiction of a case not cognizable in the courts of the United States, but upon a jurisdictional question of secondary character arising incidentally in the progress of a case of which confessedly he had rightful jurisdiction."

Mr. Thurman: "This is really a very simple question when you come to examine it properly. I shall not go into any discussion about political parties and their respect for courts at all; but, when the Senator from New York says that I propose to rebel against the decision of courts, and to tell the parties and privies to a suit to pay no respect to them, he quite misunderstood me in one respect, for I said not one word about the parties or privies to the

sult; but when the question comes up, what is the State government in a State, then I say to that Senator that neither Congress nor the President of the United States is bound in the slightest degree by that decision; and I say that upon the authority of the highest judicial tribunal in this country.

"It would be a pretty state of things indeed if either the President or Congress were bound in his or their determination of what is the lawful government in a State by any such decision as that. So far from that, the Supreme Court of the United States, in *Luther vs. Borden*, expressly held that that was a political question, and that the court could not decide it except simply by finding what was the decision of the political department of the Government. So far from the political department of the Government being bound by the decision of the judicial department on the question of what is the lawful government in a State, the Supreme Court has said solemnly that the judicial department is bound by the action of the political department, and whether it thinks it right or wrong is bound to obey it.

"Therefore, Mr. President, there is no rebelling against the decision of this court at all. Suppose that we should find that Judge Durell is wrong, and that the government that he refuses to recognize, and that he enjoins by his decree, is the lawful government of the State of Louisiana, are we bound by his decision? What lawyer will pretend for a moment that we are bound by it? So far from it, the moment that we speak he is bound to obey our decision and recognize that government which we recognize.

"But suppose Congress has not spoken, as was the fact in the case of Rhode Island, what then is the status of the case? Then the President has in the first place to act if a case arises for his action, and he has to decide in the first place until Congress has spoken. When he is called upon in the manner provided by law he must necessarily decide, and his decision is higher than that of even the Supreme Court of the United States itself until Congress has spoken. How was it in the case of Rhode Island? In the case of Rhode Island, President Tyler was called upon by a certain body calling itself the Legislature of Rhode Island, and a certain person calling himself the Governor of Rhode Island, and that compelled him to decide whether that Legislature and that Governor were the lawful Legislature and Governor of Rhode Island, or whether the Dorr Legislature was the proper Legislature and Dorr the proper Governor. Congress had not spoken upon the subject.

"Here was the President called upon in pursuance of this very act of 1795 to call forth the militia to suppress that rebellion against the State government. He was compelled to decide in the first instance which was the State government. If Congress had decided the question, the President would have been bound

by that decision; but Congress not having decided it, the President had to decide it, and he did decide it, and decided in favor of the charter government; and, when the question came before the Supreme Court of the United States, that decision of President Tyler was held by that court to be binding upon the court, and they could not reverse it. They held that the decision by the political department bound the court."

Mr. Carpenter: "Nobody questions that."

Mr. Thurman: "Very well. Now, what was the case before President Grant? I admit if there were two governments in Louisiana, and one or both of them had called upon President Grant under this act of 1795, representing that there was insurrection in that State, or domestic violence that could not be put down by State authority, in the absence of any decision by Congress as to which one of the two governments was the lawful government of the State, President Grant would have been bound to decide that question, and he would have been bound to decide it by his own opinion. He was no more bound by Durell's opinion than the President of France or the Queen of England would be. The idea that this great power with which the President is invested, necessarily, in the first instance, before Congress has spoken, of determining which is the lawful government in a State, can be taken out of his hands on the ground that he is to execute the decree of some inferior court, is monstrous; no such thing can be maintained at all. On the contrary, his decision would be binding even upon the Supreme Court of the United States, as President Tyler's was."

Mr. Carpenter: "Will my friend permit me to interrupt him for one moment?"

Mr. Thurman: "Certainly."

Mr. Carpenter: "Do I understand him to maintain that, if, upon the mere question of whether A or B was duly elected Governor of the State of Louisiana, that question were to be heard and tried in a court of justice and final judgment passed upon it in favor of A, and he was thereupon inaugurated, the President would be justified in determining that the court was wrong and that B was the Governor, and overthrow A and establish B?"

Mr. Thurman: "I do not undertake to say that, in a case in which a court has competent jurisdiction to try the conflicting titles of A and B to an office, the President would not be bound by the decision of a court having competent jurisdiction to decide that question as a mere question between A and B as to the right to that particular office."

Mr. Conkling: "What does the Senator mean by 'competent jurisdiction?'"

Mr. Thurman: "I mean this: we have a law in the State of Ohio, and I presume you have in the State of New York, which authorizes a contest of elections, and provides the tribunal to try it. In Ohio the Senate is the tribunal to decide a contested election of Gov-

error of the State. When the Senate of Ohio decides that question, its decision is final and conclusive. But suppose there are two senates, or two tribunals each claiming to be the senate, and one decides in favor of one person and the other tribunal decides in favor of the other, and each one of them appeals to the President, then the President must decide the question. That is the state of the case precisely.

"I do not blame President Grant, if he was called upon (although I have never yet seen any evidence that he was), for deciding for the time being and before Congress acted, which one of these was the lawful government of Louisiana. If the case was made in which he had a right to decide it, and if the case was made under the act of Congress which gave him the right and made it his duty to act, and therefore gave him jurisdiction to decide it, I do not blame him for deciding it, even if he decided it erroneously, provided he did it according to his best judgment."

Mr. Carpenter: "If the Senator will allow me one word right there, I understand him to maintain that the case has not arisen in regard to domestic violence in this State, that there is no conflict there between two governments, and that the President has not been called upon to interfere. Therefore all that part of the subject may be dismissed. It comes back, therefore, to a simple question between A and B contending for an office in which the Federal courts have ascertained a certain thing and made a certain decree. Now, what is the duty of the President? Has he any other duty in regard to that decree than to execute it?"

Mr. Thurman: "Mr. President, that is simply shutting our eyes to the real fact. The real fact is, and the real fact contemplated by the President was, that here were two bodies, the one claiming to be the Legislature, and the other claiming to be the Legislature, and one man claiming to be Governor and another man claiming to be Governor; and it is merely sticking in the bark to talk about its being a mere private suit between A and B. I repeat that if the President was called upon according to the statute so that he was compelled to decide, then he did right to decide; he was bound then to decide; but he was not bound by the decision of this judge, much less was he bound by a decision of this judge which is in direct violation of the very act of Congress under which the judge professed to act. I say once more, therefore, that where there are two governments thus set up, each claiming to be the lawful government of the State, the highest authority to decide that question is the Congress of the United States, and in the absence of a decision by Congress, then it is for the President to decide."

The Presiding Officer: "The question is on the resolution offered by the Senator from Indiana."

The resolution was agreed to.

On February 25th the following message, relative to affairs in Louisiana, from President Grant, was sent to both Houses of Congress.

To the Senate and House of Representatives:

Your attention is respectfully invited to the condition of affairs in the State of Louisiana.

Grave complications have grown out of the election there on the 6th of November last, chiefly attributable, it is believed, to an organized attempt, on the part of those controlling the election officers and returns, to defeat in that election the will of a majority of the electors of the State. Different persons are claiming the executive offices, two bodies are claiming to be the Legislative Assembly of the State, and the confusion and uncertainty produced in this way fall with paralyzing effect upon all its interests.

Controversy arose as soon as the election occurred over its proceedings and results, but I declined to interfere until suit, involving this controversy to some extent, was brought in the Circuit Court of the United States under and by virtue of the act of May 31, 1870, entitled "An act to enforce the right of citizens of the United States to vote in the several States of the Union, and for other purposes."

Finding that resistance was made to judicial process in that suit, without any opportunity, and, in my judgment, without any right to review the judgment of the court upon the jurisdictional or other questions arising in the case, I directed the United States marshal to enforce such process, and to use, if necessary, troops for that purpose, in accordance with the thirteenth section of said act, which provides that "it shall be lawful for the President of the United States to employ such part of the land or naval forces of the United States, or of the militia, as shall be necessary to aid in the execution of judicial process under this act."

Two bodies of persons claimed to be the returning board for the State, and the Circuit Court in that case decided that the one to which Lynch belonged, usually designated by his name, was the lawful returning board, and this decision has been repeatedly affirmed by the District and the Supreme Courts of the State. Having no opportunity or power to canvass the votes, and the exigencies of the case demanding an immediate decision, I conceived it to be my duty to recognize those persons as elected who received and held their credentials to office from what then appeared to me to be, and has since been decided by the Supreme Court of the State to be, the legal returning board.

Conformably to the decisions of this board, a full set of State officers has been installed and a Legislative Assembly organized, constituting, if not a *de jure* at least a *de facto* government, which, since some time in December last, has had possession of the offices and been exercising the usual powers of government. But opposed to this has been another government claiming to control the affairs of the State, and which has, to some extent, been *pro forma* organized.

Recent investigation into said election has developed so many frauds and forgeries as to make it doubtful what candidates received a majority of the votes actually cast, and in view of these facts a variety of action has been proposed. I have no specific recommendation to make upon the subject; but, if there is any practical way of removing these difficulties by legislation, then I earnestly request that such action may be taken at the present session of Congress.

It seems advisable that I should state now what course I shall feel bound to pursue in reference to the matter in the event of no action by Congress at this time. Subject to any satisfactory arrangement that may be made by the parties to the controversy, which, of all things, is the most desirable, it will be my duty, so far as it may be necessary for me to act,

to adhere to that government heretofore recognized by me. To judge of the election and qualifications of its members is the exclusive province of the Senate; as it is, also, the exclusive province of the House to judge of the election and qualification of its members; but, as to State offices, filled and held under State laws, the decisions of the State judicial tribunals, it seems to me, ought to be respected.

I am extremely anxious to avoid any appearance of undue interference in State affairs, and, if Congress differs from me as to what ought to be done, I respectfully urge its immediate decision to that effect. Otherwise, I shall feel obliged, as far as I can by the exercise of legitimate authority, to put an end to the unhappy controversy which disturbs the peace and prostrates the business of Louisiana, by the recognition and support of that government which is recognized and upheld by the courts of the State.

U. S. GRANT.

EXECUTIVE MANSION, February 25, 1873.

In the Senate the message was ordered to be printed and in the House it was referred to the Committee on the Judiciary.

On February 27th, the Senate, as in Committee of the Whole, proceeded to consider the bill to establish a government in the State of Louisiana, republican in form, which was as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the election held in the State of Louisiana on the fourth day of November, 1872, for Governor, Lieutenant-Governor, Secretary of State, Attorney-General, Auditor of Public Accounts, and Superintendent of Education, and for Senators and Representatives of the General Assembly of said State, is hereby declared null and void; and it is further ordered and declared that the persons who were entitled to hold the said State offices on the said fourth day of November shall continue in office and be recognized as the legal officers of said State by the Government of the United States until their successors are chosen and qualified in accordance with the provisions of this act.

SECTION 2. That an election shall be held in said State on the second Tuesday in May, 1873, by the legally-qualified voters thereof, for the State officers enumerated in the foregoing section, and for such Senators and members of the House of Representatives of said State as ought to have been chosen on the said 4th day of November, 1872, under the constitution and laws of said State; and the officers and members of the General Assembly for said State to be chosen under the provisions of this act shall enter upon the discharge of their respective duties at the time and in the manner hereinafter prescribed.

Sec. 3. That William B. Woods, Judge of the United States Circuit Court for the circuit embracing the State of Louisiana, shall immediately proceed to said State and discharge the duties hereinafter imposed upon him. He shall, without delay, appoint two competent and suitable persons State registrars, who shall be citizens and qualified voters of said State, and members of opposite political parties, and who shall cause to be made a new and complete registration of all the legally-qualified voters of said State, which registration shall be commenced on the third Tuesday in March, 1873, and shall be completed ten days prior to the day fixed by this act for holding said election.

Sec. 4. That it is hereby made the duty of said registrars to appoint two supervisors of registration in each parish of said State, except for the parishes of Orleans and Jefferson, and in said parish of Jefferson there shall be appointed two supervisors of registration for the right bank and two for the left bank of said parish, and in the parish and city of Orleans

there shall be two supervisors of registration appointed for each ward of said parish and city, which supervisors of registration shall be legal voters of the parish or ward for which they may be appointed, and shall be members of different political parties; and the said supervisors of registration shall jointly appoint two clerks, subject to the approval of the State registrars, who shall be of opposite political parties.

Sec. 5. That the existing police-jury wards in the parishes of said State shall each constitute a separate election precinct; and the supervisors of registration for the several wards in the city of New Orleans shall, before commencing registration, divide their respective wards into as many election precincts as may be necessary to accommodate all the voters in said wards, and one day before said registration shall commence there shall be published in two daily newspapers of general circulation in said city, and in one German and one French newspaper published in said city, a full and complete statement of the election precincts thus established in each ward, which statement shall set forth the number and boundaries of the said election precincts.

Sec. 6. That the State registrars shall provide the supervisors of registration with the necessary books, stationery, and blanks for a thorough and complete registration of the voters of said State, and the ballot-boxes necessary to conduct said election; and the supervisors of registration in each parish of said State, except the parish of Orleans, shall post, for three consecutive days prior to the commencement of registration, in three public places in each ward, printed notices of the place where the registration office shall be opened in said ward, and the time when it shall commence and close; and in no case shall said office be kept open for a less period than three days in any one ward. In the city of New Orleans the registration offices shall be opened in one place only in each ward in a central and convenient location: *Provided*, That all supervisors of registration shall afford every possible facility for the registration of all legally-qualified voters; and for incompetency or delinquency in the discharge of their duties the State registrars may remove any supervisor of registration.

Sec. 7. That said supervisors of registration shall register every person qualified to vote by the laws of said State, and who shall apply, and shall issue to each person so registered a certificate of registration, to be signed by both supervisors, which certificate shall specify the name, nativity, age, parish, and election precinct in which said registered voter resides. And said certificates shall be numbered to correspond with the entries made in the books of registration, and the person to whom such certificate is issued shall be entitled to vote thereon. In every case where said supervisors shall disagree as to the right of any person applying to register, the facts of the case shall be submitted in writing to the State registrars for their decision; and in case of their disagreement the case shall be referred to the judge aforesaid, whose decision thereon shall be final; and in case any person applying shall feel aggrieved at a refusal to admit him to registration, he may apply in writing to the State registrars, and in case of their disagreement the case shall be referred as above to the judge aforesaid, and his decision shall be final.

Sec. 8. That said supervisors of registration shall, five days prior to the election, appoint two commissioners of election for each election precinct, who shall reside in and be qualified voters of the precinct, and from different political parties. The commissioners shall appoint two clerks. Not less than three days before the day of election the supervisors of registration shall post printed notices stating the place at which the election shall be held in each election precinct and the names of the commissioners of the election. The polling-places shall be established so as best to accommodate all the voters of the precinct.

SEC. 9. That on the day fixed for holding the election the commissioners of election and their clerks shall assemble at the place fixed for holding the election in their respective precincts; in case one or more of the commissioners shall be absent at the hour fixed for opening the polls, the vacancy or vacancies shall be filled by the legal voters present: *Provided*, That in every case there shall be one commissioner selected from each political party. At six o'clock A. M. they shall open the ballot-boxes in the presence of the public, they shall then close and securely fasten the same by lock or seal, and they shall then proceed to receive the ballots of such persons as present themselves and offer to vote, who furnish certificates of registration as required by this act, and who reside in the precinct in which they offer to vote. The polls shall remain open for the reception of ballots until six o'clock P. M., when the commissioners of election shall open the ballot-boxes in the presence of the public, and proceed to count the ballots therein contained, without cessation, until all shall have been counted. One commissioner shall take the ballots from the box, one at a time, and hand the same to the other commissioner, who shall read the names of the persons thereon, and the office for which each was voted for; and the clerks shall keep an accurate tally of the votes thus counted, with the names and offices of all persons voted for. When the result has been thus attained, the commissioners shall make a statement in writing, signed by them and their clerks, and sworn to before some officer competent to administer oaths by the laws of said State, which shall show the number of votes cast for each person for the offices to be filled at this election, which statement shall be made in duplicate, and one copy delivered on the day following the election to the supervisors of registration for the parish or ward in which the election is held, and the other, securely inclosed in a strong envelope, transmitted by mail to the Secretary of State in New Orleans. The supervisors of registration shall, within three days after the day of election, make an accurate compilation of the votes as returned to them by the commissioners of election in their respective parishes or wards, and shall make returns thereof duly sworn to in duplicate, one copy to be delivered by one of them in person to the State registrars, and the other shall be inclosed in a strong envelope and transmitted by mail to the Secretary of State in New Orleans.

SEC. 10. That one day prior to the election the supervisors of registration shall furnish the commissioners of election, in the several election precincts throughout their respective parishes or wards, written or printed lists of all registered voters in the several precincts, containing the name and number of registration of each person entitled to vote at the precinct; and during the election, as each person casts his ballot, his name shall be checked on the list by one of the clerks, and the other clerk shall write or stamp the word "voted" across the face of the certificate of registration of the person voting. These lists shall be returned with the ballot-boxes and ballots to the supervisors of registration, and deposited by them in the office of the clerk of the court of each parish, except the parish of Orleans, and in the parish of Orleans in the office of the Secretary of State.

SEC. 11. That all ballots shall be either printed or written, and each ballot shall contain the names and offices of all persons voted for.

SEC. 12. That within ten days after the day of the election the State registrars shall, in the presence of the judge aforesaid, open the returns made to them by the supervisors of registration for the several parishes of the State and for the several wards of the city of New Orleans, and examine, canvass, and compile the same, and make public proclamation of the result of said election in two newspapers of general circulation and of opposite politics. They shall furnish to the Secretary of State for the State

of Louisiana a certified list of the names of the persons returned elected as members of the General Assembly of said State; the said list shall indicate the representative district for which each member of the House of Representatives has been elected, and the senatorial district for which each Senator was elected; and the persons so returned elected shall assemble at the Mechanics' Institute in New Orleans, or at such other place as may be secured by the proper authority for the meeting of the General Assembly of said State, on the second Monday after the date of the promulgation of the result of said election by the State registrars.

SEC. 13. That the Secretary of State shall, on the second day of the session of the General Assembly, deliver to the Speaker of the House of Representatives the returns made to him by the supervisors of registration in their original inclosures, with the seals unbroken, which returns shall be examined and counted as required by the constitution of said State, for Governor and Lieutenant-Governor, and for members of the General Assembly. On the first Monday after the convening of the General Assembly elected under the provisions of this act, the Governor and Lieutenant-Governor, together with all other State officers thus elected, shall enter upon the discharge of the duties of their respective offices, and the government thus established shall be recognized by the Government of the United States as the legal government of the State of Louisiana: *Provided*, That the terms of office of the persons chosen at said election shall terminate the same as if they had been elected on the 4th day of November, 1872.

SEC. 14. That any person who shall register and vote at this election who, at the time of registering and voting, was not a qualified elector under the constitution and laws of the State of Louisiana, or any person who shall vote upon any certificate of registration not issued to and belonging to him, or any person who shall register under a false or assumed name, or any person who shall register or vote more than once, shall be deemed guilty of a high crime, and punished by a fine not to exceed \$5,000 or by imprisonment at hard labor for a period not exceeding one year, or both, in the discretion of the court.

SEC. 15. That any supervisor of registration who shall knowingly and willfully issue a certificate of registration to any person not entitled to the same, or who shall fraudulently enter upon the registration-books any fictitious name or names, and issue or cause to be issued certificates of registration in such fictitious names, shall be deemed guilty of a high crime, and punished by a fine not to exceed \$1,000 or by imprisonment at hard labor for a period not exceeding two years, or both, in the discretion of the court.

SEC. 16. That any commissioner of election who shall refuse to receive the ballot of any person duly registered and producing a certificate of registration entitling him to vote at that precinct, or who shall knowingly permit any person to vote not qualified by law, or who shall permit any ballots other than those really cast by persons legally entitled to vote to be put into the ballot-box, or who shall make any fraudulent or false count or return, or who shall fail faithfully to comply with the provisions of this act, shall be deemed guilty of a high crime, and punished by a fine not exceeding \$1,000, or by imprisonment at hard labor for a period not exceeding two years, or both, in the discretion of the court.

SEC. 17. That any supervisor of registration who shall make any false count, compilation, or return of any vote or votes cast at this election, or shall change or mutilate any returns made to him by the commissioners of election, or shall permit any of the same to be done, or who shall refuse or fail to faithfully comply with the provisions of this act, shall be deemed guilty of a high crime, and punished by a fine not exceeding \$2,000, or by imprisonment at

hard labor for a period not exceeding three years, or both, in the discretion of the court.

Sec. 18. That any person who shall commit any act of violence or intimidation, or offer any bribe with intent to prevent any person legally qualified from voting, or to influence any person to vote contrary to his wishes, or who shall be guilty of any frauds in registration or in voting or in counting the ballots, or in making returns, or of any act calculated to influence any other person to commit any of the aforesaid acts of violence, intimidation, or fraud, shall be deemed guilty of a high crime, and punished by a fine not exceeding \$2,000, or by imprisonment at hard labor for a period not exceeding three years, or both, in the discretion of the court.

Sec. 19. That the Circuit Court of the United States for the District of Louisiana shall have exclusive jurisdiction of all crimes and offenses made punishable by this act.

Sec. 20. That the officers to be appointed under the provisions of this act shall receive compensation as follows: the State registrars the sum of ten dollars per day each for a period not exceeding seventy-five days; the supervisors of registration the sum of eight dollars per day each, and clerks of registration five dollars per day each for a period not exceeding sixty days; the commissioners and clerks of election shall each receive the sum of five dollars for all services required by this act.

Sec. 21. That the State registrars shall have authority to rent necessary office-room in the city of New Orleans, and to defray all incidental expenses attending the proper discharge of the duties of their office, and to employ not to exceed two clerks at the rate of five dollars per day each.

Sec. 22. That it shall be lawful for the President of the United States to employ such part of the land and naval forces of the United States as shall be necessary to aid in the execution of judicial process issued under this act, and on the application of the Governor of said State or of said judge of the Circuit Court to maintain the public peace, and to sustain the officers appointed under this act in the discharge of their duties until a government shall be established in said State under the provisions of this act.

Sec. 23. That the sum of \$200,000, or so much thereof as shall be necessary, is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to defray the expenses of the registration and election provided for in this act, and the same shall be expended under the direction of the President of the United States.

A substitute for the bill was offered by way of amendment by Senator Hill, of Georgia. It simply constituted certain persons of the Legislature of the State as having been elected by the people, and authorized them to count the election returns from State officers and declare who were elected. Such persons should discharge the duties of said offices, etc.

Mr. Morton, of Indiana, said: "Now, sir, what is it necessary for Congress to do? Not to pass the bill introduced by the majority of the committee, to overturn the State government, to overturn an existing government, and an efficient government, recognized by the highest tribunals of the State, for I believe that would be disastrous, disastrous in generations yet to come, in settling a fatal precedent that might in its consequences absorb and destroy all the State governments. It is not necessary to recognize this faction that is trying to force itself into power, that is trying to promote blood and strife. If we do any thing we

ought to recognize that State government that has been recognized by the courts, and give to it the moral support of Congress. But if we do nothing, the President has told us that he will go on, as he has done already; he will recognize the Kellogg government and will sustain it. If Congress shall adjourn without action, or, what will be better, if Congress shall intimate its acknowledgment of the existing government down there, these men will be powerless from that very hour. They are now hoping to stir up strife, that that strife may operate in the Capitol at Washington, and have its effect upon our action here; but if we shall recognize the existing government, or if we adjourn without doing any thing on that point, they are powerless, and the Kellogg government will go on smoothly for the coming three years, until another election in that State shall settle these questions."

Mr. Thurman, of Ohio, said: "Mr. President, I propose to make at this stage of the debate a few observations, and but a few. And now, sir, let us see what are either admitted or undeniable facts.

"In the first place, it is an undeniable fact that no legal canvass of the votes cast at the last election in Louisiana has been made. There is no controversy about that."

Mr. Trumbull, of Illinois, said: "If the Senator will allow me, it is admitted in the majority report that the canvass was under color of law, and in my judgment the De Fries board had a perfect right to canvass those returns and make the returns they did for the Legislature. I think the law authorized it."

Mr. Thurman: "I had taken it to be the fact that no legal canvass of the votes had been made. It only shows my imperfect knowledge of the facts; and if the truth be that a legal canvass had been made, then it is an admitted fact that the only legal canvass which was made shows McEnery to be elected.

"In the next place, it is an admitted fact that McEnery had a majority of the votes cast for Governor, according to the election returns. There is no question about that.

"In the third place, it is admitted, or is undeniable, that the Kellogg government is a sheer usurpation. There can be no question about that.

"In the fourth place, it is admitted that the President has recognized the Kellogg government. Then, as a matter of law, no one will assert that Congress is bound by that recognition, for, on the contrary, we all agree that Congress is not bound by it in the slightest degree.

"In the next place, it will be admitted that it is the duty of Congress to recognize the true government if there is such a government.

"Then it will be admitted that the determination of the question which is the true government belongs to the political department of the Federal Government, and that, therefore, the determination of Judge Durell has no binding

effect whatsoever, even if he had proceeded in a case where his jurisdiction would be undeniable.

"This brings us to the question, Is there a lawful government in Louisiana? A few facts, it seems to me, will answer that question. Whether these votes were counted and canvassed by a proper board or not, looking through mere forms and figures to the reality and substance of the case, the fact is undeniable and is undenied that McEnery had a majority of the votes according to the legal returns. No question is made as to the legality of the returns. Their legality is admitted, and it is admitted that according to those returns McEnery has the majority, and that establishes his right, and that makes it our duty to recognize him as the Governor of the State of Louisiana.

"But what is said in answer to this? It is said that the Supreme Court of Louisiana has recognized what is called the Lynch board as a legal board, and that having recognized that board it necessarily follows that the persons declared by that board to be elected are the persons entitled to hold the offices: and that is the answer of the Senator from Indiana. Now, Mr. President, I deny that proposition, wholly apart from the question made by the Senator from Wisconsin that the decision of that Supreme Court of Louisiana was in a case of which it had no jurisdiction, that all that it said on that question was *obiter dictum*. Wholly apart from that question, I deny the proposition that the Congress of the United States, in determining which is the true government in Louisiana is conclusively bound by the decision of the Supreme Court of that State. I assert that even if that court had possessed the most complete jurisdiction under the constitution of that State to decide that question its decision would not conclusively bind the Congress of the United States. Sir, let us see how this is.

"The case of *Luther vs. Borden* is referred to; and what was said by the Supreme Court of the United States in that case in reference to the effect of the decision of the Supreme Court of Rhode Island, which is cited as sustaining the conclusion at which the Senator from Indiana arrived? Why, sir, it does not sustain it at all. Unquestionably the decision of the Supreme Court of Rhode Island in respect to the interpretation of the constitution of that State is binding on the Federal judiciary, and that is all that that case decides in respect to that decision; but that case decides this, and it is the important matter, that what was the true government in the State of Rhode Island was a question to be decided by the political department of this Government, and that when the political department of this Government decided, the judicial department was bound to follow that decision; but if there were an absence of decision by the political department of this Government, then in the

absence of such decision the Federal judiciary would be bound to follow the decision of the State judiciary upon a question of the interpretation of the State constitution and laws. That is all.

"Sir, to put it in a plain light, suppose that the political department of the Government of the United States had recognized the Dorr government, and the Supreme Court of that State had recognized the other government as the true government, which decision would the Supreme Court of the United States have followed, that of the political department of the Federal Government or that of the judicial department of the government of the State? We all know that it would have followed the decision of the political department of the Federal Government, although it was adverse to the decision of the judicial department of the State. We all know the very principles laid down in that decision would have required the court so to do.

"Now, sir, as the decision of the question which is the true Legislature belongs to the political department of the Government, and the judicial department is bound, as was said in *Luther vs. Borden* by the Supreme Court of the United States unanimously, by the decision of the political department, it follows as a matter of course that we are bound to decide that question for ourselves, irrespective of any decision that the Supreme Court of Louisiana may have made. If we would not be bound by the decision of the Supreme Court of the United States, as that court has admitted we would not; if, on the contrary, that court is bound by our decision; if the highest judicial tribunal in the United States cannot bind us in deciding this question, how can it be pretended that the decision of a Supreme Court of a State can bind us? Such an argument will not bear investigation at all. The moment you admit what was said down in *Luther vs. Borden*, and has been recognized as law ever since, that the determination of the question which is the legal Legislature in a State, who is the legal Governor of a State, belongs to the political department of this Government, and that the judicial department is bound by the decision of the political, the moment you admit that undeniable and incontrovertible law, that moment you free yourselves from any trammels created by this decision of the Supreme Court of Louisiana.

"That being the case, we look at the facts to find out which was the Legislature, and pray what do we find? We find a body claiming to be the Legislature established by bayonets, under the order, admitted to be void and of no authority, of a district judge of the United States. We find that under an order absolutely void, which the judge had no more authority to pronounce than any Senator on this floor, and by the employment of troops of the United States, a particular body of men were inaugurated as the Legislature of that

State, and now it is said that we cannot look at that fact; now it is said that we can take no cognizance of the fact that that Legislature had its origin in the usurpation of a judge and the employment of military force; now it is said that we cannot look through this flimsy veil that is thrown over this body to ascertain the real facts of the case, but that, because the Supreme Court of Louisiana has seen fit to recognize that body as the Legislature, therefore our mouths are closed and our eyes are shut to the truth of the case. Sir, that will not do at all. A body, calling itself the Legislature, that has its origin in usurpation and violence wholly unknown to our Constitution, that was set up by fraud, by usurpation, and by force, cannot be recognized by the Senate of the United States as a legitimate Legislature.

"I think, therefore, that the true solution of this matter is to recognize McEnery as the Governor of that State. If that should be done, then I think we shall have peace there in a very short time, and a legal government there in a very short time. Then the President of the United States, I have no doubt, will do what will then be plainly his duty to do, recognize the same individual, for every one must admit that the President is bound by the recognition of Congress. If Congress shall recognize McEnery as the Governor of that State, the President is bound to recognize him, too. The President had a right as a matter of course to decide in the first instance, before Congress had spoken. I have said so heretofore, and I repeat it; but his decision is in no degree binding on us, while our decision is binding on him. Sir, recognize this man, who had the majority according to the legal returns of the election, as the Governor of the State, and then the President can recognize him, and then all will go well."

Mr. Logan, of Illinois, said: "The Senator's argument seems to proceed upon the idea that the McEnery returns were legal except some informality in canvassing them, and on that ground he claims the right of recognition of the McEnery government. I merely wish to state one fact so that we may not fall into error in this discussion. I have not talked with members of the committee, but I do not suppose there is one of them who recognizes those returns as legal returns. A portion of those returns were examined by the committee, and it was stated by a gentleman of high character respecting one side of this case, and it was acknowledged and admitted right there, that they were forgeries. Therefore, I do not wish to have the Senate or the country led into the belief that the only doubt about the McEnery returns was the informality in the counting of the votes, because that is not the fact. The fact is that a portion of the returns were absolute forgeries. The returns from some six or eight parishes were presented to us by Senator Ray, calling the attention of the

committee to the fact that the returns were made out in one handwriting; whole lists of names, the figures, the certificates of the judges of election, the oath of the judges, and every thing connected with them were in the same handwriting. They were exhibited to the committee, and no one of the committee who examined the returns will deny this fact."

Mr. Morton: "Allow me to call the attention of the Senator to the further fact that there was evidence before the committee to show that the returns from two parishes distant from New Orleans a long way were made out in New Orleans."

Mr. Logan: "That is true. The reason why I make this suggestion at this time is in order to justify the reasoning of the majority of the committee. We came to the conclusion that both elections were fraudulent, but that there was *prima facie* more evidence of fraud on that side than the other; but when we argued and tried to come to a conclusion as to the right of either party upon the ground that either one could come in without fraud, we found that to be a fallacy, because the evidence clearly shows and was exhibited to every one there that many of these returns, at least six of them, were absolute forgeries."

Mr. Thurman: "This is the first time I ever heard of the fact. I am obliged to my friend for mentioning it."

Mr. Logan: "I merely stated it so that we may have it before us in this discussion."

Mr. Thurman: "It was very pertinent for my friend to call my attention to it. It is a very pertinent matter, indeed, and if rejecting those forged returns McEnery has not a majority of the votes, then I cannot vote to recognize him as Governor, but I understood the fact to be acknowledged that upon the legal returns, those about which there could be no controversy, he had the majority. If I am in error about that, the Senator will correct me. I will yield the floor. I have said all that I desire to say."

Mr. Trumbull: "I shall only occupy it a moment."

Mr. Thurman: "I do not wish it to be considered that the Senator is occupying my time. I yield the floor; I have said all that I desire to say now."

Mr. Trumbull: "The De Feriet board in counting the returns of the Legislature said:

We, the undersigned returning officers, pursuant to authority vested in us by act No. 98, of 1872, approved November 20, 1872, do hereby certify that the foregoing is a true and correct compilation of the statements of votes cast at an election for representatives to the General Assembly, held in the several parishes of the State of Louisiana on the 4th day of November, 1872, as made by the supervisors of registration of the said parishes, and we hereby declare that the following-named persons were duly and lawfully elected to represent their respective districts, to wit:

"They go on then and name the persons elected from the different districts."

There being no returns from the parishes of St. Tammany and Terrebonne, and only meagre, informal, and illegal returns from the parishes of Iberville and St. James, we do not take the responsibility to declare the result of the election in the same, but postpone action to await the determination of the General Assembly.

Mr. Thurman: "How is the majority according to the legal returns?"

Mr. Trumbull: "On the Legislature?"

Mr. Thurman: "No; on the Governor."

Mr. Trumbull: "The Legislature counts the vote for Governor. The board make up a statement of it, and then it goes to the Legislature, which under the constitution is required to declare the vote for Governor. The majority on the Governor's vote, I think, is about seven thousand for McEnery; I have not the figures before me."

Mr. Thurman: "Is it seven thousand after rejecting the returns of which the Senator from Illinois on my right (Mr. Logan) has spoken?"

Mr. Morton: "Those returns are not rejected."

Mr. Trumbull: "I will turn to the exact figures. I can give them in a moment."

Mr. Thurman: "Let us have them."

Mr. Trumbull: "The vote for Governor, according to the Mitchell board—that was the board that succeeded the De Feriet board—is 66,403 for McEnery and 59,760 for Kellogg. That is a majority of between six and seven thousand. The Mitchell board succeeded the De Feriet board; the Senator understands, I suppose, how that is?"

Mr. Thurman: "Yes, sir."

Mr. Trumbull: "The Mitchell board made this computation of the votes for Governor, and that is the result at which they arrived. If the Senator from Ohio will turn to the last page of this volume of testimony, he will find what was said by Mr. Ray in regard to forged returns:

John Ray recalled.

The Witness: I desire to call the attention of the committee to a statement, at a suggestion made by one member of the committee yesterday. I examined and found, and if the committee will act as experts they will find, that the commissioners of elections in several cases in the parishes have their names forged to the affidavits. For instance, there is one from Madison parish (exhibiting the papers), and so in the parish of Grant also, and in the parish of Point Coupee, and in the parish of East Baton Rouge, which if the committee will examine as experts they will find it very evident in some cases that they were forged.

"That was the evidence about it, the statement of Mr. Ray. We had no other evidence of their being forged at all, and I was never satisfied myself that there were any forged returns."

Mr. Morton: "This whole matter arises under the constitution and laws of a State. It is a State question. Whether Governor Kellogg was elected is a question arising entirely under the constitution and laws of Louisiana, and as to who compose the Legis-

lature of Louisiana is a question arising entirely under the laws of that State, to be determined by the Legislature itself; and now the broad proposition is that Congress shall come in and determine the question of an election arising exclusively under the laws of a State. I say it is not competent for it to do it under any circumstances, that the question of a fraud under State laws is to be determined by the State tribunals. We must recognize the authority of the State tribunal in a case of that kind; we must recognize the authority of the Supreme Court of Louisiana; we must recognize the authority of the returning board; we must recognize the authority of each House of that Legislature to determine who were entitled to seats and who were not. That is a right that belongs to every legislative body in the world. They are the judges of the elections and qualifications of their own members. We can determine whether a Senator was lawfully elected to this body; but we cannot go into that Legislature and inquire whether A B or C D received a majority of the votes at the polls. That is a question first to be determined in Louisiana by the returning board, and next by the House of which those persons were members; and when they have settled that it is not for us to go behind it.

"There is not a question in this case that does not arise under the constitution and laws of Louisiana. They are all State questions, and their State tribunals have settled them. First, the returning board held by the Supreme Court to be the lawful board determined who were elected members of the Legislature, and we are bound to give that credit. You may say they decided wrongfully; you may say they acted without returns and all that; but, sir, it is the tribunal created by the laws of the State to settle that very question, and we must give due credit to its finding. If we can go behind the finding of that board and say they acted upon false information or had not the returns, we do it in every other State of the Union. The next time when we are asked to do it the case need not be quite so glaring; a smaller fraud will answer; and the third time a still weaker case will answer, until the Congress of the United States shall have the organization of every State Legislature in its hand.

"Sir, we dare not adopt that doctrine. It would result in the absorption and destruction of the State governments. The States have a right to organize their Legislatures in their own way. That is a right reserved to them under the Constitution. I do not believe in State sovereignty, but I believe in State rights, and the Constitution of the United States has guaranteed to every State the right to organize its Legislature in its own way, and to determine by its own tribunals whether it has a lawful quorum, or whether its members are entitled to seats, and when they have made that determination we are bound by it. If we

say they acted wrongfully or decided fraudulently, that principle gives us the right in every case to go and inquire into the organization of the State government; and after all the Congress of the United States is thus made the returning board for every Legislature, the final board to inquire whether a Legislature in West Virginia, or in any other State, has been properly organized.

"Whether that was the legal returning board was a question to be decided by the Supreme Court of that State; not by us. They have solemnly decided that what was known as the Lynch board was the legal returning board, but the Senator from Wisconsin says they had not jurisdiction. He knows better than the Supreme Court of Louisiana whether they had jurisdiction. He gives it a cursory glance, and disposes of it in a few brilliant sentences. I say they had jurisdiction, but, whether they had or not, they were the judges of their own jurisdiction, and we are bound by their decision upon a point arising exclusively under the laws of the State. The Supreme Court has decided that the Legislature was a lawful Legislature; they were called upon to do it, and could not avoid it. How? A law was passed with regard to contested elections, and that question came before the Supreme Court in the case of Morgan, who claimed to have been elected supreme judge, and the Supreme Court was compelled to pass upon it, and they said that that law was passed by the Legislature of Louisiana, that it was valid and binding; but the Senator from Wisconsin says that we understand all that much better than they do, that it was not a lawful Legislature, and that the Supreme Court of the State had no jurisdiction to examine and decide the question at all.

"It is proposed to overturn that government, and either have a new election in the month of May next, Governor Warmoth in the mean time being placed back, or if we cannot do that, says the Senator from Wisconsin, we must take the McEnery government—the McEnery government, a mere supplement to the government of Warmoth, and McEnery must be put in there, installed over the colored people of Louisiana, elected by defrauding thousands of them out of their votes, elected as the enemy of the colored people, as the acknowledged foe of their race, running on what was called the white man's ticket in the State of Louisiana, and every white man was urged to vote for McEnery upon the ground that he represented the white people. I say he was running as the white man's candidate. It is now proposed that he shall be inducted into power in Louisiana, when there is an acknowledged majority of the people of that State who are colored people. The proposition to put McEnery there is to put a minority candidate in as Governor of Louisiana. I do not believe the Congress of the United States will do it."

Mr. Edmunds, of Vermont, said: "I have

been very much impressed with what the Senator from Indiana has just said on the subject of our power. I do not myself doubt the power of the Government of the United States, when the supreme occasion shall arise for it, of determining for itself that there is no government in a State; but as the Senator from Indiana has said, and as the Senator from New York, I believe, stated with great force, it must be a time that brings you to where you can say in a moral sense, as the Senator from New York did, that it is the last resort of kings. So that I agree with the Senator from Indiana that we have not here the occasion when this last power of ours, although we possess it, should be exercised. Going so far with him, I am sorry to feel compelled, from the best consideration I have been able to give to this case, to separate.

"I think we are obliged upon the evidence that we have to determine, as he agrees, either that we must allow the Kellogg government to go on, and stand by it as the final and lawful government of that State, so far as the United States are concerned, or we must determine that it has been set up by us and not by the people of that State, and give to the other party, who on the face of the returns appears to have been elected, the office, until, by the proper process of law in that State, if he is not really entitled to it, it shall be determined that some other person is. I think that the more we look at it the better we shall be satisfied that there are less evils and less dangers in declaring one way or the other that the people of that State having had an election according to the forms of their law, must have *prima facie* elected somebody to be their chief magistrate. If we say that, as it appears to me we must, then the question is who *prima facie* has been elected?"

Mr. Sherman, of Ohio, said: "The proof shows that as to the McEnery government the election was so managed as to defeat the will of the majority and prevent a fair election. and in the other case that the actual majority of the votes returned according to law were not in favor of the government set up by Kellogg. Those two facts it seems to me are reasonably established.

"Now, what shall we do? Shall we set the example for all time to come of allowing a government to be established permanently that was not elected by the majority of those who voted? Shall we on the other hand allow a government to be perpetuated that was organized, engineered, conceived, and founded in fraud? Why, sir, to establish either of these two propositions is to subvert the republican principle. Therefore, I am disposed to acquiesce in the decision of the committee that we ought to set them both aside, under the powers given to us by the Constitution of the United States to guarantee to the State of Louisiana a republican form of government.

"Now, one question arises, and it is the only

question upon which I have had any doubt. The machinery of reorganization is amply provided and very carefully provided in this bill in a manner that is fair and just to all parties. A judge of unquestioned character is to preside over it and manage it. One of each party, having equal powers and functions, is to organize and prepare for an election, conduct it, control it, examine it, and return its result. That is the best agency and means that we can provide. But, in the mean time, who should perform the ordinary executive functions of the State government of Louisiana while this machinery is going on? There is the question, and the only question I have had any trouble about. Shall we restore the powers of a Governor to Warmoth, who, according to the statements that have been made here, has been the source and origin of the confusion and trouble in Louisiana? I felt the force of the objection made by the Senator from Indiana when he said that the very first result of this bill was to restore to power, to the collection of taxes, the discharge of executive functions, of pardoning convicts, and all the other powers and influence of the Governor of the State of Louisiana, a gentleman who, according to the testimony of the author of this bill, has been the source and origin of this trouble."

Mr. Stewart, of Nevada, said: "It seems to me that we are placed in this predicament: that by our action we must do one of three things. Non-action keeps a government in place that did not have a majority of the votes; was not elected by the people. Non-action does that because the President tells us that in that event he will continue to recognize the Kellogg government. Action to recognize the McEnery government recognizes and indorses a conspiracy that has been repudiated by the action of the Administration, by various judicial decisions, and by the action of both Houses of Congress in counting the votes for President of the United States.

"Then, what is the other alternative? The other alternative is to order a new election, and the committee have very sensibly proposed to allow the people of Louisiana to have the right that other citizens of the United States have, to elect their own officers. I think that is less arbitrary, a less violation of the Constitution, than either of the other proceedings would be."

Mr. Trumbull said: "The statement that the election in Louisiana was an organized fraud is without a basis to rest upon. There was a board of canvassers appointed under a law approved the 20th of November, 1872. That law required the canvassers to be of different political parties. It was made up of Mr. Archibald Mitchell and F. R. Southmayd, Democrats; B. R. Forman, a Republican; and S. M. Todd and O. F. Hunsacker, Republicans. Mr. Thomas was origi-

nally a member of the board, 'and he with the rest of us canvassed the vote for the State officers and Legislature, when he went home and resigned his place, and Mr. Southmayd was chosen and qualified to fill it.' Mr. Forman, as candid and fair a man as you will find anywhere, was before the committee and testified in regard to the canvass. The Senator from Indiana has said, and I have no doubt it has been taken as if it were true, that there had been no canvass of the votes, that it was only a couple of clerks without any authority who counted them. That is not so. The majority of the committee say they were canvassed under color of law. In my judgment they were legally canvassed. Four parishes were left out of the canvass, and the number of votes in those parishes, Republican and Democratic, taking the election of 1870, is only about eight thousand, and the Republican majority in those parishes was less than half that.

"Mr. Packard is the United States Marshal in the State of Louisiana; he is the chairman of the Republican State Executive Committee; a very active politician, as he admitted. He was before the committee, and testified that in the larger portion of the State the election was as fair as elections held in any of the States usually are. Then he was asked as to how many parishes there were where he believed there were gross frauds. He stated seven, and that there had been reports of unfairness in ten or fifteen more. Now let me say to my friend from Ohio, who starts out with the assumption that this election was all a fraud, that this Mr. Packard (and this is shown by his testimony) had more than six hundred special deputies in the city of New Orleans supervising the election on the day it occurred. He had from two to four in every parish in the State. Some of his deputies served for seventy days, supervising the registration and the election.

"Let me state another fact. The official returns show that the vote at the last election was twenty thousand larger than ever before polled in the State. This is official. And yet the declaration is constantly made here that the whole thing was an organized fraud. Such declarations may be made, but the testimony does not warrant them. The Senator from Ohio said it was agreed by all the committee except myself that the election was an organized fraud. It is not so. The Senator from Georgia has never agreed to that statement."

Mr. Carpenter, of Wisconsin, said: "I believe that Mr. Kellogg's government is not entitled to remain as the government of the State of Louisiana, and I want to remit the question to an election by the people. I should prefer to have the bill passed as it came from the committee; I think it is more rigidly logical than the bill as amended; but here I find half a dozen Senators who are willing to support the bill amended in its recital, and in

nothing else, who would oppose it if the recital be not amended. Now, what is a practical man under those circumstances to do? Is he to stand on the outer wall of his own peculiar views and imperil the end he would attain, or shall he yield these views, so far as he may do so without violating principle, to harmonize with other gentlemen whose opinions are entitled to his profoundest respect, and when he finds those of his friends differing from him on a particular question, he is fairly justified in thinking he must be wrong, and they must be right on that question?

"It is, practically, a question simply of this kind: whether the people of Louisiana shall be under the government of Mr. Kellogg, if you choose to put it in that form, four weeks or four years; that is all. The President of the United States has told Congress that if we adjourn without passing any law on the subject he will recognize Mr. Kellogg's government, and it will stand there supported by Federal authority for four years. I think that is all wrong. For the purpose of getting rid of that, for the purpose of remitting the question to the people again, for the purpose of having an election there conducted with perfect honesty to all parties, I am willing to throw over my views on this recital, and instead of reciting the fact which is plain enough from the enactment which follows, that that election is void, I am willing to recite another fact not at all inconsistent with it, from that election, which was held on the 4th of November, resulted in two organizations. That is true; the other was true. The one does not impeach the other."

The Presiding Officer: "The question is on the passage of the bill, and the yeas and nays have been ordered;" and, on being taken, resulted as follows:

YEAS—Messrs. Anthony, Carpenter, Corbett, Cragin, Ferry of Michigan, Frelinghuysen, Gilbert, Hamlin, Howe, Logan, Machen, Osborn, Ramsey, Sawyer, Sherman, Sprague, Stewart, and Wilson—19.

NAYS—Messrs. Bayard, Boreman, Casserly, Clayton, Conkling, Cooper, Davis, Flanagan, Hamilton of Maryland, Harlan, Johnston, Kelly, Lewis, Morton, Norwood, Saulsbury, Stockton, Thurman, Trumbull, and West—29.

ABSENT—Messrs. Alcorn, Ames, Blair, Brownlow, Buckingham, Caldwell, Cameron, Chandler, Cole, Edmunds, Fenton, Ferry of Connecticut, Goldthwaite, Hamilton of Texas, Hill, Hitchcock, Morrill of Maine, Morrill of Vermont, Nye, Patterson, Pomeroy, Pool, Pratt, Ransom, Rice, Robertson, Schurz, Scott, Spencer, Stevenson, Sumner, Tipton, Vickers, Windom, and Wright—35.

So the bill was rejected.

A motion was subsequently made, on March 1st, to reconsider the vote by which the bill was rejected. This motion was laid on the table by the following vote:

YEAS—Messrs. Ames, Anthony, Boreman, Brownlow, Buckingham, Chandler, Clayton, Cole, Conkling, Corbett, Flanagan, Frelinghuysen, Gilbert, Harlan, Hitchcock, Howe, Morrill of Maine, Morton, Nye, Pool, Pratt, Ramsey, Sawyer, Spencer, Stewart, West, Wilson, Windom, and Wright—29.

NAYS—Messrs. Alcorn, Bayard, Blair, Carpenter, Casserly, Cooper, Cragin, Davis, Edmunds, Fenton, Ferry of Michigan, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Kelly, Logan, Morrill of Vermont, Norwood, Ransom, Rice, Robertson, Saulsbury, Schurz, Sherman, Stevenson, Trumbull, and Vickers—28.

ABSENT—Messrs. Caldwell, Cameron, Ferry of Connecticut, Hamlin, Johnston, Lewis, Machen, Osborn, Patterson, Pomeroy, Scott, Sprague, Stockton, Sumner, Thurman, and Tipton—16.

In the Senate on February 7th, the bill was considered to create a commission to adjust the compensation of the several claimants for damages and for depredations by cruisers, to be discharged out of the indemnity fund awarded by the tribunal of arbitration at Geneva, to be paid by Great Britain to the United States.

Mr. Edmunds, of Vermont, said: "Mr. President, I suppose it will be expected that acting for the committee I shall make a brief statement of the grounds upon which this bill rests.

"But still, Mr. President, this bill presents questions of very considerable importance, and questions about which men who are equally patriotic and equally desirous of maintaining the honor and performing the duties of the United States, differ widely; so that I shall be excused perhaps in a very few moments, not in making a speech, but in stating to such Senators as are kind enough to listen to me precisely the grounds upon which this bill rests. And to begin, it is necessary that we should understand precisely the state of circumstances out of which the bill grows; that is to say, we should know the history, condensed, or the critical points of the history which gave rise to these claims.

"In the first place we are to remember that the destruction of American commerce, for which we have received this sum of money, was a belligerent destruction. As the Supreme Court of the United States had decided, and as I think rightly, a state of war existed between the so-called Confederates and the United States. Of course, that did not necessarily imply that as to persons there may not also have been a state of treason which might subject individuals to punishment under the municipal laws of the United States; but that has no bearing on this question. As an aggregate question, if I may use such a term, a state of war existed. The destruction of the American commerce, therefore, followed from that state of war as a belligerent destruction occurring between belligerents, and hence, upon the principles of international law, a lawful destruction. That is to say, if the Confederates had been successful as they were unsuccessful, no citizen of the United States, no citizen or subject of any other country whose property was in an attitude where belligerent rights might arise against it would have any cause to complain that his ship was destroyed, his cargo sent to the bottom, his whole voyage

frustrated, because it is a well-understood principle of public law that prevails in all civilized nations that where a state of war exists between two parties, it is lawful, it is the very object of war, that each party shall be made to suffer in the persons and in the property of its respective subjects or citizens. So, then, the destruction of these ships and vessels of ours, in respect to which we have obtained this money in a greater or less degree, was a destruction, not by her Majesty's forces, not by the accidents of warfare, not by a warfare carried on by Great Britain against some other power, we occupying the attitude of a neutral, but it was accomplished by the belligerent exercise of the lawful forces of war, in the public sense in which I am now speaking, of a belligerent recognized by all the nations of the world.

"The result of that is, of course, that no citizen of the United States had any claim upon anybody, either his own Government or the Confederate government or the Government of Great Britain, in respect to any indemnity whatever, for the Government of her Majesty, so far as she was responsible at all, was responsible only as an accessory to an act which she did not commit, but which she aided another belligerent to commit by supplying that belligerent with munitions of war and with the augmentation of force occurring in her ports. The whole injury, therefore, that was committed by the Confederates through the accession and assistance of her Majesty's subjects was a national injury, because, as I have shown and as all people agree, between two belligerents every injury that is inflicted upon the people of the other side is a national injury in respect to which neither the citizen nor any person for him is entitled to any redress at all. He is like the soldier in the skirmish line, or leading the forlorn hope in a storming party; he happens to be merely the more exposed point of the national body proper that happens to receive the blow, and he only receives it as one component part of the whole nation, and the whole nation suffers accordingly.

"It is thus obvious, Mr. President, that her Majesty's Government committed no wrong in the personal sense against any citizen of the United States. She did not even issue any orders whatever for seizure or reprisal or capture. She only, by her negligence or by her sympathy with the rebellion—and it is not necessary to decide which—suffered her subjects to be accessories, in the way of furnishing aid and munitions to a belligerent to augment the power that that belligerent had to wage war upon us. I suppose nobody will dispute that proposition; and therefore it is that this case differs from the ordinary cases between neutral powers where undertaking to exercise rights on their own account the citizens of other neutral nations have suffered injury, an injury which from its very nature they would be entitled but for certain principles of

public policy to maintain an action for in the courts of the country that committed the injury. But in this case the injury, as it respected the Lairds if you please, who built some of the vessels for the depredations of which an award was made, is so very remote, so much more remote than the consequential injuries of ours which were disallowed, that no court, no statesman, no philosopher, no writer, would think of saying that an American citizen could have any claim upon the Lairds because they had built a vessel that augmented the force of the Confederacy, and that that force of the Confederacy was afterward exerted upon the property of the particular claimant. That would be out of the question.

"Then, as I say, Mr. President, the privity, as the lawyers would call it, the relation between the Government of Great Britain and the citizens of the United States whose property was destroyed by a Confederate cruiser, and that Confederate cruiser had been enabled to destroy that property from the fact that it had received a general augmentation of its force, not to prey upon that particular ship of our citizen, but to prey upon the commerce of the United States generally, is not such as either philosophy or law can recognize as creating a responsibility on the part of her Majesty's Government to any citizen of the United States, aside from any technical difficulties in the way of such a prosecution.

"The result of that reasoning, of course, is that whatever failure in the performance of duty her Majesty's Government committed was a national failure, and whatever wrong she committed upon us as having made herself through her subjects the accessory to the rebellion was a wrong which, as it respected her obligation and as it respected our rights, was purely an international one, and that neither the citizens of the United States nor the subjects of her Majesty could have any attitude in such a question other than as the mere elements (as in all national questions such elements must exist) which go to make up the cause of national grief.

"In this state of the case, the Government of the United States and its people complained of her Majesty's Government; not that she had destroyed our commerce, not that she had made an illegal destruction or seizure of our property, but that she had enabled a belligerent with whom we were at war to exercise a greater destructive power upon our property and upon our citizens than it would have been enabled to exercise but for this augmentation of its faculties and its functions and its powers that the subjects of her Majesty, having contributed to it, enabled it to do. That was our cause of complaint; and, of course in presenting that cause of complaint, it resolved itself in reaching a sum total, as all totals must resolve themselves into a variety of elements, into a variety of particulars, inasmuch as you never can have a total of any

kind except it be made up of an aggregate of particulars. And so it happened that in the presentation of these claims lists were made out showing that A and B and C and D had each had his ship and his cargo destroyed, showing that E and F and G and H had paid such and such insurance policies, showing that such and such expenses had been incurred in fitting out of cruisers to pursue these Confederate ships that had, through the aid of her Majesty's subjects, been able to augment their destructive power upon the high-seas. We presented these claims, and then we came to the making of the treaty under which this award has been made, and which, of course, must be the guide in determining what our rights are in respect to this money.

"The framers of the treaty of course were not ignorant of this state of history; and so you will find that the treaty itself looks carefully, not to the right of any citizen whatever, not to the payment of any citizen whatever; but it looks carefully and exclusively to the injury that has been done to the nation in the various respects and details which it has pointed out as a cause for redress. The eminent gentlemen upon both sides who framed this treaty were not ignorant of earlier history. They were skilled diplomatists. They were familiar, as we must assume, with the history of treaties in similar respects; and being familiar with the history of those treaties, as I shall show you, instead of following the course that treaties have always followed without exception, where it was intended that the parties should agree to pay any private persons anything whatever, they adopted an entirely different method of treating and an entirely different method in the treaty for the adjustment of these claims.

"Now, as I have said, going over a dry detail of history as to treaties, all these treaties we must assume were perfectly fresh in the minds of the high commission, as it was called, that made this Treaty of Washington, in the year 1871. They therefore understood that the unvarying course of historic precedent was that, where reclamations were to be allowed to citizens and not to nations, special and distinct provision was made for it in the treaty itself. With that before their eyes what did they do? Let us see.

"On the 8th of May, 1871, they made this treaty, which departed entirely from the precedents to which I have referred, where nations were undertaking to deal for the interest of the citizen, and were undertaking to make reclamation and compensation to the citizen for injuries that the other nation had committed, and set sail upon the broad sea of purely international obligation; and they did it for the obvious reason that flows from what I stated in the outset, that the injuries for which Great Britain was bound to make compensation, if she was bound to make it at all, were injuries to which she was not a direct

party, but an accessory only, and that the injuries themselves were belligerent injuries committed lawfully against our commerce and our citizens under the principles of public law by a belligerent with whom we were at war. And therefore, as they all understood, there was no ground whatever upon which we could assert in the name of any private citizen or in behalf of any private citizen, or for any private purpose whatever, any claim at all, because the destruction of a ship upon the high-seas by the Alabama, although Great Britain had augmented her force, had laid her keel, and supplied her guns, was, upon the principles of public law—and public law of course was the only law that could prevail between us and her Majesty's Government—a perfectly lawful procedure. In other words, upon the principles of public law, the destruction of an American vessel by the Alabama was a perfectly proper and lawful thing to do, because war existed. I am now only looking to the public side of the question; I am not saying whether an individual Southerner may or may not be tried for treason; that is entirely apart from this question. On the principles of public law, whatever injury one nation in a state of war or one belligerent, whether a nation or not, one party recognized by the nations of the earth as a belligerent, may commit upon the other, is perfectly fair play; and therefore the citizen, who as one part of the nation suffers, stands, as I have said, precisely as the soldier does who may suffer more than his fellow-soldier, because he happens to be in the skirmish-line, or in the forlorn hope, while his fellow-soldier is holding a position in the interior of the country.

"So that, as I say, Mr. President, these gentlemen, not unskilled in diplomacy, not ignorant of history, came to consider this question, as it must be considered, as solely an international question, in respect of which no right, no injury of a citizen had any place whatever, other than as the simple element which, with others, went to make up the national question, as a part goes to make up the whole. What did they do? They provided in the first article thus:

Whereas differences have arisen between the Government of the United States and the Government of her Britannic Majesty, and still exist, growing out of the acts committed by the several vessels which have given rise to the claims generally known as the Alabama claims.

"You will observe the wide departure in this language from that which had existed in other and prior treaties with her Majesty, where it was the intention that the claim of the citizen should be recognized, and that indemnity should be made to the citizen, and the wide departure that was taken from all this prior history of treaties, where the seizure or the destruction committed by the party who was to pay for it had been, not a belligerent seizure or destruction, but only the acci-

dental or incidental injury committed against a neutral nation by a belligerent, in her efforts to carry on war against a nation with which she was in a state of belligerency. So they say, not that 'whereas differences have arisen in respect to claims of citizens of the United States for illegal seizures or captures made under the authority or by the assistance of her Majesty's Government,' but, on the other hand, that differences have arisen between the two Governments in respect to the acts, not of her Majesty's cruisers, but in respect to the acts of belligerent Confederate cruisers carrying on war, lawful war, upon principles of public law, against the whole body of the United States. Then when we come to the seventh article, to condense this as much as possible, after having declared in article six what are the duties of neutral nations, we find this guide to the action of the tribunal:

The said tribunal shall first determine as to each vessel—

"not as to each citizen—

separately, whether Great Britain has by any act or omission failed to fulfill any of the duties set forth in the foregoing three rules, or recognized by the principles of international law, not inconsistent with such rules, and shall certify such fact as to each of the said vessels. In case the tribunal find that Great Britain has failed to fulfill any duty or duties aforesaid, it may, if it think proper, proceed to award a sum in gross, to be paid by Great Britain to the United States, for all the claims referred to it; and in such case the gross sum so awarded shall be paid in coin by the Government of Great Britain to the Government of the United States, at Washington, within twelve months after the date of the award.

"That is the seventh article. There is no reference whatever to any claim of a citizen, no reference whatever to any right of a citizen, and, as I have said, for the obvious reason that the nature of the case was such that no citizen had any right, the nature of the case was such that as to a citizen her Majesty's Government had not committed any wrong whatever. No sailor of hers, no gun of hers, in the national sense, no ship of hers, had made a seizure, legal or illegal, right or wrong, of any vessel or any property of any citizen of the United States. She had only by a general contribution, and not for the purpose of making war upon us, strengthened the hands of the belligerent with whom we were at war, and thereby augmented the capacity for destruction that that belligerent had attained; and so it was necessary that we should look to her in the national sense alone; so it was necessary that she should respond to us, if she were bound to respond at all, in the national sense alone.

"Now we come to the tenth article, which provided that in case the tribunal finds that Great Britain has failed to fulfill her duties, and the tribunal does not award a sum in gross, a board of assessors shall be appointed who shall determine upon each head of the respective claims. It does not provide that that

board of assessors shall determine in favor of citizens and make awards to citizens; but, quite the reverse, it provides as follows upon that head: they shall 'ascertain and determine what claims are valid'—not what citizens are entitled—and 'what amount or amounts shall be paid by Great Britain to the United States on account of the liability'—not on account of the citizen, as the other treaties had provided, but 'on account of the liability arising from such failure, as to each vessel, according to the extent of such liability as decided by the arbitrators.' Then it goes on to provide that the sum allowed finally shall be paid by one Government to the other, not, as is stated in the former treaties, for the benefit of the citizens whose particular property may have been destroyed, but simply paid from one Government to the other.

"Thus, Mr. President, it seems to me to be perfectly evident that by the treaty itself, in the light of the history that preceded it, or without that light upon the face of the treaty itself, the sum of money which has been awarded to us by the tribunal at Geneva, if that award was made in conformity to the treaty, was a sum awarded to the nation and not to individuals, and that it was awarded to the nation without any stint or limitation in respect to the uses to which the nation might apply it, and that these individual inquiries as to the classification of injuries were only the elements that went to make up the sum total that might be allowed.

"But, Mr. President, this tribunal did not undertake to decide beyond the treaty. It did not, as I construe its decision, undertake to say that any private claimant in any character was entitled to any standing at all in respect to a claim upon this fund. It only undertook to classify, as one of the articles of the treaty required it to classify, the vessels in respect to which it might be found that her Majesty's Government had been an accessory in the belligerence of the Confederate States, and having ascertained those vessels and decided that her Majesty's Government was liable for their acts to us as acts of belligerence accessory to the acts of a belligerent, and not for any illegal destruction of the private property of citizens of the United States, it then proceeds to decide that certain other claims that we make, as for prospective profits, as for the expense of chasing Confederate cruisers, as for unearned freights, as for a variety of things, are inadmissible as going to show that the sum we claim is more than we are entitled to have. It then goes on to say as a final conclusion:

The tribunal making use of the authority conferred upon it by article seven of the said treaty, by a majority of four voices to one, awards to the United States a sum of \$15,500,000 in gold as the indemnity to be paid by Great Britain to the United States for the satisfaction of all the claims referred to the consideration of the tribunal, conformably to the provisions contained in article seven of the aforesaid treaty; and in accordance with the terms of article

eleven of said treaty, the tribunal declares that all the claims referred to in the treaty, as submitted to the tribunal, are hereby fully, perfectly, and finally settled.

"Thus, Mr. President, you have in the decision of the tribunal itself, not a classification of the claims of citizens in an award for the indemnification of citizens, but an award following the treaty which gives to the United States, upon certain principles that it adopts in order to reach a sum that it may give, a certain sum of money as the indemnity that Great Britain owes to it for having been accessory to an act of belligerence committed in a state of public war by another belligerent against us, and not for any act or wrong that it had committed against any citizen of the United States, for it had not done it as such. So it appears to me that we have no difficulty in coming to the result that this money which has been awarded to us belongs to the people of the United States, and it is for them, through their Representatives in Congress, to determine what disposition ought to be made of it. There is no obligation, so far as I can understand it, of honor, or of law, or of public policy, which can constrain us in the slightest degree, in respect to this money, to do any other thing than that which we consider, looking to ourselves alone and to our citizens alone, to be right.

"Then we come to the question as to what is right. The Committee on the Judiciary, in reporting this bill, presented what they thought under the circumstances would be right. It must be remembered that the means of defending property upon the high-seas, the great highway of nations, is not so perfect as it is upon land; for, as all nations have a right to travel there, you can have no forts and no exclusive possession there. Therefore the duty of the Government to the protection of citizens' property upon the high-seas may be of a somewhat higher degree than its duty in respect to the protection of their property upon land for the reason that I have stated, that within their own territories they can exclude everybody else; they are not obliged to decide any questions as to neutrality or the want of it, because no nation under any circumstances has a right to infract its territory. Standing thus upon a different principle from that of making compensation to citizens who were loyal in the Southern States for losses on land, we thought we might, as an act of justice and propriety, pay to those who were the real sufferers by these Confederate cruisers, whose forces were augmented by the aid of her Majesty and for which this money was obtained, what they had lost. And, having done that, we provide that the sufferers directly, owners of ships and cargoes, officers, seamen, everybody whose property or whose person has suffered a direct loss by the acts of the vessels in respect of which the tribunal found her Majesty's Government to have been accessory,

shall be paid for their real losses, their actual losses. If they have received indemnity by having paid a premium in order that some one should insure them, then of course to that extent they ought not to be paid; they have been made good.

"Then we have taken the next step that appeared to us the perfectly logical one from that. If this be not a trust, if it be a matter of national right and of national recovery, the next step logically follows that the insurance companies who may have paid to the citizen who had thus received a direct loss the sum of his loss, is not entitled to make any claim either upon the generosity or the justice of the Government, if he himself, be he corporation or person, has not been the loser in that class of business that he undertook. If the insurer has taxed the people of the United States by his charges for insurance, which runs right down through freights and cargoes and sales until at last the consumer pays the burden, if he has made himself good for a given loss by this tax which he has spread over the whole country, in its commerce, in its industry, and in its consumption, there is no ground of equity that we can perceive upon which he is entitled to say, 'I will take from the Treasury of the United States a double compensation and will thereby realize a profit which out of the ordinary course of my business I had made good before, and thus gain by the loss of my fellow-citizens.' So we have introduced a provision into this bill, without enlarging upon it now, which excludes all insurance companies who have made profit out of their war risks; but those who did not make profit out of their war risks we provide to make good their losses, standing in the place of the insured to the extent that their war risks did not make them good.

"The scope of the bill, then, is based simply upon the theory that this sum of money which we have recovered is a sum of money that belongs to the nation and does not belong to any citizen; that it is the money of the people; that it is not charged with any trust whatever, and, therefore, it is only upon principles of public policy and natural justice that we provide for these direct sufferers of the class that I have named and upon the principles that I have thus briefly and imperfectly set forth. If after this there shall be a sum of money still left, it will be a question afterward for the United States to determine, if it shall be raised, what disposition might properly be made toward making good the losses of other citizens whose vessels were destroyed upon the high-seas by Confederate cruisers in respect of which the tribunal did not appear to think her Majesty's Government had been at fault; but that is a question perhaps entirely unnecessary to be argued here. This, I believe, covers the scope of the principle of the bill."

Mr. Thurman, of Ohio, said: "Mr. Presi-

dent, nothing but what I consider to be the demands of justice and, to my apprehension, a regard for the national honor, would induce me to say one word on this subject. With the general scope of this bill I fully concur. If my amendment prevails, I can cheerfully vote for it. I prefer it to any other bill on the subject that I have seen, if this amendment of mine prevails. Indeed, I have no serious objection to any part of it except to that which I move to strike out.

"This bill proceeds upon the theory of paying precisely the claims in respect of which the award was made by the tribunal at Geneva, except such of those claims as are owned by insurance companies. It proceeds precisely upon the theory and principles upon which that tribunal proceeded in ascertaining the amount to be paid by Great Britain to the United States, excepting one singular particular; that is, it rejects claims in respect of which that tribunal made up its award, and says that those persons whose claims entered into the computation of that tribunal, and in respect of which they awarded millions of dollars, shall be utterly rejected and cast aside and the money given to some other persons, or to some other purpose, or retained by the United States.

"Now, sir, as I believe that the claims which this bill proposes to reject are as valid as any claims that were laid before that tribunal or will be laid before the board of commissioners that will be established by this bill, my sense of justice requires me to oppose the proposed exclusion of those claims, and what I regard as the national honor requires the same thing. With due respect to those who differ with me in opinion, I cannot consent to get money by the award of that tribunal of Geneva from Great Britain upon the ground that A B and C D and E F, citizens of the United States, had been injured, and that a sum of money ought to be awarded to the United States sufficient to indemnify them, and having thus obtained the money, through the virtue and the agency of their claims, say that they shall have not one dollar of it, but that we will appropriate it to some other purpose.

"I listened with the utmost attention to the very able and ingenious argument of the Senator from Vermont (Mr. Edmunds), the chairman of the committee that reported this bill. It all rests upon one postulate which, in my judgment, is utterly unsound. It rests upon a theory unknown to public law. It rests upon a nomenclature that is known only in municipal criminal law. It rests upon the theory that the public law recognizes such a thing as a principal and an accessory; that in this case the Confederacy was the principal and Great Britain the accessory—a nomenclature, I repeat, wholly unknown to public law, and known only to municipal criminal law; and the principles therefore which the Senator has applied have no application whatsoever to a

case of public international law. The Confederacy was a belligerent, it is true, but Great Britain was not an accessory in the sense in which a private individual is an accessory to the principal who commits a crime. There is not one word in the negotiations between the parties, not one word in the treaty, not one word in the debates before the Geneva tribunal, not one word in its award, not one word in public international law that makes Great Britain any thing in the world in this whole transaction but a neutral nation that violated her obligations of neutrality. By this very treaty itself, she is declared to have been a neutral nation, and not an accessory to a belligerent principal.

"Why, sir, if you apply the doctrine of principal and accessory to a case like this, as the accessory before the fact is equally guilty with the principal, so Great Britain would have to be regarded as a belligerent. There is no principal belligerent and accessory belligerent. Great Britain was either a belligerent; or she was a neutral, one or the other. This treaty says that she was a neutral who disregarded the duties and obligations resting upon her in that capacity. The argument says she was not a neutral, but an accessory of a belligerent principal, which in public law means a belligerent too. If that be the case, if Great Britain were a belligerent, and in the language of the Senator from Vermont no citizen could have any claim upon her because what she did was a belligerent act, if she stands in precisely the same shoes as the Confederacy, and *quoad* her, as well as *quoad* the Confederacy, every capture was a lawful capture, in the language of the Senator from Vermont, then what follows? It follows that every contract made between a citizen of the United States and a subject of her Majesty during the four long years of the war was a void contract; not one of them could be enforced in a court of justice. It follows further that every citizen of the United States who traded with Great Britain during that time was guilty of a criminal offense under our statute, for which he is liable to conviction and punishment. Why, sir, that will not do at all.

"It will not do to say that Great Britain was a neutral nation and at peace with us, so that all the trade and intercourse that could take place between the citizens of the United States and the citizens of any other country could take place between our citizens and the subjects of her Majesty, and then turn around in the next breath and say that she was accessory to a belligerent, in other words, a belligerent herself, and that, therefore, no citizen of the United States could by any possibility have any claim upon her. And yet that is the argument. The argument is that the accessory can be no more guilty than the principal; that the Confederacy was the principal; and that as every capture by the Confederacy was lawful, which gave no individual and could

give no individual a private claim upon the Confederacy, *ergo* no such capture could give any private individual a claim upon Great Britain. And all that upon the sophism that Great Britain was accessory to a principal; all a mere play of words, by importing into public law a nomenclature that is known only to municipal criminal law, and saying that there is such a thing as a principal belligerent nation and an accessory, and that the same law applies to the one that applies to the other, as if this very treaty and every claim we have ever made upon it did not go upon the ground that there was a belligerent power, the Confederacy, and a neutral power, Great Britain, who violated the duties and responsibilities that belonged to her as a neutral.

"That sophism, as I most respectfully call it—and I say it without the slightest disrespect at all, but I can only speak of it as it seems to me—that sophism is the sole foundation upon which this bill proposes to take four or five million dollars, in respect of which the tribunal at Geneva made its award in favor of the United States, from those who are the legal owners of the claims in respect of which the award was made, and divert it to some other use, or keep it ourselves. Mr. President, I say that will not do. In the first place, it will not do, for the reason I have already stated. But it will not do for another reason. The argument of my friend, I repeat, is that no citizen of the United States had any claim upon Great Britain. He lays it down, in the broadest and most unqualified manner, that no citizen had any claim on Great Britain whatsoever, any more than he had a claim on the Confederacy. Is that true, in the light not simply of the public law of which I have spoken, but in the light of the history of these claims? Let us see whether it is right or not, in view of the history of these claims.

"Great Britain suffered certain cruisers to be built in her ports, and to escape from her ports, to go into the service of the Confederacy. They went into the service of the Confederacy. They made captures. Those captures commenced, I think, about the beginning of 1862, possibly a little earlier. The first capture took place off the coast of Portugal, and was reported by Mr. Harvey, then our minister to Portugal, to the Secretary of State. What did the Secretary of State do? Forthwith he sent an authentic statement of that capture, of the loss of two American ships, the *Brilliant* and the *Manchester*, to our minister at Great Britain. For what purpose did he send that statement there? To be laid before the British Government as claims of American citizens for reparation by that Government, on account of the want of fidelity to her neutral obligations that she had shown in suffering the *Alabama* to escape, as she did. From that time forward to the very sitting of the tribunal at Geneva the United States continued to present, and against the remon-

strance of the British Government to present and to file with that Government, these claims as the claims of citizens of the United States upon the Government of Great Britain; and among them were the claims of these very insurance companies.

"The British Government refused to acknowledge its liability; and so matters went on until eventually what is known as the Johnson-Clarendon treaty was negotiated; and what was the Johnson-Clarendon treaty? The Johnson-Clarendon treaty in the most clear and unmistakable manner recognized these as claims of American citizens. Here is the first article of that convention:

The high contracting parties agree that all claims on the part of the subjects of her Britannic Majesty on the Government of the United States, and all claims on the part of citizens of the United States upon the Government of her Britannic Majesty which may have been presented to either Government for its interposition with the other since the 26th day of July, 1858, the date of the exchange of the ratifications of the convention concluded between Great Britain and the United States of America, at London, on the 6th of February, 1858, and which yet remain unsettled, as well as any other such claims which may be presented within the time specified in article three of this convention, whether or not arising out of the late civil war in the United States, shall be referred to four commissioners.

"Observe the language: 'All claims on the part of the subjects of her Britannic Majesty on the Government of the United States, and all claims on the part of the citizens of the United States upon the Government of her Britannic Majesty.' Now, sir, what was the objection to that Johnson-Clarendon treaty? I am not speaking of any thing which took place in executive session, I wish to be understood; I am speaking of what is history. What was the objection to that treaty? That these were recognized as claims of citizens? Nobody ever heard of such an objection. The objection was that that treaty did not go far enough; that it did not include public claims of the United States. So far as claims of citizens were concerned it was confessedly ample and sufficient; but it was said that it left out the part of Hamlet from the play, that here were injuries done not simply to our citizens, but injuries done to the United States; that here was the cost of pursuing these cruisers; here was the increased rate of insurance all over the whole country; here was the prolongation of the war entailing great expense upon the country; and then, after all the demands the Government might lawfully make, that some atonement should be made to its wounded honor by the course Great Britain had pursued. We all remember very well the speech of the distinguished Senator from Massachusetts, then chairman of the Committee on Foreign Relations, and which the Senate permitted to be printed, although it was delivered in executive session. We all know that not one single objection did he take to that treaty

on the ground that the claims of private citizens were recognized, but that the whole of his objections to the convention were because it did not recognize the claims of the United States over and above the claims of individual citizens, and combined no reparation for the wounded national honor and the dignity of this Government.

"That treaty was defeated; why defeated it is immaterial to say. Then came the treaty which is now under consideration; and the first article of that treaty being one upon which the Senator from Vermont has based a large part of his argument, I beg leave to call attention to it particularly. He says that this treaty is not like any other that ever was made upon the subject of claims due to citizens of the United States, and he bases a great deal of his argument upon the fact that in the treaties from which he has read there was a specific reference to the claims of citizens of the United States. Why, sir, the answer to that is in a word. It is because in the cases to which the articles of the treaties that he read referred, there was no question of national claims, there was nothing but the claim of the citizen, and that is the reason why nothing but the claim of the citizen is mentioned. Take the first case he read; the case of the treaty with Great Britain of 1794. That was a case which provided for paying certain amounts to subjects of Great Britain. What was the ground upon which they were to be paid? They were debts that had been due by citizens of the colonies to subjects of Great Britain, debts that had been due by one subject of Great Britain to another subject of Great Britain, but owing to the war the collection had been suspended, if the debts had not become absolutely void. Those subjects of Great Britain had no claim whatever upon the Government of the United States for the payment of those debts. Why, then, were they paid? It was simply an equivalent or one of the equivalents that the United States gave for the equivalent that she received by that treaty. It never was put upon the ground that those citizens had any claim upon the Government of the United States. It was simply one of the equivalents which we paid by that treaty for the equivalents which we received. So that that treaty has nothing to do with a case like this.

"Then take the treaty with France in which provision is made for paying citizens of the United States. What is the reason that nothing but private claims is mentioned in that treaty? Because in that committee we provided for nothing but private claims. We did not ask France to give us any thing to repair our wounded honor, or to pay us for any expense we had been at, or any national injury we had received. And so with every one of the rest of these treaties. Take the treaty with Spain. We were not there demanding money of Spain as a *salvo* to our national

honor or to indemnify us for national loss, but we were asking her that our citizens should be paid; and, that being the case, of course the treaty spoke of nothing else. The same is the case with the Algerian treaty, and in fact with every one of the treaties that have been mentioned. They are cases in which whatever may be in other articles of the treaty, in the article of the treaty that related to claims we made no claims but those of private citizens, and therefore we might well speak of their being the claims of citizens of the United States.

"But how was it when we made this treaty of Washington with Great Britain? You have seen that the Johnson-Clarendon treaty was defeated because it related to nothing but claims of citizens. Our Government, therefore, was determined that the treaty which should be formed here at Washington, if one should be made at all, should include something besides the claims of private citizens; and that is the reason why the language is not the same as it was in the old treaty. It is because we had determined to demand more than would repay our citizens for the losses they had sustained. Hence the language which is used in the first article of the treaty. But the contracting parties did not agree, perhaps they never could have agreed precisely, as to what the public claims should be; and therefore they resorted to a general term as to what they should be; and they said:

Whereas, Differences have arisen between the Government of the United States and the Government of her Britannic Majesty, and still exist, growing out of the acts committed by the several vessels which have given rise to the claims generically known as the "Alabama claims:"

And whereas her Britannic Majesty has authorized her high commissioners and plenipotentiaries to express in a friendly spirit, the regret felt by her Majesty's Government for the escape, under whatever circumstances, of the Alabama and other vessels from British ports, and for the depredations committed by those vessels.

"That expression of regret was to cure our wounded honor. Then comes something more operative and practical:

Now, in order to remove and adjust all complaints and claims on the part of the United States, and to provide for the speedy settlement of such claims, which are not admitted by her Britannic Majesty's Government, the high contracting parties agree that all the said claims growing out of acts committed by the aforesaid vessels, and generically known as the "Alabama claims," shall be referred to a tribunal of arbitration to be composed of five arbitrators.

"That is the reason why it is not said here, 'the claims of the citizens of the United States.' It is because we had public claims that we intended to assert. Under that general phraseology, 'the claims generically known as the Alabama claims.' It is because we did not intend to limit ourselves to the presentation of private claims that we did not make the language of this treaty as is that of the treaties that have been read from, simply a claim for the damages due to private citizens, individ-

nally; it is because we had public claims as well. Do we not know that this treaty nearly failed because there were public claims embraced in those words? When we came to present our case to the Geneva tribunal, we claimed not simply the claims of private citizens, but immense public claims known under the general designation of 'the indirect claims;' and we know that Great Britain refused to proceed one step. What were those indirect claims? They were the cost to this Government of the prolongation of the war, and various other matters. The prolongation of the war was the main one—the indirect losses. The enhanced rate of insurance all over the country was another. We presented those claims; we put them in our case. Great Britain said: 'I will not move one step until you withdraw them; I never submitted any such thing as that; I will not, therefore, agree to go before this tribunal, I will not submit to any five arbitrators on the face of this earth,' and no other Government, they said, that had any power or self-respect, would submit a question under which they might be mulcted in thousands of millions dollars damages.

"We got out of that. How we got out of it, it is not necessary to say particularly. We got out of it, however, first, by our Government writing to Mr. Schenck: 'We do not mean any thing by that; we do not ask any money for that at all; we have stuck it in there, but we do not ask any money for it; so just get out of it the best way you can. Well, sir, they met, and finally the tribunal decided that, whether they had jurisdiction of it or not, it was not a thing that came within the scope of the tribunal, either of the three rules laid down or the principles of international law; and therefore they would exclude it anyhow; and thereupon both parties had got exactly what they wanted. Both parties got out of the scrape, out of the snarl in which they were, and then the tribunal proceeded.

"But there were still left some public claims of which the tribunal could take cognizance, which both parties agreed were proper for the cognizance of the tribunal—claims not of private citizens, but claims that the Government alone could represent. What were they? One of the first of them was the enhanced rates of insurance caused by the existence and depredations of these cruisers. Great Britain did not deny that that might be considered by the tribunal. Another was the cost of pursuing cruisers and capturing them. That was another thing Great Britain did not deny might be considered by the tribunal; and the tribunal did consider both those things. They were public claims. Not one of these claims for increased insurance had been presented to Great Britain. They were not, therefore, the claims of private citizens. That was a matter that concerned a vast multitude of citizens, everybody engaged in commerce, and could only be represented by the Government. Of course no individual

had any right to indemnification for the cost of pursuing and capturing the Confederate cruisers. That was, therefore, a national thing also. They were then presented; they were argued; and the tribunal solemnly decided against the allowance of any thing on account of either of them. That is the reason why the language of this treaty is 'the claims generically known as the Alabama claims,' instead of being, as in the other treaties, 'the claims of citizens of the United States.'

"But, sir, the treaty does recognize that the citizens of the United States had claims on Great Britain. Let us see if the treaty does not recognize that."

Mr. Schurz: "There were some individual claims for insurance presented."

Mr. Thurman: "There may have been some few, but they were not many."

Mr. Edmunds: "If the Senator will pardon me, there were four hundred and fifty-five distinct claims presented."

Mr. Thurman: "I had overlooked that. It may be so; but it does not matter. There were still the public claims. There was the cost of pursuing and endeavoring to capture these Confederate cruisers. That was a public claim, and upon that the tribunal rendered a solemn award. In the award itself you will find it.

"Now, Mr. President, the tribunal did proceed, pursuant to that article of the treaty, and took up each vessel and decided in reference to it, and decided that Great Britain had been guilty of an omission to perform her duties as a neutral in respect to the Alabama, in respect to the Florida, and in respect to the Shenandoah from the time the Shenandoah left Melbourne, the date of which is fixed, and in regard to certain small vessels that were tenders to those cruisers, or to some of them; and decided that in respect to all the other vessels Great Britain did not fail in her duties as a neutral, and therefore was under no obligation to make any payment or reparation whatsoever; and decided in regard to the public claims of the United States, those which are distinct from individual claims, that Great Britain was not liable to the United States, and therefore was not bound to make any indemnity.

"You see from this that the tribunal had decided against us on every point except certain individual claims; that is in respect to certain vessels; and in respect to their acts, the only necessity or propriety of naming the vessels was owing to other provisions in the treaty as to the distribution of the fund. The claims, then, that were allowed by the tribunal, upon which it based its award, were wholly and entirely individual claims—claims of citizens of the United States who had suffered loss from these Confederate cruisers.

"What did the tribunal then do? Having determined that in respect to three vessels and their tenders Great Britain was liable, the tri-

bunal had either one of two things to do: it had to make an award either of a gross sum to the United States, or it had to leave the matter precisely there, and leave it to a board of assessors, to be afterward constituted, to find out the amount for which Great Britain should be liable according to the principles decided by the tribunal at Geneva. It saw fit to take the first course, to award a sum in gross.

"Then, I say, going further, that it is precisely on the foundation of these claims thus held by insurance companies, as well as those held by individuals, that the award of fifteen and a half million dollars was made, and I do therefore say that according to my poor sense of what is just, and according to my poor sense of what the honor of this Government requires, we cannot take that money to ourselves, but we are bound to give it to the men who, under the law of the land, at the time the award was made, were legal holders and owners of those claims in respect to which the award was made.

"That is the way it looks to me; and although I admit that the argument of the chairman was very ingenious, and I know the effect it has produced upon others and I know my own fallibility as much as any man can do, yet as I must act on my own convictions I feel it impossible for me to do otherwise than as I have expressed. I cannot by any special pleading take away from those people in whom the law vested this right the indemnity which justly belongs to them.

"One word further, however, I ought to say. This bill goes upon the principle of paying everybody but the insurance companies. Although the right of an insurance company was just as good as the right of an individual, this bill undertakes to exclude them unless they lost instead of made profit upon their insurance business. I say that to introduce such a principle as that is to destroy the doctrine of subrogation in favor of insurers altogether."

The bill was passed in the Senate by the following vote:

YEAS—Messrs. Ames, Anthony, Boreman, Buckingham, Carpenter, Chandler, Clayton, Cole, Corbett, Edmunds, Ferry of Connecticut, Flanagan, Frelinghuysen, Gilbert, Hamilton of Texas, Harlan, Hill, Hitchcock, Morrill of Maine, Morrill of Vermont, Pool, Pratt, Sawyer, Scott, Sherman, Spencer, Stewart, Wilson, Windom, and Wright—30.

NAYS—Messrs. Bayard, Cass, Crary, Cooper, Davis, Hamlin, Johnston, Kelly, Machen, Rice, Saulsbury, Schurz, Sprague, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—18.

ABSENT—Messrs. Alcorn, Blair, Brownlow, Caldwell, Cameron, Conkling, Cragin, Fenton, Ferry of Michigan, Goldthwaite, Hamilton of Maryland, Howe, Lewis, Logan, Morton, Norwood, Nye, Osborn, Patterson, Pomeroy, Ramsey, Ransom, Robertson, Sumner, and West—25.

In the House the bill was passed—yeas 122, nays 56.

In the House, on December 2, 1872, Mr. Blaine, of Maine, offered resolutions relative

to the Credit Mobilier investigation (*see* page 138 of this volume.)

The committee subsequently reported, and, on February 25th, the report and resolutions were considered. (For the report, *see* PUBLIC DOCUMENTS.)

The Speaker: "The Clerk will now read the resolutions reported from the select committee of which the gentleman from Vermont (Mr. Poland) is chairman."

The Clerk read as follows:

1. *Whereas*, Mr. Oakes Ames, a Representative in this House from the State of Massachusetts, has been guilty of selling to members of Congress shares of stock in the Credit Mobilier of America, for prices much below the true value of such stock, with intent thereby to influence the votes and decisions of such members in matters to be brought before Congress for action: therefore—

Resolved, That Mr. Oakes Ames be, and he is hereby, expelled from his seat as a member of this House.

2. *Whereas*, Mr. James Brooks, a Representative in this House from the State of New York, did procure the Credit Mobilier Company to issue and deliver to Charles H. Neilson, for the use and benefit of said Brooks, fifty shares of the stock of said company, at a price much below its real value, well knowing that the same was so issued and delivered with intent to influence the votes and decisions of said Brooks as a member of the House in matters to be brought before Congress for action, and also to influence the action of said Brooks as a Government director in the Union Pacific Railroad Company: therefore—

Resolved, That Mr. James Brooks be, and he is hereby, expelled from his seat as a member of this House.

Mr. Butler, of Massachusetts: "I desire to move as a substitute for those resolutions the following, in order that all matters may be brought before the House."

The Clerk read as follows:

Whereas, A select committee of this House has, after investigation, reported to the House testimony which is deemed by them sufficient to show criminal action in one or more members of this House; and whereas, the testimony shows that similar acts have been done by other persons not now members of this House; and whereas, it clearly appears, whatever acts were done, or offenses committed by members of this House, or by any civil officer of the United States now in office, or others, were done and committed more than five years ago, within the jurisdiction of the Supreme Court of the District of Columbia; and whereas, in the judgment of this House the House of Representatives has no legal or constitutional right to use its power of expulsion of its members as punishments for crimes done and committed by a member before his election thereto, and that the punishment of all crimes and offenses against the laws should be after trial by jury and judgment of a court of competent jurisdiction: therefore—

Resolved, That in the judgment of the House, as it appears there is probable cause to believe, from the report of the testimony submitted by the select committee of investigation of the matter of the Credit Mobilier, that grave offenses, punishable by the statutes of the United States as well as at common law, such as giving or receiving bribes, or false swearing, may have been committed, as shown in said testimony, within the District of Columbia, that therefore the Clerk of the House be, and is hereby, ordered to cause a copy of the testimony so taken to be forwarded to the District Attorney, the prosecuting officer of the United States for said District, with the recommendation of this House that the same, and other testimony which he may deem material, he

shall cause to be presented to the grand-jury sitting in and for said District at the next session thereof; that he may take such action in the premises as to law and justice shall appertain.

The Speaker: "The gentleman from Vermont being entitled to the floor, the Chair presumed he had yielded to the gentleman from Massachusetts. Since he has not done so, the resolution of the gentleman from Massachusetts is not before the House, and the Chair reserves his ruling till it be before the House."

Mr. Butler, of Massachusetts: "I propose, whenever I can get the floor in the course of the discussion, to offer in substance the resolution which I have sent to the Chair."

The Speaker: "The gentleman from Vermont (Mr. Poland) is entitled to the floor."

Mr. Poland: "In rising to support the resolutions which have been reported by the special committee of which I have the honor to be the chairman, I do not design to go very elaborately into a discussion of the facts that have been reported by the committee to the House, or into a very extensive exposition of the law upon which the committee claim their report to be supported."

"I am aware that we are very near the end of the session, and of this Congress, and that there is a very great pressure of public business that ought to be done."

"Another reason that induces me not to go so extensively into this matter as otherwise I might do is, that the report of the committee discusses the questions of fact and law involved in this case to a considerable extent, and that report has for several days been in the possession of the members of the House, and has been discussed in the public press."

"Another reason, sir, why I do not design to discuss this matter at very great length is, in consequence of the peculiar position of our report, because we do not, as yet, and in advance, precisely know all the questions that we may be called upon to discuss."

"And just here I may be allowed to say a word in explanation of this report, which I think will absolve it somewhat from some of the criticisms that have been made upon it. The resolution of the House under which the committee was constituted, and by which it was directed in the performance of its duties, directed the committee to inquire whether any members of this House had been bribed by Mr. Oakes Ames or any other person or corporation. That was all in accordance with what we understood to be our duty under that resolution. We examined all the evidence that was produced before us, and all that we could find in relation to any dealings between Mr. Ames or any other person or corporations, in the language of the resolution, in relation to stock in this company called the Credit Mobilier of America."

"After having taken all the testimony we could find in relation to any person then a member of Congress, we reported that testi-

mony at length, and upon that testimony the committee came to the conclusion that Mr. Oakes Ames was guilty of the crime of bribery, and that Mr. James Brooks was guilty of receiving bribes, and we therefore find those cases to come within the terms, and scope, and jurisdiction of that resolution, as we understand it, and hence we report resolutions with reference to those two gentlemen, proposing to expel them from their seats in this House."

"In relation to the other gentlemen connected with this matter, those who are now members of this House, the committee was unable to find from any evidence produced before them, or that came within their reach, that any of the other persons named in the report, who are now members of the House, had been guilty of the offense of bribery, either in giving or receiving bribes, and therefore, as to the offense we were charged to inquire into in reference to any member of this House, we said that we did not find it established as against any of those gentlemen."

"We consider, therefore, that under the resolution we have fully performed our duty in reporting as to those gentlemen. But, the House might differ from us; the House might say that, as to those gentlemen, if they were not guilty of this offense, they were guilty of something else, and we came to this conclusion, to find a special verdict with reference to every one of these gentlemen, excepting those whom we found within the terms and language of the resolution, and submit to the judgment of the House whether, upon the facts reported, any action is proper in reference to them. That is the position of our report; that is what the committee intended. We did not understand it to be our duty to report upon any conduct of any member of this House except in respect of and in view of the resolution submitted to us."

"The facts reported by the committee stand before the House, and if any member of the House desires to ask the judgment of the House upon the special verdict we have returned as to the other members named in the report, he will have opportunity to ask such judgment, and therefore, at the proper time, the committee, so far as they have control of the matter, will yield for the offering of any resolution that any gentleman may choose to offer on his own responsibility as a member, founded on the facts contained in our report."

"So much, Mr. Speaker, by way of preliminary. And now, sir, I desire the attention of the House for a few moments to the evidence laid before them to sustain the action of the committee in relation to the two members against whom they have reported resolutions of expulsion."

"And, in the first place, in regard to Mr. Ames: there is no question upon the testimony; it is conceded by Mr. Ames himself, it has been proved by various other witnesses, that in December, 1867, and in January, 1868,

Mr. Ames, here in Washington, attending the session of Congress as a member of the House of Representatives, made contracts with and made sales to various members of the Senate, and to various members of the House, of a certain number of shares of stock in a company called the Credit Mobilier of America; that such sales were made by him, and that in every instance those sales were made at the par value of the stock and the interest upon that par value from the previous July. All that is unquestioned upon the testimony before your committee.

"Now, an important and material inquiry is in reference to the value of that stock. I shall not here go into any history of the matter, because it is set forth somewhat at length in the report that was made by the committee of which I had the honor to be the chairman, and more at length in the report of the committee of which the honorable gentleman from Indiana (Mr. Wilson) was the chairman. That history sets forth the proceedings and relations between the Union Pacific Railroad Company and this Credit Mobilier of America.

"I have now no occasion to speak as to whether this connection between the two companies was honest and honorable, or whether it was otherwise, something or other had been done, either right or wrong, by which, as early as December, 1867, the stock of the Credit Mobilier Company was understood by its owners to be worth at least double its par value; that is, a share of \$100 was worth at least \$200. It was so understood by the owners of the stock; it was so understood by Mr. Ames himself. The only sale of stock that we were able to ascertain was one made by Mr. Durant, one of the leading men in this transaction, to Mr. Alley, another leading man. It was true that, on the 20th of December, 1867, Mr. Durant sold a certain number of shares of stock to Mr. Alley for \$160 per share, its par value being but \$100 a share. But there was proof in relation to that transaction that they got into a controversy about whether one of these dividends should be made. Mr. Alley opposed it; Mr. Durant wanted the dividend made, and, for the purpose of inducing Mr. Alley to consent to the dividend, Mr. Durant sold to Mr. Alley a quantity of stock for less than he himself understood it was worth at the time. Mr. Durant testified that, in his judgment, every share of that stock was worth \$200.

"More than that; we have, in the evidence that has been submitted, that of Mr. Ames himself. On page 7 of the volume of evidence taken by the committee there is a letter dated February 22, 1868, from Mr. Ames to Mr. Henry S. McComb. In the course of that letter Mr. Ames says:

You ask me if I will sell some of my Union Pacific Railroad stock. I will sell some of it at par. Credit Mobilier of America I do not care to sell at all. I hear that Mr. Bates offered his at \$200, but I do not want Bates to sell out. I think Grimes may sell a part of his at \$350.

"This shows the judgment and opinion of Mr. Ames himself in relation to the value of that stock. At the very lowest calculation, Mr. Ames considered that stock worth, and it would have sold for, double its face; that is, that every share of \$100 would have sold for \$200, if he had chosen to sell it.

"Now, this brings me to the question, Why was it that Mr. Ames was here about Congress, during those months of December and January, peddling out his ten shares of stock in a place to some dozen leading members of Congress? Was Mr. Ames utterly insensible to this additional \$100 in money that he might have obtained for each share of that stock, had he chosen to sell it to somebody else? How came his charitable disposition all at once to be so expanded in favor of members of Congress? The evidence in the case in reference to that inquiry, and out of Mr. Ames's own mouth, is incontrovertible.

"In his letters to Mr. McComb, as set forth in the testimony—there are three letters from Mr. Ames, written to Mr. McComb, the earliest of which is dated January 25, 1868; that letter was written from Washington—Mr. Ames was here professedly attending to his duty as a member of Congress from the State of Massachusetts. He was here to assist in making laws for the Government of this nation. But his actual business was the peddling out ten shares of stock in a place to members of Congress.

"In this letter of Mr. Ames to Mr. McComb, dated January 25, 1868, he goes into a detail of his transactions in Washington. He says:

I have assigned, so far as I have gone, four from Massachusetts, one from New Hampshire, one Delaware, one Tennessee, one Ohio, two Pennsylvania, one Indiana, one Maine; and I have three to place, which I wish to put where they will do most good to us. I am here on the spot, and can better judge where they shall go.

"Further on he says:

The fifty per cent. increase on the old stock I want for distribution here, and soon.

"In another letter, two days after that, a letter dated January 30, 1868, after speaking about his distribution of stock, he says:

I have used this where it will do most good to us, I think. In view of King's letter and Washburne's move here, I go in for making our bond dividend in full.

"In another letter, written nearly a month later, February 22, 1868, the same letter in which he speaks about the value of the Credit Mobilier stock as three hundred and eighty or four hundred dollars per share, he says:

I want that \$14,000 increase of the Credit Mobilier to sell here. We want more friends in Congress; and if a man will look into the law (and it is difficult to get them to do it unless they have an interest to do so) he cannot help being convinced that we should not be interfered with.

"It might very naturally be supposed that a man who has some knowledge about the value of money, who is not at all averse to getting and having his share of it, would not sell stock

for \$100 a share when he could just as easily have obtained \$200, or \$300, or \$400 a share for it. There must have been in the mind of Mr. Ames some balancing motive which made him choose to let certain men have this stock at \$100 a share, when he could have obtained from others twice or three times that amount. But we are not left in the dark upon this point. The language of Mr. Ames in these letters and in his testimony explains it.

"It should be borne in mind that, when Mr. Ames first came before the committee, he came with a statement prepared by his counsel. It was not testimony given off-hand, without knowing the questions that were to be put. It was a carefully-prepared and elaborate statement, written out by his lawyer in his closet.

"On the twenty-second page of the testimony, as printed, Mr. Ames goes fully into the condition of things; and we learn from it precisely the peril which Mr. Ames feared for himself and his company. It appears in the evidence, that some of these men made some question as to whether it would be proper for them to be holders of this stock, whether it would in any way interfere with the proper exercise of their legislative duties as members of Congress. 'No,' said Mr. Ames, 'we have got from Congress all we want; we are not coming to Congress to ask any favors from them; it will not interfere with your duty at all.' But, in point of fact, although Mr. Ames told the truth so far as he went, although the company did not come to Congress asking any further legislation, having obtained all they wanted, yet he tells himself in a very graphic way, or his counsel tells for him (and Mr. Ames swears to the statement), precisely the perils that he feared might encompass them. Says Mr. Ames:

It has become tolerably well known to all the world that the road was likely to be a success, and those of us who have risked the chance had won a prize. There appeared to be a disposition then to complain of the grant that had been offered without opposition. There was first a complaint made by Mr. Washburne of the value of the land grants. In view of this, I desired we should put it out of the power of any one to take from us what we had in my view paid the Government for. It was to get the land grants as private property, I wanted them sold, and the bonds divided. Mr. Alley thought we could not afford to do this; and the event proved he was right.

It was also complained we were excessive in our charges for freight and transportation—not that we exceeded our legal rights, but it was proposed to trammel that right. Being a mere private right, I had always found it difficult to induce any one to take the trouble to look at the case. I did not want any assistance or privilege that our legal vested rights should not be taken from us. I thought we had fairly bought or earned them, and I knew if any one would examine he would see this. For this reason I wanted more shares to be used, for I have found there is no difficulty in inducing men to look after their own property, but no one seemed to think this was necessary, and it was never done.

"That is, he refers to the fourteen thousand extra shares he wanted issued. It was done

to a certain extent, as he himself admits. But further on in the testimony of Mr. Ames he repeats in substance the assertion made in this carefully-prepared statement."

"Now, does anybody doubt—is there any possible doubt about the motive of Mr. Ames; that he designed to get this stock into the hands of members not merely to rely on a feeling of gratitude they may have had because he had given them something which was worth twice as much as they paid for it, or three or four times as much, but he relied on something stronger than that? Mr. Ames has lived long enough in this world to know men sometimes forget kindnesses—that a man's gratitude for a kindly act done him does not last always; and it is supposed he knew enough of Scripture to know that 'where a man's treasure is, there will his heart be also.' He avows his whole philosophy on that subject. He says:

The difficulty is, you cannot get these men to look into a thing, to give attention to it, to understand it, unless they have an interest to do so; and therefore I must contrive some means or other by which I can make the interest of these leading men in Congress identical with my own, that they shall be as watchful in relation to all this matter as I myself would be.

"I take it, Mr. Speaker, there is no occasion, there could be no excuse even for dealing longer in relation to the motive of Mr. Ames doing this: that he let these men have stock for one-half, or one-third, or one-quarter, of its value, and did it for the very purpose to create an interest which would make them watchful and attentive, and careful and vigilant in the defense of the rights which had been given by Congress to this road.

"But more than that, Mr. Speaker, they had started on a voyage under this Oakes Ames contract which sooner or later Mr. Ames knew would be exposed, and that the time would come when Congress and everybody else in this nation would know the nation had by that performance been defrauded out of millions. He understood it would be a good thing when that time came he should have, if possible, some strong backers. He intended by his course of conduct to provide himself with them. That Mr. Ames practically made a gift to each one of these men of the value of that stock above what they paid, and he did it for the very purpose—with intent, in the language of the statute—to influence their action as members of Congress on matters which were to come before them.

"Mr. Ames not only desired to influence them generally, but he had in view a specific measure, against which he wanted their aid. On the 9th day of December, I think, during the very first week of that Congress, Mr. Washburne, of Wisconsin, introduced a bill into Congress to have Congress provide by law for a regulation of the fares and freights upon the Union Pacific Railroad. That is the only measure Mr. Washburne had introduced on that subject prior to the date of this letter,

when he refers to 'the Washburne move.' 'The Washburne move,' Mr. Ames admits himself, and when that came to a vote, Mr. Ames and all his friends were found voting in opposition to it. There was an express measure, there was a measure actually pending before Congress where he wanted the aid and defense of these men. But, as he says in his statement, there were a variety of other matters that he wanted also.

"Was this an offense? Was this conduct of Mr. Ames a crime? Was it bribery in law? If any gentleman will take the trouble to turn to the act of 1853, which is quoted in our report, he will see that this conduct of Mr. Ames was bribery; that it was an act of bribery for which he might have been convicted and sent to the penitentiary, although every one of the men who received this stock from him received it in entire innocence and with no knowledge but that it was an honest investment. The law does not require that the intent shall be known to the person to whom the present is made. It is the insidious attempt to undertake to bind over by ties of gratitude the man whose official action you wish to influence by it. It stands upon the same principle of law as that which relates to making presents to jurors or judges, or to treating a juror. You shall not use any of those influences that ordinarily affect the human mind and the human judgment. Although the man you are practising upon may be entirely ignorant of your intent and your purpose, the law declares that you are guilty.

"I am not arguing now in reference to the question as to whether these men were one and all innocent, or whether they were guilty. I merely say that it is utterly immaterial, so far as Mr. Ames is concerned, whether they received this money with perfect innocence and with no knowledge of wrong intent on his part, or whether they received it upon a corrupt contract that they would do what he wanted them to do. The crime is the same in Mr. Ames in either case. It may be said, I have heard it said, and it may be said here, that Mr. Ames did not know that this was a criminal act, and I presume he did not. But, Mr. Speaker, in all the tribunals of this land, the meanest and most ignorant criminal is never allowed to say, 'I did not know what the law was, and did not know I was violating it.' It is, I say, a principle of law that the vilest and most debased and ignorant of men, who is brought up for the commission of an offense, is never allowed to say, 'I did not know that the law provided a penalty against this.' Are we to apply a more liberal rule to a millionaire or a member of Congress? Is he to stand up here in our presence, or anybody for him, and say he did not know what the law was, and did not know he was violating it?

"More than this, Mr. Speaker, I have heard it argued that Mr. Ames, in doing what he did,

had no sense that he was doing an immoral act, or that he was even doing an indelicate act; that he regarded it as the same thing as going into a business community and interesting the leading business-men, by giving them shares; that he did not suppose that the act he was doing was in any way different from that. It may be, Mr. Speaker—I do not take it upon myself to say whether it is or is not so—it may be that the moral sense of Mr. Ames did not rise high enough to see that this act was itself immoral and wrong. I understand that he claims now it was not. Mr. Speaker and members of this House, who are to judge of this matter, if a man's moral sense sees no wrong in that which our predecessors declared a penitentiary offense, and which would by law forever disqualify a man from holding the meanest office, I ask is he fit to sit here as one of the law-makers of this great nation? I submit it to your judgment in the most charitable view of Mr. Ames's conduct, whether he be a man that ought to be tolerated as a member of this House?

"Mr. Speaker, I now desire to ask the attention of the House for a few moments to the facts in relation to the member from New York, against whom we have also reported a resolution of expulsion. There was no connection between Mr. Brooks and Mr. Ames. The committee find that Mr. Brooks received the stock and received it corruptly, with a knowledge that he was receiving it because he was a member of Congress and a Government director, and he received it knowing that it was given him to placate his official action. But he did not receive it from Mr. Ames. Mr. Brooks, a leading man in his profession, a leading man in Congress, a leading man in his party, had also been a leading friend of the Pacific Railroad. And after the connection between it and this company, the Credit Mobilier of America, was established, after their relations were formed, Mr. Brooks was the friend and associate of Dr. Durant, who was at that time a leading man in this enterprise, and was endeavoring to get stock in the Credit Mobilier Company, taken for the purpose of urging and carrying on the work of the Union Pacific Railroad. Mr. Brooks was employed, as he himself testified before us, as an agent of Dr. Durant to go about among the capitalists of New York and urge upon them to become stockholders in the Credit Mobilier Company, and he did so.

"On the 1st of October, 1867, Mr. Brooks was appointed by President Johnson a Government director of the Union Pacific Railroad Company; and this was before the contract with Oakes Ames was perfected. True, a contract had been previously drawn; but it was discovered by some learned counselor that it contained great frauds and could not be successful unless covered by a further contract, and that was made. I say that while this thing was in progress, and before the assign-

ment of the contract to Mr. Oakes Ames, Mr. Brooks took his position as a Government director."

Mr. Brooks, of New York, said: "That is not correct; it is not a true statement of the facts on record. The record is that I was nominated for that office on the 1st of October, 1867; that I accepted it on the 2d of January, 1868; that the Oakes Ames contract was made on August 16, 1867, and that the transfer was made on October 5, 1867, long before January 2, 1868, when I first acted as a Government director. That is the record."

Mr. Poland: "I would not for my right hand misrepresent the smallest fact in reference to the gentleman's case. All he has said is not in the slightest degree in conflict with what I have stated. The Oakes Ames contract was executed in August, but it was found that that trap was not properly set, and the new machinery necessary in order to run it successfully, so as to cheat the United States and the Union Pacific Railroad, was not entirely completed until about the middle of October."

"Mr. Brooks had become on the 1st of October a Government director. There is not the slightest evidence that Mr. Brooks ever considered himself any thing but a full-fledged Government director. We had no evidence of any official act of his in the meetings of the company until the 2d of January, 1868. But, if you look into the evidence of Mr. Brooks himself, and of Dr. Durant, you will see that in December, when the first one hundred shares were purchased from Durant, the reason Mr. Brooks could not take them in his own name was, that he was a Government director of the road. He never on any occasion signified to anybody in the slightest manner that he had not accepted that office, and that all its duties were not incumbent upon him. I would not insinuate that Mr. Brooks said any thing that was not true, but he first said that he had never acted as a director until the spring following, but it turned out that a long time previous, in December, at the time of this transaction between him and Durant by which he became the owner of the first one hundred shares, he said he could not hold the stock because he was a Government director."

Mr. Eldridge, of Wisconsin, said: "I wish to call the attention of the gentleman from Vermont to a question on which I would like to hear his comments. Whether he expects the House to act differently in regard to Mr. Brooks's case because he was a Government director? Whether what he did as a Government director is a proper reason for his expulsion? Whether that is not a matter that is to be tried by another tribunal than that of this House? If he did wrong, or if he obtained bribes in consequence of being a Government director, is not that a matter for impeachment rather than for expulsion?"

Mr. Poland: "I have no doubt that it

would be a matter entirely within the jurisdiction of the House, both in point of time and in point of essence, as a proper subject for his expulsion. In relation to the time when it was done, if done at all, I shall have something to say before I get through. I say that Mr. Brooks must have been perfectly familiar with the value of this stock, in consequence of his connection with Dr. Durant, and in consequence of his official duty as a director of the Government, set there to guard and watch and to look after the interests of the Government in connection with that railroad company. We cannot suppose that, when he was employed by Dr. Durant as an agent to go out for the purpose of promoting the sale of that stock among the capitalists of New York, he was not well informed of the condition of it and of its value, and of the reasons why it was valuable or not valuable. And when he became a Government director, set there for the purpose of watching the interests of the Government, we cannot suppose that he did not perform that duty at least far enough to inform himself of the important and material facts in reference to it.

"Mr. Brooks then knew of this Oakes Ames contract, and, when in November and December that stock began to go up in value like a kite, he knew the reason of it; he knew why it was so. There had been some negotiations between him and Dr. Durant in reference to his taking some of this stock when it was not so valuable. But Mr. Brooks did not choose to take it then. The committee find from the evidence, from his own evidence, that there was no contract or agreement between him and Durant that could have been enforced. About the middle of December he applied to Durant and claimed that he was entitled to have two hundred shares (the very maximum that he ever had talked about taking), and to have it at par.

"Dr. Durant said that he had parted with the stock, and that it was then in such demand that it was very difficult indeed for him to let Mr. Brooks have that amount of stock, or to let him have any. After a long negotiation between them, it finally resulted in Durant agreeing to let Mr. Brooks have a hundred shares of that stock at par. In reference to the other hundred shares which he claimed, Durant bought him off by giving him \$5,000 of Union Pacific Railroad bonds, which were then worth very nearly if not quite par, and \$20,000 of Union Pacific Railroad stock, the value of which was probably somewhere in the neighborhood of thirty dollars per share. The committee have not reported, we did not feel ourselves justified, or rather compelled, to find that in this transaction between him and Durant Mr. Brooks stood upon his official position. The committee thought that it possibly might be that in consequence of the friendship Brooks had manifested for him, in consequence of the aid he attempted to render

him, although it never seemed to amount to any thing, yet Dr. Durant might entertain such feelings of gratitude and friendship toward Mr. Brooks as to give him those hundred shares. But it was somewhat extraordinary that he should have rewarded Mr. Brooks's friendship and Mr. Brooks's services, which seemed to have no value at all, with quite so munificent a present as was made by the sale of that hundred shares of this stock at par.

"The son-in-law of Mr. Brooks, Mr. Charles H. Neilson, first makes his appearance when it became necessary to have that hundred shares transferred. Mr. Brooks says: 'I am a Government director, and the law forbids Government directors from being stockholders in the Union Pacific Railroad Company, and although being a stockholder in the Credit Mobilier Company, which is a stock corporation, does not come within the letter of the law, yet from my relations with this company, I know that being a stockholder in the Credit Mobilier Company makes me equally interested in the Union Pacific Railroad Company, and it will not look well for me, a Government director, to hold this stock, and therefore I transfer it to Mr. Charles H. Neilson, my son-in-law.' That was done. Mr. Charles H. Neilson walks up to the office and takes the certificate of transfer of those one hundred shares.

"But there was a more important act to be performed in that ceremony than taking the transfer of the shares; and that was paying the \$10,000 that was to be paid for the stock. That little act Mr. Brooks did himself. The \$10,000 that had to be advanced to pay for those one hundred shares came out of Mr. Brooks's pocket. It is now said that this was a loan of that amount from Mr. Brooks to his son-in-law, Mr. Neilson. But not the slightest evidence was ever preserved by either of them of any loan. No note, or obligation, or security, of any sort was given, except that Mr. Brooks kept as security for the \$10,000 he had advanced the \$5,000 in Union Pacific bonds that came with the stock and was thrown in as a bonus. If Mr. Brooks required security at all, if he wanted security from his son-in-law, why did he not have security to the full extent of the loan? He took just what came; whether greater or less does not seem to have made any difference—just what was the natural course of events. What was brought to Mr. Brooks with the stock he took; but that was all he required. In that way these one hundred shares of stock were paid for.

"I allude to this in view of its effect upon what afterward took place, because the committee have not reported that they find there was any thing wrong in the reception of those one hundred shares. There was something exceedingly suspicious in it. It would be very difficult for any man hearing the testimony of Mr. Brooks, the testimony of his son-in-law, the testimony of Dr. Durant, and looking at the relative position of all those men, to be-

lieve that Dr. Durant yielded to the demand of Mr. Brooks except upon the ground that Mr. Brooks held such a position that it would not do to refuse what he asked.

"At one time, as members who are familiar with the report doubtless know, there was an increase of the stock of the Credit Mobilier of fifty per cent. It was raised from two and a half million dollars up to three and three-quarter millions; and the original holders of the two and a half millions were entitled to take this fifty per cent. themselves; and with it they were entitled to take an equal amount of Union Pacific bonds. That is, a man bought a Union Pacific bond at par, and the stock was given to him.

"After those one hundred shares had been thus obtained from Dr. Durant, Mr. Brooks asserted that he was entitled to fifty per cent. more, although he had forced Durant to give him one hundred shares at par, when, according to the statement of Durant himself, it was worth, not \$10,000, but \$20,000; and with those shares Durant had also given Mr. Brooks Union Pacific securities which he called worth \$9,000. After that Mr. Brooks set up a claim that he was entitled to fifty per cent. additional on the ground of this old increase of stock. Durant himself testified before us that this additional stock had all been issued, this very stock that Mr. Brooks received being a part of that increase. The claim was utterly and wholly unfounded; and from Mr. Brooks's familiarity with the proceedings of that company, its business, and the connection between the two, Mr. Brooks must have known perfectly well that his claim was unfounded. But he went to Mr. Sidney Dillon, who had recently become president of that company, and asserted to him this claim for fifty additional shares. Mr. Dillon said: 'I do not know about that; I am recently in this office; and whether your claim is a good one I do not know.' Thereupon the stockholders had to be consulted; and all the principal stockholders were required to sign a paper.

"If Mr. Brooks had been entitled to his shares, they would have been issued to him as a matter of course; it would not have been necessary to institute any of this machinery. He would have gone to the proper officer of the company, who would have transferred the stock to him. But no, the consent of all the principal shareholders in the company had to be obtained to a written instrument authorizing the issue of those fifty shares to Mr. Brooks. That instrument in its terms authorized the issue of fifty additional shares to Mr. James Brooks, not to Charles H. Neilson. The whole dealing, the whole information to the whole body of stockholders was that they were yielding to the demand, the imperative demand of Mr. Brooks, and not to any demand of Charles H. Neilson. So far as they were concerned (and I desire to say nothing in disparagement of Charles H. Neilson), so far as

related to the Credit Mobilier and its stockholders, Mr. Charles H. Neilson was an insignificant man. They would not for any influence he had have yielded a single farthing. It was the name, and, as the committee believe, the official position and strength and power of Mr. Brooks which enabled him to force out of that company and its stockholders fifty shares of stock, which at that time were worth four times the amount he paid for them.

"The whole evidence, Mr. Speaker, on this subject shows that Mr. Charles H. Neilson was a mere figure-head; he never appeared anywhere. He appeared merely to receive the transfer. After Mr. Brooks had carried this whole business through, after the stockholders had been procured to sign a paper to give these additional fifty shares of stock to Mr. Brooks, after it had all been brought about, then Mr. Brooks informed Mr. Charles H. Neilson there were fifty shares of stock in that company for him, and to go and get his certificate. These fifty shares of stock were not issued until the date of the certificate, 29th of February, 1868, in fact were not issued until the 8d of March, 1868. These shares went back and had an eighty per cent. dividend paid on the 4th day of January previously, eighty per cent. in bonds, and one hundred per cent. in Union Pacific Railroad stock—all went with the subsequent sale and transfer of the fifty shares made to Mr. Brooks or Mr. Neilson. Indeed, so little did they know about Charles H. Neilson that when that stock was entered on the books it was doubtless entered in the name of Mr. Brooks.

"In two places on the stock ledger it was so entered, and the name of Mr. Brooks in both places has been erased on the ledger and the name of Mr. Neilson written over it. So it was undoubtedly they knew so little of there being a man named Mr. Neilson that his name never entered into the transaction until he got the certificate. The stock was paid for by turning over the portion of the dividend which came at the same time. These past dividends were paid and received by Mr. Neilson with the certificate when he went to receive it. Four thousand dollars of bonds in fifty shares of stock were left with Mr. Dillon as collateral security for \$5,000 and a little interest paid upon it, for fifty shares of stock. Mr. Neilson when first before the committee testified he never paid this money to Mr. Dillon, that he supposed Mr. Brooks had paid the money for it; that he had never paid for it. When we get to Mr. Brooks, he says he never paid for it; Dillon says that he had his pay, and as he cannot find these collaterals left with him he supposes he sold them and paid himself out of the proceeds. So the result is that the fifty shares paid for themselves with the dividends which came with them—more than paid for the stock when it was received.

"But I must hasten on with this history. It ran on until June, where there was a dividend

of sixty per cent. in money on the stock of the Credit Mobilier. Nine thousand dollars was received in cash, the only money dividend upon this stock. It was drawn by Mr. Neilson, as the stock was in his name, but that very day that \$9,000 went into the till of Mr. Brooks. It paid this loan he had made in paying for these shares of stock, excepting \$1,000. Neilson said Mr. Brooks then had \$16,000 in Union Pacific bonds, which he held as collateral security for the payment of that \$1,000 which was left of the loan. Mr. Brooks continued to hold \$16,000 of bonds as security for the payment of it subsequently.

"Neilson within the last year has borrowed \$14,000 of Mr. Brooks; so that he owes him now pretty nearly the amount of the collateral. But for four years, from 1868 to 1872, Mr. Brooks, according to his story and the testimony of his son-in-law, Neilson, was holding as against him \$16,000 of collateral security to secure a debt of \$1,000.

"Mr. Speaker, it was claimed by Mr. Neilson, and it was also testified to by Mr. Brooks, that the Union Pacific stock that was received in dividends upon these shares had gone into the hands of the son-in-law, Mr. Neilson. We had no evidence upon the subject except the testimony of these two men; and therefore we do not feel that we should be justified in believing that it is not as they state. But this son-in-law of Mr. Brooks is not, as we heard here upon a former occasion, a regular stock-dealer. That is not his business. He is a kind of amateur stock-dealer. He deals a little in some kinds of stock. That Mr. Brooks should allow him to try his hand to practise upon this Union Pacific stock which nobody seems to have treated as of very high value, does not seem to be very remarkable, considering the relations between them. But the cash, the money that was received, the Union Pacific Railroad bonds that were received, anything that had a solid and firm value that came from this stock, went into Mr. Brooks's own pocket. That was the case with this Union Pacific stock, and they issued it in quantities to suit purchasers and takers. Almost everybody who wanted any had as much as he wanted; and Mr. Brooks allowed that to be turned over and dealt with and speculated upon by this son-in-law; and that seemed to have been about all the real connection Mr. Neilson had with it.

"Without taking any more time, Mr. Speaker, in reference to the history of this matter in relation to Mr. Brooks, I ask, are the committee justified in finding that these fifty shares of stock were yielded to Mr. Brooks in consequence of his official position as a member of Congress and as a Government director? All claim that he had upon anybody was on Durant. Whatever that was, either legal or moral, Durant had settled with him, paying him liberally. What power was Mr. Brooks able to bring upon Mr. Dillon and all the stockholders of this committee, in consequence

of which they gave him for \$5,000 fifty shares of stock that were then worth \$20,000.

"I will say in reference to Mr. Brooks as I say in reference to Mr. Ames, and as I say in reference to all these men, they are not men that are careless about their dollars; they know a dollar when they see it. They are none of them men who want to throw away any thing without receiving something for it. They are none of them men who would want to throw away ten or fifteen thousand dollars. None of them felt that kind of generosity to Mr. Brooks that induced them to give him stock for \$5,000 that was worth \$20,000. What was the motive? What was the motive, Mr. Speaker? They were not more than other people acting without motive.

"We had a witness before the committee who testified, who swore expressly that he heard a conversation between Mr. Brooks and Mr. John B. Alley, wherein Mr. Brooks declared, and declared more than once, that he either was or would procure himself to be made a Government director; and that as he was a member of Congress he would take care of the Democratic side of this House. Now, sir, I know that Mr. Brooks and Mr. Alley both denied this. Upon this naked proposition, if there was nothing else about it, we should not feel justified in believing McComb against Alley and Brooks both. But that that was said to somebody—it may have been that Mr. McComb may have been mistaken as to whether this conversation was between Mr. Brooks and Mr. Alley—but that there was such conversation between Mr. Brooks and somebody I just as firmly believe as that I stand here in your presence. It is utterly incomprehensible—the thing cannot be explained, upon any of those grounds or motions that govern the actions of men, upon any other hypothesis.

"The action of Mr. Brooks was all correspondent with that, so that the committee, upon this evidence, upon the evidence of Mr. Alley and this evidence of Mr. McComb in reference to what he heard Mr. Brooks say—and it may be that it was not said to Mr. Alley—and upon all this train of circumstances travel on at an even pace to the plain and irresistible conclusion that these men yielded to this demand of Mr. Brooks because they feared to offend against his official power. If it was so, Mr. Brooks knew that it was so. It is utterly impossible under the circumstances that the fact could have existed without Mr. Brooks's knowing it.

"The act of 1863, punishing offenses of this kind, punishes every man who gives or promises with intent to influence the action of a member of Congress or a Government officer, and punishes also every man who receives; it does not say with what intent he receives it, but of course it must be an unlawful intent. What is the fair meaning of that statute? Does it mean that the receiver must make a corrupt agreement or promise that he will carry

it out? That, I apprehend, is not a correct understanding of the law.

"But, sir, if a man receives a gift or present for the purpose of influencing his official conduct as a member, knowing that that is the intent of the giver, it is an unlawful act. The evidence in this case is abundantly sufficient to establish that intent on Mr. Brooks's part. Every member of the committee believed so, and I think every member of the House ought to do so.

"A word more in relation to the Government directorship. The committee believed that, if Mr. Brooks was guilty, as a Government director of this corporation, of corruption in office, it was a good cause for his expulsion from this House, and before I get through I will have a word to say in reference to the question raised in the argument of the gentleman from Massachusetts (Mr. Butler) in this case yesterday, in relation to the time when the act was committed. Was he guilty of any corruption in office? On the 1st of October he received his appointment as Government director, and there is no evidence that he ever intended or signified to anybody, in the slightest degree, that he did not intend to accept and hold that office, and as early as January we find him acting officially in the meetings of the company. Here was a contract entered into after he became a Government director; that was completed, and the unlawful machinery was set up after he became a Government director.

"He said in his testimony that he never looked at that contract, and did not regard it as his duty to do so. The committee say that it was his business; that he ought to have looked at it; that it was official negligence if he failed to look at it; and we believe he did look at it and understood it just as well as the other men concerned in this business. We say that it was in consequence of the completion of that machinery that there was a sudden increase in the value of Credit Mobilier stock. We believe he did know it, and that knowing it he put himself in a position to share in the spoils of that which he was set by law and by the Government to protect and care for. The committee hold that the facts abundantly prove this official misconduct on the part of Mr. Brooks; and we hold that as a matter of law it is good and sufficient ground for his expulsion as a member of Congress.

"But, Mr. Speaker, these transactions took place five years ago; they took place in the Fortieth Congress. It has been said elsewhere and said here, and it was urged at great length in something called a report of the Judiciary Committee, yesterday, that Congress had no jurisdiction over a matter of this kind, or to punish a member for something done prior to the commencement of his official term as a member.

"Now, Mr. Speaker, the committee differ entirely with that gentleman and with the few

indorsers he has got whom he called members of the Judiciary Committee. We differ *totally* on these points in relation to the law of this subject. That never was the law, and I trust in God it never will be, that it is ever to be held in this country that the vilest criminal, a murderer even, who has concealed his crime from the public until he has got himself elected a member of this House, can come in here and sit by the side of such Christian gentlemen as come here from Massachusetts, that we have no power to expel such a man, but must associate with him and take him to our bosoms as an associate lawmaker of this nation. I believe no such absurdity. And no ingenuity of the gentleman from Massachusetts (Mr. Butler) or of anybody else can ever make the honest, intelligent people of this country believe that that is the law. Why, sir, it needed the man who was the inventor of the Credit Mobilier machinery to have devised such a doctrine."

The Speaker: "The gentleman from Massachusetts (Mr. Ames) affected by this report desires to be heard. The gentleman is entitled to the floor, and sends his remarks to the Clerk's desk to be read. They will be read by the Clerk."

Mr. Ames (read by the Clerk): "Before the House proceeds to the consideration of the resolution reported on Tuesday last, by the special committee charged with the investigation of alleged transactions with certain members of this body, in the disposition of shares of the capital stock of the Credit Mobilier of America, I desire to submit the following statement:

"The charges on which said resolution is based relate to events so intimately connected with a portion of the history of the construction of the Union Pacific Railroad, that I shall ask the indulgence of the House while I proceed to trace such history in greater detail than would otherwise be necessary.

"On the 1st day of July, 1863, was passed and approved an act of Congress, authorizing and providing for the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean. The practicability and importance of such a measure had long been urged by our most sagacious public men, but it failed to receive the sanction of the Government until a great civil war threatened to result in the withdrawal of the States and Territories of the Pacific coast from the authority of the Federal Government. For a variety of reasons, then long before the public, but chiefly to avert the calamity indicated, this act was passed. It was universally esteemed not only a measure of sound policy, but a scheme appealing to the patriotism and loyalty of the capitalists of the United States, as the instrument whereby a future separation of the Pacific from the Atlantic States would be rendered forever impossible.

"The meeting of commissioners named in

the act to carry the same into effect, by the organization of the corporation, was held pursuant to act of Congress, on the first Tuesday of September, 1862. Though composed of a great number of the leading capitalists of the country, and in addition to the ordinary inducement of pecuniary advantage, acting under the stimulus of patriotic ardor, the meeting failed to accomplish any thing beyond the opening of books of subscription. Not a dollar of stock was subscribed or promised, and it was not until about the 27th of October, 1863—and then only with the explicit understanding on the part of the subscribers that, in case of failure to secure future legislation, the project must be abandoned—that a sufficient subscription was obtained to authorize the election of a board of directors. On this subscription was the name of no recognized capitalist. Parties known to the country as wielding large capital in railroad enterprises had studiously avoided all apparent association with the enterprise, and in their place appeared a class of comparatively unknown men, whose names, when rising to the surface, had been chiefly connected with enterprises involving speculative and extra-hazardous risks. Until the passage of the law heretofore mentioned, nothing was done under this organization beyond such acts as were necessary to preserve the existence of the corporation.

"Then came the act of July 2, 1864. Its principal features were as follows: It authorized a reduction of the par value of the shares from \$1,000 to \$100, with a corresponding increase in number; it enlarged the land grant from a ten to a twenty mile limit; it authorized the company to issue first-mortgage bonds on its railroad and telegraph, to an amount per mile equal to the amount of United States bonds authorized to be issued to the company in aid of the construction of the road, and made the mortgage securing the same a lien prior to that of the United States; it declared that only one-half of the compensation for services rendered for the Government should be required to be applied to the payment of the bonds issued by the Government in aid of construction.

"While thus strengthening the company by these changes, Congress at the same time, and in the same act, dealt it two wellnigh fatal blows, from the effect of which complete recovery is impossible. It authorized the Kansas Pacific, which was required to effect a junction with the Union Pacific, not farther west than the one-hundredth meridian of longitude—a distance of about two hundred and forty-seven miles west of the Missouri River—to make such connection at any point, westward of such initial point, deemed practicable or desirable. The result is a rival parallel road connecting with the Union Pacific, at a point five hundred and sixteen miles west of the Missouri River—being one-half the length of that road—and claiming equal advantages

and facilities in all running connections and interchange of business. It likewise provided that in case the Central Pacific should reach the eastern boundary of California before the Union Pacific should be built to that point, the former company should have the right to extend its road one hundred and fifty miles eastward, and this power was afterward enlarged by Congress, by act of July 2, 1866, so as to authorize such extension indefinitely, until the two roads should meet. Thus by act of Congress these two corporations were sent forth upon a race across the continent, which finally culminated in the construction of five hundred miles of road by each company in a single season, through a desert country, upon a route beset by unparalleled obstacles, and at a necessary cost largely in excess of the most extravagant estimates.

"It is in testimony before a committee of the House, that after the impracticability of building the road under the first act had been demonstrated, when it had become apparent that additional aid was necessary to induce capitalists to embark in the enterprise, the late President Lincoln was urgent that Congress should not withhold the additional assistance asked, and that he personally advised the officers of the company to go to Congress for such legislation as would assure the success of the enterprise, declaring it a national necessity, and recommending them to apply for additional concessions, ample to place the construction of the road beyond a peradventure.

"Notwithstanding this favorable legislation, no capital was attracted, no additional stock subscribed. On the 8th of August, 1864, a contract, for building one hundred miles west from the Missouri River, was let to H. M. Hoxie, the only contractor offering to undertake so hazardous a venture. Six months demonstrated his inability to perform his contract, and, with the experience of the company in dealing with individual contractors, no course seemed open unless to seek a consolidation of personal means into a corporate body, whereby the pecuniary ability of a large number of persons might be made available to the task of constructing the road, while at the same time enjoying the shelter of corporate liability only. Accordingly, by a contract made March 15, 1865, the Credit Mobilier of America, a corporation created by and organized under the laws of Pennsylvania, in substance, assumed the obligations of the Hoxie contract, and entered upon its performance. It was soon manifest that even this organization, as then constituted, would be unable to accomplish the work for which it was created. The state of the country and the peculiar local conditions surrounding the enterprise were exceedingly unfavorable to a successful prosecution of the work. Gold was 150; there was no market for the first-mortgage bonds; and the Government bonds, payable in currency, were of uncertain value, and of difficult

sale. No Eastern railroad connection existed whereby the vast amount of material essential to construction could find reasonable and rapid transportation to the line of the road; it was compelled, instead, to follow the long and tedious route of the Missouri River, at an extraordinary cost for transportation, and without insurance against the perils of the hazardous navigation of that treacherous stream. All materials were high, and all classes of labor scarce, and only to be obtained in limited quantities at extravagant prices. Add to this the universal distrust in financial circles of the ultimate completion of the road, and the general conviction that when completed it would fail to prove remunerative or profitable, and it is easy to anticipate the result which speedily followed, namely, the practical failure of the new organization to carry forward the work until reinforced by a new class of capitalists, bringing with them larger means, and a more powerful influence in the financial world.

"Early in September, 1865, it became manifest that the contract could not be performed, and that the work must stop unless additional strength could be imparted to the corporation. Accordingly, after urgent solicitation and long consideration, myself and others associated with me for the first time took an interest in the organization. Its capital stock was increased, additional money was raised, and the work went forward. Under this arrangement two hundred and forty-seven miles of road were built, when, on the 16th day of August, 1867, it was superseded by the Oakes Ames contract, so called, and this contract was on the 15th day of October, 1867, assigned to seven persons as trustees, and under it six hundred and sixty-seven miles of road were built.

"The alleged corrupt transactions imputed to me are all charged to have been initiated in December, 1867. Glance for a moment at the situation of the Union Pacific Company and my connection with it at that time. After a long and nearly ineffectual struggle, the final construction of the road had been assured by my intervention in its affairs. No one doubted that it would be rapidly pushed to completion. Congress had long before, and not at my instance, enacted the laws tendering inducements to the capitalists of the country to embark in the construction of the road, and I and my associates accepted its offers and undertook the work. The company had no reason to apprehend unfriendly or hostile legislation, for every department of the Government manifested a friendly attitude, and the whole country was loud in demonstrations of approval of the energy and activity which we had infused into the enterprise. Heads of departments and Government officials of every grade, whose duties brought them in contact with the affairs of the company, were clamorous for increased speed of construction, and never lost an opportunity of expressing approval of the

work and urging it forward. It had never entered my mind that the company would ask for or need additional legislation, and it would have been difficult to find a man so reckless of popular opinion as to have lent himself to a crusade against an organization whose praises everywhere filled the press, and were on the lips of the people.

"As a matter of history, no legislation at all affecting the pecuniary interests of the company was asked for for three years and a half after the date of the alleged sales by me of Credit Mobilier stock, and then only in settlement of a purely judicial question suddenly and without warning sprung upon it in a critical period of its fortunes, and in relation to which no controversy had ever before been made. Under no other state of affairs, and in no other attitude of the Government, could I for a moment have been induced to assume the enormous responsibility entailed by a contract involving a liability of \$47,000,000. To undertake the construction of a railroad at any price for a distance of nearly seven hundred miles, in a desert and unexplored country, its line crossing three mountain-ranges at the highest elevations yet attempted on this continent, extending through a country swarming with hostile Indians, by whom locating engineers and conductors of construction-trains were frequently killed and scalped at their work—upon a route destitute of water, except as supplied by water-trains hauled from one to one hundred and fifty miles to thousands of men and animals engaged in construction—the immense mass of material, iron, ties, lumber, timber, provisions, and supplies necessary, to be transported from five hundred to fifteen hundred miles—I admit might well, in the light of subsequent history and the mutations of opinion, be regarded as the freak of a madman, if it did not challenge the recognition of a higher motive, namely, the desire to connect my name conspicuously with the greatest public work of the present century. It is by no means strange that my credit with conservative financiers like Governor Washburn should have been shaken, and that he should have hastened to call in loans which, in his judgment, this contract proved to be in unsafe hands.

"Under these circumstances, with all legislation sought granted, and no future action of Congress to be asked for or feared, it is charged that I 'have been guilty of selling to members of Congress shares of stock in the Credit Mobilier of America for prices below the true value of such stock, with intent to influence the votes and decisions of such members in matters to be brought before Congress for action.'

"If this charge is true, it is predicated upon three facts, all of which should be shown to the satisfaction of this body in order to justify the extreme measures recommended by the committee:

"1. The shares must have been sold at prices

so manifestly and palpably below the true value as to conclusively presume the expectation of some other pecuniary advantage in addition to the price paid.

"2. The shares must have been of such a nature as that their ownership would create in the holder a corrupt purpose to shape legislation in the interest of the seller.

"3. Some distinct and specific matter or thing to be brought before Congress, and on which the votes or decisions of members are sought to be influenced, should be alleged and proved.

"It is by no means clear from the testimony that the stock was sold at a price less than its true value. It was not on the market; it had no market value. Unlike an ordinary marketable commodity, it had no current price, and the amount for which it could be sold depended upon the temperament of the buyer, and his inclination to assume extraordinary risks on the one hand, or his tendency to conservative and strictly solid investments on the other. It is in proof before a committee of this House, by witnesses largely interested in railroad construction and operation, and of great financial ability and strength, that when this stock was offered to them at par it was instantly declined by reason of the enormous risks involved in the enterprise on which its value depended.

"These capitalists believed that all the capital invested in the stock was jeopardized, and the venture was declined on the rule that no promise of profit justifies a prudent man in embarking in any enterprise in which all the capital invested is liable to be sunk. Apart from some proof that a small amount of this stock changed hands between persons addicted to speculation at about one hundred and fifty, nothing is shown in reference to its value except that it was not on the market, and had no ascertained price. To overturn the presumption of innocence, and substitute the conclusive imputation of guilt from the simple fact of such a transaction occurring between men who had long maintained the most friendly personal relations—of whom nothing was asked, and by whom nothing was promised—is to overturn all the safeguards afforded person and property by the common law, and in lieu thereof establish an inquisitorial code, under which no man's reputation is safe.

"It has been assumed that the ownership of Credit Mobilier stock necessarily created in the holder a personal and pecuniary interest in procuring congressional legislation favorable to the Union Pacific Railroad Company, or preventing legislation adverse to it. At the date of the alleged distribution of Credit Mobilier stock, the Oakes Ames contract had been made and was in progress of execution. It was completed, and the road covered by the contract turned over to the company about the close of the year 1868. Not until two years after was any legislation asked for by

the company, and then it was such as arose out of exigencies presented by the action of the Government in reversing a long-continued and uniform previous policy, which could not by any possibility have been foreseen or anticipated.

"The stock depended for its value upon the connection of the Credit Mobilier with the Oakes Ames contract, which was simply in the capacity of a guarantor of its execution, whereby a certain class of its stockholders became entitled to participate in the profits of that contract in money. There is no provision of the Oakes Ames contract, the assignment thereof, or of the triplicate agreement, whereby a stockholder became entitled to any of the securities of the Union Pacific Railroad Company, or in any way interested in their value. The profits derived, if any, were to be, and were, in cash. When the Oakes Ames contract was completed, and the consideration thereof divided in cash to the several parties entitled, in due proportion, the interest of a holder of Credit Mobilier stock in the Union Pacific Railroad Company, and every thing pertaining to it, was at an end. In other words, the stipulations of that contract, and the cash profits derivable therefrom, were the end and the beginning—the centre and circumference—the absolute measure of the pecuniary interest of a holder of Credit Mobilier stock in 1868. To say that the Washburn bill, which professed to deal exclusively with the operation of the road in the hands of the company after it had been built and turned over by the contractors, was a measure feared, and to protect the railroad company, against which the stock in question was sold to members of Congress, seems to me to invoke the last degree of credulity.

"It is impossible to impute to me the purpose to corruptly influence members of Congress by conferring upon them pecuniary benefit without adequate consideration, unless the benefit conferred is of such a character as to necessarily create an inclination to aid the donor to the detriment of the public. There is but one escape from this position, and that leads to a lower deep. It may be said that the giving by any person and the receiving by a member of Congress of any gratuity whatever, or, what is identical therewith, selling and buying at an inadequate price, imports corruption in both the giver and receiver, the buyer and seller. Whoever proclaims this doctrine should instantly set on foot the inquiry how many railroad presidents and superintendents have presented to members of Congress the value of transportation over their respective railroad lines, and by whom the same have been received, to the end that justice may be done, and the one presented for indictment and the other for expulsion. The dimensions and value of the gratuity have nothing to do with the question. There is no middle ground on which to stand.

"For the first time in the history of any tribunal, this body has before it an alleged offender without an offense. Any person accused in the courts of the country, under like circumstances, might well, when called upon to plead to the indictment, insist that it failed to charge a crime. I am charged by the committee with the purpose of corrupting certain members of Congress, while it, at the same time, declares said members to have been unconscious of my purpose, and fails to indicate the subject of the corruption. In other words, the purpose to corrupt is inferred, where the effect of corrupting could not by possibility be produced, and where no subject for corruption existed.

"No lawyer who values his reputation will assert that an indictment for bribery could stand for an instant in a common-law court without specifically alleging who was the briber, who was bribed, and what precise measure, matter, or thing, was the subject of bribery. There can be no attempt to bribe without the hope and purpose of corruptly influencing some person or persons in respect to some particular act. Until, therefore, it is alleged and shown not only who tendered a bribe, but who accepted or refused it, and what was the specific subject-matter of the bribery, any conviction which may follow the alleged offense must rest upon the shifting and unstable foundation of individual caprice, and not upon the solid rock of justice administered under the restraints of law.

"I shall not enter upon a discussion of the jurisdiction of this body over offenses alleged to have been committed during a previous Congress, leaving that question for such additional comment as the lawyers of the House choose to make. The position, however, that the fault—if such exists—is a continuing offense, is so extraordinary and fruitful of such fatal consequences that I cannot forbear a reference to it. Since the Credit Mobilier stock sold by me passed into the hands of the several members of Congress referred to in the report, I have been in the judgment of the committee a perpetual and chronic offender against the dignity and honor of the House, and so far as my own volition is concerned must so continue to the end of the world.

"So long as a single share of this stock shall not be restored, but shall remain in the hands of the several receivers, or either or any of them, my offense goes on, and I am bereft of the power to stop it. And yet, notwithstanding the world is now apprised of my alleged corrupt intentions—and no member of Congress can be ignorant of them—the parties who alone have the power but fail to release me from the necessity of continuing my offenses by return of the stock, are themselves without blame, and in no way obnoxious to the sins laid upon me. The committee declare that want of knowledge alone of the corrupt intention of the seller excused the buyer while

holding and owning the proceeds of the sale. Now that such knowledge is everywhere and among all men, how can this, in the absence of a restoration of the stock or its proceeds, be a living, continuing, perpetual crime in the seller and not in the buyer?

"I beg to be correctly understood. I allege nothing against those members of the House who purchased Credit Mobilier stock. I am simply following the reasoning of the committee to its logical results. I make no assault upon any man or class of men, but I most earnestly protest against being chosen the victim of a line of reasoning and assertion, in my judgment, unjust, partial, unsound, inconsistent, and inconclusive, calculated, if indorsed, to bring this body into disrepute, and repugnant to the sense of justice and fair-play embedded in the hearts of the American people.

"Reference is made by the committee to the act of February 26, 1863, and, after setting out the same, the following language is used:

In the judgment of the committee, the facts reported in regard to Mr. Ames and Mr. Brooks would have justified their conviction under the above-recited statute, and subjected them to the penalties therein provided.

"I beg gentlemen to note the entire section carefully and critically, and verify the assertion I now make that every penalty denounced upon him who shall 'promise, offer, or give, or cause or procure to be promised, offered or given,' 'any valuable thing' 'to any member of Congress' 'with intent to influence his vote on any matter pending, or to be brought before him,' is alike launched with impartial severity against any member, officer, or person who shall in any wise accept or receive the same, not knowingly, willfully, or feloniously receive the same, but in any wise accept or receive the same. Mark the language:

And the member, officer, or person who shall in any wise accept or receive the same, or any part thereof, shall be liable to an indictment as for a high crime and misdemeanor, and shall, upon conviction thereof, be fined not exceeding ten times the amount so offered, promised, or given, and imprisoned in a penitentiary not exceeding ten years.

"Again I protest against the conclusion of the committee, which makes this unequal, partial, and discriminating allotment of the penalties of a statute designed by its framers impartially to strike or shelter all to whom it applies. Whatever result may be reached here, none can doubt that in the courts of the country there will be one law for all.

"Aside, then, from the letters addressed to Mr. McComb, it is impossible to infer the motives attributed to me by the committee. A perfect understanding of the circumstances under which these letters were written, and a candid consideration of their object and purpose, must, I think, carry to any unbiased mind the conviction that my motives were very far from those ascribed to me. Mr. Du-

rant, Mr. McComb, and myself, were each anxious to secure as large a portion as possible of the shares of Credit Mobilier stock, and professedly for the same purpose, namely, for disposition to those persons with whom, for past favors or personal friendship, we were willing to share opportunities of profitable investment. I had no desire or expectation to further enrich myself, for my sole object was to get and retain as much of this stock as possible to be used in redeeming obligations of the character named. These obligations had been incurred not only to members of Congress, but to many private citizens in no way connected with official life: they had been contracted early in the year 1867, when the stock could not be sold above par, and it was to meet these contracts that I made special efforts to obtain the stock. In doing so, I took it, not for my individual use, but as trustee, for the sole purpose of conveying it to the parties entitled, and it would have been a breach of faith in me to have asked or taken a price in excess of the par value, notwithstanding it may have in the mean time advanced. No distinction was made between members of Congress and unofficial friends, and, in performing the obligations I had incurred, I sold to both alike stock at its par value, in accordance with my agreement. When, therefore, Mr. McComb objected to my receiving so large an amount, and entered upon a struggle to prevent it, I naturally addressed to him such arguments and considerations as in my judgment would make the deepest impression upon his mind. It so happened that in the prosperity and success of the Union Pacific Railroad Company Mr. McComb and myself had a common and identical interest, and I therefore urged upon him that I had so disposed of the stock as to enhance the general strength and influence of the company, for whose welfare his solicitude was not less than my own. It is no sufficient answer to this to say that the statement contained in the letters on which I most relied to influence his mind I now concede contained expressions liable to be construed against the purity of my motives. Tried by the test of casual and confidential letters, often written hastily and under circumstances and surroundings entirely different from those in the light of which they are interpreted—framed for a specific purpose, and to accomplish a particular end—their collateral and incidental bearings not reflected upon and deliberately weighed, but flung off hastily in the instant press of business and the freedom of that personal confidence ordinarily existing between parties jointly concerned in financial schemes or enterprises of public improvement, he would, indeed, be a cautious, a prudent, a wise, and almost perfect man, who could emerge from such an ordeal completely free from the suspicion of fault.

"I wish, therefore, to declare, in the broadest sense of which language is capable, that

in writing the McComb letters I had alone in view the objects above enumerated; that I never for an instant imagined that from them could be extracted proof of the motive and purpose of corrupting members of Congress—motives and purposes which I solemnly declare I never entertained. The insignificant amounts of stock sold to each member with whom I had dealings, the proven fact that I never urged its purchase, and the entire lack of secrecy—ordinarily the badge of evil purposes—in these transactions, ought, in my judgment, to stand as a conclusive refutation of the offenses charged. And above and beyond this, I submit that a long and busy life spent in the prosecution of business pursuits, honorable to myself and useful to mankind, and a reputation hitherto without stain, should of its own weight overcome and outweigh charges solely upheld by the unconsidered and unguarded utterances of confidential business communications.

"A vast amount of error has been disseminated and prejudice aroused in the minds of many by incorrect and extravagant statements of the profits accruing from the different contracts for the construction of the road, and especially that commonly known as the Onkes Ames contract. The risk, the state of the country, the natural obstacles, the inflation of the currency, and consequent exorbitant prices of labor and material, the Indian perils, the unparalleled speed of construction, and the clamorous demands of the country for speedy completion, seem to be forgotten, and the parties connected with the Credit Mobilier, and the construction of the road, are now to be tried by a standard foreign to the time and circumstances under which the work was done.

"It is said that when the failure to secure the necessary amount of cash subscriptions to the stock was proved, and it became manifest that the only medium through which the work could go on was by a constructing company, which would undertake to build the road and take the securities and stock of the company in payment, when the whole enterprise had come to a complete halt and was set in motion by my individual credit and means and that of my associates, the enterprise should have been abandoned. Were it possible to present that question to the same public sentiment, the same state of national opinion, which existed at the time the exigency arose, I would willingly and gladly go to Congress and the country on that issue. But I am denied that justice, and the motives and transactions of one period are to be judged by the prejudices of another, at an hour when the fluctuations of opinion are extreme and violent, beyond the experience of former times.

"The actual cost of money of building the road was about \$70,000,000, and all statements of a less cost are based upon mere estimates of engineers who never saw the work, and

utterly fail to grasp the conditions under which it was prosecuted. The actual profit on this expenditure, estimating the securities and stock at their market value when received in payment, was less than \$10,000,000, as can be demonstrably established in any court. It is in testimony before a committee of the House by witnesses who have spent their lives as contractors, as well as those who have been builders, owners, and operators of some of the great trunk-lines of the country, that for twenty years past the ordinary method of building railroads has been through the medium of constructing companies; that few, if any, roads involving a large outlay of capital are built in any other way; that a profit of from twenty to thirty per cent. is not unreasonable in any case, and that upon the construction of the Union Pacific Railroad, estimating it with reference to the magnitude of the work and the risk incurred, no man could reasonably object to a profit of fifty per cent. The like evidence is given by a Government director long intimately acquainted with the manifold difficulties and embarrassments encountered, and who has not yet outlived the recollection and realization of them.

"So far as I am pecuniarily concerned, it would have been better that I had never heard of the Union Pacific Railroad. At its completion the company found itself in debt about \$6,000,000, the burden of which fell upon individuals, myself among others. The assumption of the large portion of this liability allotted to me, followed by others necessary to keep the road in operation until there should be developed, in the inhospitable region through which it runs, a business affording revenue sufficient to meet running expenses and interest, finally culminated in events familiar to the public, whereby losses were incurred greatly in excess of all profit derived by me from the construction of the road.

"What, then, has the Government received as the fruits of the connection of the Credit Mobilier with the Union Pacific Railroad Company and the transactions now under consideration? By the terms of its charter it agreed, among other things, to loan the company for thirty years its bonds to certain amounts per mile, and until their maturity one-half the earnings on account of Government transportation should be retained, to be applied in repayment to the Government of whatever interest might in the mean time be paid on the bonds by the United States. The company in turn, by acceptance of the charter, agreed to pay the United States the amount due on the bonds at their maturity, and to perform certain services. Without asking additional legislation, or being called upon to resist obnoxious legislation, except wherein this contract had been disregarded and ignored by the Government, the road has been completed, and successfully operated throughout its entire line now nearly four years.

"No complaint has ever come up from any quarter of any failure to faithfully perform its obligations to the Government, both in respect to transportation services and its pecuniary obligations. In the only instance in which it has differed from any Department of the Government, the variance has been upon a purely judicial question, upon which the courts have been open to the United States, but closed to us. The Government made itself the creditor of the Union Pacific Company, tying its debtor hand and foot with a multiplicity of stipulations, and then refused to submit their interpretation to its own courts. That it has so far reaped the principal benefit of the bargain cannot be denied. Official statements of the Postmaster-General are before the House, which show that for the six years ending June 30, 1872, the saving to the Government upon the transportation of postal matter alone by reason of the construction of the Union Pacific Railroad, assuming the amount carried to be equal to that transported previous to its construction, has been \$643,579.55.

"But the amount of postal matter has been over six times greater by rail than by stage, so that the real saving is not less than \$3,861,477.30. Even this result fails to represent the increased speed of carriage and convenience of handling and distribution afforded by postal cars to the employees of the Department accompanying the mails, thus insuring safety and regularity in delivery. A like statement from the War Department shows the saving upon military transportation for the same time to have been \$6,507,282.85. No official estimates are before the House for the saving upon transportation of Indian goods, for the Navy Department, or of coin or currency, but they may be safely aggregated at not less than \$2,500,000. This gives a total saving for the six years ending June 30, 1872, of the sum of \$12,868,760.15.

"The Secretary of the Treasury in a communication to the House, bearing date May 20, 1872, in answer to a resolution calling for such information, estimates the amount of interest and principal which will be due from the Union Pacific Railroad Company at the maturity of the Government bonds, at the present rate of payment, at \$58,156,746.98. Assuming that the saving to the Government of all the different classes of transportation in the future will be the same as the past (a supposition entirely on the side of the United States, for it will, in fact, increase in almost geometrical progression), and the result is a total saving at the date of the maturity of the bonds of \$64,343,880.75, a sum in excess of the principal and interest due at that time to the amount of \$6,187,058.77. In other words, if at the maturity of the bonds not one cent of interest or principal were paid, but on the other hand were entirely lost, the Government would be the gainer in money to the amount of \$6,187,058.77.

"All this is solid gain, involving no consequential element, and susceptible of exact computation. To attempt to grasp the national benefits which lie outside the domain of figures, but are embodied in the increased prosperity, wealth, population, and power of the nation, overtakes the most vivid imagination. When the rails were joined on Promontory Summit, May 10, 1869, the Pacific and the Atlantic, Europe and Asia, the East and the West, pledged themselves to that perpetual amity out of which should spring an interchange of the most precious and costly commodities known to traffic, thus assuring a commerce whose tide should ebb to and fro across the continent by this route for ages to come. Utah was then an isolated community, with no industry but agriculture, and those manufactures necessary to a poor and frugal people.

"In 1872 it shipped ten millions of silver to the money centres of the world, and is now demonstrated to be the richest mineral storehouse on the continent. An institution repugnant to the moral sense of the Christian world is fast yielding to the civilizing contact of the outer travel made possible by the construction of the railway. Many believe it has already substantially solved the perplexing problem of polygamy. A vast foreign immigration, bringing with it from Europe an immense aggregate sum of money, has already been distributed far out on the line of the road, and its means and muscle are fast subjecting the lately sparsely-peopled Territories of Colorado, Wyoming, Montana, and Idaho, to the uses of an enterprising and rapidly-increasing population. A steady and copious flow of British capital is pouring into the mines of Colorado and Utah. The Indians have been pacified; fruitless and costly hostile military expenditures, frequent elsewhere, have ceased in the vicinity of its line, and the facility and speed of connection afforded by the railroad enable the Government to offer adequate protection to the frontier with a handful of troops, and, at the same time, dispense with large garrisons and fortified posts, hitherto maintained at fabulous cost. The countless herds of Texas are moving up to occupy the grazing-grounds of the buffalo in the valleys and cañons shadowed by the Rocky Mountains. A region of boundless natural resources, lately unknown, unexplored, and uninhabited, dominated by savages, has been reclaimed, hundreds of millions added to the wealth of the nation, and the bonds of fraternal and commercial union between the East and West strengthened beyond the power of civil discord to sever.

"Does any one, yearning with solicitude lest the United States, which has made this fortunate bargain, should fail to receive each cent due at the precise moment it may be demanded by its officers, doubt the ability of the company to perform its obligations and pay the last dollar due long before the matu-

city of the bonds? Four years ago the road was opened, without local business, with no considerable through traffic, and in the dawn of the friendly relations between the United States and those Asiatic nations which now bid fair to prove the source of its largest and most lucrative business. The conservative capitalists of the country believed it would bankrupt any organization which undertook to operate it. Four years have reversed that opinion, and now the same men are putting forth their best efforts to secure the benefit of a close traffic connection, and perhaps ultimate ownership. Twenty-four years ago there was scarcely a mile of railroad west of Lake Erie, and no connecting line west of Buffalo. Let him who would rightly estimate the future of this company go back to the year 1848, and, thenceforward to the present time, trace the growth and development of that portion of the United States lying west of the great lakes, and he will be able to approximate the coming history of the region through which this road stretches for a thousand miles, and of the trade and products and commodities of which it is to be the great commercial artery. There is but one power that can destroy its ability to perform all its obligations to the Government; there is but one agency that can render it incapable of paying all its indebtedness to the last dollar, namely, the Congress of the United States. It alone can so cripple, weaken, or destroy the company as to make the loan of the Government to it a total loss.

"These, then, are my offenses: that I have risked reputation, fortune, every thing, in an enterprise of incalculable benefit to the Government, from which the capital of the world shrink; that I have sought to strengthen the work, thus rashly undertaken, by invoking the charitable judgment of the public upon its obstacles and embarrassments; that I have had friends, some of them in official life, with whom I have been willing to share advantageous opportunities of investment; that I have kept to the truth through good and evil report, denying nothing, concealing nothing, reserving nothing. Who will say that I alone am to be offered up a sacrifice to appease a public clamor or expiate the sins of others? Not until such an offering is made will I believe it possible. But if this body shall so order that it can best be purified by the choice of a single victim, I shall accept its mandate, appealing with unflinching confidence to the impartial verdict of history for that vindication which it is proposed to deny me here."

[Mr. Brooks, of New York, made no remarks during this debate. But on a previous occasion, on December 17th, he obtained the privilege of the floor. The speech then delivered is inserted here, although it was spoken previous to the report of the committee and is not a part of this debate, that the statements of Mr. Brooks may appear.—EDITOR.]

Mr. Brooks: "Mr. Speaker, I rise to a question of privilege, and, in order to make myself understood, I must say that I hold in my hand several newspapers, among them the *New York Herald* and the *New York World*, which state that, before a committee of investigation created by this House, a person by the name of Henry McComb, of Delaware, has sworn that the company of Credit Mobilier gave me fifty shares of Credit Mobilier stock, in order that I might control or influence the Democratic side of this House to sustain the Union Pacific Railroad Company in whatever demands it might make upon Congress, and that I accepted this gift of the Credit Mobilier thus to control the Democratic side of the House. This is the substance of many statements which are circulated in the press as the testimony of Henry McComb with reference to myself. It is upon this ground that I claim the attention of the House as a matter of personal privilege.

"Mr. Speaker, I have been in public life now more or less for a quarter of a century, and this is the second time in all that long public life in which I have felt it a matter of public duty to reply to a personal charge of this nature. But as a member of Congress, and as a member of one of the most important committees of the House, in which millions of dollars are directly or indirectly pending, if what Mr. McComb says of me is true, I am unfit to be a member of this House, and ought to be expelled, not only from this House but from all association with decent men here or elsewhere. It will be recollected that in August last, during the presidential campaign, and when it was uncertain in the public mind whether Greeley or Grant would prevail, there appeared in the *New York Sun* a certain charge or record in which it was affirmed that a member of this House connected with the Union Pacific Railroad had made out a list including many of the most distinguished members of the Republican party here and elsewhere, including not only the honorable Speaker of this House but the Vice-President of the United States, the Secretary of the Treasury, and many other distinguished men on the Republican side who had been long in public life and had hitherto borne good characters; and the allegation furnished directly or indirectly to the *New York Sun* by Mr. McComb was, that these gentlemen had been guilty of fraud in the acceptance of bribes of certain shares of stock in the Credit Mobilier, to be used in this House and elsewhere, and even to influence such a high officer of the Government as the Secretary of the Treasury. The publication, as furnished by Mr. McComb, stated positively that Oakes Ames made up and furnished the list of Republicans to be bribed, whereas when confronted in committee he swears, as I understand, that he himself (McComb) made up the list at the suggestion, however, I hear, he adds, of Ames. The public were thus made to credit for months that Oakes Ames himself furnished the list of

members he was bribing, whereas it now turns out that McComb was the man.

"In that publication were used certain private letters, whether true or untrue will be developed in the course of this investigation, but which nevertheless were private letters, and which were intended to influence and control the public mind pending the presidential election, and to prejudice a large portion of the country, not so much against the Republican party as against the purity and character of many of the most eminent men in that party. Sir, the public never think well of any man who, for pelf or passion, ushers private letters into print, and they are likely to think the less of that man who, claiming to be a Republican, attacks or suffers to be attacked leading men of his own party, in a lawsuit where money only is what he is after. The use made of these private letters develops in part the character of McComb; but I propose by-and-by, more at length, to develop the character of this calumniator. I availed myself at that time of all opportunities, public and private (though I was not in good health and seldom appeared in public), to say that so far as I knew there was nothing of truth in that publication; and I spoke with some knowledge, because I was and am a director of the Union Pacific Railroad, and have been for many years.

"And now, before I go further, in order to answer this charge properly, it becomes necessary for me to say that some six or seven years ago I was appointed by the then President of the United States a Government director of the Union Pacific Railroad. Two great interests, the one located in Boston and the other in New York, were struggling in the executive department and in the Department of the Interior to secure the Government director for the benefit either of the Boston or New York interest, so that they could so far influence and control the government of the road. Boston presented its distinguished candidates, among them eminent men; I believe Governor Andrews, an ex-Governor of the State of Massachusetts, was one; and New York presented candidates also.

"The then President of the United States, Mr. Johnson, unable to decide among all these gentlemen who had been preferred by their friends for the place, none of them claiming it personally, I believe, for it was a place of no profit, no pay, no salary, except five dollars per day while actually serving—the then President of the United States, as I was informed, said to both the New York and the Boston interests, 'I do not know personally these men you recommend; but I do know Mr. Brooks; I have sat beside him or in close contiguity with him in the Old Hall of the House of Representatives for four years, and I am willing to make him one of the Government directors.' The commission was made out and sent to me, without the least personal solicitation on my

part, to the then great regret of the Boston interests, and with a complimentary and explanatory letter, which I should have brought here but for the recent destruction of this with other documents in the conflagration of my printing and editorial offices in New York.

"I happened, then, to be a Government director, without salary, without pay, except five dollars a day, I think, while on actual service, and so much for travel per mile, the usual congressional mileage, which amounted in my case to little or nothing, because the board generally sat in the city of New York, which was my residence.

"When General Grant came into power, naturally enough so prominent an assailant as I was, and one so offensive politically, I trust not personally, to him and to his party, was turned out of office, and a distinguished ex-member of Congress, Mr. Wilson, of Iowa, was substituted in my place. The stockholders of that road, not supposed to be a political road, having invested millions of dollars in that great trunk-line of the continent, indisposed to have the least suspicion go to the country that it was a political road, immediately elected me as one of the stockholders' directors. And since that time I have been elected and reelected as one of the stockholders' directors by the stockholders themselves. Three-fourths of the stock was then held in Boston, and by men whom I have been opposing in political life for the last eight or ten years. I valued the compliment all the more for this, and I accepted the post, in part for that, but the more to gratify an honorable ambition of having my name identified with the greatest achievement of the age.

"Over thirty years ago, in the newspaper with which I am connected, one of the original projectors of that road, Mr. Whitney, then well known, published to the world a series of articles which greatly aroused the attention, and which even gave me a lively interest in what seemed then to be a wonderful if not impossible scheme. And whatever political honors in this House and elsewhere I may have received from my countrymen, yet the highest ambition I have ever had was to be connected with that great trunk-road from the Pacific to the Atlantic. If there is to be hereafter, I said to myself, any monument of any value to my memory, the proudest both for me and my children will be the association and the connection of my humble name with that link of rail from ocean to ocean—the band of a continent, and the bond of my country in a union, one and indivisible.

"Another, a lesser, but yet a significant reason for my acceptance of this post of stockholders' director, when President Grant removed me as Government director, was what I then deemed a matter of justice and importance to the Democratic party and my Democratic friends. I felt it my duty to see that the road should not be in any manner

controlled politically against them; that it should never become a partisan road. I felt it my duty to stand there as a sentinel and watch that road to see that it was not so used. In justice to the majority of the directors who are opposed to me in politics, I feel it my duty now to say that the road has never been used that way in any manner, at least within my knowledge.

"Of course it was to be expected that a road upon which the Government had lavished millions in the form of bonds, and which was to have such great power over the commerce and trade of the country, would be besieged upon all sides by ambitious and mercenary men desirous to control it financially, if not politically. Hence, when this road was beginning to shadow itself before the public, and while it was still in the infancy of its construction, there came from the country to New York two men—men attractive in personal appearance; men of agreeable manners; men not without talent; but men of audacity, who, upon the great theatre of Wall Street and its surroundings, desired to figure largely, as political men desire to figure here. One came from the pure air and green hills of Vermont. Amid its Christian surroundings, its captivating scenery, and its frugal population, he had been trained in virtue and in virtuous associations. But when he entered New York he abjured his home and its associations, and put on the livery of Satan, the better to serve the devil in Wall Street. That man was James Fisk, Jr., whose career is well known to you all.

"Another man came to New York about the same time from the streets and alleys of the little city of Wilmington, Delaware. He came as a saint, though not wearing sandal, cowl, or crozier. He was a member of the Church, and traded on his sanctity. The saint worked himself in as a director of the Union Pacific Railroad, and also as a director of the Credit Mobilier of America, while the Satan attempted by storm what the saint worked for under the cowl. But together they struggled to insinuate themselves into the Union Pacific Railroad. Fisk bought six shares, and strove to fight his way in by the courts of law. McComb was in, and aided Jim Fisk to the best of his ability. McComb was all gentleness, goodness, and charity, while Fisk, like a roaring lion, ran rampant in Wall Street, or in the Central Park, emblazoning his courtesans and cyprians to the fashionable population of a great city. Their tracks were both alike, save in this, that the cowl protected the one, while the livery of Satan was always exposing the other.

"Mr. Speaker, these two gentlemen about the same time instituted suits against the Union Pacific Railroad; the one by Fisk on his part, July 2, 1868, the report of which I hold before me, and the other by McComb in the January term, 1868, of a court in Pennsylvania; the one in the city of New York before

Judge Barnard, a man of some renown, who appointed as receiver of the road a Mr. Tweed, a name of not less renown. Fisk swore in that Barnard court what McComb swears also, that members of Congress are all, or almost all, corrupt; in substance, that there is no virtue in public life, all that is left being in the bosom of the Fisks and McCombs. When greedily to grasp the Union Pacific Railroad, Fisk swore:

I am also informed, and believe, that a number of members of Congress have a direct or indirect interest in securing the said Credit Mobilier a continuance of its present control over the Union Pacific Railroad; that over \$500,000 of the funds of the said Union Pacific Railroad Company were expended by its directors within a single year in bribes to members of Congress and officers of the United States Government, and that millions of dollars have been given to such members and officers as bribes, in an indirect manner, by giving to them shares in the profits of the said Credit Mobilier.

"Now, McComb is of the same opinion, and has insinuated if not sworn to the like in the court of Pennsylvania; of my case it was an after-thought that I was given fifty shares of the Credit Mobilier only to corrupt Democratic members of Congress, for it was not proffered in the Pennsylvania suit or in the publication that McComb first caused to be made in the *New York Sun*.

"It turns out, as I understand, that McComb is suffering about as much in the court of Pennsylvania as Fisk has suffered in the court of New York, and hence it became advisable to change the issue or the venue. The Speaker of the House, the Vice-President of the United States, and the Secretary of the Treasury were therefore involved, with other eminent Republicans in Congress, in the August publication, in order either to compel them to compel Oakes Ames to pay McComb black-mail, or in order to fish for additional testimony before a committee of the House, which he knew the Speaker or some other member must demand as soon as the House assembled in December. In other words, he was transferring his black-mail suit from a court in Pennsylvania to a court in Congress, where he supposed he could create a public opinion which would make Ames pay up or drive him from Congress. McComb and Fisk both operated in the same way.

"And here, if I am not misinformed, an effort has recently been made in Washington on the part of McComb—and since this investigating committee was started—to settle this whole suit here, when McComb, if he was compelled to appear at all as a witness before the committee, would so appear as to do no harm to anybody.

"As I have already said, these two suits, instituted by these two copartners, Fisk and McComb—not copartners in business, but copartners in general devilry—were instituted about the same time; one was ended by the impeachment of Judge Barnard for his action

in reference to this very road, while the other was practically ended in the courts of Pennsylvania, and then forced into this House.

"Now, when it was found that no damage could be done to the dominant majority of this House, as the men assailed were men of sufficient character to sustain themselves before the country, or if not men of sufficient character, their party was triumphant in power and could sustain them, then, long after this publication in the *New York Sun*, for the first time now McComb turns up here before the committee, selects me, a Democratic member of Congress, and swears that Mr. Alley, of Massachusetts, ex-member of this House, offered me fifty shares—nay, gave me fifty shares—of this Credit Mobilier stock on condition that I would control the Democratic side of the House. Sir, he was very late in promulgating to the world that the Democracy were corrupt, only after Grant's reelection, when the Republicans were triumphant and the Democracy were down under foot; and he selected me as a victim because, upon the discovery of what manner of a man he was three years ago, I was largely instrumental in having him turned out of the directorship of the road, of which he is now no longer a member.

"Now, Mr. Speaker, what charge could be more ludicrous than this, that I, with only fifty shares of Credit Mobilier worth only \$5,000 at par, was invested with the mission of bribing all the Democratic members of Congress? I was first, I suppose, to buy up the New York City members, all of whom are men of property, who would laugh at a \$5,000 bribe; certainly laugh at what would be the trivial share of it among a hundred other Democratic members. I had therewith to influence such men as my honorable friend from Indiana (Mr. Holman), who not only always resists wrong, but often resists right, and cannot be induced by any kind of argument to go for the right in matters of appropriation, or, that I might influence the gentleman from Ohio (Mr. Morgan), now in my eye, or the gentleman from Indiana (Mr. Kerr), or the honorable gentleman from Kentucky (Mr. Beck), all of whom I was to influence and control by the gift of fifty shares of Credit Mobilier stock, worth \$5,000; in a word, that I should control the whole Democratic side of the House.

"Now, Mr. Speaker, I do not remember ever to have spoken on matters of business connected with the Union Pacific Railroad to any Democratic member of the House. I refrained, from delicacy as a director of that road. I do not remember, certainly I never attempted to influence a member in any way in his vote in this House.

"Mr. Speaker, when a man thus undertakes to assail a public man or public men, he should look to his own character; and McComb has not any character, and has not had any for some years past, as I shall proceed to

show. He was a mere adventurer, reckless, audacious, and devoted only to Mammon. There is in the War Department at the other end of the avenue, or was deposited there December 28, 1864, the result of an examination of a military commission investigating frauds of army contractors, of which there were a great number at that time, as unfortunately there always are in great civil wars. Among those mentioned by the Secretary of War, and referred to Judge-Advocate-General Holt, at the head of the list indeed as a criminal and as a swindling contractor, was this Henry S. McComb; and this is a matter of record now on file at the War Department.

"The papers were referred to Judge Holt on the 28d of December, 1864, in order that he might propose some course of action, and he made his report to the War Department, a report which I suppose in the excitement of the civil war, or in the absorption of matters of vastly more importance to the country, was forgotten, so that it lies and sleeps there yet. He is charged by a military commission with being a swindling contractor and a criminal too; and beyond that, if the report be true, he was no better than a robber—a bandit among the soldiers of his country—in time of civil war.

"I hold now in my hand, Mr. Speaker, the testimony of the select committee appointed to investigate the condition of affairs in the State of Louisiana, of which the gentleman from Pennsylvania (Mr. Scofield) was chairman, associated with many other gentlemen known to this House. In that testimony there are developed facts very damaging to the character of McComb. Without reading the testimony, I will refer the House to the pages where they are set forth. The document is No. 211 of last session, and I refer the House to pages 475 to 490. It will be seen that McComb employed one Kimball, of Pennsylvania, to put through the Louisiana Legislature the Jackson Railroad, and according to the testimony given in this action he succeeded in the purchase of the Legislature. For it is said—I quote the testimony of S. W. Scott, who was on the staff of General Augur in the latter part of 1862—

Question. What was the price of a Senator; what did they range at?

Answer. The amount set opposite the names of the Senators, with the exception of three or four, was, I think, \$600.

Question. Who commanded a higher price?

Answer. As I remember, Senator Campbell and Senator Pinchback had \$2,000 each set opposite their names.

Question. Can you name others on the list?

Answer. No, sir; I didn't read the list. I thought it was a disgraceful transaction, and I put it in an envelope, so that no one should see it.

Question. Did the list compose about the members who voted for the bill?

Answer. Nearly; I think there were about fifty-odd names on the list of members of the House.

Question. How many members voted for the bill who were not on that list?

Answer. I don't know; I wasn't there when the vote was taken.

Question. Did Mr. Kimball say it cost him more to get the bill approved than to get a member to vote for the bill?

Answer. I don't say that. He stated to me that it cost \$80,000 to get it through.

"That is, through the Louisiana Legislature."

(Here the hammer fell.)

The Speaker: "The House directed that at two o'clock to-day, to the exclusion of all other orders, the gentleman from Indiana (Mr. Wilson), who has charge of the resolution upon the two per cent. fund of the States of Ohio, Indiana, and Illinois, should be entitled to the floor."

Mr. Maynard, of Tennessee, said: "I hope that by general consent the gentleman from New York (Mr. Brooks) will be permitted to conclude."

The Speaker: "That may be allowed by unanimous consent. It was the duty of the Chair to call attention to the fact that that was the special order for this day at two o'clock, and that hour has now arrived. The Chair will also remark that when a gentleman receives the consent of the House to make a personal explanation, he is entitled to one hour. Half of that time has now expired."

Mr. Bingham, of Ohio, said: "I would ask the Chair if extending the time of the gentleman from New York will interfere with the time allowed for the two per cent. resolution?"

The Speaker: "It will not. That resolution will come up *proprio motu* as soon as the gentleman from New York has finished his remarks."

There being no objection, the extension of time was granted.

Mr. Brooks: "Testimony is given on page 490, by the same man, with regard to a municipal bill where the charter had been defeated. I quote:

Question. You spoke of the Senate passing a municipal bill when you refused to pay up. Had you defeated a municipal bill the year before?

Answer. A charter had been defeated.

Question. Did they have to use money to defeat it then?

Answer. I do not know.

Question. You stated that Mr. Kimball told you his principal had gone back on him; who was his principal?

Answer. Henry S. McComb.

Question. Is he the purchaser of the Jackson Railroad?

Answer. Yes; he has purchased the interest in that road held by the State and by the city.

"On page 498 of this testimony it will be found that, in order to influence the Louisiana Legislature in the control of this Jackson Railroad, McComb employed the Speaker of the House as his counsel. Here is his letter as it appears in this testimony:

PRESIDENT'S OFFICE, }
NEW ORLEANS, March 11, 1871. }

DEAR SIR: I hereby appoint you my special attorney and counselor to look after my affairs in connection

with my railroad interests in this State. I bespeak your vigilant attention in all matters affecting my interests.

Respectfully yours, H. S. McComb.

G. W. CARTER, Esq., attorney-at-law.

P. S.—Salary to be fixed by me hereafter.

"I ask now the Clerk of the House to read part of the letter addressed by the Mayor of New Orleans to McComb, which I found among the proceedings of the New Orleans City Council. Let me state here, in order to have that letter understood, that McComb obtained, directly or indirectly, for his Jackson City Railroad, the control of certain streets, or alleys, in New Orleans, the control of which seemed to be very offensive to the mayor and other authorities of the city. I now ask the Clerk to read the part of the letter which I have marked."

The Clerk read as follows:

I might, perhaps, have thought your memory on this point better than my own, and that all happened as you say; but I recall the fact that a few weeks after the election of the Jackson Railroad directory ticket, which was made up by you and myself at two separate interviews, and which gave you the control of the railroad, your memory proved so defective that you testified, under oath, you had never had any consultation with me in regard to the ticket.

I must, therefore, insist that I did not make the promise you state, and must decline to receive any such alleged consent or permission as a justification of the company's closing the streets of the city or taking possession of any part of the levee or other public grounds. BENJ. F. FLANDERS, Mayor.

Mr. Brooks: "I have caused that letter to be read in order to show that in this matter of oath-taking Mr. McComb was no more particular in New Orleans than he has been before this investigating committee.

"Now, Mr. Speaker, all these are matters of entire unimportance provided what Mr. McComb has alleged against me is true. No matter what is his character, no matter what is his infamy; if he succeeds in convicting me of having received a bribe of fifty shares of Credit Mobilier stock, to control the Democratic side of this House, corruptly as he alleges, no matter what his indecent associations may have been and character, I am not less amenable to the justice and punishment of the House.

"Mr. Speaker, I do not know that there is any law, constitutional, statute, moral, religious, or financial, which forbids me or any other member of this House from holding property. If it be an absolute prerequisite that every member of this House shall own nothing except the clothes upon his back, and shall receive nothing but his daily pay, the honor would not pay for the sacrifice he would be obliged to make in order to become a member of Congress. I hold and shall continue to hold that when Congress is not in session I have as much right to buy and sell ships, stock, houses, lands, and bank stock, as any other individual in the community.

"There is no reason why I should not hold fifty shares of Credit Mobilier stock, or why

any other member of the House should not hold fifty shares of that stock or any other kind of property, although there would be a good reason why, if a member held an interest in stock or property of this kind, he should very carefully exercise his influence with this House in all matters pertaining to that property. I have refrained generally from giving a vote at all in this House upon any question in which I was personally interested. I do not remember that I ever cast a vote upon any question affecting the Union Pacific Railroad since I was a director of the road or had any pecuniary interest in its welfare. I believe I have refrained from voting, though I have not examined the record, for whatever measures may have come up here connected with that railroad; not because I had not a right to vote, a moral, religious, and constitutional right to vote, but because, as a matter of perhaps over-delicacy, I preferred not to do it.

"It is generally said, and I expect upon pretty well-informed authority, that there are over eighty members of Congress directly or indirectly connected with the banking institutions of the country. I cannot, for one, see that it is any thing to their discredit that they are so connected. I know of nothing calculated to damage or destroy their individual character or influence in the fact that they have received honors at the hands of their fellow-citizens at the same time that they were engaged in the management of the property institutions of the country.

"Sir, during the darkest hour of the civil war, the firm with which I am connected invested from thirty to one hundred thousand dollars in United States stocks. That money was the result of twenty or thirty years' hard labor on my part and on the part of my brother, during which we often worked from fourteen to sixteen hours a day. We made this investment at a time when the prospects of peace were uncertain and doubtful, when the foundations of all property seemed to be fluctuating under our feet. It was at a time when gold was 280 and United States stocks only of the value of thirty-two cents on the dollar in gold. I then mustered all the resources of my office and invested them in United States stocks.

"But you all know how boldly and vigorously I denounced the war. I believed it was unwise. I thought it ought to have been closed much sooner by conciliation and compromise. I do not believe now that it has resulted in any benefit to the country. But I had such confidence in my country and my countrymen that I believed that, although there might be a temporary separation, yet the South must and would come back to the Union, and I knew that, if it did never come back, in the great North and greater Northwest there was ample security for the \$100,000 which, in that darkest hour of the war, we invested in United States stocks.

"I make this preface in order to remark, that when an honorable member from Pennsylvania, from the Lancaster district, now dead and gone, proposed something very like repudiation, who certainly proposed to pay in paper what the country had promised to pay in gold—many members on the other side of the House will recollect it—I denounced it as repudiation. And when an honorable member from Ohio, not now in this Congress, proposed a like or similar repudiation, I attacked it, and associated a large majority of the Democratic members of this House together, and invoked them to act with me, and they did act with me, and resolved that we would never let the stamp of repudiation rest on the Democratic party. My honorable friend from the Brooklyn district of New York (General Slocum), whom I see before me, and who voted with me, remembers our consultation, and he urged on the instant that we must repudiate all repudiation.

"What was I to do? Because I held United States bonds, was I to sit silent here and see the debt of my country repudiated, its promise and faith broken? No; I did right to exercise whatever influence I had with my Democratic associates, to put the stamp of disapprobation upon that proposition, whether it came from that side of the House or from this, and I thank God that a large majority, a very large majority, of the Democratic members of this body voted with me.

"I have laid down this general chart of my action to say that, while claiming the right to own Credit Mobilier or any other stock, I have never owned directly or indirectly a single dollar or share of the Credit Mobilier, and the records of the company will show that fact, despite the testimony of this perjurer before a committee of this House, and will prove that his story is made out of whole cloth, and is as a figment, a fiction of his own villainous imagination.

"The reason why I did not own it, associated as I was with those gentlemen connected with it, was because, as Government director, I could not own any stock in the Union Pacific Railroad Company, and I did not feel it right or proper, when the laws of the country forbid me to own stock in the Pacific Railroad Company, to own indirectly, in another form, the stock of the Credit Mobilier. I supposed there was money in it, and I with others might have bought any number of shares in it, and made a most profitable investment. But, from an over-sense of delicacy respecting the law, and not because I was a member of Congress, I refrained from owning a sixpence in the stock of the Credit Mobilier.

"But this man will not rest content with this statement, and will wriggle in more insinuations, if not charges, respecting me, if I leave the issue here. I will leave him nothing to make a stand on. I have a daughter who is married. I am sorry to bring these family

affairs before this House, but I must do so. She married to please herself. She did not marry a planter, or a farmer, or a merchant, but she chose to marry a man doing business in Pine Street, closely connected with Wall Street, whose uncle was president of the board of brokers there, and who himself, from the connection, probably, was often more or less engaged in stock operations. I have asked of him to let me have the loan of his shares of the Credit Mobilier, and that he has done. He had purchased fifty shares, the very fifty shares out of which all this attack on me has grown. Here is his certificate of Credit Mobilier, made out to Charles H. Neilson, and dated February, 1868. (Mr. Brooks here exhibited to the House the certificate of fifty shares of the Credit Mobilier.) And here is the receipt of the president of the Credit Mobilier, Sidney Dillon, for the money he paid him on that day, \$5,233.33, or \$233.33 beyond the par value of the Credit Mobilier stock of that day. And now, out of this transaction of a person with whom I had this relationship, is made this whole story of fifty shares of Credit Mobilier stock given away to a member of Congress, to buy up the whole Democratic side of this House. Why, sir, in the old slavery times an intelligent, good-looking slave, was worth more than that. And what estimate can this man, who purchased a Louisiana Legislature, who was engaged in robbing soldiers during the war, place upon a member of Congress, when he proposes not only to buy him with \$5,000, but with the same \$5,000 to buy up all the Democratic members of the House associated with him?

"Mr. Speaker, I think I have sufficiently discussed this transaction. I think I have sufficiently vindicated myself from any allegation of being bribed. I am ready to be examined inside and out—riddled from top to bottom; and in a friendly way, not by a lawless exercise of power, I am willing that by *lettres de cachet*, or by inquisition, my private papers here and in New York may be seized and examined. I am willing that every transaction of my life shall be scrutinized.

"I have felt it my duty in all the transactions of my public life, not only to walk straight, but to walk more than straight—to bend backward. But I have never felt it my duty to impoverish myself, to earn nothing, to trade in nothing, and to have nothing, because I am a member of Congress. What I have earned has been earned by hard and honest labor—severe and unremitting industry, often working as a journalist in New York from the break of day till midnight. My accumulations have all been fair, honest, and reputable, and such as will bear a thorough examination before the world. My newspaper has been profitable; it has yielded me at times large sums of money; and, in investing them wisely and judiciously, I have done no more than I had a right to do. In the presence of God, and in this

House, and before the whole country, I swear that on no occasion, at no time whatsoever, for no man, have I ever used my influence or power, in this body or elsewhere, to accumulate one cent of money, or to add one farthing to my fortune.

"Mr. Speaker, lest I may be censured for my connection with the Pacific Railroad as a director, and for many transactions in connection therewith, which would all bear investigation, if investigated at the time they took place, I have only to ask this House to recall the period when there were no railroads in Iowa, when that State, but a few years ago, was a wilderness or a prairie, and when, in order to build the Union Pacific Railroad, it became necessary, either to bring every thing through the mud and prairies of Iowa, or by the waters of the Missouri; so that the iron used upon that road, which was conveyed to the Platte River, or beyond, was often transported in wagons; and the timber (as little or none existed upon the prairies) was brought from the upper or lower waters of the Missouri, and burnettized to be prepared for that road.

"I make this remark without expanding upon it; simply saying, that of all the great achievements, not only of this age, but of all ages, the most wonderful achievement that human beings ever engaged in, was the construction of that railroad from the Missouri to the Pacific Ocean. I have seen all or nearly all the wonders of the world; I have been on the Pyramids of Egypt; I have been on the promontory where was the Colossus of Rhodes; I have wandered up and down the Great Wall of China; and I declare in your presence that, in my judgment, no achievement of human industry, or human enterprise, or human capital, is to be compared with the construction of the Pacific Railroad, in view of the circumstances under which it was completed. There were, necessarily, great and often wasteful expenditures of money, and reckless audacity, apparently, in the making of contracts.

"On the Wasatch Mountains sixty dollars a bushel was at one time paid during the winter for corn; and for oats the price was correspondingly high. This road was built eight years earlier than the directors were required to finish it under their contract. I might dwell upon this subject—and I shall perhaps at some time hereafter take occasion to do so—but to-day I only want to do my duty to myself; and that duty I have discharged to the best of my ability. For myself, as my career is about ending, as I am about to be gathered to my fathers—for in the natural course of events I cannot much longer dwell on this earth—all I have to transmit to my children and to their children is my good name; and this I value above all price.

"For the vindication of this, and for no other purpose, I have addressed the House this day, and challenged investigation. To

the committee engaged in investigating this subject I say, search my life from beginning to end, riddle me through, and, if you find aught in me corrupt or rotten or suspicious, drive me from this Capitol; let my long career be disgraced, and bring reputation neither to myself nor my children."

[The regular proceedings of the House are here resumed.]

The Speaker: "The immediately pending question is upon the resolution reported from the select committee to expel Mr. Oakes Ames, which will be followed by the resolution to expel Mr. James Brooks. The gentleman from California (Mr. Sargent) introduced a substitute affecting the same two gentlemen, in separate resolutions, preceded by a preamble. The first vote will be as to whether the House will substitute what is moved by the gentleman from California for the two resolutions expelling the member from Massachusetts (Mr. Ames) and the member from New York (Mr. Brooks). Afterward, should the House make that substitution, the first vote will be on the first resolution in the series offered by the gentleman from California, in relation to Oakes Ames, and next in relation to James Brooks, and then in relation to the preamble.

"The question recurs on the substitute offered by the gentleman from California (Mr. Sargent), which will be again reported."

The Clerk read as follows:

Whereas, By the report of the special committee herein, it appears that the acts charged as offenses against members of this House, in connection with the Credit Mobilier of America, occurred more than five years ago, and long before the election of such persons to this Congress, two elections by the people having intervened; and whereas grave doubts exist as to the rightful exercise by this House of its power to expel a member for offenses committed by such member long before his election thereto, and not connected with such election: therefore—

Resolved, That the special committee be discharged from the further consideration of this subject.

Resolved, That the House absolutely condemns the conduct of Oakes Ames, a member of this House from Massachusetts, in seeking to procure congressional attention to the affairs of a corporation in which he was interested, and whose interests directly depended upon the legislation of Congress, by inducing members of Congress to invest in the stocks of said corporation.

Resolved, That this House absolutely condemns the conduct of James Brooks, a member of this House from New York, for the use of his position of Government Director of the Union Pacific Railroad, and a member of this House, to procure the assignment to himself or family of stock in the Credit Mobilier of America, a corporation having a contract with the Union Pacific Railroad, and whose interests depended directly upon the legislation of Congress.

The Speaker: "The first question will be whether the resolutions offered by the gentleman from California shall be substituted for the two resolutions of the committee. Should the House vote affirmatively upon that question, the House will then first vote upon the

resolution in relation to Oakes Ames, next upon the resolution relating to James Brooks, next upon the resolution discharging the committee from the further consideration of the subject; then upon the preamble."

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Adams, Averill, Barnum, Barry, James B. Beck, James G. Blair, Boorman, Bright, Burlington, Bunnell, Burdett, Benjamin F. Butler, Roderick R. Butler, Carroll, Cobb, Coghlan, Comingo, Conner, Cotton, Crocker, Crossland, Darrah, Dickey, Dodds, Donnan, DuBose, Dunnell, Eames, Eldredge, Elliott, Ely, Farusworth, Farwell, Charles Foster, Wilder D. Foster, Garrett, Gulladay, Halsey, Harner, Harper, George E. Harris, Havens, Hays, Gerry W. Hazelton, John W. Hazelton, Hill, Hooper, Houghton, Kellogg, Kendall, Ketchum, Killinger, Lamison, Lampert, Lansing, Leach, McIntyre, Maynard, Mellen, Melunkin, McKee, Mitchell, Morey, Leonard Meyers, Negley, Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Perce, Perry, Peters, Platt, Potter, Prindle, Rainey, John M. Rice, John Rogers, Rusk, Sargent, Sawyer, Seeley, Sessions, Shanks, Sheldon, Shober, Shoemaker, Slocum, Sloss, John A. Smith, Worthington C. Smith, Snyder, Stoughton, Stowell, St. John, Sutherland, Sypher, Dwight Townsend, Washington Townsend, Turner, Tuthill, Twitchell, Tyner, Vaughan, Voorhees, Wakeman, Wallace, Warren, Wells, Whiteley, Williams of Indiana, Williams of New York, and Winchester—115.

NAYS—Messrs. Acker, Ambler, Archer, Arthur, Banks, Barber, Beatty, Erasmus W. Beck, Bell, Bigby, Biggs, Bird, Austin Blair, Boles, Braxton, Buckley, Burchard, Caldwell, Campbell, Clarke, Coburn, Conger, Cox, Crebs, Cletcher, Davis, Dox, Duell, Duke, Eddy, Finkelburg, Henry D. Foster, Frye, Getz, Giddings, Goodrich, Griffith, Haldeman, Hale, Hambleton, Hancock, Handley, Hanks, John T. Harris, John B. Hawley, Joseph R. Hawley, Hay, Hereford, Herndon, Hibbard, Hoar, Holman, Kissella, Lewis, Lowe, Lynch, Manson, Marshall, McClelland, McCormick, McCrary, McGrew, McKinney, Merriam, Merrick, Benjamin F. Myers, Monroe, Moore, Morphis, Silas L. Niblack, William E. Niblack, Orr, Hosea W. Parker, Poland, Porter, Price, Randall, Read, Edward Y. Rice, Ritchie, Ellis H. Roberts, William R. Roberts, Robinson, Sion H. Rogers, Roosevelt, Shellabarger, Sherwood, Slater, H. Boardman Smith, Snapp, Speer, Sprague, Stevens, Stevenson, Storm, Swann, Terry, Thomas, Upson, Van Trump, Waddell, Walden, Waldron, Wheeler, Whitthorne, Willard, Jeremiah M. Wilson, John T. Wilson, Wood, and Young—110.

NOT VOTING—Messrs. Ames, Bingham, Brooks, Cressy, Davies, Forker, Garfield, Kelley, Kerr, King, McNeeley, Morgan, Seafeld, Starkweather, and Taff—10.

So the substitute was agreed to.

The Speaker: "The Clerk will now read the first resolution on which the action of the House is asked."

The Clerk read as follows:

Resolved, That the House absolutely condemn the conduct of Oakes Ames, a member of this House from Massachusetts, in seeking to procure congressional attention to the affairs of a corporation in which he was interested, and whose interests directly depended upon legislation of Congress, by inducing members of Congress to invest in stock of said corporation.

The question was then taken; and there were as follows:

YEAS—Messrs. Acker, Ambler, Archer, Arthur, Banks, Barber, Barnum, Beatty, Erasmus W. Beck,

Bell, Bigby, Biggs, Bird, Austin Blair, Boorman, Boles, Braxton, Bright, Buckley, Bunnell, Burdett, Burdett, Caldwell, Campbell, Carroll, Clarke, Cobb, Coburn, Conger, Cotton, Cox, Crebs, Critcher, Crocker, Crossland, Darrall, Davis, Dodds, Donnan, Dox, DuBose, Duell, Duke, Dunnell, Eames, Ely, Finkelnburg, Charles Foster, Henry D. Foster, Wilder D. Foster, Frye, Getz, Giddings, Golladay, Goodrich, Griffith, Haldeman, Hale, Halsey, Hambleton, Hancock, Handley, Harmer, Harper, George E. Harris, John T. Harris, Havens, John B. Hawley, Joseph R. Hawley, Hay, Gerry W. Hazelton, John W. Hazelton, Hereford, Herndon, Hibbard, Hill, Hoar, Holman, Houghton, Kellogg, Kendall, Ketcham, Killinger, King, Kinsella, Lamison, Lampport, Lansing, Leach, Lewis, Lowe, Lynch, MacIntyre, Manson, Marshall, McClelland, McCormick, McCrary, McGrew, McJunkin, McKee, McKinney, Merriam, Merrick, Mitchell, Monroe, Moore, Morey, Leonard Myers, Silas L. Niblack, William E. Niblack, Orr, Packard, Hosea W. Parker, Isaac C. Parker, Pendleton, Poland, Porter, Potter, Price, Prindle, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, Ellis H. Roberts, William R. Roberts, Robinson, John Rogers, Sion H. Rogers, Roosevelt, Rusk, Sargent, Sessions, Shanks, Shellabarger, Sherwood, Shober, Shoemaker, Slater, Slocum, H. Boardman Smith, John A. Smith, Worthington C. Smith, Speer, Sprague, Stevens, Stevenson, Storm, Stoughton, Swann, Terry, Thomas, Dwight Townsend, Washington Townsend, Turner, Tutthill, Tyner, Upson, Van Trump, Vaughan, Waddell, Wakeman, Walden, Waldron, Wallace, Wells, Wheeler, Whiteley, Whitthorne, Willard, Williams of Indiana, Jeremiah M. Wilson, John T. Wilson, Winchester, Wood, and Young—182.

YAYS—Messrs. Adams, Averill, Barry, James B. Beck, Brooks, Buffinton, Benjamin F. Butler, Roderrick R. Butler, Comingo, Conner, Dickey, Eldredge, Elliott, Esty, Farwell, Garrett, Hays, Hooper, Maynard, McHenry, Morphis, Negley, Packard, Peck, Perce, Perry, Rainey, Sawyer, Seeley, Sloss, Snapp, Snyder, St. John, Twichell, Voorhees, and Williams of New York—57.

Nor Voting—Messrs. Ames, Bingham, James G. Blair, Coghlan, Creely, Dawes, Farnsworth, Forker, Garfield, Hanks, Kelley, Kerr, McNeely, Morgan, Palmer, Peters, Platt, Scofield, Sheldon, Starkweather, Sypher, and Taffe—22.

So the resolution was adopted.

The question was upon adopting the following resolution:

Resolved, That this House absolutely condemns the conduct of James Brooks, a member of this House from New York, for the use of his position of Government Director of the Union Pacific Railroad and of member of this House to procure an assignment to himself or his family of stock in the Credit Mobilier of America, a corporation having a contract with the Union Pacific Railroad, and whose interests depended directly upon the legislation of Congress.

The question was taken; and there were as follows:

YEAS—Messrs. Acker, Ambler, Archer, Arthur, Banks, Barber, Barnum, Beatty, Erasmus W. Beck, Bell, Bigby, Biggs, Bird, Austin Blair, Boorman, Boles, Braxton, Bright, Buckley, Bunnell, Burdett, Burdett, Caldwell, Campbell, Carroll, Cobb, Coburn, Conger, Cotton, Crebs, Critcher, Crocker, Crossland, Davis, Dodds, Donnan, Dox, DuBose, Duell, Duke, Dunnell, Eames, Ely, Finkelnburg, Charles Foster, Henry D. Foster, Wilder D. Foster, Frye, Getz, Giddings, Goodrich, Griffith, Haldeman, Hale, Halsey, Hambleton, Hancock, Handley, Harmer, Harper, George E. Harris, John T. Harris, Havens, John B.

Hawley, Joseph R. Hawley, Hay, Gerry W. Hazelton, John W. Hazelton, Hereford, Herndon, Hibbard, Hill, Hoar, Holman, Houghton, Kendall, Ketcham, Killinger, Kinsella, Lamison, Lampport, Lansing, Leach, Lewis, Lowe, Lynch, MacIntyre, Manson, Marshall, McClelland, McCormick, McCrary, McGrew, McJunkin, McKee, McKinney, Merriam, Merrick, Mitchell, Monroe, Moore, Morey, Leonard Myers, Silas L. Niblack, William E. Niblack, Orr, Packard, Packer, Hosea W. Parker, Isaac C. Parker, Pendleton, Poland, Porter, Potter, Price, Prindle, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, Ellis H. Roberts, Robinson, John Rogers, Sion H. Rogers, Roosevelt, Rusk, Sargent, Sessions, Shanks, Shellabarger, Sherwood, Shober, Shoemaker, Slater, Slocum, H. Boardman Smith, John A. Smith, Worthington C. Smith, Snyder, Speer, Sprague, Stevens, Stevenson, Storm, Stoughton, Stowell, Sutherland, Swann, Terry, Thomas, Dwight Townsend, Washington Townsend, Turner, Tutthill, Tyner, Upson, Van Trump, Vaughan, Waddell, Wakeman, Walden, Waldron, Wallace, Wells, Wheeler, Whiteley, Whitthorne, Willard, Williams of Indiana, Jeremiah M. Wilson, John T. Wilson, Winchester, and Wood—174.

NAYS—Messrs. Adams, Averill, Barry, James B. Beck, Buffinton, Benjamin F. Butler, Roderrick R. Butler, Clarke, Comingo, Conner, Dickey, Eldredge, Elliott, Farwell, Garrett, Golladay, Hays, Hooper, Maynard, McHenry, Morphis, Negley, Peck, Perce, Perry, Rainey, Seeley, Sloss, Snapp, St. John, Voorhees, and Williams of New York—32.

Nor Voting—Messrs. Ames, Bingham, James G. Blair, Brooks, Coghlan, Cox, Creely, Darrall, Dawes, Esty, Farnsworth, Forker, Garfield, Hanks, Kelley, Kellogg, Kerr, King, McNeely, Benjamin F. Meyers, Morgan, Palmer, Peters, Platt, William R. Roberts, Sawyer, Scofield, Sheldon, Starkweather, Sypher, Taffe, Twichell, Warren, and Young—84.

So the resolution was adopted.

The Speaker: "The Clerk will now report the next resolution."

The Clerk read as follows:

Resolved, That the special committee be discharged from the further consideration of the subject.

The question was taken; and it was decided in the negative—yeas 104, nays 114, not voting 22.

So the House refused to discharge the committee.

The Clerk again read the preamble, as follows:

Whereas, By the report of the special committee, wherein it appears that the acts charged as offenses against members of this House in connection with the Credit Mobilier of America occurred more than five years ago, and long before the election of such persons to this Congress, two elections by the people having intervened; and whereas grave doubts exist as to the rightful exercise by this House of its power to expel a member for offenses committed by such member long before his election thereto and not connected with such elections: therefore—

The question was taken; and it was decided in the negative—yeas 98, nays 118, not voting 29.

So the preamble was not agreed to.

This session of Congress closed on March 4th, at noon. Among the numerous acts passed was one to abolish the grades of admiral and vice-admiral in the Navy of the United States; another abolished the franking privilege. By another act the pay of certain offi-

cers and members of Congress was fixed. This part of the act was as follows:

On and after the 4th day of March, 1873, the President of the United States shall receive in full, for his services during the term for which he shall have been elected, the sum of \$50,000 per annum, to be paid monthly; the Vice-President of the United States shall receive in full for his services, during the term for which he shall have been elected, the sum of \$10,000 per annum, to be paid monthly; and the Chief-Justice of the Supreme Court of the United States shall receive the sum of \$10,500 per annum, and the justices of the Supreme Court of the United States shall receive the sum of \$10,000 per annum each, to be paid monthly; the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of the Interior, the Attorney-General, and the Postmaster-General, shall receive \$10,000 per annum, each, for their services, to be paid monthly; and each Assistant Secretary of the Treasury, State, and Interior Departments, shall receive as annual compensation, to be paid monthly, \$6,000; and the Speaker of the House of Representatives shall after the present Congress receive, in full for all his services, compensation at the rate of \$10,000 per annum, and Senators, Representatives, and Delegates in Congress, including Senators, Representatives, and Delegates in the Forty-second Congress holding such office at the passage of this act, and whose claim to a seat has not been adversely decided, shall receive \$7,500 per annum each, and this shall be in lieu of all pay and allowance, except actual individual traveling expenses from their homes to the seat of Government and return, by the most direct route of usual travel, once for each session of the House to which such Senator, member, or Delegate belongs, to be certified to under his hand to the disbursing officer, and filed as a voucher: *Provided*, That, in settling the pay and allowances of Senators, members and Delegates in the Forty-second Congress, all mileage shall be deducted and no allowance made for expenses of travel.

CONNECTICUT. The Republicans of this State assembled in convention at New Haven, on February 5, 1873, for the purpose of nominating their candidates for Governor and the other State officers. The whole number of votes at the beginning was 466, and the nominations made were as follows: for Governor, Henry P. Haven, of New London; for Lieutenant-Governor, Charles S. Griswold, of Chester; for Secretary of State, John M. Hall, of Windham; for Treasurer, David P. Nichols, of Danbury; for Controller, John T. Rockwell, of Winsted. Messrs. Griswold and Nichols were nominated (the latter renominated) for their respective offices by acclamation.

The following platform was adopted by the convention:

Resolved, That the Republican party of the State of Connecticut pledges itself to the maintenance of the principles of political faith by which it has been enabled under the providence of God to save the Constitution, restore the Union, and secure the blessings of republican liberty to ourselves and our posterity.

Resolved, That, as the best guarantee of the permanency of these principles and the security of the rights of all men without distinction of race, birth-place, or color, we hail the reelection of the soldier statesman, Ulysses S. Grant, by a majority so unexampled as to have silenced the tongue of the slanderer, and made it evident to the world that neither republics nor republicans are ungrateful.

Resolved, We point with pride to the glorious record of the Administration: to the successful settlement of the Alabama difficulty; to the establishment of correct principles of international law; to the treaties with foreign powers by which the rights of naturalized citizens have been secured abroad and postal facilities increased; to the reduction of the debt and to the avoidance of a great commercial panic and disaster; to the firm and honorable efforts to procure the abolition of slavery in the Spanish colonies; to the inauguration of a wise and humane policy toward our Indian tribes; to the direction of means for the reform of the abuses in the civil service and the restriction of United States officials to the duties of their offices.

Resolved, That we congratulate the country upon the steady disappearance of the spirit of violence at the South and passing away of the revolutionary necessity of any interference with the local affairs of the States. We denounce corruption of men of all parties in high places. We have no apology or excuse for those of our own, but desire the fullest investigation, and demand the punishment of the guilty, conscious that the Republican party is strong enough to purify its own ranks, that it cannot be strong if it neglects its duty in this respect, and that it can only continue to commend itself to the confidence of the country by purging itself of unworthy elements.

Resolved, That the Republican party confidently asks the judgment of the people upon the conduct of affairs of this State during the year past, to its economy and to the intelligent attention to its material, reformatory, charitable, and educational interests.

Resolved, That it is the duty of the State to be vigilant in the protection of the rights and interests of the people, against the encroachments of powerful corporations, and especially in holding railroads strictly to the responsibilities and duties contemplated by their charters.

Resolved, That inasmuch as drunkenness still prevails to an alarming extent, in many parts of our State, we favor such further legislation as shall be required to remove this great evil, and promote sobriety, industry, and the happiness of the people in our Commonwealth.

Resolved, That we confidently commend the candidates for State officers, this day nominated, to the approval of the people upon their merits and services and eminent fitness for their several offices, and pledge them and the principles they represent our undivided support.

The work of nominating candidates was progressing, when the president asked leave to lay before the convention three resolutions handed to him by a delegation of the Labor-Reformers, with the request that they might be referred to the Committee on Platform; the said resolutions relating, severally, to the usury laws, to a bureau of labor statistics, and to the working-hours of women and children in factories. By order of the convention, they were so referred. The chairman of that committee, after the reading of the platform, reported also on these resolutions, dissuading action on the bureau of labor statistics and the working-hours of women and children in factories; and offering a substitute for the resolution relating to the usury laws. A delegate offered the following preamble and resolution as a substitute for that reported, and moved to insert it in the regular platform:

Whereas, Advantage has been taken of the repeal of the usury law by the last Legislature, so as to op-

press borrowers of money by the charge of excessive rates of interest: therefore—

Resolved, That in the opinion of this convention the next Legislature should enact a usury law that shall restrain the taking of excessive rates of interest, and provide proper penalties for the violation of such law.

Which amendment, after some opposition concerning the insertion of it in the platform, was adopted by the convention, and the platform was ratified as a whole.

A resolution was afterward offered by the same delegate and adopted by the convention, declaring that a law should be enacted by the State, limiting the time of work for women and children employed in factories, so as not to exceed ten hours a day.

A resolution, declaring in favor of a constitutional convention to revise the organic law of the State, was proposed for adoption, but strenuously opposed, and finally voted down.

Thereupon the convention adjourned *sine die*.

The Democrats of the State held their convention at Hartford on the 29th of February, which was very numerous attended, not a few of the delegates present belonging to the Liberal Republican party who made common cause with the Democrats. All the candidates proposed for the several State offices were nominated by this convention unanimously, some of them by acclamation, as follows: for Governor, Charles B. Ingersoll, of New Haven; for Lieutenant-Governor, George E. Sill, of Hartford; for Secretary of State, Mervin H. Sanger, of Canterbury; for Treasurer, William E. Raymond, of New Canaan; for Controller, Alfred R. Goodrich, of Vernon. The above-named candidates for Lieutenant-Governor and Treasurer, respectively, were Liberal Republicans.

The following platform was then unanimously adopted:

Resolved, That the Democratic and Liberal party is based upon the principles of the constitution declared at Cincinnati and Baltimore; it is firm in the conviction that its cause is just, and that its final success cannot be long delayed.

Resolved, That we arraign the President of the United States for using his pardoning power in the interest of the ballot-box stuffers and repeaters; for prostituting the high trusts committed to his hands, at a time of extraordinary demoralization and public wrongs, to the interests of those who make sport of the ballot, and debauch the elections; for striking down a faithful cabinet officer, to please a corrupt ring, and persisting in retaining another, who pays out to greedy cormorants vast sums of the people's taxes in violation of all law; for using the army to crush the civil power and the rights of States. We arraign the Vice-President and Vice-President-elect of the United States for their complicity in one of the greatest and most corrupt schemes of bribery ever known to influence the votes of Congressmen to take wrongfully millions of the public money, for the benefit of a corporation organized for the sole purpose of plunder. We arraign the leading men of the radical party, occupying high official positions, for the aid they have rendered to corrupt rings; for the waste of public money upon steamship subsidies, and for wickedly squandering the public lands upon combinations as corrupt as the

Credit Mobilier. We arraign the party that repudiates Senator Caldwell and places Senator Cameron at the head of the committee over which Charles Sumner so long presided to the satisfaction of all parties. We arraign that party for its manifold corruptions in the elections, in the appropriations, in the contracts, and in the legislative and executive departments of the Government.

Resolved, That the interference of Federal office-holders, from the President downward, in political affairs which are exclusively under State jurisdiction, has already led to results which should rouse thoughtful attention and prompt action on the part of voters. A Governor, receiving no votes from the people, foisted upon a State by presidential orders; the creation of a State Legislature by Executive decree; and the destruction by Congress of electoral votes of two States, and parts of the electoral vote of another State, are among the alarming results of centralization and usurpation practised by the Administration party.

Resolved, That the sympathies of this convention and of all who believe in national independence and republican government, are due to the indomitable patriots of Cuba, in the arduous struggle for freedom and just government which they have so long and so bravely maintained in the face of enormous odds and unprecedented difficulties. Though the Administration at Washington has been against them, the hearts of the American people have never ceased to feel for their sufferings, or to pray for their success.

Resolved, That we welcome Spain to the sisterhood of republics, and look forward to the freedom of Cuba as a necessary and early consequence.

Resolved, That in the death of Horace Greeley the country has lost one of its able and distinguished public men—one who showed himself capable of regarding country before party—who kept himself pure in a time of corruption, and who, earlier than most of his fellow-countrymen, saw and condemned the prevalent depravity of the Republican leaders, and warned the people in these forcible words: "I insist that the legislation of your country, national and State, needs purification, and that the leading men in our Government should be called to justice."

Resolved, That the repeal of the usury law, followed by an unusual stringency in the money market of this and other States, has resulted in evils that call for remedy—not the least of which is the tendency to change our savings institutions from depositories of the greatest safety to speculative institutions of a questionable character. Further action on the part of the Legislature is demanded.

Resolved, That since the adoption of the constitution of this State, over fifty years ago, new industries and vast public enterprises have come into existence. In every department a revision is necessary, and is demanded by the general interests of the State; and we recommend a call for a constitutional convention by the ensuing General Assembly.

Resolved, That the legislation of this State to protect labor and laboring children has been in the right direction, but something more is needed; and, to secure the equal and just advantages of education to the poor, as well as the wealthy, we deem the establishment of a Bureau of Labor Statistics in this State to be important.

Immediately after the foregoing platform had been adopted, a delegate, in behalf the Labor-Reformers, offered the following resolutions, recommending their adoption as a whole:

Resolved, That we demand the reenactment of the usury laws of this State, which were repealed by the last Legislature, believing their repeal to be injurious to the interests of honest labor and legitimate business; its direct tendency being to increase a rate of interest already oppressive and to increase the taxes of the already over-taxed producing classes.

Resolved, That the interests of the people require the establishment of a State Bureau of Labor Statistics, similar to that existing in the State of Massachusetts, whereby the condition and interests of the producing classes may be fully understood. We also demand that our representatives in Congress use their influence and votes to establish a national commission for the purpose of gathering and preparing statistical and other information in reference to the condition of the producing classes.

Resolved, That eight hours' daily labor is sufficient for transacting the business of the country, and that the improvements in the arts and sciences should tend to lessen the hours of manual labor, and that women and children should not be employed in our manufacturing establishments more than ten hours a day.

These resolutions were unanimously adopted, and the convention adjourned.

The members of the Temperance Association assembled in convention in January, 1878, when they declared their object, and set forth the means necessary for its realization, and adopted the following platform:

Resolved, That the great foe of modern Christian civilization is the dram-shop; that it violates the law of God, and is hostile to the best interests of men, and therefore is a thing to be destroyed; that to despair of the possibility of its destruction, is to lack faith in God and the moral power of good men. We therefore believe that it can be destroyed, and we are resolved, God helping us, that it shall be destroyed.

Resolved, That all experience shows that the only effective method of its destruction is by force of law, backed by the powers of moral sentiment, and sustained by unintermitted moral effort, and the only method of law that has been found to avail for this is that of prohibition, enforced by the authority and executed by the officers of the State. We therefore condemn the action of the Legislature in refusing to give effect to the prohibitory law of the State, by the establishment of a police force for its execution, and instead, repealing the law and substituting in its place the tried-out and broken-down experiment of license, and we demand the renunciation of that principle, and the reestablishment of a prohibitory law, by a force adequate to its execution.

Resolved, That such a law should make liquor, held for purposes of illegal sale, subject to seizure and confiscation, and this not only as stored, but in transit, and the illegal traffic responsible for all damages resulting therefrom, and the repute of such sale should be held valid ground of conviction and punishment.

Resolved, That the liquor law of the last session of the Legislature is a public fraud—first, in that it professes to leave the question of the sale of liquor to be drunk as a beverage to the free and unembarrassed decision of the citizens of the several towns, whereas it associates with such sale what is known as the legitimate sale, and refuses the supply of liquors for medical and mechanical purposes, unless, with this, the sale for common tipping purposes is also authorized, thus putting the towns under bonds of their legitimate needs to allow the illegitimate sale; second, in that, while professing to give the towns the option of prohibiting the traffic within their bounds, it furnishes them no effective means of enforcing their decision, thus leaving their vote an empty form; third, in that it virtually pledges licensed dealers protection against the unlicensed sale, which pledge it leaves unfulfilled, thus returning no equivalent for the license-money received; fourth, in that that it threatens the unlicensed dealers with penalties which it fails to visit on them. Thus everybody who trusts in it is cheated by it, and it is time that the course of this dishonesty were aban-

doned as unworthy of the State, and that a square and honest style of dealing with the traffic were inaugurated in its place.

Resolved, That we indorse the bill now before Congress prohibiting the manufacture, importation, and sale of intoxicating liquors for drinking purposes, within those parts of the country subject to the national control, and demand its enactment into law.

Resolved, That we believe in all the good things in which the other parties believe before election, and which the dominant party of the country shows such rare facility of forgetting as soon as the election is over, viz: civil service reform, integrity in the administration of public affairs, decentralization in the national Government, respect for the rights of the States, national reconciliation, labor reform, etc., and we pledge ourselves to enact them into law so fast and so far as we are intrusted with the power.

The State election in April, 1878, resulted in favor of the Democratic-Liberal Republican ticket. The whole number of votes then cast for Governor was 86,881; of which Mr. Ingersoll, the Democratic candidate, received 45,039; the Temperance candidate, about 2,000; which would leave less than 40,000 for Mr. Haven, the Republican candidate. Three Republicans and one Democrat were elected to Congress. The Legislature was Democratic by a considerable majority.

On May 7th the General Assembly met at Hartford, and opened their regular session. Both Houses met in joint convention, and the Governor-elect appeared before them in person and took the oath of office, as did also the Secretary of State, the Treasurer, and the Controller, successively. The Lieutenant-Governor had previously taken his oath in the Senate, which body he had also led into the Hall of Representatives for the joint convention, as its president.

The debt of the State was reduced in the course of the last fiscal year \$565,688.92, and bonds amounting to \$623,400 were purchased, which leaves outstanding, at the beginning of May, 1878, \$5,095,900; with \$738,078.06 on hand in the Treasury.

The revenue of the State on account of the civil list during the same year amounted, in the aggregate, to \$2,084,465.24; the sources which most contributed to make up that sum having been the two-mill tax on the towns, \$785,888.77; the tax on savings-banks, \$471,222.90; the tax on railroad companies, \$339,620.44; and the tax on mutual insurance companies, \$305,670.88.

The expenditures were \$1,175,567.88, divided as follows: salaries of executive officers for the year, \$5,700; of judicial officers, \$59,950; cost of the General Assembly of the last session, \$92,276.18; judicial expenses, \$185,873.74; contingent expenses, \$146,823.34; Board of Education, \$5,935.81; Director of State-prison, \$600; State Purveyors, \$3,426.50; families of volunteers, \$108,448.85; advance to quartermaster-general, \$5,000; to paymaster-general, \$43,000; to adjutant-general, \$8,000; public buildings, \$89,117.60; miscellaneous amounts, \$362,126.53.

The sum of \$333,402 was paid last year as interest on State bonds.

The total value of taxable property in Connecticut, which on the 31st of March, 1872, was less than \$340,000,000, advanced in the twelve following months above \$9,000,000, it being set down for the same date in 1873 at \$348,856,457. Nearly \$6,000,000 of this increase represents the value of new buildings in the mean time erected, or of improvements made in old ones.

The public-school fund continues to be in a prosperous condition. The total amount of this fund on September 2, 1872, was \$2,044,190.81, secured by contracts, bonds, and mortgages, mostly in Connecticut, or otherwise invested, as follows:

To individuals in the State.....	\$1,415,609 66
To individuals in New York.....	229,060 86
To individuals in Massachusetts.....	28,790 71
To individuals in Ohio.....	9,180 46
Amount of bank stock.....	204,812 61
Connecticut State bonds.....	130,000 00
Cash in Treasury.....	26,166 51
Total.....	\$2,044,190 81

In accordance with a law passed last year, all debtors residing in other States have been required to pay up in full. All new loans made from this fund since August 31, 1872, bear interest at seven per cent. per annum.

The receipts of the fund during the year ending April 1, 1873, were, of revenue, \$191,986.96, including cash on hand April 1, 1872.

The savings-banks in operation within the State, at the beginning of 1873, numbered 78, the total of their respective assets being \$71,271,395.10, and of their deposits, \$68,523,397.88. Nearly \$22,000,000 were deposited, and a little over \$16,000,000 withdrawn, in the course of 1872.

During the last year these banks raised their usual rate of interest on loans to seven and a half and eight per cent.; in some cases much higher. As the object of their establishment is trust and security, rather than speculation for profit, the Governor urges the Legislature to keep a watchful eye on the affairs of these institutions, and adopt measures calculated to hinder the continuance and prevent a repetition of such practices.

He further recommends, as his predecessor did to the preceding Legislature, that such portion of the deposits in the savings-banks as is loaned on real estate should, in justice, be declared exempt from taxation, which, in such cases, is in reality a double tax laid on the borrowers' property, and paid by them.

There are in Connecticut eight chartered trust companies, and three organized under the joint-stock laws; their capital being, in the aggregate, \$2,263,890, and the deposits held by them, \$2,869,406.19. The amount loaned by them on mortgage security is \$762,175, and in bills of discount and demand loans, \$3,861,656.93.

There are four State banks of discount, having, together, a capital of \$1,450,000.

The operations of life, fire, and marine insurance companies in Connecticut represent exceedingly large sums of money. The recent report of the Commissioner of Insurance, for the year 1872, fills up two volumes, the first being devoted to fire and marine, the second to life and accident insurance. The condition of life and accident insurance companies of other States doing business in Connecticut, the amount of premium notes held by them on December 31, 1872, and the amount of business transacted that year in Connecticut by outside and home companies, respectively, were briefly as follows: "The net decrease of new business of 1872 was \$1,413,158, against a net decrease the year previous of \$32,638,266. The amount of insurance terminated during the year was \$246,323,857, against \$300,523,174 the year before. The amount of premium notes held December 31, 1872, by nineteen companies of other States, was \$15,708,164.94, against \$14,881,171.21 held at the close of 1871. Thirteen companies show an increase of \$1,076,328.26, while six companies show a decrease of \$249,384.53; leaving a net increase of \$826,993.73, against a net increase of \$258,763.18 in 1871. The ratio of premium-notes to gross assets of the several companies ranges from .08 to 58.07; average ratio, 18.17. Ratio of notes to aggregate assets, 9.09. The net increase in the amount of notes held by twenty-five companies was \$707,145.59. The aggregate amount of notes received during the year was \$5,721,241.29, against \$8,069,391.47 received in 1871; a decrease of \$2,348,150.18. Only six companies show an excess of notes taken in 1872 as compared with 1871, aggregating \$253,257, while three of the remaining nineteen report none taken the past year.

"Connecticut companies issued 2,686 policies, insuring \$4,508,323, and received in new and renewal premiums \$1,466,147.99, and paid for losses \$352,676. The whole number of policies in home companies on lives of Connecticut citizens was 15,747, covering \$81,268,184 of insurance. The ratio of loss during the year to the mean amount at risk was 1.13. The whole number of policies issued by the twenty-three companies of other States was 1,567, covering \$3,326,111 of insurance. The whole amount received during the year for new and renewal premiums was \$699,801.44. Paid for losses, \$273,541. The whole number of policies reported in force by these companies was 9,336, insuring \$21,032,884. The ratio of loss to the mean amount at risk was 1.20. The aggregate of business in the State, of all the companies represented in this report, was 4,253 policies, insuring \$7,834,434. The whole number of policies in force, 25,113; whole amount insured thereby, \$52,801,068. Whole amount of premiums collected, \$2,165,949.43. Whole amount of losses paid during the year, \$626,217; ratio of aggregate loss to mean amount at risk, 1.20."

For the year 1873, thirty-four life and casualty insurance companies are authorized to transact business in Connecticut, their gross assets amounting, in the aggregate, to \$254,392,070.80.

The fire-insurance companies doing business in the State at the beginning of 1873 numbered ninety-eight; of which twenty-seven were Connecticut companies, sixty-three incorporated by other States, and eight foreign companies.

The gross premium receipts of these companies, on risks written in Connecticut during the year 1873, were \$1,682,449.68; the losses incurred within that period, \$535,433.84; showing the receipts to have been more than three times as large as the losses. About the same ratio was obtained in the previous year.

The aggregate amount of risks written in Connecticut during the year was \$147,717,429.

Of the companies chartered in other States and allowed to do business in Connecticut, twenty-eight were admitted in 1872, and the number of those suspended or withdrawn, during the same year, was seventeen.

An account of the condition of the various companies in operation at the time of the report is given by the commissioner, a summary of which is as follows: "The aggregate cash capital, December 31, 1872, of the stock companies transacting business in the State, was \$26,292,010, against \$26,021,010 the year before. The gross assets of the American and foreign companies were \$70,831,292.17, against \$66,428,218.27 the year before. The gross liabilities, exclusive of capital, are \$39,468,425.19, and inclusive of capital, \$65,760,435.19, leaving an aggregate net surplus of \$6,017,846.86, and surplus, as regards policy-holders, of \$31,429,019.58, which amply guarantees all outstanding risks under ordinary circumstances.

"The aggregate premium income was \$48,809,894.85; income from all other sources (except assessments on stockholders), \$4,763,831.52; total income, \$53,633,526.37. The aggregate loss payments were \$41,652,317.81; expenditures for all other purposes, \$15,652,518.70; total expenditures, \$57,304,829.51, an excess of expenditures over income of \$3,671,108.14, which represents the expense to net surplus accumulations and capital stock (not to speak of the loss of dividends) at which the business has been conducted during the year covered by the report.

"The fire risks in force at the close of the year are reported at \$4,029,021,051, against \$3,418,583,601, reported by companies represented in the last report, an increase of the amount at risk of \$610,438,050. The marine and inland risks in force aggregated \$36,480,701.15, against \$41,422,402.78 reported at the close of 1871, a decrease of \$4,941,241.63. The fire risks written during 1873 are reported at \$4,593,596,351, against \$3,486,465,743 reported for the preceding year, an increase of \$1,107,130,608. In the above summaries the

business of the home mutuals is not included. The gross cash assets of these companies aggregate \$620,694.39; premium notes and liens, in various forms, subject to assessment, \$4,893,629. The risks written during the year aggregate \$20,250,999. Cash premiums received thereon, \$151,078.68; average premium rate, .74. Whole amount at risk as reported, \$18,446,098.52. Ten of these companies report losses during the year aggregating \$65,043.43."

The expenditures for the public schools in 1872 amounted, in the aggregate, to \$1,528,440.07; of which \$1,127,717.67 was raised by town and district taxation. The school-fund contributed to this expense by paying \$182,924, the *per capita* dividend at the usual rate of one dollar for each child of school age in the State. Thirteen thousand five hundred and twelve children did not attend any school during the year 1872. The number of children between four and sixteen years of age in January, 1873, was 182,943.

In the General Hospital for the Insane, at Middletown, there were 271 patients under treatment, their daily average during the year having been 264. The number of those admitted within that period was 74, and of the discharged, 65. The applications for admission were 190.

There were twenty deaths in the hospital during the year, several patients having died almost immediately after their admission.

Many among the male patients are made to work on the farm connected with the hospital, which labor is reported to prove beneficial to them, and help to hasten the recovery of their sanity.

The receipts of this institution during the year amounted to \$88,623.75; which was sufficient to cover all its current expenses, and leave a surplus on hand of \$1,811.82.

Of the insane under treatment in the hospital last year, they being classified as the law provides, there were 217 pauper patients, 98 indigent patients, 12 private patients, and 9 insane convicts.

In the School for Imbeciles at Lakeville there were last year 61 pupils; which number, by the beginning of May, 1873, had been reduced to 50. Twenty among these were State beneficiaries, 17 among them being orphans.

At the Hartford Hospital, 281 males and 89 females were admitted; 486 patients were under treatment. The daily average of patients was 69. There were 206 recoveries, and 55 deaths. Nine patients, all males, died of injuries received by accidents. The average stay of patients in the hospital was eight weeks, and the cost \$6.70 a week. The receipts were \$3.81 a week each.

The report intimates that the hospital is filling so fast that persons with no other infirmity but age must soon be excluded from it.

The American Asylum for Deaf and Dumb,

at Hartford, in the beginning of May, 1873, had 225 pupils, of whom 51 were from Connecticut. The last census of the United States, however, shows that there are in Connecticut many other deaf school mutes of proper age, who are not receiving the education intended for them by the establishment of this institution.

The whole number of children connected with the Hartford Orphan Asylum during the past year was 97; number provided with other homes, 40; number indentured in permanent homes, 11; number received, 88. Four have died.

It seems that persons of wealth, in disposing of their property by testament, remember this institution by bequeathing something to it; the report noting, as an unusual occurrence, that "for the first time in a long period of years, no legacy has been left to the Orphan Asylum during the last twelve months."

The Connecticut Industrial School for Girls, at Middletown, has admitted 123 inmates during the three years of its existence. Thirty-four of them have been discharged. With the sum appropriated for it by the last General Assembly the institution has been freed from debt, and its building furnished with many conveniences required for its successful operation.

The State Reform School, on the 1st of March, 1873, had 301 boys under its care. The number of those received during the previous year was 147; of those discharged, 160.

The earnings of the boys for that year amounted to \$18,199.55, which sum exceeds their earnings at any preceding year. It has covered all the current expenses of the school, and left a surplus in its treasury. The institution is free from debt, and no appropriation of State money is asked for it.

In the State-prison there were 175 convicts confined on the 1st of April, 1873, of whom 69 were received into it during the year, one fourth of this number being from the County of Hartford. Forty among the convicts are colored persons. All of the convicts, except three, are males, thirty-nine of these, and one of the three women, being colored persons. Thirteen of the prisoners are less than twenty, and fourteen more than fifty years old. As to their respective nationalities, they are in the proportion of three Americans to one foreigner. One hundred and sixty of them have been sent to prison for their first offense, ten for their second, and two for their fourth. Eight were pardoned by the Legislature. Twenty-three of the convicts are under sentence for life.

The receipts of the prison, almost exclusively from the earnings of prisoners, and its expenditures, during the last year, were as follows: Receipts for the year—shoe-shop, \$14,695.01; wire-shop, \$3,080.40; burnishing shop, \$2,220.30; rule-shops, \$4,833.85; profit and loss, \$675.95; board of United States

convicts, \$880.81; interest, \$117.14; total, \$26,452.96. Expenses: expense account, \$11,245.74; provisions, \$8,662.76; clothing and bedding, \$2,195.71; hospital, \$543.59; female department, \$208; transportation of convicts, \$165.77; repairs and improvements, \$1,918.89; leaving a net gain of \$1,511.50.

There are ten county-jails in Connecticut, each of the eight counties into which the State is divided having one for its own prisoners; New London and Fairfield Counties, two each. To maintain the prisoners confined in these jails, the State pays three dollars a week for the board of each, which nearly covers all their current expenses. The inspector, who was extraordinarily appointed last year to visit all the prisons in the State, and examine into their condition in every respect, has recently presented a detailed report of his inspections, characterizing these county-jails as noteworthy for strength and safety. Those which have land and shops attached employ their prisoners in various works, and from their earnings pay no inconsiderable sums of money into their county treasuries respectively. The treasury of Norwich County received last year \$2,817 from that source; Windham, \$1,513; Hartford and New Haven, \$4,000 each.

One of the most important matters of general interest acted upon by the General Assembly at their session was, the proposition to submit to the people the question of calling a convention for the purpose of framing a new constitution for the State. The measure was strongly urged by Governor Ingersoll in his message, especially because the existing constitution, though good and adapted to the wants of the people for whom it was formed in 1818, is utterly inadequate to their requirements in 1873, the lapse of more than half a century having worked in their condition very material changes politically and socially, in all respects. A bill to that end was introduced in the House of Representatives, entitled "An act to provide for the calling of a Constitutional Convention." It declares the objects of the act, etc., and determines the power of action of the delegates when in convention, by imposing on them certain restrictions in specified matters. The bill met with strong and decided opposition in both Houses, many of their members maintaining, among other reasons, that the deficiencies in the old constitution may be more easily supplied by particular amendments, than by engaging in the long and expensive work of forming a new one. The bill was put on its passage in the House of Representatives on July 9th, and defeated by a very large majority—141 nays to 62 yeas. The Senate had previously rejected it by a vote of 14 nays to 7 yeas.

Upon the declaration of the vote in the Lower House, one of its members moved "to reconsider, in order that he might make a motion to have this bill continued to the next session, and published with the laws." The House

adopted the motion, in which the Senate, to whom it was sent, concurred.

The following amendments to the constitution were proposed to the General Assembly at this session, and continued to the next:

HOUSE OF REPRESENTATIVES, }
May Session, A. D. 1873.

Resolved, by the House of Representatives, That the following be proposed as an amendment to the constitution of this State, which, when approved and adopted in the manner provided by the constitution, shall, to all intents and purposes, become a part thereof, viz.:

From and after the first Wednesday in May, in the year of our Lord 1876, the Senate of this State shall consist of not less than forty-one nor more than fifty-one members, and be chosen by districts. The General Assembly, which shall be holden on the first Wednesday of May, A. D. 1876, shall divide the State into districts for the choice of senators, which districts shall not be less than forty-one nor more than fifty-one in number, and shall always be composed of contiguous territory, and in forming them no town shall be divided—and in forming them neither the whole nor part of one county shall be joined to the whole or part of another county to form a district—regard being had to the population in said apportionment, and in forming said districts in such manner that no county shall have less than two senators. The districts, when established, shall continue the same until the session of the General Assembly next after the completion of the next census of the United States, which said General Assembly shall have power to alter the same, if found necessary, according to the principles above recited; after which said districts shall not be altered, nor the number of senators altered, except at any session of the General Assembly next after the completion of a census of the United States, and then only according to the principles above described.

Resolved, That the foregoing proposed amendment to the constitution be continued to the next session of the General Assembly, and be published with the laws passed by the present session.

Passed in the House of Representatives, July 12, 1873.

HOUSE OF REPRESENTATIVES, }
May Session, A. D. 1873.

Resolved, by the House of Representatives, That the following be proposed as an amendment to the constitution of this State, which, when approved and adopted in the manner provided by the constitution, shall, to all intents and purposes, become a part thereof, viz.:

The House of Representatives shall consist of electors residing in towns from which they are elected. Every town which now contains, or hereafter shall contain a population of five thousand, shall be entitled to send two representatives, and every other town shall be entitled to its present representation in the General Assembly. The population of each town shall be determined by the enumeration made under the authority of the census of the United States next before the election of representatives is held.

Resolved, That the foregoing proposed amendment to the constitution be continued to the next session of the General Assembly, and be published with the laws passed at the present session.

Passed in the House of Representatives, July 9, 1873.

Together with the two above recited, two other amendments to the constitution were proposed: the third, providing that the election of State officers, instead of being annual, as it now is, should take place biennially, was indefinitely postponed; the fourth, repealing the section of a former amendment, passed in

1856, electing judges of the Supreme and Superior Courts for eight years, was rejected.

The action of the General Assembly in 1873, concerning the rate of interest on money, was regarded to be of the greatest importance by its members and the people generally. By an act passed last year, the old law, fixing the amount of interest within certain limits, was repealed, and the parties concerned were left free to determine it by private agreement between themselves. This change, instead of proving beneficial to the borrower, as the promoters of the new system had anticipated, has rendered his condition worse, the money-lenders having demanded higher rates than previously. Complaints have been generally made in this respect, chiefly against the savings-banks. The Governor officially avers in his message: "Several of them have, during the last year, raised their usual rate of interest on loans to seven and a half and eight per cent.; and rates even considerably beyond this have, I am inclined to believe, been required in some instances." Public statements have also been made, even by those who advocated the continuance of free trade in money, that these institutions, "taking advantage of the repeal of the usury laws, notified their borrowers of an increase in their rates," and this, not only in regard to new loans, but also on loans "obtained in past years on real-estate security, with the understanding that the rate should remain as then fixed."

In order to remedy these evils, a bill was introduced abrogating the free-money statute enacted last year, and restoring the usury law; limiting the rate of interest to seven per cent.; prescribing also that three-fourths of the deposits in the savings-banks should be loaned upon real estate; requiring any such institution, having less than three-fourths of the deposits loaned on mortgage, to make no further loan of other kinds until the three-fourths requirement is complied with; and prohibiting them from investing in railroad stocks or bonds. After warm discussion, and some alterations made in it, the bill passed both Houses by large majorities. Its chief provisions are, that it fixes the legal rate of interest at seven per cent.; allows the savings-banks to take interest in advance for a period not exceeding six months; and allows private individuals to add taxes and insurance to the interest.

The question whether the State of Connecticut should continue to have two capitals was brought before the General Assembly at the present session also, a member of the Lower House having proposed the following resolution for its adoption:

Resolved, by the House of Representatives, That the following be proposed as an amendment to the constitution of this State, which, when approved and adopted in the manner provided by the constitution, shall, to all intents and purposes, become a part thereof, to wit: All annual and special sessions of the General Assembly shall, on and after the first

Wednesday of May, A. D. 1875, be held at Hartford, but the person administering the office of governor may, in case of special emergency, convene said Assembly at any other place in the State.

In the Lower House the vote stood: For the resolution, 186, against the resolution, 52; the whole number of votes being 238. The proportion of the population represented by the affirmative and negative votes in either House, according to the number of inhabitants in the respective localities, as set down in the United States census of 1870, was as follows: In the House, for the resolution, 854,804; against the resolution, 170,021; absent, 18,173. Popular majority for the resolution, 174,610. In the Senate, the popular majority was 146,878.

At the general election of October 7, 1873, the popular vote resulted in the adoption of the constitutional amendment, establishing the city of Hartford the sole capital of Connecticut, by a majority of 6,107; the votes having been for the amendment, 86,861, against the amendment, 80,754. Of the negative votes, 12,290 belonged to New Haven County alone; 12,964 to the other seven counties reckoned together. The whole number of votes cast in the State at this election, as officially announced by the Board of Canvassers on October 20th, was 67,615, or nearly 20,000 less than the number polled at the election held in the preceding April for State officers.

On the 12th of July, as previously agreed upon by both Houses, the General Assembly closed its session of 1873 by final adjournment.

Among the most important public acts passed at this session besides those already noticed, the following seem worthy of mention: Reducing the State tax from two mills to one mill on a dollar; extending the exemption from taxation of all soldiers and sailors who served during the late civil war, relieving them of all poll and commutation taxes; placing private banking institutions under the same supervision as savings-banks; establishing a Board of State Charities, composed of three gentlemen and two ladies, who are to visit and inspect all institutions both public and private, in the State, where persons are detained by compulsion, for purposes either of punishment, or reform, or medical treatment; furnishing relief for defendants whose cases in court have been defaulted by accident, or other cause not imputable to them; punishing the placing of obstructions on railroad-tracks with imprisonment for thirty years, and providing heavy penalties for throwing stones at railroad-trains; guarding against the erection of unsafe buildings; providing for the establishment of a Bureau of Labor Statistics.

Numerous changes were made this year in the State judiciary. Judge Origen S. Seymour was elected Chief-Justice, in place of the late Judge Butler, resigned; and Judge Park was elected as the successor of Judge Seymour, whose term will expire, by reason of his age, in February, 1874. Judge Carpenter was re-

elected to the Supreme bench; and Judges Phelps and Pardee were promoted from the Superior to the Supreme Court.

The population of Connecticut, which exceeds half a million, is very unequally distributed into 166 towns, the number of their respective inhabitants ranging from 500 to 50,000, without any proportion between them. New Haven (with more than 50,000), Hartford, and Bridgeport, contain alone about one-fifth of the whole.

The natural increase of population in 1872 amounted to 8,885, this having been the excess of births over deaths in the State during that year. The births numbered 18,805, or 691 more than in 1871, and 2,002 over those recorded in 1862. Of that number, 7,164 were males, 6,527 females; of 114 the sex was not stated. The town of Bridgeport, with scarcely one-half the population of Hartford, returned a larger number of births than the latter; which was the case in 1871 also. Among the births returned from Middlesex County one was characterized as a monster. The births reported illegitimate were 129.

Of the whole number of births, 278 were colored children, males 148, females 127; the sex of three was not stated.

The total number of deaths during the same year was 9,970, males 5,095, females 4,785; the sex of 140 not stated. The excess over the deaths in 1871 was 1,804. The largest proportion of this increase of mortality is made up of the deaths of children; there having been 1,275 more children of ten years of age and under who died in 1872 than in 1871.

The deaths among the colored population were 183, males 96, females 88; the sex of four having not been stated.

The marriages contracted in the State during 1872 numbered 5,203, or 141 more than in 1871. Of the marriages in which both parties were American born, there were 2,939; where both were foreigners, 1,824; and where one party was native and the other foreign, 674.

There were 121 marriages among the colored population, including one mixed marriage in Hartford County, and two in New London County.

The divorces granted within the same year were 464, a greater number than in 1871 or 1870; it being in the ratio of little less than one divorce in ten marriages. The complaining party, on whose petition the divorce was respectively granted, was, in 328 cases, the wife, in 141 the husband.

The artificial propagation of fish in the existing varieties and the introduction of new ones in the waters of Connecticut are successfully progressing. The last report of the State commissioner, to whom this interest is intrusted, shows that there are now thirty-seven lakes and ponds which they have stocked with black bass; so that almost every town in Connecticut has near it a supply of this wholesome fish. The law protects it for

three years, to allow its growth and natural multiplication. The increase of shad also, which has ever been a Connecticut fish, is helped by the commissioners by artificial propagation. Within three or four weeks in midsummer of 1873, about ninety millions of young shad were sufficiently hatched, and nearly all of them let loose in the Connecticut River. The catching of this fish during the last season is set down at 600,000, weighing at least two and a half pounds each. The number of those caught in the Connecticut River alone is estimated to have been between 400,000 and 450,000. The contemplated introduction of salmon into the waters of the State has been delayed by the circumstance that the Holyoke Water-Power Company has refused to build a fish-way necessary for that purpose, over their dam at South Hadley. A lawsuit has taken place on the subject; the matter is now settled, the Supreme Court having decided against the company. It was anticipated that the said fish-way would be built without further delay.

The railroad interest is one of the most important in Connecticut, of which the following is a summary: There are 23 railroad companies in the State, representing 1,268 miles of road, of which 1,163 are in operation, and 868 within the State. Since last year's report there have been added 25 miles to the Boston, Hartford & Erie road, and six miles to the Danbury & Norwalk road. The whole capital stock reported is \$44,844,550, and of this \$35,460,117.66 is paid up. The increase of paid-up stock during the year is \$4,468,673.40. About 35 per cent. of all the stock and 44 per cent. of the paid-up stock is held in the State. The floating and funded debt of all the roads is \$43,273,492.85, an increase of nearly \$24,500,000, mostly due to the inclusion of the Boston, Hartford & Erie road this year. The whole cost of all roads and equipments is \$74,074,037.40; of which about 42 per cent. is paid for, and 58 per cent. is still in indebtedness.

The average cost of construction and equipment per mile is \$58,404.12. The highest is the "Air Line" which, though only single track, cost \$106,401, and the next highest is the New York, New Haven & Hartford, \$105,393.95. The least is the Shepaug Valley road, \$25,417.32.

There has been a great increase in rolling-stock. These are 6,506 men employed, exclusive of those engaged in construction. The miles traveled by all roads were 5,679,594, a gain of about 600,000. There were 10,134,633 passengers carried, and 3,162,473 tons of freight. The average cost per mile of operating the roads was about \$6,434.29. This ranges from \$18,000 on the New York, New Haven & Hartford road to \$500 on the Shepaug. The cost per mile run averages \$1.31, the same as in Massachusetts, and the highest cost was on the New York, New Haven & Hartford road, \$1.53.

The gross earnings for the year were 25 per cent. of the capital stock, and 11 per cent. of the whole cost of roads and equipment. The net income is 7 per cent. of the whole capital, and $4\frac{1}{2}$ per cent. of the whole cost of roads and equipment. Passengers yield about 50 per cent. of the total earnings. The average rate of fare on all roads is 2.61 cents per mile for passengers, and $4\frac{1}{2}$ cents per mile for freight.

Concerning fixed rates of fare, the report says it would result in injury to the commuter, the person most frequently benefited by the road. The Massachusetts report is quoted to show that there is not only more profit to the road but also more advantage to the traveling community in the discriminating rates of Massachusetts than in the uniform mileage regulations of New York.

Eighty-five accidents are reported for the year; 54 fatal, 31 not fatal. Only one passenger was killed, and he by jumping from the cars. Walking on the track and trying to get on moving trains are the two prime causes of accidents. Boys are said to be particularly careless. The report says that the broken rail which in January, on the Canal road, wrecked a train near Ives's Station, was a new rail, and was broken by the same train that was thrown off.

The military force of the State consists of four thoroughly-appointed regiments. Under the system lately introduced, the commutation tax is sufficient to pay all military expenses.

COSTA RICA (REPÚBLICA DE COSTA RICA), an independent state of Central America, extending from latitude 8° to 11° 5' north, and from longitude 81° 20' to 85° 58' west, and bounded north by Nicaragua, east by the Caribbean Sea, southeast by the United States of Colombia, and south and west by the Pacific Ocean.

The area of the republic is estimated at 21,493 square miles; although Mr. Blair, late United States minister to Costa Rica, speaks of the latter (in a communication addressed by him to Mr. Fish) as "a country embracing an area of only 5,700 square miles," a statement which would be still far below reality, even granting the province of Guanacaste to belong to Nicaragua, as claimed by the latter.

In an official publication under date June 14, 1873, it was affirmed that the population of the republic "could not be less than 350,000;" which figure is evidently exaggerated by at least three-sevenths, according to the calculations of the most reliable authorities. About one-half of the inhabitants are whites; one-fourth are mestizos; there are some 4,000 Africans, and the remainder are Indians. The number of inhabitants of San José, the capital, may be set down at about 26,000.

The territory of the republic is divided into five provinces—Alajuela, Cartago, Guanacaste, Heredia, and San José; and two *comarcas*, or districts—Puntarenas and Limón.

The President of the republic is General

Tomás Guardia, reelected May 8, 1872, for the term of four years. The first *Designado* (first Vice-President) is Salvador Gonzales; and the second *Designado*, Rafael Barroeta.

The items of the national revenue, for the year ending May 31, 1873, are exhibited in the following table:

Proceeds of the National Bank.....	\$141,593
State lands.....	13,179
Import duties.....	755,374
Export duties.....	166,885
Spirits monopoly.....	645,299
Tobacco monopoly.....	328,835
Gunpowder monopoly.....	8,634
Sale of salt.....	11,323
Mint.....	26,471
Licenses.....	25,787
Stamp duties.....	23,351
Court of justice fees.....	21,928
Slaughter-house tax.....	16,445
Post-Office.....	23,200
Telegraphs.....	4,784
Proceeds of loans.....	139,492
Deposits.....	85,839
Sundries.....	3,127
Total.....	\$2,500,436

The expenditure for the same year amounted to \$1,988,527. According to official returns, the national income for the month of April, 1873, reached \$337,707.18, while the total expenditure was but \$237,839.44, which constituted a surplus of nearly \$100,000.

Another official document gives the estimated income of the country for 1873-'74 at \$2,850,000, and the expenditure at \$2,850,000, which would leave a surplus of \$500,000. It should be remarked that this estimate of the income exceeds that for last year by \$648,000, and that for the year 1871-'72 by \$1,084,000.

The public debt amounted in 1867 to \$104,500, of which \$4,500 are understood to have been paid; but since that year large loans have been contracted for railway and other purposes of a kindred nature, as follows: a loan of £1,000,000 in London in 1871, at 6 per cent.; and another in 1872 of £2,400,000, also in London, at 7 per cent. interest, and 82 per cent. exchange. There is, besides, a home debt estimated at \$6,000,000; so that the whole national indebtedness may be recapitulated thus: Debt to Peru, \$100,000; England, \$17,000,000; home debt, \$6,000,000—total, \$23,100,000.

The great staple of exportation is coffee, most of which is taken by Great Britain; besides that article, there is annually exported a small quantity of woods of different species, hides, India-rubber, sarsaparilla, etc.

The total value of the exports for the year ending May 31, 1873, and the value of each article shipped, were as follows:

By the Pacific Port of Puntarenas.

Coffee (23,974,374 pounds).....	\$5,600,000
Hides.....	137,000
India-rubber.....	21,000
Woods (cedar, mahogany, etc.).....	58,000
Minerals.....	50,000
Dye-stuffs, sarsaparilla, etc., etc.....	229,000
Total.....	\$6,095,000

By the Atlantic Port of Limon.

Dye-stuffs, India-rubber, sarsaparilla, etc., etc.....	25,000
Total.....	\$6,120,000

The annexed table shows the exports through Puntarenas during the year 1872:

ARTICLES.	Quantity.	Price.	Value on board.
	Pounds.		
Indigo.....	315	\$1 00	\$315 00
Coffee.....	17,199,026	0 15	2,579,853 90
India-rubber.....	16,416	0 30	4,924 80
Hides.....	317,380	0 15	47,598 00
Deer-skins.....	20,518	0 34	6,974 42
Woods.....	2,644	8 00	21,152 00
Metals.....	28,428	0 08	2,274 24
Grindstones.....	4,825	0 03	144 75
Brazil-wood.....	99,970	0 03	2,999 10
Potatoes.....	1,400	0 02	28 00
Tropical plants.....	897	0 60	538 20
Cedar-wood.....	1,600	8 00	12,800 00
Sarsaparilla.....	2,448	0 06	146 88
Total.....			\$2,679,748 99

The crop of coffee, the cultivation of which constitutes the principal industry of the inhabitants, was comparatively small in 1872; but the unusually high price obtained in London amply compensated for the decrease in quantity. The crop of the previous year was 27,560,000 lbs.*

The export duty of 50 cents per quintal (100 lbs.) on coffee, which came into force in 1872, produced in the first ten months of that year no less than \$95,000.

The importation of tobacco and spirits, in both of which articles a large trade was formerly done, is now monopolized by the Government.

The total imports for the year ending May 31, 1873, amounted to \$4,500,000, according to the *Almanach de Gotha*, from which source we took also the above table of exports for the same year. It is most probable, however, that both these returns include the trade for two years, it being scarcely presumable that 33,887,374 lbs. of coffee could be produced in a single year. In effect, the second table of exports (for 1872) is from the Central Statistical Office of San José, and it shows only 17,199,026 lbs.; and the quantity shipped in 1871, a remarkably favorable year, was but 187,135 sacks, or 24,327,550 lbs.

Some notion of the great increase in the production of coffee, within the past fourteen years, may be obtained from the following figures: the crop of 1858 yielded but 11,500,000 pounds; that of 1859 only 6,500,000, or a little less than one-sixth of the crop of 1871.

The total exports for 1858 did not reach \$1,500,000, while the value of the imports was very nearly the same as at the present time.

At the port of Limon the number of vessels entered during the year 1872 was 79, with an aggregate of 16,000 tons; the number cleared was 80, with 16,243 tons.

The Government, convinced that the locomotive was necessary to the prosperity of the country, entered, June, 1872, into a contract with the American engineer, Henry Meiggs,

* In the ANNUAL CYCLOPEDIA for 1872 (page 234, top of second column), 2,756,000 lbs. was, by mistake, printed, instead of 27,576,000 lbs.

Eq., resident in Peru, for the construction of a railway from Puerto Limon, on the Atlantic, to Alajuela, some fifty miles from the Pacific, the line to pass through the cities of Cartago, San José, and Heredia. The sum of \$8,600,000 was to be paid for the road; and the latter be completed in December, 1874. It is now scarcely possible that the work will be finished at that time, although it has been carried on with an energy unusual in Central America.

The contract has since been transferred to Mr. Henry Meiggs Keith, a relative of Mr. Meiggs.

A Costa Rica journal of December gives a glowing description of the triumphal entry of the locomotive into Cartago, drawing the first passenger-train from San José, some of whose prominent citizens were in attendance to celebrate the important event with due civic pomp. A ball was given by the municipality of Cartago.

According to a prospectus under date December 15, 1873, the capital at the Banco Nacional de Costa Rica, Limited, will be \$2,000,000 in 2,000 shares at \$1,000 each.

Telegraphic communication has been established between the capital at Guanacaste, Liberia, and the central portions of the republic.

A line of telegraph was also to be laid during the summer from Cartago to Puerto Limon, thus placing the Atlantic and Pacific coasts in instantaneous communication.

Many important improvements were begun in San José and other cities of the republic; common roads were not thrown into the shade by railroads; and the Government shows itself ready to make liberal appropriations for the development of the material and intellectual interests of the country.

In the province of San José there are 26 schools, 7 of which are for females. The number of male scholars is 1,070, and of females, 430; and the total annual expenditure for salaries of teachers, etc., amounts to \$22,740.

In the other provinces the number of schools is still smaller than in San José; and in all the provinces there were several schools closed for want of teachers; notwithstanding, new buildings are now in process of erection for educational purposes.

Considerable progress is shown in some of the private academies, and especially in those for young ladies, as manifested by the favorable report of examination, at the end of the year.

A decree was issued toward the end of 1872, to the effect that dentists, oculists, etc., should not take the title of *doctor* unless they were incorporated with the Faculty of Medicine of San José.

The arrival of 654 coolies, in January, caused a great deal of excitement among employers, who were naturally enthusiastic on the subject in view of the interests at stake, as well with regard to the coffee-crop as to the works on

the railroad, the dearth in the labor market having begun to present itself in a serious shape.

As to the result of the competition between the coolies and native labor, nothing can be said beyond surmise; the means of judging of their relative merits is by observation. That the Costa Rican makes a good laborer, there is no doubt; but, being imbued with a spirit of independence to which his little property (the inheritance of this peasantry) gives him claim, his services are not as certainly to be counted upon as those of the enduring and patient, but poorer, Chinese, who are ever ready to comply with the necessities of employers in the absence of the same right to the position to which the Costa Rican aspires through his possession of more or less property.

The opening of Congress took place on May 1st, on which occasion the Secretary of Foreign Affairs read the President's message, the most important points of which are here noticed.

The nation is at peace with all foreign powers.

The boundary question between Colombia and Costa Rica has been amicably settled.

A like question, now pending with Nicaragua, does not seem to be so easily solved. The Executive would greatly prefer to arrive at a friendly settlement; but Costa Rica cannot, in justice to herself, cede any portion of her territory to a neighboring republic.

A minister arrived from Guatemala to obtain the ratification of the treaty of December, 1871; but, not having the necessary power to act in the premises, he was recalled.

It is hoped that Costa Rica will, at no far-distant day, take a distinguished place among the nations visited by the Executive during his late visit to Europe; and the day is looked forward to when the Central American states will be merged into one grand republic.

The national credit is firmly established abroad, owing to the punctuality with which the nation meets its obligations.

The revenue of the country has been doubled in direct proportion to the growth of commerce, and the population is fast increasing. The bank will be the treasurer-general and commercial agent of the Government, from whom it is to receive a loan of \$1,000,000 at 10 per cent. interest, which is the present capital of shares now in that bank belonging to the supreme Government. The net proceeds of the national revenue for 1869—say \$783,000—compared with those of the past year (1872)—\$1,664,000—corroborates that statement. The total revenue for 1870 was \$2,518,000, or \$850,000 in advance of that of the year immediately preceding; and it may fairly be expected that the revenue for 1873-'74 will reach if not exceed \$3,000,000. It is then asked, If the national income has so rapidly increased during the construction of the railroad, what will it be when that work is accomplished?

The so-called monetary panic recently talked

of in this country is to be attributed to the suspension of credits in a private banking-house, but it has been dispelled by the protective influence of the Government.

The construction of the railway to the Atlantic is in active prosecution, and will certainly be completed.

A commission, sent to explore the regions of Talamanca, in April, discovered some curious ancient ruins, especially those of three Spanish cities which existed a century ago among the mountains. They also met with the ruins of a fort, with the cannon, etc., all rusty and in great decay. The zoological collections were successful, especially in that of birds.

In December President Guardia handed over the reins of government to the first Designado, Señor Salvador Gonzales, alleging that the hostile attitude of Nicaragua was leveled at himself and not at Costa Rica. A short time afterward, however, he resumed the presidential functions.

Señor Salvador Gonzales, while in exercise of the executive power, issued a decree ordering political refugees at that time in Costa Rica to adopt a moderate and pacific conduct, not only with respect to the Government that protects them, but toward all foreign governments. Whoever acted contrary to that order, and left the republic on an expedition hostile to any other country or government, should, on his return to Costa Rica, be tried and punished according to the penal code.

COSTE, JEAN JACQUES MARIE CYPRIEN VICTOR, a French scientist and member of the Institute of France, born at Castries (Hérault), May 10, 1807; died in Paris, September 28, 1878. We are not aware where his early studies were prosecuted, but at the age of twenty-two or twenty-three he came to Paris, and devoted himself to the study of the natural sciences, and particularly to embryogeny, which was at that time becoming an important topic with the Swiss and German naturalists. In 1834 he published a quarto volume, copiously illustrated, entitled "Researches on the Generation of the Mammifera, and the Formation of Embryos," a work which brought him to the notice of the Academy of Sciences, who presented him with their gold medal for the work, in which he had been assisted by M. Delpsch. Soon after he was called to give lectures on Embryogeny at the Museum of Natural History, and somewhat later the chair of Embryogeny was created for him at the College of France. He continued to hold the professorship through all the changing administrations. In 1851 he was elected a member of the French Institute, as the successor of De Blainville. His published works on embryology have been: "Course of Comparative Embryogeny" (one vol., 8vo, with a quarto atlas of plates), 1837; "Ovology of the Kangaroo," 1838; "General and Particular History of the Development of Organized Bodies" (2 vols., 4to, and atlas, folio), 1847. Since 1851, M.

Coste had devoted himself almost exclusively to pisciculture or the multiplying of fish in rivers, lakes, streams, etc., by processes of artificial fecundation. This subject had previously received little attention in France, though MM. Gehin and Remy had, in 1842, established a series of ponds in the Vosges, for the multiplication of trout. On the application of MM. Coste and Milne-Edwards, the Government granted them the necessary advances, and they established at Huningue, in 1851, a model series of fish-ponds, from which, two years later, 600,000 salmon and trout were supplied to the Rhone. M. Coste next proceeded to the development of new and foreign genera and species of fish, in pools at the College of France, and in 1855 stocked the lake and the river in the Bois de Boulogne. He wrote much on this subject, his principal works being: "Practical Instructions on Pisciculture," 1853-1856; "A Voyage of Exploration on the Coasts of France and of Italy," undertaken in the interests of pisciculture, 1855; and numerous reports, memoirs, and papers on the subject, in the *Comptes Rendus* of the Academy. He was appointed in 1862 Inspector-General of Maritime and River Fisheries; and in 1866 was called to a seat in the Grand Council of Special Secondary Instruction.

CROSBY, DIXI, M. D., LL. D., an eminent surgeon and medical and surgical professor in Dartmouth College, born in Hanover, N. H., in 1800; died there, September 26, 1878. Dr. Crosby received a good and thorough classical education, but was not, we believe, a graduate of any college. He studied medicine in the Medical School of Dartmouth College, and received his medical degree in 1824. Fourteen years later, years which had been passed in active practice in Hanover and its vicinity, and had given him a high reputation as a surgeon, he was called to the chair of Anatomy and Surgical Anatomy in the Medical Department of Dartmouth. In 1841 he was promoted to the surgical professorship just vacant by the removal of Prof. Mussey to the West, and there was added to this important chair another quite as important, that of Obstetrics and Diseases of Women and Children. Dr. Crosby was equal to these responsibilities, and for twenty-seven years he delivered both courses of lectures, with an ability, a thoroughness of knowledge, and a clearness of statement, which left nothing to be desired. In 1868 the burden of years rendered it desirable that he should lay aside a part of the duties he had so long borne, and he turned over the surgical lectures to his able associate, though the college did not appoint a full surgical professor till 1871. In 1870 he found himself unable to perform even the divided duty to his own satisfaction, and he was appointed Professor of Surgery *Emeritus*, and lectured when he pleased. Dartmouth College honored itself in conferring on him the degree of LL. D. in 1867.

CZERMAK, JOSEPH, Ph. D., a German

physiologist and pathologist; died in Leipzig, September 16, 1873. Prof. Czermak was one of the most eminent of modern physiologists, and a man of wide and generous culture in all departments of scientific investigation. Endowed with large wealth, he used it unsparingly for the promotion of science. He was the inventor of the laryngoscope, and his treatise upon it was published in English by the Sydenham Society. He was the founder, proprietor, and head of the Leipsic

Physiological Laboratory, and grudged no expense in the costly and admirable investigations constantly carried on there for the advancement of physiological research. He was one of the German committee to decide upon contributions to the International Scientific Series, and was intending to contribute a volume to it himself. Two of his lectures "On Hypnotism in Animals" were translated and published in the *POPULAR SCIENCE MONTHLY* in September and November, 1878.

D

DELAFIELD, Brigadier and Brevet Major-General RICHARD, U. S. A., Chief of the Corps of Engineers, but on the retired list since August 8, 1866, born in New York City, in 1798; died in Washington, D. C., November 4, 1873. He was from an excellent and intellectual family, and one of five brothers all of whom have attained high distinction in various walks of life. After a very thorough preparatory training, Richard Delafield entered the Military Academy at West Point in 1814, and graduated thence in 1818, ranking first in his class. He was immediately commissioned second-lieutenant in the Corps of Engineers, and assigned to duty as astronomical and topographical draughtsman to the American Boundary Commission under the Treaty of Ghent. In 1819 he was ordered to duty as assistant engineer in the construction of the defenses of Hampton Roads, where he was employed for five years. In 1820 he was commissioned first-lieutenant of engineers, and in 1828 captain. From 1824 to 1832 he was employed as superintending engineer on the fortifications, improvements, and roads, in the vicinity of the Mississippi; and from 1832 to 1838 on the public works and fortifications on or near Delaware River and Delaware Bay. In July, 1838, he was commissioned major of engineers, and assigned to duty as superintendent of the U. S. Military Academy at West Point, which post he filled for seven years. For the next ten years (1846-'55) he was superintending engineer of the defenses of New York Harbor and of the Hudson River improvements, serving, however, for seven months also as chief-engineer of the Department of Texas, and during the whole ten years as a member of various military and engineering boards and commissions. During the Crimean War (in 1855-'56), acting under orders from Jefferson Davis, then Secretary of War, he proceeded to Europe in company with Captain (afterward Major-General) George B. McClellan, and Major Mordecai, for the purpose of obtaining information in regard to the military service in general, and the changes which had been made in modern warfare. He made an elaborate report, accompanied by maps, giving an account of the siege operations at Sevastopol, and describing

several great fortresses of Continental Europe. This report, which made a large volume, was printed by order of Congress. In 1856 Major Delafield was reappointed superintendent at the Military Academy, and continued to hold that position until 1861. He was relieved of the command of the Military Academy, January 23, 1861, but, it being discovered that the officer appointed his successor (General Beauregard) was in sympathy with the Confederates, that officer was removed, and he reinstated, January 28, 1861. On March 1, 1861, he was at his own request relieved, and Major Bowman appointed his successor. In August, 1861, he was promoted to a lieutenant-colonelcy of engineers, and during the civil war rendered valuable service to the Government, aiding Governor Morgan of New York in the reorganization and equipment of the New York State forces, and in supplying ordnance stores for the Atlantic and lake defenses; acting as superintending engineer of the defenses of New York Harbor, and as member of the consulting boards and commissions from 1861 to 1864. He was advanced to the rank of colonel of engineers in 1863, and to that of brigadier-general, and chief of engineers of the U. S. Army, in April, 1864, and from that time to August 8, 1866, was on duty at Washington as commander of the Corps of Engineers, and in charge of the Bureau of Engineers of the War Department. He was also a member of the commission on ocean encroachments at Sandy Hook, and of the Light-house Board. He received the brevet rank of major-general, U. S. A., May 18, 1865, and on August 8, 1866, was placed on the retired list as having been borne on the army register over forty-five years. He continued to reside in Washington, and performed service on the commissions of which he was a member.

DELAWARE. The Legislature of this State, which assembled on January 15, 1873, adjourned on April 12th, after a session of fourteen weeks. Some acts of public interest were passed. A more stringent liquor law was passed, making the cost of a license \$100, with such other provisions as would confine the sale of liquors chiefly to hotel-keepers. An act was adopted to so amend the State constitution as

to allow the passage of a general incorporation act. A provision of the constitution forbids the granting of charters for a longer term than twenty years, although they could be revoked by the Legislature at any time. The passage of the same act by the next Legislature would cause it to become an amendment to the constitution, and authorize the passage of the general law. Another act increased the legal right of married women. An unsuccessful effort was made to increase the representation in the Legislature. Three Senators and seven Representatives are now chosen from each county in the State. The proposition was to increase the whole number of Senators to twelve, of whom six should be chosen in New Castle County, without any change in the number chosen in the other two counties. In like manner it was proposed to make the whole number of Representatives twenty-eight, of whom one-half should be chosen in New Castle County. An effort, which was also unsuccessful, was made to repeal the attachment law so far as it authorized the seizure of wages. Several remonstrances against the repeal were sent to the Legislature, one of which said that the repeal was sought "by evil-disposed persons," and that they "can show both public and private reasons" against repeal, but they regard it as unnecessary to name more than one—which is, that the repeal of the wages attachment would deprive a large number of good citizens "of any protection, and leave them no remedy to collect by law what honestly belongs to them." In another the remonstrants added as follows: "On the other hand, who are they that want the law repealed? We will simply say that they are those who want the whipping-post abolished also; while everybody knows that neither the attachment law nor the whipping-post has any terrors for honest people."

The only reduction in the rate of taxation was made in reference to the railroads. The arrangement in reference to them provided that the Philadelphia, Wilmington & Baltimore road should be taxed \$27,000, in lieu of all other than the ten-cent tax. The ten-cent tax may be commuted for by paying the sum of \$18,000, and the railroad may graduate this tax as is most conducive to the interests of the public. Discrimination in fares or freights, against any one, may be punished by suit and recovery of tenfold the amount so charged.

Another bill provided for the graduation of the ten-cent tax by permitting all other roads to pay over such sums in gross as would be proportioned to their passenger receipts, in the same ratio as the amount paid by the Philadelphia, Wilmington & Baltimore holds to theirs.

The debt of the State at the close of the year 1872 was \$1,825,000. The interest of this debt has been paid promptly, and the market value of the bonds has steadily increased. They are as high as, if not higher

than, those of any other State drawing six per cent. interest. It is with difficulty that the Treasurer has been able to purchase them for redemption. The Committee on Ways and Means reported to the Legislature in March the State debt as follows:

Debt due in 1875.....	\$169,000
" " " 1885.....	810,000
" " " 1890 (Junct. & Breakwater Loan)...	352,000
Making a total of.....	\$1,331,000
The interest charge on which is.....	\$79,000

The annual receipts, from taxes and all other sources, applicable to State use, are about \$289,000.

If it was desired to pay off the debt at maturity, and it was thought best to undertake the necessary taxation for so rapid a reduction, there would be required, in 1873 and 1874, collectively, the sum of \$169,000, to be paid out to bondholders, on January 1, 1875. From that date to January 1, 1885, \$81,000 per year would have to be placed in the sinking fund, to meet \$810,000, at the latter date, and in addition, from January 1, 1875, to January 1, 1890, \$23,467 annually, to meet the remaining \$352,000. The following amounts are, upon such a plan, required:

1873 to 1875....	\$81,500 per annum.
1875 to 1885....	\$81,000
" " " 1885....	23,467 — 104,467
1885 to 1890....	23,467

The difficulties between the authorities of the State and those of New Jersey as to the fishing rights of their citizens were not completely settled, and the operation of the law relative to fishing taxes was suspended during the year. The question for the commissioners to settle was, whether citizens of New Jersey had a fishing right within the jurisdiction of Delaware.

No election for State officers took place during the year.

The progress of the industrial interests of the State is rapid. In the city of Wilmington the aggregate of capital employed in manufactures and the annual product have increased as follows:

1872—total capital employed	\$12,275,000
1873—total capital employed	12,625,000
1872—annual product	30,125,000
1873—annual product	23,150,000

In the amount of invested capital, there has been no reduction, in any industry, while railroad car-building has added \$50,000; iron-ship building, \$100,000; machine work, \$50,000; foundry-work and car-wheels, \$50,000 miscellaneous, \$100,000. In the annual product, railroad-cars show an increase of \$200,000; iron ships, \$100,000; machine-work, \$200,000; foundry-work and car-wheels, \$400,000; and miscellaneous articles, \$500,000; while a decrease appears in the single article of morocco, and is set down at \$250,000.

For the year ending October 1, 1872, the report showed the erection of 451 new buildings, within the city limits; in the year 1873 there are 448 reported.

The best mineral in the State is kaolin. The main deposits of the clay stretch along a strip of country probably two miles long and three-fourths of a mile wide, from the summit of a hill near Auburn, on Red-Clay Creek, to the summit of another hill, just over into Chester County. Within these limits large quantities lie, at a depth of from six to twelve feet, and smaller veins run off in all directions, sometimes creeping out on the surface, forming quicksand holes, and if upon the hill-sides are liable to be washed out and the course of the vein traced by deep gullies. This clay is not confined to lowlands, but is as near the surface on a hill-top as in a valley.

With the exception of some of the large manufactories in Wilmington, the canning and drying of fruit exceed all other industries. It is computed that the quantity of peaches alone canned and dried during the year was 161,000 baskets, that 1,800 persons were employed, and their weekly wages were \$8,000.

The construction of short lines of railroad was extensive during the year, and some important routes across the State were proposed, and steps taken for their future completion.

In November a daring attempt was made to rob the National Bank of Delaware, which was thwarted after its commencement by the presence of more persons than had been expected. The robbers, of whom there were four, were subsequently arrested and convicted, and sentenced to pay the costs of prosecution, a fine of \$500 each, to stand in the pillory one hour, to be whipped on the same day forty lashes, and to be imprisoned for ten years. The manner in which the corporeal punishment was inflicted and endured by the prisoners is thus stated:

The whipping-post and pillory of New Castle are located in the jail-yard, inside the walls. There is, however, a large door-way, usually shut up by heavy folding-doors. These were thrown open, to admit such small portion of the immense congregation as could be crammed inside. The "post" is planted upright, and at a height of seven or eight feet a platform is fixed upon it, upon which the culprit stands "in the pillory." Beneath the platform, he stands while being whipped. He faces the post, and his arms are stretched upward along its sides, and secured by iron hasps which shut down on his wrists. These hasps were padded so as to be comfortable to the wrists.

Shortly after ten o'clock, every thing being in readiness, Carter and Hope were led out to the pillory. They walked firmly, but there was an unusual pallor upon the face of the former. Hope manifested but little concern, but beneath the outward calm exterior it was evident he was suffering mental anguish within. They were accompanied to the pillory by the sheriff and his deputy, and when they first mounted the platform they faced the crowd, but subsequently shifted their position to the other side. Mr. Herdman, the deputy, adjusted the stocks for Hope and the sheriff for Carter. Owing to an affection of the asthma, and the shortness of Hope in stature, he was allowed to stand a little more erect than Carter, and the stocks were not fastened by the usual hooks, but were tied down with strings. Carter was securely locked in them, placing his long, sandy beard under his throat as an easy rest for the neck.

The prisoners behaved themselves becomingly,

and were wrapped up, or rather blankets and coats were thrown over their shoulders, and their hats were placed upon their heads. When their hour had expired, they were removed from the stocks, and both expressed the hope that Delaware law had been so far appeased. Carter remarked that his greatest difficulty was in the lower part of the chest, he being tall and much bent over. Hope complained more of pain in his wrists than anywhere else.

When Hurlburt and Lawler were led out, the former looked contemptingly upon the object of punishment before him. Lawler evidently felt that the disgrace was far more a matter of concern than the bodily pain which he would be called upon to endure, and his eyes were downcast. Mr. Herdman accompanied them to the platform and adjusted their necks to the stocks, which, as in the case of Hope, would not close down, and were fastened with strings. While Lawler's neck was being fitted, Hurlburt laughingly contemplated the scene, which provoked much comment from the crowd outside. The sheriff promptly repressed all tumult, and stated that no remarks would be allowed from the spectators, as the punishment itself was sufficient for the prisoners to bear.

Immediately after the release of Lawler and Hurlburt from the stocks, which was left by Hurlburt on the bound, as if glad that that much of the sentence was gone through with, they were led back to their cell, and the whippings began.

The first of the prisoners led to the whipping-post was "Big Frank." He wore his dress-coat about his body, which was removed as soon as he was ready to be fastened to the post, and a physique of only ordinary mould and strength was revealed. He bowed his head between his arms, and took the chastigation without shrinking or flinching under the stings of the thongs. His back was considerably reddened and slight welts were raised, but no blood was drawn.

Hope was the second to receive the penalty. He stood erect, and there was a slight yielding under the weight of the blows. Closing his eyes, his head was thrown somewhat upward, as if in the attitude of prayer, and several times he shook his head as though he were undergoing much bodily pain. His anguish of mind was intense. No blood was drawn, although red welts were drawn across his back.

When Lawler was brought out to the post, his face wore an expression of sadness, and he seemingly was compressing his lips as he walked along. His body swelled with emotion, and, although he bore up well under the lash, his flesh quivered with the cold. He was apparently more severely punished than any of the rest, for welts were raised which blackened, and under a few more blows would have opened and sent the blood streaming down his back. No blood was drawn.

Hurlburt's countenance was very composed as he walked along the avenue which was opened through the crowd, but, when he reached the post and was fastened to it, he dropped his head between his arms and his face was hid from view. He is a man of strong physical organization, and did not flinch under the lash. Large red welts were made across his back, but no blood was drawn.

We may safely say that nine-tenths of the people present went to New Castle, to-day, expecting to see Sheriff Armstrong draw the blood at every blow, and that they were disappointed in this was shown by the suppressed remarks which we heard expressed by a large number of persons. We heard many say that the whole proceeding was a farce, and some became actually nervous because the sheriff did not cut the backs of the prisoners into huge sores. The more humane, however, were satisfied with the punishment inflicted, and expressed much satisfaction that it was no more severe.

DENMARK, a kingdom in Northern Europe. Reigning sovereign, Christian IX., fourth son

of the late Duke William of Schleswig-Holstein-Sonderburg-Glücksburg, and of Princess Louise of Hesse-Cassel; appointed to the succession of the Danish crown by the Treaty of London, of May 8, 1852, and by the Danish law of succession of July 31, 1853; succeeded to the throne on the death of King Frederick VII., November 15, 1863; married, May 26, 1842, to Louise, daughter of Landgrave William of Hesse-Cassel. Heir-apparent, Prince Frederick, born June 3, 1843; married, July 28, 1869, to Princess Louisa, only daughter of the late King Charles XV. of Sweden; offspring of the union are two sons, Christian, born September 20, 1870, and Charles, born August 3, 1872. The King has a civil list of 500,000 rigsdalers, and the heir-apparent 60,000 rigsdalers. The ministry, at the close of the year 1873, consisted of the following members: President of the Council, Count Holstein-Holsteinborg, appointed President of the Council May 28, 1870; Minister of Foreign Affairs, Baron Otto Rosenörn-Lehn (1870); Minister of the Interior, Christen Andreas Fonnesbech (1870); Minister of Public Education and Ecclesiastical Affairs, Carl Christian Hall (1870); Minister of Justice, C. S. Klein (June 28, 1872); Minister of Finance, Andreas Frederick Krieger (June 28, 1872); Minister of War and Marine, Captain N. F. Ravn (1873). The area of Denmark proper, inclusive of lakes, is 14,753 square miles; of European dependencies (Farøe Islands and Iceland), 40,268 square miles; of American possessions (Greenland, St. John, St. Thomas, and St. Croix), 759,900 square miles. Population, according to the census of 1870: of Denmark proper, 1,784,741; of Farøe Islands, 9,992; of Iceland, 69,768; of Greenland, 9,825; of the West India islands, 37,821; total of colonies, 127,401. Nearly the entire population of Denmark proper, namely, 1,769,583, or 99.15 per cent., is connected with the Lutheran Church; of the remainder, 1,433 are Reformed; 1,857 Catholics; 3,223 Baptists; 1,211 Free Congregations; 2,128 Mormons; 4,290 Jews; 260 Methodists; 349 Irvingites; 74 Anglicans; 28 Friends; 12 Greek Catholics; 88 of various other sects; 205 without definite creed. The number of emigrants from Denmark was 3,906 in 1871; 3,525 in 1870; 4,360 in 1869: nearly all the emigrants went to the United States. The actual revenue and expenditure of the state for the two years 1870-'72 (the financial year ending March 31st) were as follows:

	Rigsdalers.	Rigsdalers.
1870-'71.....	23,419,622	21,904,003
1871-'72.....	22,516,916	20,565,183

For the financial year 1872-'73, the revenue showed a surplus of 2,500,000 rigsdalers over the expenditures. According to the Danish Constitution, the annual financial accounts must be laid on the table of the Folkething at the beginning of each session, that is, about six months after the close of the financial year, and be examined by four revisers, two of whom are

elected by the Folkething, two by the Lands-thing. In the budget for the financial year, 1873-'74, the revenue is estimated at 23,736,161 rigsdalers, and the expenditures at 22,989,633 rigsdalers; in the budget for the year 1874-'75, the revenue at 23,952,236, the expenditures at 23,235,371. The public debt, on March 31, 1872, amounted to 114,660,781 rigsdalers, of which 82,876,160 were home debt, and 31,784,621 foreign debt. The state assets were 46,286,912, leaving 68,373,809 as the real amount of the indebtedness of the state. The debt has been in the course of reduction since 1866, when it amounted to 132,000,000 rigsdalers. According to the budget for 1874-'75, the public debt, on April 1, 1874, would amount to 105,338,375 rigsdalers.

The army, in time of peace, numbers 15,258 men; and on the war-footing, 52,656. The navy, in 1873, comprised 30 steamers, 7 of which are iron-clads, and 2 sailing-vessels. It was manned by 918 men, and officered by 1 admiral, 15 commanders, 34 captains, 47 lieutenants, and 20 under-lieutenants.

The commerce of Denmark, which is mainly carried on with Germany and Great Britain, was, from 1868 to 1872, as follows:

YEAR.	Imports.	Exports.
1868-'69	22,010,000 cwt.	7,990,000 cwt.
1869-'70	20,100,000 "	9,040,000 "
1870-'71	21,740,000 "	11,390,000 "
1871-'72	23,600,000 "	8,720,000 "

The precise amount of the commercial transactions is not known, as the official returns since 1863 have not given the declared or real value of the imports or exports, but only their weight.

The movement of shipping in 1871 and 1872 was as follows:

HOME NAVIGATION.

YEAR.	Vessels.	Tons.	Foreign vessels.
1870-'71.....	46,061	615,892	1,062
1871-'72.....	46,110	599,167	1,007

OUTWARD NAVIGATION.

YEAR.	Vessels.	Tons.	Foreign vessels.
1870-'71.....	36,755	1,092,749	30,397
1871-'72.....	39,341	1,214,593	21,588

The commercial navy, on March 31, 1872, was composed of 2,387 vessels, with an aggregate of 204,710 tons; of these, 91 were steamers, with 15,633 tons; and 2,746 sailing-vessels, with 189,077 tons. On March 31, 1873, the number of vessels was 2,738 (109 steamers), of an aggregate of 197,000 tons.

On January 1, 1873, there were 542.74 miles of railroad in operation. The length of telegraph-lines, in 1871, was 1,485.76 miles; that of the wires, 3,833.77 miles. The post-office forwarded, in 1871-'72, 13,468,134 letters, and 12,233,261 newspapers.

Denmark has 26 banks; the most important

of which is—the National Bank of Copenhagen, established in 1818; is a bank of issue, and has a capital of 18,376,200 rigsdalers; the Private Bank, established 1857, capital, 6,000,000 rigsdalers; the "Peasants' Bank of Mortgage and Exchange," established 1871, capital 6,000,000.

The Folkething, or Lower House of the Danish Rigsdag, on March 31, adopted, by 55 against 34 votes, an address to the King, expressing want of confidence in the ministry, which, the address says, acted according to principles considered by the Folkething as injurious to the prosperity of Denmark, and to its relation to the people of South Jutland (Northern Schleswig). The Folkething, therefore, asked the King to give to the country another ministry. The president of the ministry emphatically protested against the opinion that a ministry, in order to be constitutional, must be in harmony with the Folkething. The Landsthing, on April 2d, adopted, in its turn, an address to the King, by 44 against 6 votes, in which it claims entire independence with regard to resolutions passed by the Folkething. The King replied to these two addresses, on April 4th, that if the second Chamber intended to disregard the fundamental laws of the Constitution, the necessary cooperation between the Government and the popular representation would be greatly impeded, but that he was determined to protect the best interests of the country. This called forth from the "United Left," which constituted the majority of the Folkething, a manifesto to their constituents, in which they declare that, as guardians of the law, they will continue the opposition to a ministry which is unworthy of public confidence. As to the question whether the Folkething should refuse to vote the budget, there was, however, a difference of opinion. In the discussion of the financial law, a violent attack was made by Deputy Tauber on the Minister of Public Worship, Hall, who was charged by him to be the cause, when prime-minister in 1863, of the loss of Schleswig, his administration of that province having turned the hearts of friends as well as enemies from Denmark; but, when the vote was taken, the financial law of the ministry was adopted, by 61 against 39 votes. The provisions of the Scandinavian monetary convention were adopted by the Danish Rigsdag as well as by the Swedish Legislature; but they were not acceded to by Norway, and will therefore, for the present, go into operation for Sweden and Denmark only. The Rigsdag was closed by the President of the Council of Ministers on May 21st. The United Left, in a new manifesto to their constituents, threatened, if, on the reassembling of the Rigsdag, in October, the ministry should still be in power, all the weapons which the Constitution allowed would be used against it. At a supplementary election, held on the island of Funen, the candidate of the Left was successful, which now numbered 54 out of 101

members. The Internationals declared that, in the conflict between the Government and the Left, they would side with the latter.

The Scandinavian monetary convention was ratified at Copenhagen on May 27th. The introduction of the new coins is to take place on January, 1875. The names *daler*, *mark*, and *skilling*, will cease. The new monetary unit will be called a "crown," which will be equal in value to the present 3-mark pieces (27 cents). The crown is divided into 100 *oere*, and there is no intermediate piece. According to the monetary law, there will be gold coins of 20 and 10 crowns, silver coins of 2 crowns, 1 crown, of 50, 40, 25, and 10 *oere*; and bronze coins of 5, 2, and 1 *oere*. The present principal coins (2 *dalers*, 1 *daler*, and 3 marks) will be lawful money until 1878; the smaller coins will not be used after 1881.

On May 27th a charter was given to the Northern Telegraphic Company for laying a submarine cable between the western coast of Jutland or Farøe and France, as well as between Jutland and Sweden. Both cables were finished in August.

On July 19th a postal treaty was concluded with Sweden and Norway.

The Althing (Diet) of Iceland petitioned the King to appoint a Governor for Iceland, and its three ministers should be exclusively responsible to the Althing; and in case he should not see fit to grant this petition, to confer upon the Althing legislative powers and in particular the right of voting the budget. The Althing was closed on August 2d. Iceland will celebrate the thousandth anniversary of the first settlement of the island in the course of the year 1874.

In March the leaders of the Danish Socialists, Pio, Geleff, and Brix, charged with having instigated on May 5, 1872, an armed resistance to the Government, were sentenced to from four to six years' detention in a house of reform. The plaintiffs appealed from this sentence of the Criminal Court to the Supreme Court, which, however, confirmed the sentence.

On April 18th the Japanese embassy arrived at Copenhagen, and soon after was received by the King.

A considerable change appears to have been made in the course of the year 1873 in the relations between Denmark and Germany. On his return from Sweden and Norway, the Crown-prince of the German Empire, on August 17th, met at Malmö the Crown-prince of Denmark, who asked him to pay a visit to the royal court of Denmark, where he would be most cordially welcomed. The German crown-prince, accordingly, on August 17th, went to Elsinore, where he was met by the King of Denmark. He remained with the royal family until the 19th, and received from the King the order of the Elephant. The organ of the Government (*Berling Gazette*), in commenting on this visit, expressed a hope that the friendly intercourse between the princes of Denmark and Germany

would lead to the restoration of friendly relations between the two nations.

The new union of the Rigsdag was opened on October 6th. The "United Left" of the Folkething called upon the ministry "to remove (by its resignation) the impediments which have accrued to the prosperous development of the commonwealth out of the continuing want of agreement between the Government and the representation of the people." The President of the Council replied that at the express wish of the King all the ministers would remain in office, and that the Folkething, if it carried out its threat and refused to vote the budget, would be dissolved. As the Folkething adhered to its threat, and refused to vote the budget, it was dissolved on October 18th, and new elections ordered to take place on November 14th. At the new election the "United Left" was again successful, electing 53 of its candidates against 48 of all parties. All its leaders, in particular Krabbe, the President of the dissolved Folkething, Hansen, and Berg, were reelected. The new Folkething met on December 4th, when the "United Left" reelected the former president and vice-presidents, Krabbe, J. A. Hansen, and Høgsbro. An address to the King, expressing the wish that "the administration of the country be changed, was moved by Deputy Sibjöring and adopted by 59 against 32 votes. The President of the Folkething, Krabbe, presented it to the King, who replied that he would confer on the subject with his ministers.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. The correspondence concerning the foreign relations of the United States is contained in the various papers sent to the Houses of Congress, and in the documents accompanying the annual message of the President at the opening of the first session of the Forty-third Congress. The latter are arranged in two volumes, making 1,442 pages.

ARGENTINE REPUBLIC.—The following extract from the message of President Sarmiento to Congress seems to furnish a striking proof of the wisdom which dictated the establishment of the principle that war, with its long train of concomitant evils, may be honorably avoided in most, if not all cases, by reference of disputed questions between nations to the award of distinguished parties:

A discussion is pending with Chili upon the Straits of Magellan, and a recent circumstance which might have endangered a peaceable solution of the question was amicably disposed of the very moment it assumed a disagreeable character. Whatever importance may be given to this subject, the governments of Chili and of this republic, in provision of any serious difficulty, have established by treaty that the question of boundaries should be submitted to arbitration in the event of a failure by diplomatic means. This honorable method of settling international disputes was adopted only a short time ago by two of the most powerful nations of the earth, and should be imitated, as it was applauded, by all others.

AUSTRIA—HUNGARY.—On March 6, 1872,

Count von Beust, the Austrian ambassador in London, writes to the Austrian Minister of Foreign Affairs, Count Andrassy, relative to the three rules of war embraced in the Washington Treaty of 1871, as follows:

England has agreed (Article VI. of the treaty of 8th May, 1871) to acknowledge three of the rules proposed by the Government of the United States, the immediate object of which is to specifically define the duties of the neutral power during the naval war. The importance and extensive bearing of these rules are clearly manifest.

On the other side, the British Government, with the admission of the application of the stipulated rules of law to the case of the *Alabama*, has joined in the express protest against the position stated therein, "that these rules were internationally operative at the time of the origin of the *Alabama* claims." Both powers have further agreed that, in the decision of the disputed question, the international principles that have hitherto been in force may be employed only so far as they do not derogate from the three new rules. Finally, England and America have agreed to consider the newly-settled fundamental principles of law, not only as binding upon themselves in future, but have agreed to bring them to the knowledge of the other naval powers with the formal invitation to adopt them. These movements, when they confirm on one side the importance of the new rules of law, present also the proof that the treaty-contracting powers acknowledge in them a completely new principle of law.

Next to the prominent chief significance of this present novelty in maritime law, also its practical extent and capability of further expansion deserve to be well considered. In this view the history of the Washington treaty offers a very instructive illustration. And even in the case that the Geneva arbitration tribunal should not reach the desired aim, the theoretical and practical significance of the Washington neutrality rules, viewed from a general international stand-point, ought not to be under-estimated.

The latter are manifestly in favor of the belligerent powers. In the same degree as they narrow this sphere of rights belonging to neutrals toward the belligerents, they extend that of the contending parties as against those who stand aside from the contest. Further, the newly-imposed duties are so much the more oppressive, inasmuch as the responsibility and obligation to indemnity, arising from their non-performance by the neutrals, may be regarded as becoming extensive and comprehensive in the highest degree possible.

In the interest of the powers there exists undeniably the increasing, if not universal, acknowledgment of the principle that forms the actual foundation of a correct position of neutrals, namely, the free and untrammelled activity to be exercised by the state individually, especially in the direction of unlimited protection of its own commercial interests. The fact of a war, originating quite independently of the will of a neutral state, between two other powers, should impose upon the first the least possible limitation of its national rights, as well as the least possible measure of duties, in regard to the condition of war created without its own instrumentality. This tendency is in harmony with the opinion existing largely, if not wholly, in all civilized countries, and recently practical attempts to fairly comply with the same have not been wanting. Everybody remembers the efforts made at the Paris Peace Congress to protect the rights of neutrals against the unjust violence of belligerent maritime powers. Let me be permitted to point to an appropriate example in the history of recent time. This is the dispute between the Foreign Office and the North-German ambassador in London, in regard to the privileges of the neutral commerce, during the war of 1870 and 1871. In this case it was the Eng-

lish minister who successfully opposed the attempt to inflict upon the duties of neutrality a construction limiting neutral commerce. Now, however, appear the neutrality rules of the Washington treaty, and, still more, the material tendency of this latter to be directed toward producing limitation and excessive responsibility on the part of neutrals; also, they are in full contradiction to the most recent development of international law; wherefore a universal acknowledgment appears that the leading ideas founded in the Washington treaty may be considered not only as an obstacle to the suitable, natural, further development of maritime law, but even as contributing to retrograde movement therein. The want of confidence against such a reform of maritime law can only be confirmed through the fact that the Americans are willing immediately, by the first practical application of the new rules of law, to draw thence the consequences in as comprehensive a degree as possible. In justification of the new formula of the duties of neutrality, certainly various arguments may be brought forward; for example, the clearer the rules upon neutrality duties may be, so much the fewer will be the points of controversy, so much less occasion for dispute. The more regulated the conduct to be observed by neutrals, so much the easier is it for the government in question to hold their citizens to a close observation of neutrality duties. The more precisely these duties are defined, so much more successful will be the defense against any accusation brought by one or the other of the belligerent parties, of favoring the other belligerent party, etc., etc., etc. These, and similar arguments, do not, however, meet the actual marrow of the question. The close limitation of the circle of the rights and duties of neutrals possesses, certainly, great formal value for promoting a long duration of friendly international relations, but it appears important that this should not take place in such a manner as would increase to an intolerable degree the responsibility of neutrals, and almost wholly forbid proper commercial communication with belligerent states. Should the dangerous ground of a minute limitation of neutrality duties be once trodden, there would, in consequence of the national tendency of each close definition of rights, constantly new points for a further limitation of neutrals be found in the experience of every new war. One point of view should always, therefore, be held firmly: the endeavor to decisively dissent from every transformation of international principles which does not exist in the natural development of international right.

The powers would have the more reason for taking into serious consideration the theories upon neutrality accepted by England and America, and intended for adoption by all maritime powers, inasmuch as the penalty sanction, which the Government of the United States, at least according to the theory wishes to incorporate into the new law, is certainly a monstrous one.

CHINA.—A settlement of "the audience question" has been urged upon the Chinese Government for the last twelve years by foreign ministers. It is a demand for an audience of the Emperor, in accordance with the usages of Western nations, and is repulsive to Chinese notions of propriety. Such a concession, it has been supposed, would be regarded by all classes as an assault upon their political, moral, and intellectual position, opposed to all the teachings of their histories, classics, and general literature, and contrary to their popular beliefs and prejudices, through all of which the native mind has become thoroughly possessed of the idea that the Emperor is the Son of Heaven, and consequently without an equal on the

earth. If this estimate is correct of the feelings and prejudices of the Chinese concerning the "infallibility" of their sovereign, it logically follows that all other nations must of necessity be regarded as inferior to their own.

This deep-rooted faith being universal throughout the empire, it is clear that the equality of other nations, which the treaties recognize, is so only in name; therefore relations between China and other nations rest on an insecure foundation.

Until the native mind can be freed from the belief that all "outside states" are inferior, there can be no real relations of peace and amity between China and Western nations. Nothing that could be done would have the effect to dispel these erroneous beliefs as some act of the Emperor, which would in itself be a recognition of equality.

It is in this view alone that importance has been attached to the proper settlement of the audience question at the earliest time possible.

On June 30, 1873, Mr. Low writes to Mr. Fish, the Secretary of State, that this question has been settled.

PEKING, June 30, 1873.

SIR: I have only time before the courier leaves to write a hasty note to say that the foreign ministers were all received at a personal audience of the Emperor yesterday, in a manner which will, I trust, be satisfactory to foreign governments.

The practical solution of this question, one that has at different times occupied the attention of several European governments during the last one hundred and fifty years without reaching a result at all satisfactory, is a cause for congratulation. This distinct recognition of the equality of Western nations will, I trust, be productive of the best results in the future; and, while its good effects may not be seen immediately, I shall be much disappointed if foreign nations do not date a "new departure" in their relations with China from yesterday.

GERMANY.—The liability of Germans naturalized in the United States to be compelled to do military service upon their return to their native land was a cause of great embarrassment to large numbers. It was considered that there was no chance for the success of negotiations for the removal of these liabilities so long as the question moved within the limits of the North-German States, and the relief asked for appeared only as an exceptional remission of penalties established by exceedingly numerous stringent German laws. Those who were compelled to serve in the German army, and they formed all the people, were exceedingly jealous of any who escaped from that service.

The course pursued by the American minister was to appeal to the inherent right of man to choose his home. Under date of May 8th Mr. Bancroft writes: "I saw there was no chance of success except by an entirely new form, as one relating to the natural and inherent right of man to choose for himself the land of his dwelling-place. The Prince von Bismarck is, by nature as well as by observation, study, and reflection, ready to receive liberal ideas and to reduce them to practice when the time for it appears to have come. The idea of the natu-

ral right of emigration was from the first received by him with favor. It was also sure to be in itself acceptable to all branches of the liberal politicians of Germany. If the natural right of emigration could be affirmed by treaty, with the full recognition of all the consequences of acknowledging that right, the point for our German adopted citizens was won in its fullest extent. The wishes and instructions of your predecessor coincided exactly with my own judgment to press forward and settle this question without the delays and dangers that would attend a complex proposition which would in all probability have defeated our design. So I made it my rulesimply to establish the right of emigration as an inalienable and natural right, not limited by any duty to the original government except where the performance of that duty had been formally initiated. Of this principle I was so happy as to obtain the recognition in Berlin, contrary to the expectation and prediction of every one of my colleagues at Berlin. Indeed, I was the only one accredited to the North-German Government who had confidence that I should succeed." Four of the German States made treaties similar to the one with the North-German Government.

The regulations to control religious organizations in Germany were adopted during the year, and are thus described in the same correspondence: "The idea of the supremacy of the state is deeply fixed in the people of the German Empire, especially in Prussia. After much reluctance and deliberation the Government resolved to assert the paramount authority of the laws of the state against every encroachment or disobedience growing out of a coördinate or pretended superior allegiance to a foreign alien power. The Prussian Constitution recognized the right of public worship by independent self-governing churches. It now adds that the right is to be exercised under the laws of the state, and subject to the supervisions of the state as ordered by law. The idea of interfering with freedom of conscience is utterly disclaimed, but the rights of the state are to be maintained against attacks under the veil of religion. To carry out the objects of the ministry, the royal government proposed two laws: one to regulate the relations of the state to the education, appointment, and removal of the ministers of religion; the other to fix the limits of ecclesiastical disciplinary power. Henceforward every spiritual officer in a Christian church in Prussia must be a German and free from objections on the part of the Government. He must have gone through a course at a German gymnasium, and a three years' course at a German university or in some seminary that the state regards as equivalent. The state does not assume the theological examination, but the candidate must pass an examination on the part of the state, extending to philosophy, history, German literature, and the classical languages;

and no one but a person thus thoroughly educated can be appointed, even temporarily, a minister of religion. Nominations by ecclesiastical superiors must be communicated to the Government, which any time within thirty days after a nomination may veto the appointment. All theological seminaries stand under the supervision of the state.

"With regard to ecclesiastical discipline, punishments must be confined to the circle of religion; are not to be decreed for acts of obedience to the laws of the state or as menaces to prevent obedience to those laws; nor to influence the exercise of the right of suffrage. The disciplinary powers within the church itself, of the prelates over their subordinate officers and ministers of religion, must likewise find their limits in the rights of sovereignty of the state."

HAWAIIAN ISLANDS.—The census of the inhabitants of the Hawaiian kingdom was taken on the night of December 27, 1872. The following are the results of the enumeration: males, 81,650; females, 25,247—total, 56,897.

INHABITANTS.	Males.	Females.	Total.
Under 6 years of age.....	3,574	3,295	6,869
Between 6 and 15 years.....	4,808	4,128	8,931
Between 15 and 40 years.....	13,282	10,279	23,561
Over 40 years.....	9,691	7,545	17,536
Married.....	13,077	12,682	25,759
Natives.....	26,130	22,914	49,044
Half-caste.....	1,225	1,262	2,487
Chinese.....	1,831	107	1,938
Hawaiian-born, both parents being foreigners.....	418	431	849
Americans.....	649	240	889
British.....	441	178	619
German.....	177	47	224
French.....	69	19	88
Portuguese.....	367	38	395
Other foreigners.....	343	21	364
Clergymen.....			130
Teachers.....			324
Licensed physicians.....			47
Lawyers.....			91
Merchants.....			728
Mechanics.....			2,115
Agriculturists.....			9,670
Plantation laborers.....			4,772
Freeholders.....			6,580
RECAPITULATION.			
Natives.....			49,044
Half caste.....			2,487
Total.....			51,531
FOREIGN-BORN.			
Americans.....			889
British.....			619
Germans.....			224
French.....			88

Chinese (laborers).....			1,998
Other nations.....			364
Children of foreign parents born in Hawaii.....			849
Total foreigners.....			5,866
Natives.....			51,531
Total population, 1872.....			56,897
Total population, 1866.....			62,959
Decrease since 1866.....			6,062
Adding increase of foreign population.....			3,515
Decrease of natives in six years.....			9,577
Foreign population in 1866.....			1,851
Foreign population in 1872.....			5,366
Increase.....			3,515

SPAIN.—The abdication of the King, Don Amadeo I., was the occasion of great excitement in Spain. It took place on February 11th, and was practically the extinguishment of the monarchical form of government. The report of the American minister, Mr. Sickles, to Secretary Fish, under date of February 18th, presents some of the scenes of a most unusual occurrence in the history of monarchical governments. The following are extracts:

On the night of Sunday, the 9th instant, a rumor, apparently authentic, was heard at the opera, and in some of the clubs, that the King had intimated his desire to renounce the crown. On the following morning several of the journals confirmed the report, although suggesting that an act of the Cortes would be necessary before such a step could be taken, in conformity with article 74 of the Spanish Constitution. During the day it was understood that this grave question was under consideration in Cabinet council, and that the Cortes would be asked to suspend its sittings for a few days to enable ministers to prepare the necessary measures to meet the crisis. It seems that a communication in this sense was sent by the President of the Council to Señor Rivero, the presiding officer of the Chamber of Deputies, which that officer declined to announce officially to the House, lest such a proof of the irresolution of the cabinet might provoke popular tumult.

I had an appointment for that day, the 10th instant, at three in the afternoon, with the Minister of State at the Foreign Office. At noon Señor Merelo, the Assistant Secretary, called at the legation to say that the minister could not meet me as proposed, and it was not difficult for me to satisfy myself, despite the reticence of my visitor, that there was ample foundation for the reports I had heard. The Chamber of Deputies met as usual at three p. m., and I repaired to the diplomatic tribune, where several of my colleagues soon afterward joined me. Empty benches and a dull debate poorly reflected the animation already visible in the streets. Descending to the floor of the House, I soon encountered groups of members in the halls and *salons*, busily discussing the theme as yet forbidden in the Chamber itself. Observing Rivero, the President, leave the chair, I went to his room, and had scarcely saluted him when several of the cabinet entered, among them Martos, Beranger, and Becerra, in whose faces I fancied I could see a serenity and satisfaction of good augury.

Returning to the diplomatic tribune, it was not long before Rivero resumed the Speaker's chair, which was regarded as only preliminary to the appearance of ministers in their places. A crowd of members came in from the lobbies, and expectation was on tiptoe for a statement from the Government bench. None of the cabinet appearing, the hum of conversation soon swelled into loud murmurs, as it was of course known that the council had risen, and ministers were in the antechamber.

Figueras, the Republican parliamentary leader, seized the opportunity afforded by the impatient temper of the House and demanded that the speakers should request the attendance of ministers, in order that the Cortes might be informed of the crisis, which it is understood embraced not only the cabinet, but even the crown.

Rivero replied from the chair that he had already sent repeated messages to the Government, requesting their presence, and that this would be the last he proposed to send.

At this moment the ministers entered the chamber, the President of the Council foremost.

Señor Zorrilla at once rose and requested Señor Figueras to repeat the inquiry which had been addressed to the Government through the chair in the absence of the cabinet.

Figueras promptly responded, saying he would

omit his preamble and come to the point. He wanted the House to hear what the Government proposed to do in the present juncture, and, if the Government was not prepared to submit a proposition, he would do so himself.

Zorrilla made a long speech in reply, to much of which the House listened with marked impatience. He said it was true the King had spoken of abdication, but nothing could transpire officially on so grave a matter until his Majesty had given the subject more reflection; that ministers had besought the King to pause in his purpose, and take twenty-four or forty-eight hours to reconsider his determination; that meanwhile, and in order that there should be no precipitation, he hoped the House would suspend its sittings, thus leaving the Government disengaged from other duties, so that they might consider and frame the measures most expedient to be brought in for the action of the Cortes.

While this debate was going on, a great multitude had gathered around the palace of the Chamber of Deputies. Although here and there an irrepressible agitator harangued groups of listeners, the crowd was calm, though anxious to know something of the action of the Chamber. To satisfy this feeling and avert any untoward demonstration, several influential deputies came out and spoke to the people from the balconies and porticoes of the building. Troops were sent for to keep the streets open and allow deputies to pass in and out of the palace. The arrival of a couple of companies of cavalry and a small force of infantry caused a flurry and some scampering, but it was soon seen that no offensive movement was contemplated. The people made way for the column, which broke into detachments, posted at the approaches to the palace, and kept a clear space for some distance.

To return to the Chamber. As soon as the President of the Council concluded his long speech, Figueras rose to reply.

Rivero, from the chair, said the rules did not allow a deputy to continue the discussion after his question had been answered.

Figueras invoked the practice of Parliament to open a debate when a cabinet crisis was announced, remarking that this was even graver, since the very institutions of the country were tottering.

Rivero suggested that the only way to open a debate was for Figueras to announce an "interpellation."

Zorrilla, on the part of the Government, said they were not disposed to answer an interpellation, as they required all their time to meet the necessities of the situation; and he begged Señor Figueras not to avail himself of the last resource afforded him by the rules—that of offering a proposition.

Figueras replied that he regretted he could not accede to the request of the President of the Council of Ministers, for to do so would make himself the most criminal of men. He demanded the reading of a proposition he had placed on the table before the order of the day was announced.

The Secretary then read the proposition as follows: "The Cortes agrees to go into permanent session." (Signed by five members, as prescribed by rules—Figueras, Ramos, Calderon, Huelves, Fatino, Puigcerver y Nieto.)

Figueras supported his proposition in a brief, strong appeal, saying that the speech of the President of the Council reminded him of what Tiberius said to his doctors: "You dispute while I die." The Government asked forty-eight hours to consider while the country is in agony, and when in a few minutes the fate of the nation may be decided by the people. Are we here in a bed of roses, where we can slumber until it pleases the President to wake us up and tell us the King has revoked "an irrevocable resolution?" Do you know what may happen in twenty-four hours? Monarchies have a habit of procrastination. Who knows if in these twenty-four hours we shall not see armies here that

will cover in mourning and blood the capital of Spain? Rather than this should happen I prefer that this should be the last day of my life. After having struggled thirty years for the republic, a solution that embraces all, and is the only salvation of the country, shall we repel it for the convenience of a dying dynasty?

The President interrupted Figueras, saying, "I beg, sir, you will not reflect upon the dynasty." Many deputies exclaimed, "There is none!" Zorrilla cried out, excitedly, "Prove to me there is no dynasty!" an exclamation that provoked laughter.

Figueras responded that he always yielded to the chair. He could do no less, however, than to put on record, in conclusion, the words pronounced by the Minister of State when he fought with us in the opposition: "If the King disappears or perishes, we will say long live the nation." The King goes. What are we to say now? "Long live the nation!" The crown renounced! From the moment those words fell from the lips of the King, and the President communicates them to us here, they are beyond recall.

Zorrilla said he had made no official communication to the Chamber of the abdication of the King. If he had communicated to the Council of Ministers what his Majesty had said he had only done his duty; was that official? What reason has Señor Figueras given to precipitate a crisis and ask the Cortes to declare itself in permanent session? Is he afraid that for some reason or other our liberties will be lost? Does he suspect us to be traitors? Does he think we are weak? Suppose we are weak! What powers does he wield to substitute for ours, to do what we are unable to accomplish? What is meant by this permanent session? I beg Señor Figueras to explain his purpose. Is it understood that the session is to go on even in the absence of a majority of the deputies, as if an enemy were at our gates? Is it intended that the Chamber may at any moment come to a supreme decision, overturning the dynasty and the Government and all the public powers? If so, the Government cannot accept the proposition.

Figueras said he did not suspect any one in particular, but every one in general. He was like the authors of the representative system, neither more nor less. He was accustomed to hear many promises, and the sound of cannon answered them. It was not intended that the Cortes should go on debating interminably, because moments may happen in which there will be nothing to discuss. But he demanded there should be no adjournment; that they should await events in their seats, and meet them in a way becoming the magistracy of a great nation.

Zorrilla said he recognized the solicitude of the Chamber, but he could not admit that the Government needed a guardian to see that it performed its duties. The cabinet was competent to fulfill its trusts and defend liberty.

Figueras said he was sure the minister had not understood him. Every one knew there was no executive power; that a struggle was imminent between the legislative and executive departments. We were menaced by a reactionary ministry. The President of the Council himself intimated that he had so advised the King.

Zorrilla interrupted and said he had not said this, but he had a right so to advise the King.

Figueras: "I so understand you; if I am mistaken I am glad. We are in critical moments. It is necessary that Madrid see a power to protect it; that the Cortes be here in the exercise of their powers to meet any exigency."

Zorrilla: "Let it be understood that I have had no occasion to advise the King, and that I have not advised him. The ground taken that there is no executive power confirms my position. One of two things must be done. If there is an executive authority, as I affirm, there is no need of a permanent session. If the Chamber thinks that the executive has ceased to exist, then let it proceed to name one at

once. The Republicans and other deputies can be as distrustful as they choose, but I maintain that the cabinet exercises the executive power, with the sanction of the crown and the vote of the Chambers, until we are dismissed by the one or the other. I might have furnished Señor Figueras a solution consistent with the dignity of the Government and the apprehensions of himself and his friends, but he wishes something else to which I cannot consent."

The Minister of State (Martos): "This is not the time for long speeches, but for great and patriotic decisions. The situation is grave. Let us not aggravate it. Let us consider calmly what is happening. Señor Figueras has reminded me of what I said on a former occasion. I do not forget the words. I said one day, from yonder benches (pointing to the left) that when all should be lost, that when unhappily there should be no king, we would cry: 'The King is dead—long live the nation!' I repeat it now. But let the Chamber say it when the King is gone. I beg you to hear me, to listen to one who has a right to your attention, because he has never spoken unless to express his honest, sincere, and patriotic purposes. Does not the constitution afford us the means to meet peacefully and legally any crisis that may arise? If so, you have not the right to anticipate events or to manifest distrust. Your apprehensions may be excused by your patriotism, but they have no foundation. Has the moment arrived when you should bring to this bulwark of liberty the torch of discord? I am a minister of the crown, one of a cabinet that has thus far merited the confidence of the Chambers. I must preserve my honor and loyalty as one of his Majesty's ministers, and more than ever if his Majesty persists in his determination. I heard with disdain the excitations to a greater loyalty addressed to me in times when the dynasty was prosperous, but in this hour of the King's extremity I shall not refuse him my voice, my counsel, or my life. It is true, gentlemen, that I fear the decision of the King is irrevocable. After making known his purpose, I fear he must execute it. This being so, I ask, can any thing be more clear than the future of the Republican party? The difficult point in the situation is with those who are resolved to perform their duties as a government until the King has signed his abdication, and until the Cortes have established such a government as it may please them to ordain. I know that in maintaining our trust we may see the blood of the people shed, and you will comprehend the gravity with which we appreciate the situation. This last duty to the dynasty performed, I am also one of those who will be found where liberty is fighting, in the ranks of her common soldiers, indifferent to the mere name inscribed upon the banner. This is one of the difficult moments of public life, not for you, Republicans, who have only to be patient, because, if the King goes, there is nothing else possible but the republic. And you, by your impatience, are compromising the republic and liberty. [Loud protests from the Republican seats.] Rather than your interruptions I would prefer reasons. I would rather Señor Castelar should tell me whether or no I am right. You demand a permanent session. That is to say, there is no executive, and the Assembly assumes all powers. ['No! No!'] Then if you do not mean that, so much the better. The Government says we can preserve order better than an assembly, because deliberative bodies cannot be efficient guardians of public order. [A voice, 'We watch over liberty!'] The Government will look after liberty and we will all look after the liberties of Spain. But are we in that extremity that we must watch without a moment of rest? There is no occasion for such sleeplessness, because the dangers which Señor Figueras imagines do not exist. After all, what has Señor Figueras told us? That we may have a reactionary ministry, supported by an army that might reach Madrid in twenty-four hours. The moment when the King

puts his determination in force there will be no other authority than the Cortes, and all patriots and all loyal generals commanding troops will come here for orders. Where is the army that Señor Figueras fears? [A deputy: 'In Vitoria!'] Would to God that in Vitoria we had a large army, because under the orders of its commander (Moriones) it would be a guarantee of liberty. Since, then, there is no danger, there is no occasion for a permanent session. The King still reigns under the constitution, ministers are still at their posts performing their duties, and the constitution affords the means of settling all conflicts that may arise. Why, then, precipitate events? Where, then, is the difficulty we are unable to solve? Where are the ambitions, the tumults, the disorders, the hopes, the fears? I pray you to believe, gentlemen, that whatever may happen can be met by the general and energetic co-operation of those of us who are resolved to save liberty. If any one doubts me let him say so. If I have your confidence, then I pray you to believe that speeches, and votes, and propositions to-day may bring unhappy consequences to-morrow. I appeal to the patriotism of all. Do not foment dissensions. Withdraw this proposition. Avoid every thing not legal and constitutional in its origin. From our constitution will come the remedy for all our difficulties. Even if chaos comes and a new creation is necessary, let it appear with law; let it come from this Chamber if it is not so born. If our institutions are found in the streets and barricades, liberty is lost. If they come from our hands sanctioned by law, we may be sure their birth will be auspicious, and they will save the country and liberty." [Great and long-continued applause.]

Figueras made a brief response, saying if he could curse the divine word that makes man the most worthy of creation, he would denounce the voice of Señor Martos, who had just administered to the majority an opiate to put them to sleep in order that they might awake on the morrow humiliated, beholding their lost liberties. "My distinguished friend," he said, "has given compliments to some, hopes for others, and a mixture of both for all, but not an argument for any one. I find, gentlemen, in his words the most powerful reasons in favor of my proposition. He tells us the determination of the King is irrevocable, and that the question rests with us now; it is impossible for the King to recede. This being so, no reason can be given why we should not remain in permanent session. In such a moment if any one wishes to sleep let him sleep. As for us Republicans, when liberty is in danger we know not repose. The God of battles, who sends us these moments of trials, will give us the strength to support the immense responsibility it has pleased Him to impose upon us. Let us, then, wait here, with our worthy president in his place, the secretaries in their places, and let us not be moved by those whom we suspect in these moments to be devising plans for the destruction of liberty and the dissolution of this Chamber." [Sensation.]

Castelar then spoke. He asked the Cortes not to expect a speech from him in these grave and solemn moments, when his heart and his conscience prompted only grave and patriotic acts. One could not speak at a time when every passing moment might carry with it a danger to liberty fatal to the fortunes of this generation and of generations to come. To-day a display of eloquence would seem like the levity of Nero strumming the lyre while his capital was in flames. "Never in my life have I so much admired eloquence, the grandeur of human words, as when listening to-day to the minister of state pronouncing one of the most brilliant speeches that ever came from his lips. He has invoked my patriotism, my good sense, my calmness. He well knows how unnecessary was this appeal. I am patriotic, I am measured, I am prudent by conviction and temperament always, and above all in these supreme moments in which a single impru-

dence, a single indiscretion from any one, might bring down the pillars of the capital. Gentlemen, we need now a feeling that disregards mere forms and procedure, well enough for courts, but useless to this Assembly; we must go to the bottom of the question, the reality of things. No speech, however eloquent it may be; no minister, not even those before us who have served liberty so well, can revive that which has ceased to exist, nor avert from us the reality that imposes itself upon us, that dominates us with its incontestable presence. That reality, gentlemen, is that, without provocation from any one, without the fault of any one, the people or the Government, the Cortes or any public authority, without a cloud in the sky, the King, the actual King, the elected King, the dynastic King, has announced publicly and solemnly that he huris from his head to the pavement the crown of Spain."

A pause followed, in which the President of the Council, the Minister of State, and several others of the cabinet, were in consultation in their seats. It was evident a difference of opinion existed between Señor Zorrilla and Señor Martos. Señor Martos was about to quit the blue bench; his colleagues earnestly dissuading him, secreted his hat under the bench, and he resumed his seat with much apparent reluctance. Señor Zorrilla then rose to leave, and, repelling the efforts to detain him, he retired from the Chamber. Whereupon

Señor Martos said: "I have not perhaps clearly understood Señor Figueras. The circumstances are grave, and, according to my latest information, graver than we could have thought. I beg, therefore, that Señor Figueras will explain his purpose. The Government desires, if it can do so consistently with the requirements which its dignity imposes on this most unhappy occasion, to be among the first in averting the evils foreshadowed by Señor Figueras, and which may not unreasonably be apprehended. Wishing thus to avoid every motive for dissension, and trusting there may be no occasion for a vote, I pause for Señor Figueras's explanation."

Figueras: "I have already said that we shall wait here, organized, but without deliberating, until the Government decides upon its course; that we shall discuss nothing, remaining, however, in our places, regarding ourselves as in permanent session."

Martos: "Señor Figueras desires that, without action, we remain assembled here prepared for any contingency, the flag flying over the palace as the sign that the Chamber is in session. Is this the proposition? [Cries of 'Yes, yes!'] Well, then, would to God that with the same facility we might settle the difficulties of to-day and those that may come to-morrow!"

The President of the Chamber: "Congress orders a permanent session without deliberation, and as the presiding officers will remain here, I desire that a committee be named to remain with us." [Many deputies: "Let the President name the committee."]

The secretary then read the names of the committee appointed by the President, and the session was, *pro forma*, suspended at nine o'clock at night, after a sitting of six hours.

During these proceedings in the Chamber the crowd outside had increased to thousands. The usual entrance for deputies was besieged by an inquisitive throng whose curiosity was from time to time gratified by the appearance of a prominent deputy, assuring them of a prompt and peaceful republican solution. The Republican deputies had issued a printed address, which was posted through the streets of Madrid, advising their supporters to abstain from all violent demonstrations. The Republican directory, comprising Castelar, Figueras, and Pi y Margall, communicated assuring intelligence to their friends in the provinces. Ministers had likewise announced to provincial governors and captains-general the probable abdication of the King,

and enjoining the strictest vigilance and utmost zeal in maintenance of order.

Satisfactory answers had been received from most of the provinces. The only ground for apprehension seemed to be that the suspension of the sitting of the Cortes without action might be made a pretext for disturbances. It was understood that the Conservative leaders were in council during the afternoon and evening at the house of Señor Sagasta. They expected to be summoned by the King to form a new cabinet, efforts having been made by the Duke of Fernan Nunez, General Concha, Admiral Topete, and others, to persuade the King to desist from his proposed abdication and change his advisers. It was even said on good authority that a deputation of army officers, backed by General Concha and others, proposed to the King to authorize them to put themselves at the head of the troops of the Madrid garrison, and enable the King to dismiss Zorrilla and his colleagues, dissolve the Cortes, suspend the constitution, and maintain the throne. The King disapproved of all these suggestions. He said he had sworn to obey the constitution; that he had kept faith with the country, approving all measures sanctioned by the Cortes, and had endeavored to do justice to all parties; that all the factions, except the one in power, were habitually arrayed against him, and that it was too late now for him to give his confidence to those who had kept aloof from the court until no honorable resource was left but to return his crown to the Cortes, from whom he had received it, and leave the country free to determine its destinies. Marshal Serrano arrived in town the same evening from the south, and it was expected that he would put himself at the head of a conservative movement, but without the support of the troops, from whom he had long been separated, and, in presence of so formidable a popular rising in favor of a republic, the reactionary military leaders shrunk from the responsibility and risks of action, preferring to await events and hold themselves ready to profit by any favorable opportunity that might present itself. The Government called out several battalions of citizen-militia, which guarded the public buildings and squares during the night. The main body of the garrison remained in their quarters under arms. Thus the night was passed in tranquility.

At three in the afternoon of Tuesday, the 11th, the Chamber of Deputies resumed the sitting suspended the night before, with an announcement from the presiding officer that a communication had been received from the Government, which the secretary read as follows:

To the President of the Chamber of Deputies:

YOUR EXCELLENCY: At half-past one this afternoon, accompanied by the Minister of State, I presented myself in the royal chambers, in compliance with His Majesty's request, and received from the King the inclosed document, which I have the honor to transmit to your excellency, in order that it may be communicated to Congress.

MANUEL RUIZ ZORRILLA.

MADRID, February 11, 1873.

The secretary then proceeded to read the abdication of the King in the following words:

To the Chamber:

Great was the honor bestowed upon me by the Spanish nation when it elected me to occupy its throne, an honor all the more appreciated by me since it was offered to me environed by the difficulties and dangers which accompany the task of governing a country so deeply agitated.

Animated, however, by the firmness of purpose natural to my race, which seeks rather than shuns danger; fully determined to seek my sole inspiration in the good of the country, and to raise myself above all party level: resolved to fulfill religiously the oath I took before the Constituent Cortes; and ready to make all manner of sacrifices in order to give to this heroic nation the peace it needs, the freedom it deserves, and the greatness to which its glorious history and the uprightness and constancy of its sons entitle it, I thought that my limited experience in the art of governing would be

compensated by the loyalty of my nature, and that I should find powerful aid in warding off the dangers and conquering the difficulties that were not hidden from my view in the sympathy of all those Spaniards who, loving their native land, were desirous of putting an end to the bloody and barren struggles which for so many years have been gnawing at its vitals.

I realize that my good intentions have been in vain. For two long years have I worn the crown of Spain, and Spain still lives in continual strife, departing day by day more widely from that era of peace and prosperity for which I have so ardently yearned. Had the enemies to her happiness been foreigners, then, at the head of our valiant and tried soldiers, I would have been the first to give them battle. But all those who, with sword and pen, and speech, aggravate and perpetuate the troubles of the nation, are Spaniards; they all invoke the hallowed name of fatherland; they all strive and labor for its well-being; and, amid the din of combat, amid the confused, appalling, and contradictory clamor of the contestants, amid so many and so widely opposed manifestations of public opinion, it is impossible to choose the right, and still more impossible to find a remedy for such vast evils. I have earnestly sought a remedy within the bounds of law. Beyond this limit he who is pledged to obey the law has no right to go.

None will attribute my determination to weakness of spirit. No danger could move me to take off the crown from my brows if I believed that I wore it for my country's good. Neither have I been influenced by the peril that threatened the life of my angust wife, who, in this solemn moment, joins me in the earnest hope that in good time free pardon may be given to the authors of that attempt.

Nevertheless, I am to-day firmly convinced of the barrenness of my efforts and the impossibility of realizing my aims.

These, deputies, are the reasons that move me to give back to the nation, and in its name to you, the crown offered to me by the national suffrage, renouncing it for myself, my children, and my successors.

Be assured that, in relinquishing the crown, I do not give up my love for this noble and unhappy Spain, and that I bear away with me from hence no other sorrow than that it has not been possible for me to accomplish for her all the good my loyal heart so earnestly desired.

AMADEO.

PALACE OF MADRID, February 11, 1873.

The President: "Gentlemen of the Chamber, the renunciation of the crown of Spain by Don Amadeo, of Savoy, remands to the Spanish Cortes the sovereign authority over the kingdom. This event would be grave if, in the presence of the majesty of the Cortes, any thing could be grave or difficult. As this Chamber cannot, by itself, exercise the powers now devolved on Congress, the presence and co-operation of the Senate being necessary, I have the honor to propose that a message be addressed to that body, which is already written, in order that both Chambers, representing the sovereign authority, shall take such action in relation to the document just read as the emergency demands."

The motion was agreed to without debate.

The two Houses of the Cortes assembled together and sent a reply to the King's message, and approved of the following act:

The national Assembly, assuming all power, declares that the form of government of the nation is republican, remitting to a constitutional convention (*cortes constituyentes*) the organization of this form of government.

This Assembly will choose an executive, removable by, and responsible to, the Chamber.

The National Assembly then elected the following persons to constitute the executive power: President, Figueras; Secretary of State, Castelar; Interior, Pi y Margall; Grace and Justice, Nicolas Salmeron; Finance, José Echegaray; War, Lieutenant-General Cardova; Navy, Admiral Beranger; Public Works, Manuel Becerra; Colonies, Francisco Salmeron.

In reference to the causes that contributed

to the abdication of the King, Mr. Sickles writes: "Conspicuous among these is the law for the emancipation of slaves in Porto Rico. As soon as it became apparent that Señor Zorrilla's cabinet seriously entertained the purpose of passing this measure, giving to it the support of the crown, the project was made the pretext for the formation of a 'league,' in which all parties in Spain, except the Republicans and the Radicals, were influentially represented. Carlists, Alfonsists, Conservatives, forgetful of all differences, united in this organization. It embraced Marshal Serrano, Admiral Topete, Señor Sagasta, General Caballero de Rodas, hitherto supporters of the dynasty, besides a number of generals and cabinet ministers of Isabella. Nor were the adhesion and support of the leading Carlists in arms in the distant provinces rejected.

"The league was understood to command ample pecuniary resources. It at once obtained the support of a large majority of the journals in Madrid and in the other principal towns. It established corresponding organizations throughout Spain. Failing in alternate efforts to dissuade and to intimidate the cabinet from proceeding with the emancipation project, a formal demand was addressed to the King invoking his interposition. The King declined to interfere unless he should be enabled to do so constitutionally with the sanction of Parliament. From that moment his Majesty, abandoned by the conservative leaders who had united with General Prim in establishing the new dynasty, became the object of renewed and embittered hostility at the hands of all the factions in Spain.

Subsequently, on February 15th, Mr. Sickles appeared before the President (Figueroa) and thus recognized the Spanish Republic:

MR. PRESIDENT: In obedience to the command of my Government, I come to salute, in your person, the Republic of Spain.

If permitted to forecast something of the future, I would say that the tranquillity and dignity which have accompanied the recent transition, and the wisdom which has confided to your excellency the presidency of the executive power, are good omens of the happy destiny of the new commonwealth.

The United States of America, occupying a considerable part of the continent consecrated to civilization by the valor and faith of Spain, cannot witness without emotion and sympathy the establishment of a republic in the empire of Ferdinand and Isabella.

Taught by the uninterrupted practice of free institutions during the past century, their inestimable value in promoting the welfare of a nation, it is a source of profound satisfaction to the American people that Spain finds in our example the means by which her prosperity and power may rest on sure foundations.

Conveying to your excellency the fervent wishes of the President of the United States for the success of your administration, I perform the most agreeable duty of my mission in recognizing the authority placed in your hands by the sovereign Assembly.

The following joint resolution, tendering the congratulations of the American people to the people of Spain, was adopted on March 3d:

Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the name and behalf of the American people, the congratulations of Congress are hereby tendered to the people of Spain upon their recent efforts to consolidate the principles of universal liberty in a republican form of government.

That the President of the United States be, and hereby is, requested to transmit this resolution to the American minister at Madrid, with instructions to present it to the Spanish Government.

THE STEAMER VIRGINIUS.—Her capture by the Spanish man-of-war Tornado was an occurrence which excited much interest, both in the United States and Spain, and led to an extensive correspondence, by which peace between the two nations was preserved. The whole matter was fully set forth in a message of President Grant to Congress, on January 5, 1874, and the accompanying documents. The message and a summary of the correspondence are here presented:

To the Senate and House of Representatives:

In my annual message of December last, I gave reason to expect that, when the full and accurate text of the correspondence relating to the steamer *Virginus* (which had been telegraphed in cipher) should be received, the papers concerning the capture of the vessel, the execution of a part of its passengers and crew, and the restoration of the ship and the survivors, would be transmitted to Congress. In compliance with the expectations then held out, I now transmit the papers and correspondence on that subject.

On the 26th day of September, 1870, the *Virginus* was registered in the custom-house at New York as the property of a citizen of the United States, he having first made oath, as required by law, that he was the true and only owner of the said vessel, and that there was no subject or citizen of any foreign prince or state directly or indirectly, by way of trust, confidence, or otherwise, interested therein. Having complied with the requisites of the statute in that behalf, she cleared in the usual way for the port of Curaçoa, and on or about the 4th day of October, 1870, sailed for that port. It is not disputed that she made the voyage according to her clearance, nor that from that day to this she has not returned within the territorial jurisdiction of the United States. It is also understood that she preserved her American papers, and that when within foreign ports she made the practice of putting forth claim to American nationality which was recognized by the authorities at such ports. When, therefore, she left the port of Kingston in October last, under the flag of the United States, she would appear to have had, as against all powers except the United States, the right to fly that flag and to claim its protection as enjoyed by all regularly documented vessels registered as part of our commercial marine. No state of war existed conferring upon a maritime power the right to molest and detain upon the high-seas a documented vessel, and it cannot be pretended that the *Virginus* had placed herself without the pale of all law by acts of piracy against the human race. If her papers were irregular or fraudulent, the offense was one against the laws of the United States, justifiable only in their tribunals.

When, therefore, it became known that the *Virginus* had been captured on the high-seas by a Spanish man-of-war, that the American flag had been hauled down by the captors, and that the vessel had been carried to a Spanish port, and that Spanish tribunals were taking jurisdiction over the persons of those found on her, and exercising that jurisdiction upon American citizens, not only in violation of international law, but in contravention of the provi-

sions of the Treaty of 1795, I directed a demand to be made upon Spain for the restoration of the vessel, and for the return of the survivors to the protection of the United States, for a salute to the flag, and for the punishment of the offending parties. The principles upon which these demands rested could not be seriously questioned; but it was suggested by the Spanish Government that there were grave doubts whether the *Virginus* was entitled to the character given her by her papers, and that, therefore, it might be proper for the United States, after the surrender of the vessel and the survivors, to dispense with the salute to the flag, should such facts be established to their satisfaction. This seemed to be reasonable and just. I therefore assented to it on the assurance that Spain would then declare that no insult to the flag of the United States had been intended. I also authorized an agreement to be made that, should it be shown to the satisfaction of this Government that the *Virginus* was improperly bearing the flag, proceedings should be instituted in our courts for the punishment of the offense committed against the United States. On her part, Spain undertook to proceed against those who had offended the sovereignty of the United States, or who had violated their treaty rights. The surrender of the vessel and the survivors to the jurisdiction of the tribunals of the United States was an admission of the principles upon which our demand had been founded. I therefore had no hesitation in agreeing to the arrangements finally made between the two Governments, an arrangement which was moderate and just, and calculated to cement the good relations which have so long existed between Spain and the United States.

Under this agreement the *Virginus*, with the American flag flying, was delivered to the navy of the United States at Bahia Honda, in the island of Cuba, on the 16th ult. She was in an unseaworthy condition. In the passage to New York she encountered one of the most tempestuous of our winter storms. At the risk of their lives, the officers and crew placed in charge of her attempted to keep her afloat. Their efforts were unavailing, and she sank off Cape Fear. The prisoners who survived the massacres were surrendered at Santiago de Cuba on the 18th ult., and reached the port of New York in safety. The evidence submitted on the part of Spain, to establish the fact that the *Virginus*, at the time of her capture, was improperly bearing the flag of the United States, is transmitted herewith, together with the opinion of the Attorney-General thereon, and a copy of the note of the Spanish minister expressing, on behalf of his Government, a disclaimer of any intent of indignity to the flag of the United States.

U. S. GRANT.

January 5, 1874.

The correspondence accompanying the President's Message is very voluminous. It appears that, on the 6th of November, General Sickles telegraphed to Secretary Fish that the *Virginus* had been captured six miles from Jamaica, and that the Captain-General had been ordered, on Mr. Sickles's suggestion, to await orders. The Secretary telegraphed Mr. Sickles in reply, that the summary proceedings demanded investigation as inhuman; that reparation will be required if American citizens have been wrongfully executed. Mr. Sickles, the next day, reported his interview with Señor Carvajal and with President Castelar. The latter, he said, had ordered that no person be executed without authority of the Cortes, and thereupon Mr. Sickles expressed satisfaction. He subsequently telegraphed Mr. Fish that the Spanish Government would spontaneously do

every thing required by public law and treaty obligations; that the Spanish Government regretted the execution of the four prisoners, and orders were sent to stay further proceedings.

On the 8th of November, Minister Sickles gave a detailed account of the interview with the Spanish Minister of State, who said that no formal demand would be necessary on the part of the United States, as the Spanish Government would at once take up the question and decide it. The case of the *Deerhound* was cited, and the same principles would be applied to the *Virginus*. After further correspondence, Mr. Fish telegraphed to Minister Sickles as follows:

Accounts have been received from Havana of the execution of the captain and thirty-six of the crew, and eighteen others. If true, General Sickles will protest against the act as brutal and barbarous, and ample reparation will be demanded.

The Secretary confidentially informed Minister Sickles that doubt existed as to the right of the *Virginus* to carry the American flag. Mr. Fish telegraphed to Minister Sickles that the course of the Spanish Government was accepted as evidence of a willingness to administer justice. The condemnation of the act should be followed by punishment. Mr. Sickles was instructed to say so to the Spanish Government, and that this Government feared that Spain could not control the insurrection of the *Casino Español*.

On November 12th General Sickles stated that he had had an interview with President Castelar, who said such scandals must cease; that interrogatories had been addressed to the Captain-General, and that, as soon as they were replied to, General Sickles would receive a communication. The Minister of State informed Mr. Sickles of the execution of the prisoners, and the orders from Madrid arriving too late to prevent it, but the slaughter had ceased. The discussion between Mr. Sickles and the minister is given. Orders, it was said, would be issued to assure the United States citizens the protection of the ordinary tribunal. General Sickles urged a speedy solution of the troubles, and called attention to executions in pursuance of previous convictions made in the absence of the accused. Secretary Fish telegraphed to Sickles, November 14th:

Your telegram, announcing the adjournment of conference, received. Unless abundant reparation shall have been voluntarily tendered, you will demand the restoration of the *Virginus*, and the release and delivery to the United States of the persons captured on her, who have not already been massacred, and that the flag of the United States be saluted in the port of Santiago, and the signal punishment of the officials who were concerned in the capture of the vessel and execution of the passengers and crew. In case of refusal of satisfactory reparation within twelve days from this date, you will, at the expiration of that time, close your legation, and will, together with your secretary, leave Madrid, bringing with you the archives of the legation. You may leave the printed documents, which constitute the library, in charge of the legation of some friendly power, which you may select, who

will consent to take charge of them. You will signify the reception of this by telegraphing to me in plain the word, "New Jersey."

The same day protests were made to the Spanish Government against the summary executions, and on the 15th Minister Sickles telegraphed to Mr. Fish:

Made demand by note to-day, at three o'clock in the afternoon, and on the same day telegraphed. Received an ill-tempered note to-day from the Minister of State, rejecting the protest, and saying, that Spain would nevertheless consider and decide the questions according to law and her dignity.

Mr. Fish telegraphed to Minister Sickles, November 15th, reporting fifty-seven more executions, and saying, "If Spain cannot redress these outrages, the United States will." These instructions to Minister Sickles were to be used cautiously and discreetly.

On November 16th General Sickles sent a copy of a note to Señor Carvajal, demanding reparation, and a copy of the latter's reply, and also General Sickles's rejoinder. General Sickles alluded to the abusive attitude of the Madrid press. General Sickles telegraphed to Secretary Fish, November 16th:

Mr. Layard informs me he has received instructions from his Government concerning seventeen British subjects among the crew of the *Virginus*, executed, and seven more under sentence of death—the latter all minors. Of the seventeen dead, six were executed immediately on the arrival of the *Virginus* in port. A British frigate is ordered to Santiago.

On November 18th General Sickles transmitted a copy of the reply of the Minister of State to his note of November 16th, respecting reports from Havana. Sickles regarded it as a refusal, and proposed to close the legation unless otherwise ordered, and on the 18th asked Secretary Fish that a vessel might be ordered to Valencia to take him to France. The next day Sickles transmitted a copy of Carvajal's reply, rejecting the protest. On the 19th he informed Secretary Fish he was waiting instructions, and said: "The popular feeling runs high here against the United States and this legation. The press is violent, advising Government to order me out of Spain. Last night a mob was collected to attack and sack the legation. The authorities interfered, and preserved the peace."

Mr. Sickles also telegraphed: "Spain has asked the good offices of England. Lord Granville declined, unless on the basis of ample reparation made to the United States." Mr. Fish telegraphed to Mr. Sickles, November 19th, that the Spanish minister at Washington had shown a telegram from his Government, asking time for inquiry, and expressing an intention to make reparation. This being regarded as a reconsideration of the decision communicated to Mr. Sickles, he was instructed to defer his departure. On the 20th, Mr. Sickles announced that the tone of the notes from the Minister of State was unsatisfactory, and says:

If permitted to offer a suggestion with reference to your instructions of the 19th, I would remark that the tone, temper, and substance of the written communications made to me by the Minister of State are very different from the apparent purport of the telegram sent to the Spanish minister in Washington, and communicated to you. The refusal to say a word about the merits of the case in reply to a demand repelled as arbitrary, inadmissible, and humiliating, was announced to me here on the same day that different professions were made to you. Señor Carvajal's notes to me are exhibited here as showing the real position of this Government. They are offensive in form and unsatisfactory in substance. If we hesitate, it would be asserted and believed, in Spain and Cuba, that we pause before the defiant attitude assumed by this Government and people. This boast will be supported by the official and formal declarations of this cabinet in reply to communications I have made to it in obedience to your instructions. Misapprehending our forbearance, Spain would abuse any success obtained by duplicity and delay, and show herself more than ever arrogant and regardless of our rights and dignity. On the other hand, any concession now obtained at Washington will appear to corroborate the intimation made here in high quarters, and generally believed, that my action in the matter of the *Virginus* has not been in conformity with the instructions I have received, and is not approved by my Government. I have the best reasons for the opinion that my prompt withdrawal from Madrid, in default of the reparation the President has directed me to demand, will convince Spain we are in earnest, and she may yield to our terms, and peace may be honorably preserved. The fact that Spain holds one attitude here, and another in Washington, on the same day, would seem to impeach her sincerity, and this dissimulation, I am sure, is due to the fear of a diplomatic rupture, or something worse. This cabinet has already obtained all the information it will ever get from Cuba about this transaction. The Italian Government has kindly consented to allow Count Maffi, *chargé d'affaires* of Italy, in Madrid, to take care of American interests here, and accept the custody of the library and property of this legation, on application being made by your authority through our minister in Rome. I hope you will make the request, and that this courtesy may be duly acknowledged.

SICKLES.

Mr. Fish telegraphed to General Sickles, November 21, 1873:

Your telegram suggesting a possible difference of attitude on the part of Spain in Madrid and here, which you think calls for your withdrawal from Madrid, and asking a request to the Italian Government to authorize its representative to take care of our library at Madrid, has been laid before the President, who decides that public interests require that you should remain at your post until the expiration of the time heretofore named, or until further orders. If a difference exists, as you suggest, the President feels it his duty to take into consideration the representations made at Washington, which approach most nearly to compliance with our just demands; he depends upon you to cooperate with our efforts to induce Spain to make such concessions as may avert a rupture between the two republics. Without questioning the sincerity of the Madrid cabinet, it will not be possible to send a vessel to Valencia.

FISH.

After further correspondence, Mr. Fish telegraphed, November 25th, to Mr. Sickles: "If no accommodation is reached by the close of to-morrow, leave. If a proposition is submitted, you will refer it to Washington and defer action." Mr. Sickles informed Mr. Fish, No-

venember 25th, that Lord Granville regarded the reparation demanded as just and moderate. On the 26th, Mr. Sickles telegraphed to Mr. Fish: "President Castelar says Mr. Sickles would receive a note that day recognizing the principles on which the American demand was made, and asking a delay till December 25th for investigation." Mr. Sickles, November 26th, acknowledged receipt of instructions, and stated that he had informed the minister that he might defer a reply and request for passports, and transmitted the substance of a note received from the Minister of State containing a proposal for an adjustment.

Mr. Fish telegraphed to Minister Sickles November 27th, transmitting a copy of the Senate's resolution of June 16, 1858, that the detention of merchant-vessels on the high-seas by force in time of peace is a derogation of the sovereignty of the United States. Minister Sickles telegraphed to Mr. Fish, November 28th, announcing that it had been informally agreed at Madrid the previous day that reparation should be made in accordance with the American demand; that he was informed that a different proposition had been authorized by Mr. Fish and accepted by the Spanish Government, and he inquired whether this was true. Mr. Fish telegraphed to Minister Sickles, November 28th:

Supposing from the tenor of Minister Sickles's dispatches that he had left Madrid, the reply to the last Spanish proposal was communicated to Admiral Polo, who now says that negotiations are going on at Madrid. Having received notice that General Sickles would demand his passports at three o'clock, it is supposed that these negotiations have dropped.

Mr. Fish said to General Sickles, November 29th:

Spanish minister yesterday made a proposal embracing substance of demands of 15th of November, with slight variations, which has been accepted and protocol signed.

December 3d, Mr. Fish telegraphed to General Sickles: "Powers sent to Admiral Polo to negotiate place and time for surrender of the *Virginius*." The result is given, and the correspondence between Mr. Fish and General Sickles relative to the latter's resignation appears in the documents.

The following will give an idea of the correspondence and negotiations with the Spanish Legation at Washington: Mr. Fish stated to Admiral Polo, November 12th, that he had received intelligence of the shooting of fifty-three persons from the *Virginius*; that the story was too shocking and cruel to be credible. The Secretary asked if Admiral Polo had more authentic intelligence. Admiral Polo said to Mr. Fish, November 12th, that he had received no information. Copies of telegrams to Admiral Polo were handed by Admiral Polo to Mr. Fish, November 15th. It was there said that the papers of the *Virginius* were irregular; that the order from Madrid did not reach Santiago in time to stay the execution, owing to the destruction of telegraph-wires, and that the *Virginius* was regarded as a pirate. Telegrams

handed by Admiral Polo to Mr. Fish, November 17th, said that Spain was disposed to make amends for any violation of international law, but required time to make examination.

Admiral Polo, in a letter to Mr. Fish, November 18th, inclosed a copy of a telegraphic dispatch from the Minister of State at Madrid, in which it was said that Spain could not answer till the facts were known, and was resolved to preserve the integrity of its territory, but she would observe the obligations of international law and the letters of all treaties.

A copy of a telegram from the Foreign Minister at Madrid to Admiral Polo was handed to Mr. Fish by Admiral Polo, November 20th, proposing an arbitration, and the surrender of the vessel into the hands of the arbitrators. It was added that "the authority of Spain is respected in Cuba. The evidence is conflicting. This is a reason for arbitration. Spain is acting in good faith."

Admiral Polo wrote to Mr. Fish November 20th, inclosing a copy of a telegram from the Minister of State, in which it was said that the Spanish authority was respected in Cuba, and that peremptory orders had been issued. The following is a memorandum of an interview between Admiral Polo and Mr. Fish, November 21, 1873:

Mr. Fish declines to submit to arbitration the question of an indignity to the flag. He is willing to submit all questions which are properly subjects of reference. He is surprised to find no expression from Spain of disapproval of the hasty executions, or of readiness to release the vessel and survivors. Arbitration would be postponement. It was desirable to have the settlement complete before the assembling of Congress. The United States strongly desire a friendly settlement.

Admiral Polo informed Mr. Fish, November 28d, when and where the testimony of Greenwood and other witnesses would be taken. Admiral Polo, November 28d, inclosed to Mr. Fish a telegram from Madrid, in which it was stated that the reported hostile manifestations against General Sickles were not true. Mr. Fish wrote to Admiral Polo, November 24th, respecting the proposed examination of witnesses in New York. A telegram from Madrid to Admiral Polo was handed to Mr. Fish by Admiral Polo, November 24th, asking whether the United States would await the result of the investigation by Spain; whether the President would submit the question to Congress, and ask for a statement of the points of offense in view of the treaty stipulations and international law. Secretary Fish stated to Admiral Polo, November 24th (in answer to a demand for reasons why it is impracticable to wait), the reasons why the President must submit the facts to Congress, and gave a general statement of the points of offense.

A telegram from Madrid to Admiral Polo was handed to Mr. Fish by Admiral Polo on November 26th, in which it was said:

The news contradictory as to right of *Virginius* to carry United States flag. It may appear that she is

the subject of reclamations against United States. Spain suspends her reclamations, and asks United States to do the same till facts are known. No satisfaction possible till right to demand it established.

On November 25th Mr. Fish said to Admiral Polo that the United States, in the interest of all maritime powers, including Spain, deny the right of capture of documented vessels on the high-seas in time of peace; that the right to inquire into the validity of papers was in the power issuing them, which the United States were prepared to do; that the United States would consider the subject of reclamations when the honor of the flag was vindicated; that the identity of the *Virginus* was unquestioned, and that any irregularity in her papers, therefore, was merely technical. On November 27th Mr. Fish read a dispatch from General Sickles, saying that the United States could not accept this proposal, and that the communication was made to Admiral Polo because it was supposed General Sickles had left Madrid. The proposition was virtually that Spain should hold the vessel while seeking proof to justify her capture. Admiral Polo asked whether, if the vessel be given up, inquiries would be instituted by the United States with a view to the punishment of any who might be found to have violated the law of the United States, reserving the question of salute for further information.

Mr. Fish consulted the President and accepted the proposal, if the vessel and the survivors were delivered forthwith. The salute, he said, would be dispensed with if Spain, before December 25th, satisfies the United States that the *Virginus* had no right to carry the flag. In that case proceedings would be begun by the United States against the vessel and survivors implicated. Spain was also to proceed in accordance with the second proposition to General Sickles.

A telegram from Madrid to Admiral Polo was handed to Mr. Fish by Admiral Polo, November 28th, in which it was said that negotiations had been renewed in Madrid, and that any arrangement made would be carried out in Cuba. A telegram was handed to Mr. Fish by Admiral Polo, November 28th, expressing satisfaction at the happy termination of the negotiations. A protocol of conference between Mr. Fish and Admiral Polo was then drawn up, November 29th, carrying out the agreement.

Admiral Polo said to Mr. Fish, December 1st, that he had not received his instructions for naming the time and place for surrender, but that he expected them every moment. He asked, therefore, for an extension of time. Mr. Fish stated to Admiral Polo, December 2d, that delay appeared unavoidable and would doubtless cease in a few hours; the President would then rely upon the immediate execution of the agreement. Mr. Fish stated to Admiral Polo, December 4th, that he was informed by General Sickles that powers had

been sent to Admiral Polo; that he was prepared to execute the agreement, and asked Admiral Polo to name an hour on that day when he would meet Mr. Fish for that purpose. Admiral Polo stated to Mr. Fish, December 4th, in reply, that his powers required him to act in conjunction with the superior authorities of Cuba, and that he had referred the subject to Madrid. An agreement was signed between Mr. Fish and Admiral Polo, December 8, 1873, as to the time, place, and manner of the surrender of the vessel and survivors, and as to the mode of rendering the salute if not dispensed with.

Admiral Polo, December 10th, transmitted to Mr. Fish the following evidence in order to show that the *Virginus* at the time of her capture was not entitled to carry the flag of the United States:

1. Bill of sale of the *Solicitors of the Treasury* to John F. Patterson.
2. Oath of John F. Patterson, that he was the true and only owner of the said vessel, and that there was no subject or citizen of any foreign prince or State, directly or indirectly, by way of trust, confidence, or otherwise, interested therein.
3. Bond on the issue of the certificate of registry.
4. Crew-list.
5. Clearance bond.
6. Manifest of cargo.
7. Master's oath of clearance.
8. Manifest.
9. The deposition of Francis E. Sheppard.
10. The deposition of Francis Bowen.
11. Deposition of Francis Bowen.
12. Deposition of Charles Smith.
13. Deposition of Edward Greenwood.
14. Depositions of John McCann and Matthew Murphy.
15. Deposition of Thomas Gallagher.
16. Deposition of Ambrose Rowling.
17. Deposition of John Furlong.
18. Deposition of Adolfo de Varona.

Mr. Fish acknowledged the receipt of this evidence on December 22d, saying that the inclosure made it appear to the satisfaction of the United States that the *Virginus* was not entitled to carry the flag at the time of her capture; that the salute would therefore be dispensed with, and, in accordance with the terms of the protocol, inquiries would be instituted and proceedings begun against the vessel and the persons appearing to be guilty of illegal acts connected therewith.

The documents conclude with a large mass of consular and miscellaneous correspondence, including copies of the argument with Admiral Polo, addressed to Secretary Robeson, and requesting that instructions might be given for carrying it out; also the opinion of Attorney-General Williams. Mr. Fish, December 17th, transmitted the opinion of the Attorney-General to Secretary Robeson, and requested that steps might be taken to inform the proper officers at Santiago that the salute would be dispensed with. Admiral Polo expressed to Mr. Fish, January 28d, on behalf of his Government, a disclaimer of an intent of indignity to the flag of the United States.

The protocol between Secretary Fish and Admiral Polo will be found at the end of the President's annual message, under the title PUBLIC DOCUMENTS.

DISCIPLES OF CHRIST.—The *General Missionary Convention of the Disciples of Christ* was held at Indianapolis, Indiana, October 21st. The evangelistic work of the society had been prosecuted in, and contributions had been received from, the States of Iowa, Missouri, Indiana, Illinois, Ohio, New York, Kentucky, West Virginia, Pennsylvania, Michigan, Georgia, Kansas, Nebraska, Minnesota, Maryland, the District of Columbia, and the Territory of Colorado. The total amount of money contributed was \$95,182. Of this amount \$839.39 were contributed especially for the Freedmen, \$187.85 for the Bible School, and \$338.10 for books and papers. The total number of additions to the churches resulting from the work carried on in connection with the convention was 8,868, of which 3,000 were among the Freedmen. Bequests amounting to \$10,500 had been made to the convention during the year. The sums reported as raised and disbursed in all the States and Territories were represented to be seventy per cent. larger than the best collections of former years. A proposition was made to abolish the Bible School at Louisville, Ky., established for the education of colored preachers, with a view, as the mover suggested, of promoting the education of white and colored students at the same schools. The convention decided that no change should be made. The convention was offered a tract of land in Missouri, represented to be worth \$200,000, for the benefit of this school. Pledges were also made in the convention to the amount of about \$4,000, for the Bible School and for missions among the Freedmen in the South. The year 1873 marked the completion of the first quarter of a century of the existence of the convention. In connection with this fact a committee was appointed to make arrangements to have the Disciples of Christ appropriately represented in the Centennial Exhibition to be held at Philadelphia in 1876. It was decided that this representation should embrace a history of the Disciples' movements; statistics of the schools, colleges, educational associations, and missionary societies organized among the Disciples, of the number of members in their churches, value of church property, and other matters of interest relating to the society; the gratuitous distribution of tracts specially prepared to set forth the views of the Disciples; selections from books by representative authors; books, complete sets of the periodicals and catalogues of the colleges of the connection; and documents relating to its Sunday-school enterprises. It was decided to establish a foreign mission, if possible, during the ensuing year. A report was made of Sunday-schools, which showed the number of such

schools to be 2,453; number of teachers and officers, 27,173; number of scholars, 284,470. A general Sunday-school agent is to be appointed.

The annual general meeting of the Churches of the Disciples of Christ in England, Scotland, Ireland, and Wales, was held at Wigan, August 12th. One hundred and ten churches were represented, of which seventy were in England, twenty-three in Scotland, one was in Ireland, and ten were in Wales. The number of members reported was 4,025; showing an increase from the previous year of 224. The receipts on the account of the work of the Assembly were £930 4s. 8d., and exceeded the receipts of any former year by about £200. Five Evangelists had been sustained during the whole year, and five others during parts of the year, at an expense of £937 4s. 1½d.

The annual Evangelistic Conference of the churches meeting in Scotland was held at Dundee, July 28th. The receipts for the support of the work during the year had been £177 6s. 1d., or double the receipts of the previous year; the expenditures had been £167 9s. 5d. Two preachers had been employed during the whole year. This meeting was regarded as held merely for the purpose of arranging the work of a large district, and not in opposition to the general meeting of representatives in England.

DIXON, JAMES, LL. D., a prominent political leader and United States Senator from Connecticut, born in Enfield, Conn., August 5, 1814; died in Hartford, March 27, 1878. He was a son of Judge William Dixon, and was fitted for college under his father's supervision. He graduated from Williams College with high honors in 1834, and immediately commenced the study of law in his father's office. He was admitted to the bar in 1836, and the next year was elected to the Legislature. In 1837, he removed to Hartford, where soon after he formed a partnership with William W. Ellsworth, subsequently M. C., Governor, and Judge of the Supreme Court, and rose rapidly in his profession. He was again a member of the Legislature in 1838 and 1844, and in 1845 was elected to Congress. In 1847 he was again elected, and on the expiration of his second term was chosen State Senator. He was again elected a State Senator in 1854. Meantime he had after his return from Congress engaged actively in life insurance, and was for several years President of the Hartford Life and Health Insurance Company. He was, by the Legislature of 1856, elected United States Senator, and in 1862 was reelected, his second term ending in 1869. He was sent to Congress in 1845-'49, as a Whig, and elected to the Senate, both terms, as a Republican, but in 1867-'68 he espoused the cause of President Johnson, and with him left the Republicans, and at the close of his second term he retired forever from political life. During his sixteen years of congressional

life, Mr. Dixon won a high reputation as a ready and eloquent debater, an industrious and laborious working member, and a gentleman of elegant culture and refined tastes. Had he chosen to devote himself to literature instead of politics, he might have won distinction in that field, for he was an elegant and classical writer, and a poet of more than ordinary ability. His elegant residence in Hartford was greatly frequented by distin-

guished authors and scholars of both sexes. We believe that neither his orations nor his poems have been collected, though well worthy of collection; but several of his fugitive poems, which attracted much attention when first published, are preserved in Everett's "Poets of Connecticut." He received the honorary degree of LL. D. from Trinity College.

DOMINION OF CANADA. (See GREAT BRITAIN, POSSESSIONS OF.)

E

EARLY, Right Rev. JOHN, D. D., the oldest surviving Bishop of the Methodist Episcopal Church, South, born in Virginia, in 1785; died at Lynchburg, Va., November 5, 1878. He joined the Virginia Methodist Conference in the great revival of 1801-'2, and became an itinerant minister about 1807. He soon attracted attention by his fervor and eloquence, and was specially successful in conducting religious exercises in a revival. He successfully filled the offices of secretary of the conference and presiding elder, and was repeatedly a delegate to the Quadrennial General Conference. After the disruption in 1844, in which he had actively participated, he was chosen, at the Conference of 1848, book-agent of the Southern Methodist Book-Concern, and held that office for eight years. In 1854, though sixty-nine years of age, he was elected bishop, and had served his church with great zeal and fidelity for nineteen years. Bishop Early, though a vigorous writer, was not fond of appearing in print. His only published remains, so far as we are aware, are a few sermons, addresses, and occasional pamphlets, some of them relating to the disruption controversy.

ECUADOR (REPÚBLICA DEL ECUADOR), an independent state of South America, so named from its situation under the equinoctial line. It lies between latitude 1° 50' north and 5° 30' south, and longitude 59° 52' and 80° 35' west; and is bounded north by the United States of Colombia and Brazil, east by Brazil, south by Peru, and west by the Pacific Ocean.

The Ecuadorians assert their right to the province of Mainas, south of the river Marañon; but most geographers agree in assigning that river as forming the greater portion of the southern boundary, adopting for the northern a right line drawn from the northernmost mouth of the river Mira east by south to the Caquetá or Japurá, some 80 miles below the confluence of the Mesai, the Caquetá forming itself the remainder of the boundary to longitude 66° 52' west. The extreme length of the republic would then be about 740 miles from east to west, and the greatest breadth 320 miles from north to south.

The area, according to the best estimates, is about 252,000 square miles, which, with that

of the Galápagos Islands, 2,951, makes a total area of 254,951 square miles.

The territory of the republic is divided into 13 provinces, which, with their respective capitals, are as follows:

PROVINCES.	Capitals.
Azuay	Cuenca.
Chimborazo	Riobamba.
Esmeraldas	Esmeraldas.
Galápagos	Albemarle.
Guayas	Guayaquil.
Imbabura	Ibarra.
Leon	Latacunga.
Loja	Loja.
Los Rios	Los Rios.
Manabi	Portoviejo.
Oriente	Archidona.
Pichincha	Quito.
Tunguragua	Ambato.

According to the census of 1854 (since which year no reliable census has been taken), the population was 1,065,500, to which may be added 546,601 for the increase during 19 years, at the mean annual rate of 2 $\frac{1}{2}$ per cent. as computed by Dr. Villavicencio, and 200,000 savages inhabiting the province of Oriente; making a total population of 1,812,101 at the end of 1873.

The chief towns are: Quito, the capital of the republic (population, about 70,000); Cuenca (32,000); Guayaquil (26,000); and Riobamba (20,000).

The inhabitants may be distinguished into six classes: whites, Indians, cholos or mestizos (from the union of the first two races), negroes, mulattoes (springing from whites and negroes), and zambos (from Indians and negroes). There are probably not more than 800,000 whites in the whole country, and these are for the most part descendants of the early Spanish settlers.

The President of the republic is Dr. García Moreno; Minister of the Interior and of Foreign Affairs, and Vice-President of the republic (by the terms of the Constitution of 1869), F. Leon; Minister of Finances, F. J. Equigüen; and Minister of War and Marine, General S. Dequea. The Governor of Guayaquil is N. de Santiestéban.

The Archbishop of Quito is Dr. T. I. Checa; and there are the following bishops: Cuenca, T. R. Toral; Riobamba, I. Ordóñez; Guayaquil, — Lizarzáburea; Manabi, L. de Tola; and Loja, Archbishop J. M. Riofrio (*pro tem.*).

The army is composed of about 1,500 men.

The staple articles of export are cacao, Peruvian bark, copper, India-rubber, dye-stuffs, jipijapa (commonly, but improperly, called Panama) hats, nuts, pearl-shell, sarsaparilla, coffee, cotton, tobacco, wool, vegetable ivory, etc. The chief imports are cotton, linen, woolen, and silk fabrics, hardware, machinery, agricultural and other implements, cordage and cables, etc.

In the year 1872 there were shipped from the port of Guayaquil 181,073 quintals of cacao, the total crop of which commodity was 187,238 quintals; 22,851 of India-rubber; 58,451 of pearl-shell; 22,581 of vegetable ivory; 6,600 of coffee; and 39,728 pounds of sarsaparilla.

Although the foregoing statement has been copied from an official report, it is evidently inaccurate in the quantity of India-rubber said to have been shipped, for 56,946 quintals were shipped to the United States alone in the course of the year alluded to.

It may be proper to remark here that the India-rubber from Ecuador *via* Panama and Aspinwall, and which is known in the United States as Central-American India-rubber, now figures in the first line as regards the quantity imported into the latter country; and yet in 1870 the amount received was but 27,612 quintals; in 1871 it had increased to 34,032 quintals; which, compared with the figures given above for 1872, will show a regular annual augmentation of 10,500 quintals, on the average.

The coffee of Ecuador is of good quality, and will, it is hoped, be imported before long in large quantities into the United States.

The following table shows the exports to Great Britain in the five years from 1868 to 1872 inclusive:

YEARS.	Amount.
1868	\$510,505*
1869	1,000,320
1870	692,055
1871	1,398,830
1872	1,210,200
Total.....	\$4,810,910

The imports from the same country during the same years are exhibited in the subjoined table:

YEARS.	Amount.
1868	\$144,200
1869	275,550
1870	285,040
1871	305,835
1872	411,410
Total.....	\$1,422,045

From the foregoing table of exports to Great Britain, it is evident that so far a large proportion of the products of the republic are sent to that country. Indeed, the present condition of British trade with Ecuador compares favorably with that of former years; and, if there has been no very marked increase, there has at least been no falling off.

* The Ecuadorian peso, or dollar, is equivalent to seventy-seven cents of the United States.

British manufactures are imported direct by five different lines of steamers, making an average of fifteen packets per month in the port of Guayaquil. Besides these, the port is likewise visited by a number of sailing-vessels.

The value of the metals exported in 1870 amounted to \$1,185,467. No official returns have as yet been made of the total commerce of the republic for the year 1873.

We annex a table of the shipping movements at the port of Guayaquil, for the year 1870:

NUMBER.	FLAG.	Tons.
72.....	British.....	42,094
18.....	German.....	5,156
10.....	French.....	3,746
11.....	Central American.....	1,881
6.....	Indian.....	899
3.....	Cuban.....	817
4.....	Peruvian.....	535
1.....	Spanish.....	242
125.....		55,310

The furs and more costly European merchandise are usually brought in steamers; the cheaper goods, and those most liable to breakage, being sent in sailing-vessels; and direct imports by these are almost entirely in British and German bottoms.

The greater part of the passengers and cargoes between Ecuador and the other South American republics is carried by the British steamers of the Pacific Steam Navigation Company. There is also a French company, the "Compagnie Générale Transatlantique," whose steamers call at Guayaquil twice monthly, on their way from Panama to Valparaiso, and *vice versa*.

The high duties upon imports in foreign bottoms render it impossible for vessels of other nationalities to compete with the French flag in carrying South American produce generally into the various ports of France.

The onerous dues of 4 reals per ton register, formerly levied on vessels entering ports of the republic, have been abolished. Sailing-vessels, however, still pay 6½ cents per ton register for each light in the ports; steamers pay but one-half that rate. Vessels touching at Manta Bay, where a light-house has been constructed, have to pay light-dues of 6½ cents per ton register.

In Guayaquil there are now two light-houses, one on the Island of Santa Clara, and the other on Punta Mandinga, on the Island of Puná. Two others are projected, one of which, for Punta Arenas, was to have been built in 1873.

The national income is mainly derived from the customs receipts, which amounted to \$708,991 in 1868; they reached \$829,126 in 1869; \$1,271,539 in 1870; \$1,271,439 in 1871; and have since been steadily increasing from year to year, with the increased facilities for internal communication, and a larger number of steamers calling at the different ports.

The net income of the republic in 1870. was as follows:

SOURCES.	Amounts.
Customs receipts.....	\$1,081,486
Tobacco-tax.....	14,316
Spirit-tax.....	95,604
Salt monopoly.....	198,425
Powder monopoly.....	14,853
Paper-stamps.....	88,985
Income-tax.....	49,211

The expenditure rarely falls short of \$2,000,000. The foreign debt amounted, in 1865, to \$9,890,554; and the home debt to \$3,692,955. The Bank of Ecuador paid 12 per cent. on the paid capital; the Hypothecary Bank, 10 per cent.; the Guayas Steam Navigation Company, 12 per cent.; and the Gas Company, 12 per cent.

In reply to certain observations of a Colombian journal, concerning the dissatisfaction of British bondholders with the Government of Ecuador, for its unwillingness to meet its obligations, *El Nacional*, of Quito, in an article under date of March 19th, explained the prolonged insolvency of the republic on the grounds that "Ecuador, like Colombia, has, owing to inadequacy of the national revenue to meet the current expenses of the Government, been obliged to suspend the payment of even the interest on the national debt."

It may not, however, be improper to state that, in view of the energy and disinterestedness of President Moreno, it is confidently believed that, as soon as the pressing causes shall have ceased which rendered it necessary to suspend the application of the fourth part of the customs receipts upon the payment of the debt, an equitable arrangement will be made for the satisfactory settlement of the claims. It is true, to accomplish that, innumerable difficulties must be overcome, and immense sacrifices submitted to. In effect, notwithstanding that, from 1855 to 1869, more than \$2,000,000 were paid to the foreign creditors, the original debt (\$7,000,000, at 6 per cent.), far from being reduced, has increased by upward of \$1,000,000; for the 2½ per cent. of the customs receipts appropriated in favor of the creditors was not sufficient to cover the constantly-growing interest.

It was announced in the official journal of Quito, March 12th, that by order of the Government the eighth dividend of the North American debt, say \$10,333.28, was paid to the United States consul by the Secretary of the Treasury.

Mr. Charles Weile, a citizen of the United States, petitioned the Government of Ecuador for an exclusive privilege to extract India-rubber, for a term of three years, from the forests of a certain territory comprised between the river Pescadillo on the south, the province of Esmeraldas on the north, the river Bulzar on the east, and the Cordillera of the Mono on the west. The contract, for

which he offered \$1,000 per annum, was to be put up at auction, and given to the highest bidder.

The highways of the republic still continue to command a large share of attention. The carriage-road from Guayaquil to Quito is prosecuted with energy; and it has been determined to build a railway on the portion reaching from Sibamba to Pueblo Nuevo, a distance of 28 miles. Mr. H. G. McClellan was sent to the United States to study the narrow-gauge system of railways, purchase the necessary materials, and engage an assistant engineer and other employes required for the work.

In November, 14 miles of the Iguaque Railway had been graded; and the works, on which 380 hands were employed, were progressing satisfactorily.

A Mr. F. de la Quadra, having received a steamer from the United States, offered to place it on the river to ply between Babahoyo and Savaneta. It was to carry the national flag, run from ten to twelve miles an hour, and take the mails. The only condition upon which the realization of the project depends is that the Government shall have the river cleared of the trunks of trees, aquatic plants, etc., which would obstruct the passage of the boat. The work on the Esmeraldas road was far advanced; and it was fully expected that it would be entirely finished by the end of the year.

Much and remarkable progress has been made in the development of the natural resources of the republic in the course of the year; light-houses in the harbors, dredging-machines, public roads, and even railways, have been projected, one at least—between Guayaquil and Quito, or at all events a portion of the distance—having been decided upon. Nor has public education been forgotten by Dr. Moreno, the instigator of the improvements referred to; primary instruction especially is one of his favorite objects, and occupies much of his thought; and the Government manifests a laudable spirit of liberality in its appropriations for multiplying schools throughout the country. Some friends of the cause of education, however, in the neighboring republics, and particularly in Colombia, exclaim against Dr. Moreno for persisting in leaving the school system almost completely in the hands of the clergy. An association for mutual instruction was organized at Guayaquil toward the end of 1872.

In February, 1873, the Government ordered the payment of \$12,000 to the Bishop of Guayaquil, as a compensation for the trouble and expense he had been at consequent upon the erection of an orphan asylum, some free schools, etc., in that city.

Subscriptions for a statue of Bolivar had reached, in October, the sum of \$10,891; and the statue was in process of erection.

Copper money was decreed to be a legal tender throughout the republic.

The privilege granted to Messrs. Jones & Raymundo Peizer, for the sinking an artesian well, was annulled by the Government, they being at the same time confirmed in the possession of the privilege for supplying Guayaquil with pure water by a system of pipes.

By order of the Government, a day was set apart in December, 1872, for thanksgiving for the benefits received during the year, and prayer for the Roman Catholic Church. On that occasion the Bishop of Ibarra congratulated the President, whom he designated as defender of the faith and of the holy doctrines of Christ crucified.

The pupils placed, in 1872, under Mr. L. Rivera, for instruction in the cultivation of the indigo-plant at the expense of the Government, having finished their course of studies, were sent back to their respective provinces. The specimens of indigo manufactured by them were considered as very satisfactory.

In the month of February, 1873, extensive deposits of silver-ores near the city of Loja were discovered. The most important metaliferous specimens were sulphuret of silver in octahedral prisms of great brilliancy, and sulphuret of lead; a reddish-colored silver, with hexahedral prisms of a dull, dingy shade approaching to black; and bismuth, argentiferous lead, and sulphuret of copper. Varieties of coal, copper, and lead, also abound. An excellent mule-road leads from the mines to the sea-coast, the nearest port being at a distance of some 70 miles, and formed by the inlet of Yambelli to the southward of Guayaquil. Along the whole road from Loja, timber, water, and provisions, are plentiful, as is also the necessary fodder for animals. The climate is mild and salubrious. Laborers are paid at the rate of 80 cents per diem.

The journal *La Prensa*, published at Guayaquil, announced the discovery, in July last, of a quicksilver-mine in the vicinity of that city.

Two young ladies, examined in obstetrics, gave evidence of considerable proficiency in that art.

The 9th of August was appointed for the celebration of the sixty-fourth anniversary of the independence of Ecuador.

By a decree issued in the month of February, amnesty was extended to all Ecuadorians absent from their country for political causes, and permitting their return upon their written application to the Minister of the Interior for a passport.

A German scientist, Prof. Weiss, who, together with his countryman, Prof. Stübel, was occupied, by appointment of the Government, in studying the volcanoes of that region, succeeded, early in 1873, in ascending to the top of Cotopaxi, and viewing the immense crater of that giant of the equatorial Andes, then first seen by human eye. On his way thither he visited the ruins of an Inca palace full of interest, as are all the relics of Inca architecture, but now, after having withstood for more than

three centuries the destroying hands of time, earthquakes, and volcanoes, converted into a shelter for swine and other animals.

EGYPT, a country of Northeastern Africa, nominally a pashalik of the Turkish Empire, but virtually an independent state since 1811. The ruler of Egypt, who has the name of Khedive, is Ismail Pasha, born at Cairo in 1830, second son of Ibrahim, the son of Mehemet Ali, succeeded to the government at the death of his uncle, Said Pasha, January 18, 1863; heir-apparent is the eldest son of the Khedive, Mehemet Tefwick. The territories under the rule of the Khedive are estimated at 659,100 square miles; the Egyptian statistician De Regny (in his work, "Statistique de l'Égypte d'après des Documents officiels," vol. iii., 1872) claims 927,000 square miles. Since then Sir Samuel Baker has proclaimed the annexation of a large portion of Central Africa, extending to the southward as far as the equator, to the dominions of the Khedive. For the present the Egyptian rule in these new dominions is entirely nominal. But, if it becomes permanent, as is likely to be the case, since Egypt is without a rival in these regions, the area of the Egyptian Empire would by far exceed 1,000,000 square miles. At all events, it appears to be highly probable that Egypt may become more and more preëminent among the native states of Africa. The population of Egypt proper is given by Regny as 5,203,405 in 1871; that of the entire Egyptian Empire is estimated at about 8,000,000. The revenue of Egypt for the financial year, ending September 10, 1874, was calculated in the official budget estimates (published in the newspaper *l'Égypte*, of October 3, 1873) at 1,982,394 purses (1 purse = \$25.79), the expenditures at 1,763,128; the surplus at 219,166. Accounts of the actual receipts and disbursements have not yet been published by the Government. The chief source of revenue, according to the budget estimates, was from a land-tax (810,000 purses). The expenditures embrace 188,635 purses as the amount of the yearly tribute to the Porte; the civil list of the Khedive is 60,000 purses; the appanage of the heir-apparent 6,000. The public debt in 1873 amounted to £44,204,000, of which £19,149,000 was consolidated, and £25,055,000 floating debt. The consolidated private debt of the Khedive was, in 1873, £8,910,000; and his floating debt was estimated by the *Economist* at £6,518,000.

The strength of the Egyptian army, which is raised by conscription, is about 14,000 men, 8,000 infantry, 3,000 cavalry, artillery, and engineers, and 3,000 negro troops.

The imports of Egypt were, in 1871, valued at 560,000,000 piasters (1 piaster = 5 cents); the exports at 999,000,000 piasters; 240,000,000 of the imports and 751,000,000 of the exports belonged to the trade with Great Britain. The chief articles of export are cotton (2,040,000 cwt., valued at 624,000,000 piasters),

cotton-seed (98,000,000 piasters), wheat (56,000,000 piasters), beans (73,000,000 piasters), sugar (380,000 cwt., valued at 37,000,000 piasters.)

The commerce of Egypt continues to derive great advantages from the construction of the Suez Canal, connecting the Mediterranean with the Red Sea, opened for navigation November 17, 1869. The income of the company was, in 1871, 13,276,000 francs; in 1872, 18,325,000; during the first nine months of the year 1873, 17,900,000. The expenditures were in 1871, 15,918,000, in 1872, 16,253,000. The number of vessels passing through the canal from 1870 to 1872 was as follows:

YEAR.	Vessels.	Tons.
1870.....	496	485,911
1871.....	765	761,467
1872.....	1,032	1,439,169

The following exhibits the nationality, number, and tonnage of the vessels passing through the Suez Canal in the year 1871:

NATIONALITY.	VESSELS.	
	Number.	Tonnage.
English.....	761	1,059,926
French.....	80	162,621
Austrian.....	61	58,067
Italian.....	66	48,001
Turkish.....	33	32,697
Netherlandish.....	13	26,421
Russian.....	10	13,134
German.....	16	12,188
Portuguese.....	10	8,366
Egyptian.....	13	7,919
Spanish.....	6	7,769
Others.....	11	7,087

On January 1, 1872, the aggregate length of the railways which were in operation was 1,047 kilometres (1 kilometre=0.62 English mile). The telegraph-lines had an aggregate length of 6,297 kilometres, the telegraph-wires of 18,874.

A contract of marriage between the hereditary prince of Egypt and the daughter of El-hani Pasha was signed on January 16, 1873, in the presence of the Khedive, the cabinet, the highest officials of the viceregal court, and the representatives of the foreign powers. Each consul received the present of a Cashmere shawl and a dromedary. On the 18th, there were races, and in the evening a grand ball was given. The Sultan of Turkey sent congratulations and honors to the Khedive and the members of his family.

The difficulty between Egypt and Abyssinia, concerning the occupation of the Bogos country by the Egyptians, appears to have been settled, the Abyssinians having during the year 1873 made no resistance to the organization of the country by Werner Munzinger, the Egyptian Governor of Suakin and Massowah. Munzinger wrote on November 26, 1872, on the Egyptian occupation of these border districts, to the *Geographische Mittheilungen* of Gotha, as follows: "The districts which we have taken, or mostly retaken, are Mensa, Bo-

gos, Takue, and Bedjuk, for Marea has been paying tribute to us for thirty years. The newly-acquired territory is of small extent, but of great importance, because its occupation secures peace and order in Habab, Samhar, Baroa, and Bazen. Since I have been established at Tantarua, a profound peace has prevailed along the whole border. Here (at Massowah) I am occupied with the construction of an aqueduct, which is now finished from Molullu to the sea."

Sir Samuel Baker safely returned from his expedition into the interior of Africa to Khar-toum, on June 29th. According to his reports, made to the Egyptian Government, the country as far south as the equator has been annexed to Egypt. The slave-trade has been suppressed, and all rebellious movements and secret intrigues checked. The country is orderly and its government perfectly organized. A road has been opened to Zanzibar, free from interruption. He won a victory on the 6th of May, with only one hundred and five men, over the army of the African chief Onioso. His mission, he claims, has been perfectly successful. Baker made Fatiko the capital of the new territory, and appointed officers in other places. The natives expressed themselves entirely satisfied with the new order of things, and punctually paid the tribute imposed upon them. Gondocoro will be the second capital; and eight other places will be made chief stations, and form an uninterrupted chain leading from Nubia to the Albert Nyanza.

In June the Sultan issued a *firman* granting to the Khedive independent civil, military, and diplomatic rights. The *firman* confirms all the rights conceded to the Khedive by former *firman*s, and regulates the appointment of a regency, in case the successor of the Khedive should not be of age. The Khedive is to pay hereafter to the Sultan a tribute of 150,000 purses annually.

Protestantism is gaining a foothold in Egypt, chiefly by the efforts of the American missionaries of the United Presbyterian Church. Their missions constitute the "Presbytery of Egypt," which transacts its business and keeps its records in the Arabic language. At the meeting of the presbytery, held in 1873, there were present, as members of the presbytery, eight ministers (six of whom were missionaries and two natives) and five native elders. The committee appointed to translate the Book of Discipline reported the translation of the three parts known as "Form of Government," "General Administration," and "Book of Discipline," at the same time suggesting that a copy of the translation in writing would be given to each congregation, to be corrected and returned at the next annual meeting. A call from the Cairo congregation, for a native Egyptian (Copt), Ibrahim Yusef, to become their pastor, was presented to him, and, after considerable deliberation, was accepted.

EUROPE. At the beginning of the year,

the republican principle appeared to gain another great victory, as the Spanish Cortes, on the abdication of King Amadeo, proclaimed the republican form of government. At the new general election, the immense majority of those who took part in the vote chose republican deputies, but actually the Government showed itself as weak as the administration of King Amadeo and Queen Isabella had been. The civil war assumed and retained larger dimensions than it had for a long time previous. Don Carlos placed himself at the head of the insurrection in his favor, and successfully defied the troops of the Government. In the south, the party of the Intransigentes, who, without waiting for the action of the Cortes, undertook to proclaim the autonomy of the several provinces, obtained a firm foothold in the fortress of Cartagena, where they maintained themselves until the end of the year. The weakness of the Government encouraged the schemes of monarchical statesmen and generals to conspire for the overthrow of the administration of President Castelar, and for the restoration of the monarchy. The execution of their plans was only delayed by a sudden difficulty arising between Spain and the United States, which for a time threatened to lead to a war between the two countries. The royalist conspirators believed it to be in their interest to allow Castelar to compromise the difficulty by some concessions, which then could be used against him. At the beginning of 1874, the plans of the conspirators were fully matured, and their leader, General Pavia, by a *coup d'état*, dissolved the Cortes by force, and formed a new government. (See SPAIN.)

In France, the monarchical majority of the National Assembly made an undignified attempt to restore the monarchy under Count de Chambord, the representative of the elder line of the Bourbons, which had been dethroned in 1830. The reconciliation of the house of Orleans with Count de Chambord, and thus the fusion of Orleanists and Legitimists was successfully accomplished; President Thiers, whose policy had gradually declared itself in favor of establishing a moderate republic, was induced to resign, and Marshal MacMahon, who fully approved of the schemes of the monarchical majority, and was willing to aid in their realization, was elected President of the Republic. Nothing but the obstinacy of Count de Chambord, who declined to make the least concession to the wishes of his adherents in the question of the flag and the constitution, prevented the restoration of the kingdom of France. The majority of the Assembly, under these circumstances, elected MacMahon President for a term of seven years, and, as the Republican party at the supplementary elections for the National Assembly began to display a remarkable increase of strength, toward the close of the year matured a scheme for the abolition of general suffrage.

The occupation of French territory by Ger-

man troops ceased sooner than had originally been expected, as France, on September 5th, paid the last installment of the war indemnification. The French Government began at once to give a prominent attention to strengthening the fortifications on the new frontier, and the hope of recovering Alsace and Lorraine on a favorable opportunity was openly expressed on all sides. The continuing excitement of the people against the Prussians led, in several instances, to the maltreatment of German subjects by the French populace. (See FRANCE.)

The new German Empire is involved in one of the fiercest conflicts between church and state which Europe has known for a long time. The Roman Catholic bishops of Prussia unanimously refused to submit to the new church laws of their country, and the Government proceeded against them by the imposition of heavy fines. An interesting correspondence on the subject took place between the Pope and the Emperor, which resulted in widening the breach. All the governments of Germany more or less sympathize in this struggle with the Government of Prussia, whose policy is also fully indorsed by the majority of the Prussian Diet and the German Reichstag. At the new elections for these two bodies, the Catholic party was eminently successful in the Catholic districts, and the number of deputies who will fully indorse the attitude of the bishops is now much greater than before; but, on the other hand, all the other parties are determined to resist the demands of the Catholic party. The Old Catholics have been generally recognized by the German Governments as still belonging to the Catholic state Church, and being entitled to a share in the property and rights of the Church. The bishop of the Old Catholics, Dr. Reinkens, was recognized as a "Catholic bishop" by the Governments of Prussia, Baden, and Hesse. The consolidation of the empire is making slow but steady progress, and the Governments of Bavaria and Wurtemberg have, in general, satisfied the wishes of those who desire to strengthen the central power. (See GERMANY.)

In Austria, a new electoral law has gone into operation, which by the Liberal party is looked upon as the beginning of a new political era. The members of the Reichsrath, henceforth, are to be directly chosen in special electoral districts, and no longer, as heretofore, by the provincial Diets. Thus, it is thought, it will be made impossible for the Federalists and other opponents of the liberal constitution of Austria to obstruct the progress of liberal legislation by means of the opposition of the provincial Diets. The Universal Exhibition of Vienna, in a financial point of view, did not realize the hopes which had been expressed with regard to it; it had, however, a very favorable influence upon the industry, commerce, and agriculture of the empire. (See AUSTRIA.)

Switzerland was chiefly engaged in discussions concerning a new revision of the Federal Constitution, which has been prepared by the Federal Council, and will, in 1874, be again submitted to a vote of the entire people. Some concessions have been made to the champions of the cantonal rights, which it is hoped will secure its adoption by the popular vote. The strongest opposition to it will again come from the Catholic party, which regards it as an even greater encroachment upon the rights of the Church than the present Federal Constitution. (*See SWITZERLAND.*)

The Government of Italy looked upon the attitude of the majority of the French National Assembly, which appear to encourage the hopes of the Pope for a restoration of the temporal power, as dangerous to the unity of Italy. The King, therefore, endeavored to strengthen his alliance with Germany, and to that end paid a visit to Berlin, where he was enthusiastically received. (*See ITALY.*)

In England, the position of Gladstone has been greatly strengthened by the return to the cabinet of Mr. Bright, who has again secured to the ministry the support of the advanced Liberals. As the Catholic bishops of Ireland can now no longer expect so many concessions from the ministry as in the past, they have begun to ally themselves with the Home-rule party, which demands the restoration of an Irish Parliament (*see GREAT BRITAIN*). The treaty concluded with the Netherlands in 1871, by which the Dutch possessions on the coast of Guinea, in Western Africa, were ceded to England, led to a war of England with the Ashantees, which bids fair to become both very bloody and expensive (*see ASHANTEES*). The other party to this treaty (Holland) became likewise, in consequence of the treaty, involved in a war with the Sultan of Acheen in Sumatra. The first expedition of the Dutch, undertaken in April, proved to be an entire failure; but the second, begun in the latter part of the year, promised to be entirely successful. (*See ACHEEN.*)

A new campaign of the Russians in Central Asia, against the Khan of Khiva, was a brilliant success. The people of Central Asia have again been taught that they are utterly unable to resist the Russians and to arrest the extension of the Russian territory. The whole of what was formerly Independent Toorkistan has now virtually become a dependency of Russia. (*See RUSSIA, KHIVA.*)

In the Scandinavian kingdoms a great change is taking place, as far as their relations to Germany are concerned. The new King of Sweden is decidedly favorable to the establishment of the most friendly relations, and even the royal family of Denmark appears to be inclined the same way. These sentiments are shared by a large and rapidly-growing party in all the Scandinavian kingdoms. (*See DENMARK, SWEDEN.*)

In Turkey, the Government is endeavoring

to carry through an important reform by the sale of the property of the Church, and has thereby provoked the fanatical opposition of the Mohammedan priests. Though the Government is well disposed in favor of religious toleration, it could not prevent a new persecution of the Christians in Bosnia, which led to a diplomatic interference of Austria in their behalf. (*See TURKEY.*)

The population of Europe, at the close of the year 1873, was estimated at 301,281,000 against 301,700,000 in 1872. The decrease is caused by the reduction in the population of France, as shown by the census of 1872. The following table exhibits the area and population of the countries of Europe at the close of the year 1873:

COUNTRIES.	Square Miles.	Inhabitants.
Russia.....	1,924,897	69,364,541
Finland.....	142,538	1,809,657
Germany.....	208,739	41,060,695
France.....	204,091	36,102,921
Austria.....	240,954	35,904,485
Liechtenstein.....	68	8,320
Great Britain and Ireland....	121,607	32,131,488
Malta, Gibraltar, and Helgo- land.....	144	162,525
Italy.....	114,295	26,801,154
San Marino.....	23	7,303
Monaco.....	6	2,127
Spain (inclusive of Balearic and Canary Islands).....	195,774	16,885,506
Andorra.....	144	12,000
Turkey.....	142,957	9,800,000
Roumania.....	46,710	4,500,000
Servia.....	16,817	1,825,437
Montenegro.....	1,701	120,000
Sweden.....	171,761	4,250,402
Norway.....	125,280	1,768,000
Belgium.....	11,373	5,067,105
Portugal (inclusive of Azores and Madeira).....	85,813	4,867,882
Netherlands.....	12,680	3,674,402
Luxemburg.....	999	197,528
Switzerland.....	15,992	2,669,147
Denmark.....	14,738	1,784,741
Faeröe and Iceland.....	40,268	79,755
Greece.....	19,358	1,457,894
Total.....	3,806,051	301,281,000

The number of Catholics is estimated at 147,500,000, 49.1 per cent. of the total population; the number of Protestants at 71,760,000, or 23.9 per cent.; the number of Greek Catholics at 69,350,000, or 23.1 per cent.; the number of Jews at 5,000,000; the number of Mohammedans at 6,400,000. Included in the number of the Catholics are about 100,000 Old Catholics.

The area and population of the foreign colonies of European states were estimated, at the close of 1873, as follows:

COUNTRIES.	Area.	Inhabitants.
Great Britain.....	7,955,892	202,130,000
Turkey.....	1,733,316	24,736,000
Netherlands.....	675,069	22,832,000
Russia.....	5,912,039	10,960,000
Spain.....	117,210	6,420,000
France.....	457,606	5,733,000
Portugal.....	739,871	3,873,000
Denmark.....	46,892	47,696
Sweden.....	9	2,900
Total.....	17,727,904	276,808,300

EVANGELICAL ALLIANCE. This is the name of an association of Christians belonging to those Protestant denominations which collectively are called Evangelical, and having for its object to represent the unity of all Evangelical denominations of the globe in the essential articles of faith, and to promote their co-operation for common aims. The Alliance originated in England in 1845, and has thus far held six General Conferences, attended by delegates from all the important Christian countries. The first of these conferences was held at London, from August 19 to September 2, 1846; the second in Paris, in 1855, on occasion of the World's Exhibition; the third in Berlin, in 1857; the fourth in Geneva, in 1860; the fifth in Amsterdam, in 1867; the sixth in New York, in October, 1873.

The meeting of a General Conference of the Alliance in New York was first moved at the fifth General Conference, in Amsterdam, where the Rev. Dr. Prime, of New York, after reading a luminous report on the state of religion in the United States, prepared by the Rev. H. B. Smith, D. D., of the Union Theological Seminary, New York, and chairman of the executive committee of the American branch of the Alliance, made the following communication: "Brethren of the Alliance—I am charged, in the name of the American branch of the Alliance, to invite you to hold your next General Conference of Christians of all nations in the city of New York, assuring you a hospitable welcome in the name of Jesus Christ our Lord." The announcement was enthusiastically received and acknowledged, and then referred for consideration to the different European branches of the Alliance, with a view to its being accepted. That acceptance having been universally accorded, the preparations for convening the Conference were begun by the American branch, of which W. E. Dodge was president.

After having been several times postponed by circumstances unforeseen, the sixth General Conference opened at New York on October 2d. The number of delegates, both American and foreign, was very large. Great Britain, Germany, France, Switzerland, Holland, Belgium, Spain, and Italy, were all represented, and from British India the Rev. Narayan Sheshadri, of Bombay, attended, a converted Brahmin, who naturally attracted the special attention of the General Conference. After an address from William E. Dodge, the president of the American branch of the Alliance, Dr. Woolsey, ex-President of Yale College, was chosen permanent president of the Conference. Mayor Havemeyer, of New York, Lord Alfred Churchill, and a number of other prominent persons, were made vice-presidents. The Rev. S. Irenæus Prime was elected secretary, with a number of assistant general and recording secretaries.

The opening of the General Conference, on October 2d, had been preceded, on the evening

of October 2d, by a social evening reception at the hall of the Young Men's Christian Association. An address of welcome was made by the Rev. Dr. W. Adams, after which Lord Alfred Churchill read a greeting of the Council of the London organization of the Evangelical Alliance. Replies to the welcome were then made by the Rev. Dr. Houghton, of London; the Rev. Dr. Fisch, of Paris; the Rev. Dr. Coulin, of Geneva; Dr. Dorner, of Berlin; Dr. Christlieb, of Bonn; Dr. M. Cohen Stuart, of Rotterdam; the Rev. Narayan Sheshadri, of Bombay; and Charles Reed, M. P., of London.

The programme of the first day consisted of reports on the present state of religion in various parts of Christendom. The subjects of these reports, which embrace a vast amount of interesting information on the religious condition of Europe, were as follows: "Evangelical Theology in Germany," by Prof. Tholuck, of Halle (who was not present, and whose essay was read by Dr. Witte, of Cœthen); "Religion in Italy," by the Rev. Matteo Prochet, of Genoa; "Religious Condition of Holland," by the Rev. M. Cohen Stuart, of Rotterdam; "Protestant Germany," by the Rev. H. Krummacher, of Brandenburg, Germany; "Religion in Switzerland," by the Rev. Eugene Reichel, of Montmireil; "Evangelization of Spain," by Rev. F. Fliedner, of Madrid; "Religious Progress in Greece," by Mr. Kalopathakes, of Athens; "State of Religion in Belgium," by Rev. Leonard Anet, of Brussels; "Protestantism in France," by the Rev. A. Decoppet, of Paris; "Protestant Relations between America and Europe," by the Rev. John Stoughton, D. D., of London; and "State of Religion in Scandinavia," by Dr. Kalkar, of Copenhagen. Addresses bearing on this subject were also made by Lord Alfred Churchill, the Rev. J. S. Russell, secretary of the British Alliance, and the Very Rev. Dr. R. Payne Smith, Dean of Canterbury. The latter also read the following letter from the Archbishop of Canterbury, expressing his belief in the success of the Alliance and hearty sympathy with its object:

ADDINGTON PARK, CROYDON, August, 1873.

MY DEAR DEAN: I cannot allow the dean of my cathedral to go to America to attend a General Conference of Christians of all countries without expressing my good wishes and earnest hope that his efforts to promote unity in Christ's Church may be blessed.

In 1870 (before the proposed Conference was postponed, owing to the unhappy war between two great Christian nations) I wrote a letter to the late lamented Bishop Mellvaine, which he kindly undertook to present to the Conference. I hope that you will on the present occasion be the bearer of my good wishes in the place of one whose loss has been felt by Christian men wherever the English language is spoken.

You are aware that I have never been a member of the Evangelical Alliance, under the auspices of which the Conference is to be convened. But it is not possible for me to hold the position which God has assigned to me in that Church which has generally been regarded as the bulwark of the Reformation without praying for God's blessing on all earnest efforts to spread the great Gospel doctrines

which the Reformation vindicated. Never since the Reformation has it been more important that Christian men should learn to understand and cooperate with one another, and that they should, by the manifestation of their union in faith and good works, offer an effectual opposition to the growing progress of superstition and infidelity. And never has this union been more earnestly longed for than in the present day.

I trust that the Holy Spirit of God may guide all who take part in your discussions at New York, and that the solution of the great social and religious questions which you propose to treat may be advanced by the mutual intercourse of minds accustomed, many of them, to regard these questions in different aspects, according to the peculiarities of their several countries.

That God may hasten the time when the differences which at present tend too much to keep Christians asunder may be removed, and when all who love the Lord Jesus Christ sincerely may be able, without compromise of principle, to unite both outwardly and in spirit, is my heart's prayer. Believe me to be, my dear dean,

Yours very sincerely, A. C. CANTUAR.
The Very Rev. the Dean of Canterbury.

As the High-Church party in the Anglican Church of Great Britain and the United States declared an active participation in the Alliance as incompatible with the principles of the Anglican Church, this letter of the first bishop of the Anglican communion is one of considerable importance.

Dr. Schaff, who has lately visited Europe, and had there an interview with the Emperor of Germany, made the following statement regarding the Emperor's views of the Evangelical Alliance:

At the interview with the venerable hero Emperor of Germany, to which the president has just alluded, his Majesty charged and authorized me to bring to this assembly his most cordial greeting and good wishes. His words were accompanied with a hearty pressure of the hand. He, moreover, wished me to assure this General Conference of the Evangelical Alliance of his full sympathy with its principles and Evangelical union efforts. He said that he sustained precisely the same relation to the Evangelical Alliance which his brother publicly expressed when he received the General Conference at his palace of Sans-Souci, in Potsdam, in 1857. There Frederick William of Prussia appeared for the last time in public life, and gave the most noble testimony in favor of Christian truth and Evangelical union. The Emperor added that he considered the labors of the Evangelical Alliance and the convening of the General Conference all the more important at this time by reason of the growing power of infidelity on the one hand and superstition on the other. Then, talking like an old soldier, he added, "Only a united army may expect to conquer, and to enjoy the fruits of victory." In laboring for union we act in harmony with the last prayer of our Lord before he offered himself as a sacrifice for the whole world.

The subject of the papers offered at the second day's session was "Christian union," the papers laying down the fundamental principles of the Alliance, and the basis upon which it was formed. Among these papers were the following: "Union by Faith," by Prof. Charles Hodge, of the Princeton Theological Seminary; "Communion of Saints," by President Eliphalet Nott Potter, of Union College, N. Y.; "Christian Unity," by Rev. Geo.

R. Crooks, of New York; "Unity consistent with Diversity," by the Very Rev. R. Payne Smith, Dean of Canterbury; "Fellowship of Christian Souls," by the Rev. C. Dallas Marston, of London; an "Historical Sketch of the Alliance," by the Rev. James Davis, secretary to the British Alliance; "Spiritual and not Organic Union," by the Right Rev. Gregory T. Bedell, Bishop of Ohio; the "Evangelical Alliance in France," by the Rev. Emile F. Cook, of Paris; "Objects of the Alliance," by the Rev. W. Noël, of Berlin; "Interchange of Pulpits," by the Rev. F. W. Conrad, of Philadelphia; "Testamentary Address to the New York Conference," by the late Merle d'Aubigné, of Geneva; "Protestantism in Canada," by the Rev. Dr. H. Wilkes, of Montreal; "How to preach," by the Rev. H. W. Beecher; "Addresses on Sunday-Schools," by Charles Reed, M. P., Rev. Nathaniel Weiss, of Paris, and Rev. J. H. Vincent, D. D., of New York.

The Sunday following was given up to sermons and addresses in the city churches from foreign clergymen.

The next day a series of papers was read upon the general topic, "Christianity and its Antagonisms," in which the most conspicuous forms of modern skepticism and doubt, metaphysical, materialistic, and rationalistic, were discussed, and their arguments controverted. Among the essays of this day were the following: Prof. Hanley Leathes, King's College, London, on "Counteracting Unbelief;" Prof. John Cairns, D. D., of Berwick, England, on "Modern Infidelity;" Rev. Wm. T. Warren, president of the University of Boston, on "Phases of American Infidelity;" Rev. E. A. Washburn, of New York, on "Reason and Faith;" Prof. Felix Boret, of Neuchâtel, Switzerland, on "Gospel and Christianity;" Rev. Dr. James McCosh, president of Princeton College, on the "Development Theory;" Principal Dawson, McGill College, Montreal, on "Primitive Man and Revelation;" Prof. Arnold Henry Guyot, of the College of New Jersey, on "Geology and the Bible;" President J. Williamson Nevin, Lancaster, Pa., on "Christianity and Humanity."

Tuesday was devoted by the Conference to a discussion of the general topic, "Christian Life," in the course of which President Porter read an essay on "Modern Literature in its Relation to Christianity;" and the Rev. Dr. Parker, of London, and the Rev. H. W. Beecher, made characteristic addresses (the former a written production, the latter extemporaneous), on the "Pulpit of the Age."

On Wednesday, "Protestantism and Romanism" was made the subject of discussion, in the course of which the letter of the Old Catholic Bishop Reinkens, and the president and vice-presidents of the Old Catholic Congress of Constance, was brought out, showing the relation of that movement to Protestantism on the one hand, and the Catholic Church on the other. The papers of this day embrace

a "History of the Old Catholic Movement," by Prof. Kraft, of Bonn; "Essays on Papal Infallibility," by Prof. Dorner, of Berlin, and Prof. Hitchcock, of New York; and an essay on "Protestantism, Romanism, and Modern Civilization," by Prof. Fisher, of Yale College.

Thursday's topic was "Christianity and Civil Government," the notable papers being that by President Woolsey on "Constitution and Government in the United States as related to Religion," which in an exhaustive manner treated of the dependence of religion in this country upon the States; and that by President Curry, of the Richmond University, upon the "Church and the Nation," which was so uncompromising in its arguments that its delivery was cut short by the chairman upon the ground that "If prolonged, it would leave long and abiding wounds."

On Friday, the topic was "Christian Missions." Dr. J. Angus, of Regent's Park College, England, spoke on "Churches and Missions," and the Rev. Dr. Rufus Anderson, of Boston, on "Missionary Fields." Other subjects discussed on this day were, "Lay Preaching," "Missions in Large Cities," and "Specific Missionary Fields."

The last day of the Conference, Saturday, was given to a discussion of the practical work of the Christian Church under the head of "Christianity and Local Reforms."

Before the adjournment, a resolution was adopted, that hereafter the American branch of the Evangelical Alliance hold biennial meetings.

EVANGELICAL ASSOCIATION. The thirty-fourth meeting of the Missionary Society of this Association was held at Cleveland, Ohio, October 18th. The treasurer reported the receipts to have been \$76,678.49, and the expenditures \$59,440.08. Eighteen thousand dollars had been received through bequests of money and land. The "Heathen Fund" in hand amounted to \$22,460.80. The society decided that this amount was sufficient

to justify the taking of preliminary steps to establish a mission to the heathen, and accordingly appointed a committee to deliberate in reference to the men who are to be sent, and the place at which the mission ought to be established.

The annual meeting of the Board of Publication was held at Cleveland, October 14th. The book-agent reported the property and assets of the publishing-house to be worth \$243,294.75. The total profits for the year were \$41,224.97.

The following are the statistics of the Evangelical Association for the year 1878:

CONFERENCES.	Itinerant Preachers.	Local Preachers.	Members.
East Pennsylvania.....	91	92	13,495
Central Pennsylvania.....	80	56	10,135
New York.....	34	9	3,691
Pittsburg.....	47	40	6,375
Kansas.....	25	12	1,423
Canada.....	32	12	3,727
Michigan.....	37	22	2,342
Illinois.....	73	73	8,171
Iowa.....	51	38	4,717
Wisconsin.....	54	26	8,088
Ohio.....	62	61	6,935
Minnesota.....	36	7	2,424
Indiana.....	46	30	5,909
Germany.....	26	3	4,783
California and Oregon.....	8		145
In 1873.....	691	486	83,195
Increase.....	680	463	81,090
	31	23	1,503

The number of churches is 1,091, the probable value of which is \$2,391,047; number of parsonages, 319; probable value of the same, \$3,881.80; number of Sunday-schools, 1,311½; of officers and teachers, 14,436; of scholars, 76,115.

The collections for religious and benevolent purposes were: Conference contributions, \$4,323.54; missionary collections, \$67,171.88; for Sunday-school purposes and the Tract Union, \$2,285.14.

F

FERRIS, ISAAC, D. D., LL. D., Chancellor Emeritus of the University of New York, a clergyman of the Reformed (late Dutch) Church, born in New York City, October 13, 1799; died at Roselle, a suburb of Elizabeth, N. J., June 16, 1873. He was very fond of study from a child, and entered Columbia College when but twelve years of age. He joined the military company raised among students in the War of 1812, and with it did duty in the forts around New York Harbor. His college course was delayed one year by this, but he graduated in 1816 with the highest honors of his class. After the completion of his college course he commenced the study of theology, in the private theological school

of Rev. Dr. John M. Mason, the most eminent preacher of his time. He was fond of athletic sports at this time, for which his large frame and great strength well fitted him. His first pastorate was at Morristown, N. J.; but in 1821 he was settled over a Reformed Church in New Brunswick, and in 1824 accepted the pastorate of the Middle Reformed (Dutch) Church in Albany, where he remained twelve years, collecting around him a host of warm friends. In 1836 he removed to New York City, to become the pastor of the Market Street Reformed (Dutch) Church, and there identified himself with all the charitable, educational, and religious associations of the Reformed Church in New York and in the country. He

was long connected with the Sunday-school Union as president of the city organization. He was one of the founders, and long Principal and chairman of the Board of Trustees of the Rutgers Female Institute (now Rutgers Female College), then in Henry Street, but now in Fifth Avenue, and subsequently was deeply interested in the Ferris Institute. In 1853 Dr. Ferris was prevailed upon to accept the chancellorship of the University of New York, then laboring under serious embarrassment from its heavy debts. He had a high reputation as an able administrator of educational institutions, and his services were sought primarily to complete the subscription for the payment of the debt and place it upon a sound financial basis, and secondarily to give that dignity and character to its course of instruction which his eminent scholarship could command. He was very successful in both undertakings. He collected about \$74,000, outside of the rentals and other receipts of the university, and thus relieved it from its financial embarrassments, and raised the standard of scholarship materially. Having accomplished these results, he retired from the chancellorship in 1870, but was immediately chosen Chancellor *Emeritus*, while his successor, Rev. Dr. Crosby, performed all the active duties of the position. Chancellor Ferris retired the same year to Roselle, near Elizabeth, N. J., where he continued to reside till his death. Dr. Ferris was a tall man, of very large frame, and great dignity of manner. He was a man of great benevolence and amiability. In his intercourse with his parishioners he was genial and sympathetic. He was eminent as a scholar, and bore a high reputation for integrity and ability. As a preacher he was logical rather than brilliant or original; still his sermons always held the attention of his hearers. He endeared himself to them more by his character. His venerable appearance and kindly manner first drew people toward him, and he was ready to labor with them in all good works. Though an able writer, Dr. Ferris was singularly averse to the publication of his productions. Aside from some occasional sermons, essays, and addresses, we have been unable to find any thing from his pen. He received the degree of D. D. from Union College in 1893, and that of LL. D., we believe, from Columbia College.

FINANCES OF THE UNITED STATES.

The general prosperity of the country was undiminished during the first three-quarters of the year 1873. The revenues of the Government were maintained, and the reduction of the debt continued during this period. But, on the 18th of September, the most extraordinary financial panic began which the country has ever experienced. It reached its extreme point about the middle of the ensuing month. In that short space, of less than thirty days, it prostrated thousands of commercial establishments, and cut off the wages of hundreds of

thousands of laborers. It overthrew the stock exchange and banking-houses, trust companies and manufactories. In one day it broke off the negotiation of American securities in the money-markets of Europe, and suspended the construction of all public works dependent upon such sale. It swept down the entire banking system of the country, and paralyzed the monetary circulation to a degree that carried distress to that vast mass of the people with whom credit for the necessities of life has little or no existence. Even the savings-banks closed their doors. The effect of this disturbance upon the national revenues was immediate. Instead of being able to continue the liquidation of the public debt, as heretofore, at the rate of one hundred million dollars annually, the Treasury Department could not prevent its increase in the same proportion, making a difference, in a single month, of eighteen million dollars.

In the annual report of the Secretary of the Treasury, made December, 1872, there was presented a statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1873, and an estimate of the same for the remaining three-quarters of the fiscal year. The receipts and expenditures of the first quarter above mentioned, ending on September 30, 1872, which is the first of the fiscal year ending June 30, 1873, were as follows:

Customs.....	\$57,739,540 27
Sales of public lands.....	797,894 57
Internal revenue.....	34,169,047 29
Tax on circulation, etc., of national banks.....	3,307,288 69
Repayment of interest by Pacific Railways.....	119,098 73
Customs fines, etc.....	108,787 30
Consular, patent, and other fees.....	479,306 08
Proceeds of Government property.....	336,801 88
Miscellaneous sources.....	1,346,287 47

Net ordinary receipts.....	\$98,388,897 16
Premium on sales of coin.....	2,426,736 91

Total receipts.....	\$100,815,134 07
Balance in Treasury, June 30, 1872, including \$1,014.48 received from "unavailable".....	106,565,371 42

Total available.....	\$207,380,505 49
----------------------	------------------

The expenditures, during the same quarter, were as follows:

Civil and miscellaneous expenses.....	\$18,299,891 28
Indians.....	8,037,343 58
Pensions.....	9,135,389 71
Military establishment.....	12,576,863 41
Naval establishment.....	7,305,146 48
Interest on the public debt, etc.....	36,196,894 88

Total, exclusive of the principal and premium on public debt.....	\$86,851,643 54
---	-----------------

For premium on purchased bonds.....	\$1,702,568 53
Net redemption of the public debt.....	16,992,188 73
	18,634,707 25

Total net expenditures.....	\$105,486,355 79
Balance in Treasury, Sept. 30, 1873..	101,894,149 70

\$207,380,505 49

For the remaining three-quarters of the same fiscal year, ending June 30, 1873, it was estimated that the receipts would be as follows:

Customs.....	\$125,000,000
Sales of public lands.....	1,500,000
Internal revenue.....	74,000,000
Tax on national banks.....	3,000,000
Pacific Railways.....	500,000
Customs fines, etc.....	800,000
Consular, patent, and other fees.....	1,700,000
Sales of public property.....	600,000
Miscellaneous sources.....	1,400,000
Total.....	\$318,500,000

For the same period it was estimated that the expenditures would be as follows:

Civil expenses.....	\$13,000,000
Foreign intercourse.....	900,000
Indians.....	4,000,000
Pensions.....	20,000,000
Military establishment.....	25,000,000
Naval establishment.....	13,500,000
Miscellaneous civil.....	27,800,000
Interest on the public debt.....	71,500,000
Total.....	\$173,700,000

These estimates contemplated a balance, applicable to the payment of the principal of the public debt, for the fiscal year ending June 30, 1873, of \$44,800,000. The actual receipts into the Treasury during the fiscal year ending June 30, 1873, were as follows:

Customs.....	\$128,060,522 70
Internal revenue.....	113,729,314 14
Sales of public lands.....	2,832,312 38
Tax on circulation and deposits of national banks.....	6,830,087 67
Repayment of interest by Pacific Railway Companies.....	514,206 04
Customs fines, penalties, etc.; labor, drayage, storage, etc.....	1,966,469 36
Sales of Indian trust-lands.....	813,248 50
Fees (consular), letters-patent, homestead, etc.....	1,877,221 67
Proceeds of sales of Government property.....	1,637,283 15
Marine-hospital tax.....	333,003 03
Steamboat fees.....	259,009 56
Direct tax.....	315,254 51
Profits on coinage.....	430,134 63
Tax on seal-skins.....	233,181 12
Miscellaneous sources.....	2,184,894 25

Total ordinary receipts.....	\$323,177,673 78
Premium on sales of coin.....	11,560,530 89

Total net receipts.....	\$333,738,204 67
Balance in Treasury, June 30, 1873, including \$3,047.90 received from "unavailable".....	106,567,404 74

Total available cash.....	\$440,305,609 41
---------------------------	------------------

The net expenditures by warrants, during the same period, were:

Civil expenses.....	\$19,348,521 01
Foreign intercourse.....	1,571,362 85
Indians.....	7,951,704 86
Pensions.....	29,359,426 86
Military establishment, including fortifications, river and harbor improvements, and arsenals.....	46,323,156 31
Naval establishment, including vessels and machinery, and improvements at navy-yards.....	23,426,256 79
Miscellaneous, civil (including public buildings, light-houses, and collecting the revenue).....	52,408,226 20
Interest on the public debt.....	104,750,688 44
Premium on bonds purchased.....	5,105,919 99

Total, exclusive of the public debt....	\$390,345,245 33
---	------------------

Redemption of the principal of the debt, exclusive of the certificates of deposit issued under act of June 8, 1873, for the redemption, of which a like amount of United States notes was set apart and held as a special deposit..... \$50,498,335 58

Brought forward.....	\$50,498,335 58	\$290,845,945 83
Outstanding certificates of deposit mentioned above, added to the principal of the debt and to the cash balance in the Treasury..	21,730,000 00	

Leaving net disbursements on account of loans.....	18,768,335 58
--	---------------

Total.....	\$309,112,560 21
-------------------	-------------------------

Balance in the Treasury June 30, 1873.....	\$99,403,028 50
To which add special deposit of legal tender notes for redemption of certificates of deposit, added above.....	21,730,000 00

Total cash balance July 1, 1873.....	121,192,028 50
--------------------------------------	----------------

Total.....	\$440,305,609 41
By the foregoing statement it will be seen that the net revenues for the fiscal year were.....	\$333,738,204 67
And the ordinary expenses.....	290,345,245 33

Leaving a surplus revenue of.....	\$43,392,959 24
-----------------------------------	-----------------

This surplus has been applied to the reduction of the debt, as follows:

Reduction of principal account, exclusive of certificates of deposit.....	\$50,498,335 58
Decrease of cash in the Treasury, exclusive of special deposit of United States notes for redemption of certificates of deposit, as compared with June 30, 1872.....	7,105,376 24
Reduction in debt.....	\$43,392,959 34

This statement treats solely of the principal of the debt. By the monthly debt statement of the public debt, into which enter the accrued interest, interest due and unpaid, and the cash in the Treasury, as ascertained on the day of publication, as well as the principal of the debt, the reduction of the debt during the last fiscal year amounted to \$43,667,630.05; and the total reduction from March 1, 1869, to November 1, 1873, has been \$383,629,788.39, the annual saving of interest resulting therefrom being \$27,482,932.04.

In the following table (see page 281) is given a statement of the outstanding principal of the public debt of the United States on June 30, 1873.

The receipts during the quarter ending September 30, 1873, which is the first quarter of the fiscal year ending June 30, 1874, were as follows:

Customs.....	\$49,195,403 68
Sales of public lands.....	578,768 07
Internal revenue.....	25,640,154 41
Tax on circulation, etc., of national banks.....	3,490,745 66
Repayment of interest by Pacific Railways.....	163,970 56
Customs fines, etc.....	421,514 21
Consular, patent, and other fees.....	508,941 13
Proceeds of Government property.....	308,765 32
Miscellaneous sources.....	1,507,981 21

Net ordinary receipts.....	\$81,853,493 24
Premium on sales of coin.....	2,350,818 34
Government of Great Britain—payment of the award of the tribunal of arbitration at Geneva.....	13,500,000 00

Total receipts.....	\$97,704,310 58
Balance in Treasury, June 30, 1873.....	121,192,028 50

Total available.....	\$230,896,339 08
----------------------	------------------

The expenditures during the same period were as follows:

Civil and miscellaneous expenses, including public buildings, light-houses, and collecting the revenues.....		\$17,372,293 60
Indians.....		2,008,715 19
Pensions.....		8,698,156 58
Military establishment, including fortifications, river and harbor improvements, and arsenals.....		13,795,053 48
Naval establishment, including vessels and machinery, and improvements at navy-yards.....		9,792,451 57
Interest on the public debt, including Pacific Railway bonds.....		37,051,907 79
Total, exclusive of the principal and premium on public debt.....		\$88,718,578 21
Premium, purchased bonds	\$1,301,946 78	
Award by Geneva tribunal, investment account.....	15,500,000 00	
Net redemption of the public debt.....	\$2,980,828 91	
		49,788,775 00
		\$138,507,353 00

Brought forward, total net expenditures.....	\$138,507,353 90
Balance in Treasury, September 30, 1873.....	92,388,985 18
Total.....	\$230,896,339 08

For the remaining three-quarters of the same fiscal year, ending June 30, 1874, it was estimated that the receipts would be as follows:

Customs.....	\$111,000,000
Sales of public lands.....	1,500,000
Internal revenue.....	66,000,000
Tax on national banks.....	3,200,000
Pacific Railways.....	300,000
Customs fines, etc.....	800,000
Consular, patent, and other fees.....	1,300,000
Sales of public property.....	1,000,000
Miscellaneous sources.....	2,000,000
Total.....	\$187,100,000

STATEMENT OF THE OUTSTANDING PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES,
JUNE 30, 1873.

TITLE.	Length of Loan.	When redeemable.	Rates of Interest.	Selling price.	Amount authorized.	Amount issued.	Amount outstanding.
Old debt.....		On demand	5 & 6 p. c.				\$57,665 00
Treasury notes prior to 1846.....	1 and 2 years.	1 and 2 years from date.	1 mill to 6 per cent.	Par.			82,575 35

Funded loan of 1881.....	10 years.....	May 1, 1881.....	5 per cent.	Par.	500,000,000	200,000,000	200,000,000 00
Certificates of deposit.....	Indefinite	On demand.....		Par.	No limit..	57,160,000	31,780,000 00

It was estimated that the expenditures for the same period would be as follows:

Civil expenses.....	\$15,250,000
Foreign intercourse.....	1,100,000
Indians.....	6,500,000
Pensions.....	21,780,000
Military establishment.....	81,000,000
Naval establishment.....	18,000,000
Miscellaneous civil, including public build- ings.....	24,000,000
Interest on the public debt.....	70,000,000
Total.....	\$900,630,000

This will leave a deficiency in the revenues of \$13,530,000.

In the preparation of these estimates the probable effects of the financial and business derangement were somewhat taken into account, although it was too early to determine their full effect upon future revenues. By the alterations made in the tariff laws by the acts of Congress, passed May 1 and June 6, 1872, adding tea and coffee, and other articles, to the free list, and fixing a reduction of duties on other merchandise, as well as by the removal of a considerable amount of internal revenue taxation, the receipts for the year ending June 30, 1873, fell off much below those of previous years.

The value of merchandise imported into the United States, during that fiscal year, was \$642,029,539, as against \$626,595,077 for the previous year.

An analysis shows an increase in the imports of merchandise admitted duty free, in raw materials, and in some articles of necessity, while in some articles of luxury there was a reduction.

The increase in the importation of coffee was \$6,164,339, and in tea, \$1,522,519, in addition to the amounts in bond July 1, 1872, and which were withdrawn therefrom during the year. Coffee was so withdrawn for consumption to the value of \$16,901,126, and tea to the value of \$18,024,217. There was an increase, also, in the importation of copper and copper manufactures of \$1,818,488; soda and salts, \$1,719,408; tin in plates, \$2,681,222; hides and skins, \$1,427,784; fur-skins, \$188,170; melado, \$2,656,138; wood and manufactures thereof, \$2,141,766; earthen-ware, \$745,140; manufactures of cotton, \$9,893,870.

There was a decrease in silk goods, \$5,723,582; precious stones, \$182,905; fruits, \$713,208; fancy goods, \$278,577; fine linen, laces, and other manufactures of flax, \$1,054,115; as well as in some articles of a different class, such as barley, \$440,626; opium and extracts thereof, \$128,839; leather and leather goods, \$1,829,917; wool, \$8,105,114.

The gold value of the exports of merchandise from the United States was \$522,478,892, as against \$444,177,586 for the previous year.

There was an increase in certain articles exported as follows, the value being stated in currency: Cotton, \$47,201,672; wheat, \$12,537,194; wheat-flour, \$1,425,980; bacon and hams, \$13,895,545; pork, \$884,727; lard, \$1,068,196; cheese, \$2,745,092; oils, \$7,256,514;

wood, and manufactures thereof, \$3,878,980; manufactures of iron, \$2,372,725; coal, \$952,449; drugs and chemicals, \$575,050; hides and skins, \$2,159,845; fur and fur-skins, \$382,545; leather and leather goods, \$1,621,465; in live animals, \$259,781.

The export of gold and silver in excess of the imports was \$63,127,637, as against \$66,133,945 for the previous year.

The balance of trade in merchandise has been largely against the United States for many years, and the country has exported, during the twenty years ending with the last fiscal year, gold and silver to the extent of more than a thousand million dollars over and above the amount imported.

The disturbance in financial affairs, and other causes, largely diminished the importation of foreign merchandise, and stimulated the export trade, so that the balance of trade for the months of October and November was in favor of the United States. Gold and silver, therefore, flowed into the country during those months at a more rapid rate than ever before, except in the year 1861, when, for the whole year, the excess of imports over exports was \$16,548,531. During the last twenty years, there has been no other single year in which there has been an excess of imports of gold and silver over exports.

The following statement shows the increase and decrease from each general source of internal revenue for the fiscal year ending June 30, 1873, as appears from the report of the Commissioner of Internal Revenue:

	Increase.	Decrease.
Spirits.....	\$2,623,855 42	
Tobacco.....	650,132 57	
Fermented liquors.....	1,096,430 38	
Penalties.....	19,447 94	
Banks and bankers.....		\$857,197 68
Adhesive stamps.....		8,474,943 75
Articles and occupations formerly taxed but now exempt.....		12,723,224 53
Total.....	\$4,350,875 31	\$22,055,365 96

It will be seen that there has been an increase in the receipts for taxes on spirits, tobacco, fermented liquors, and from penalties.

The decrease in the receipts from banks and bankers is due principally to that provision in the act of June 6, 1872, which raises the exemption of all sums deposited in savings-banks, etc., in the name of one person, from \$500 to \$2,000.

The repeal of all stamp-taxes imposed under Schedule B, act of June 30, 1864, except that of two cents on bank checks, drafts, or orders, took effect October 1, 1872, and has caused a falling off from that source.

The class of articles and occupations formerly taxed but now entirely exempt includes incomes, gas, and other sources of taxation on lists repealed prior to the act of June 6, 1872, and the receipts from these sources constantly and rapidly diminish.

In accordance with the provisions of the act of December 24, 1872, the offices of assessors and assistant assessors of internal revenue have been abolished, and all their final accounts approved by the Commissioner of Internal Revenue, and referred to the accounting officers. The number of these offices varied according to the exigencies of the service, being greatest in 1868, when there were three thousand and forty-three, of which two hundred and forty-one were assessors; since which time the number had, up to the taking effect of the act above referred to, been reduced about one-half.

The system of collecting taxes by stamps, and without assessments, has been found to give general satisfaction. Since its application to special taxes they have been collected more promptly and thoroughly, and a more gratifying and healthy increase in the receipts therefrom is apparent.

Arrangements for refunding the debt were commenced in January, and have been continued during the year with considerable success. Subscriptions were made to the new five per cent. funded loan to the extent of \$84,000,000, and the proceeds were, as fast as subscriptions matured, devoted to the redemption of an equal amount of five-twenty bonds bearing six per cent. interest. The \$15,500,000 received from Great Britain, as the Geneva award, were used to redeem so far outstanding public debt bearing six per cent. interest, and an equal amount, so redeemed, has been invested in five per cent. bonds of the funded loan. At the maturity of the above-mentioned subscriptions there will have been effected a conversion of the debt amounting to \$100,000,000, making an annual saving of interest to the amount of \$1,000,000. The whole amount converted into this loan, since the passage of the refunding act, is \$300,000,000, reducing the annual interest charge \$3,000,000.

The condition of the carrying trade with foreign countries, though exhibiting a large adverse balance, shows some slight gains, with prospects of still further improvements. Of the exports and imports during the year, twenty-seven per cent. were carried in vessels belonging in the United States, which is a gain of three per cent. over the previous year.

The increase in ship-building in the country has been important. Official numbers were awarded by the Bureau of Statistics to 1,699 vessels, of the aggregate tonnage of 313,743 tons. During the preceding year the addition to the mercantile marine was 33,621 tons. Since the close of the last fiscal year still greater activity has prevailed in the yards of the Atlantic sea-coast. From July 1st to November 1st documents have been issued to 1,288 completed vessels, of 181,000 tons. Incomplete returns, however, indicate that there were building, in October, 386 vessels, of the tonnage of 177,529 tons, including 69 steamers, with a tonnage of 67,007 tons.

The action of the Treasury Department, during the financial panic which prevailed in the month of September, is thus briefly stated:

This year there was a great demand for currency to pay for the heavy crops of a bountiful harvest, for which the European countries offered a ready market. The suspension of certain large banking-houses, the first of which occurred on the 18th day of September, alarmed the people as to the safety of banks and banking institutions in general. Suddenly there began a rapid calling in of demand loans and a very general run on the banks for the withdrawal of deposits. Entire confidence was manifested in United States notes, and even in national bank-notes, and they were drawn wherever they could be obtained, and were largely hoarded with as much avidity as coin was ever hoarded in times of financial distress when that was the circulating medium of the country. The banks found themselves unable to meet the demands upon them, currency in circulation became exceedingly scarce, and the business of the country became greatly embarrassed.

In this condition of things, great pressure was brought to bear upon the Treasury Department to afford relief by the issue of United States notes. The first application came from a number of gentlemen in New York, suggesting that no measure of relief would be adequate that did not place at the service of the banks of that city twenty million dollars in United States notes, and asking that the Assistant Treasurer of New York should be authorized to issue to those banks that amount of notes as a loan upon a pledge of clearing-house certificates secured by ample collaterals, and for which certificates all the banks were to be jointly and severally responsible. This proposition was declined, it being clearly not within the duty or the authority of the Treasury Department, under any provisions of law, thus to employ the public money.

Exchange on Europe having fallen to unusually low rates, and indeed having become almost unsalable in the market, to the embarrassment of our foreign and domestic trade, application was made to the Secretary of the Treasury to use the money in the Treasury in the purchase of exchange. The Treasury Department having no occasion to do this for its own use, and no necessity for transferring funds to Europe, was compelled to decline this proposition, which, if accepted, would have put the department in the position of becoming a dealer in exchange, a position clearly inconsistent with its duties.

Subsequently the New York Produce Exchange made a proposition to accomplish the same result in a different form, and also requested, as others had before, that the Secretary should pay at once the twenty million loan of 1868.

The Chamber of Commerce of Charleston, South Carolina, petitioned for the transfer of currency to that city, and the purchase with it, at that point, of exchange on New York, to aid those engaged in forwarding the cotton-crop to the market. To all these propositions the simple answer was, that the department had not the authority to comply.

The Executive Department of the Government was anxious to do every thing in its power, under the law, and with due regard to the protection of the Treasury and the maintenance of public credit, to allay the panic and to prevent disaster to the legitimate commercial and industrial interests of the country; but it was found impossible to afford the relief in any of the many forms in which that relief was asked. It was decided, therefore, to adopt the only practicable course which seemed to be open to it, the purchase of bonds for the sinking fund to

such an extent as the condition of the Treasury would allow, and thus release a considerable amount of currency from its vaults. Purchases of bonds were commenced on the morning of the 20th of September, and were continued until the 24th, when it became evident that the amount offering for purchase was increasing to an extent beyond the power of the Treasury to accept, and the purchasing was closed after bonds to the amount of about thirteen million dollars had been bought, and without the use of any part of the forty-four millions of United States notes, generally known as the reserve.

It should be stated that in the excitement there were many persons in the city of New York who insisted with great earnestness that it was the duty of the Executive to disregard any and all laws which stood in the way of affording the relief suggested by them—a proposition which indicates the state of feeling and the excitement under which applications were made to the Secretary of the Treasury to use the public money, and which, it is scarcely necessary to add, could not be entertained by the officers of the Government to whom it was addressed.

The currency paid out of the Treasury for bonds did much to strengthen many savings-banks, and to prevent a panic among their numerous depositors, who began to be alarmed, and, had there developed an extended run upon those useful institutions, it would inevitably have caused widespread disaster and distress. It also fortified other banks, and checked the general alarm to some extent. But the loss of confidence in the value of a great amount of corporate property which immediately followed the failure of banking-houses connected with largely-indebted corporations, the distrust of the solvency of many other institutions, the doubt as to the credit of firms and individuals whose business was supposed to be greatly extended, and the legitimate effect thereof in disturbing the business of the country, could not be avoided by any amount of currency which might be added to the circulation already existing.

The following letters were written by President Grant and made public at this time:

EXECUTIVE MANSION,
WASHINGTON, September 28, 1873. }

Messrs. H. B. Claflin and Charles B. Anthony, of New York.

GENTLEMEN: In response to the news you have communicated to me touching the present stringency in the money market of the country, and the necessary steps to restore confidence and legitimate trade and commerce, I have the honor to communicate the following: The Government is desirous of doing all in its power to relieve the present unsettled condition of business affairs, which is holding back the immense resources of the country now awaiting transportation to the seaboard.

A marked confidence on the part of the people is the first thing needed to relieve this condition and to avert the threatened destruction of business with its accompanying disasters to all classes of people. To reestablish the feeling, the Government is willing to take all legal measures at its command. But it is evident that no Government efforts will avail without the active cooperation of the banks and money corporations of the country. With the fourteen millions already paid out in the purchase of Government indebtedness, and the withdrawal of their large deposits from the Treasury, the banks are now strong enough to adopt a liberal policy on their part, and by a generous system of discounts to sustain the business interests of the country. Should such a course be pursued, the forty-four millions of reserve will be considered as money in the Treasury to meet the demands of public necessity as the circumstances of the country may require. Close attention will be given to the course pursued by those who have the means at their command of rendering all the aid necessary to re-

store trade to its proper channels and condition. With a view of strengthening the hands of those who carry out the measures, above indicated, orders have already been issued for the prepayment of the interest accruing in November.

(Signed)

U. S. GRANT.

EXECUTIVE MANSION,
WASHINGTON, D. C., October 6, 1873. }

MY DEAR MR. COWDREY, President of the Continental National Bank, New York: Your letter of the 29th ult. was duly received and read, as was your previous letter. Neither required an answer particularly, and hence I did not answer them at that time. Your last letter, however, contains one sentence that it seems proper I should reply to, that is, as to an implied threat to the National banks contained in my letter to Messrs. Anthony and Claflin. Nothing was further from my mind than a threat. My whole object was to restore confidence to the public mind, and to give assurances that the Government would give all the aid in its power, keeping in view at the same time the solvency of the National Treasury. You, and all bank presidents, know more about the condition of your banks than I can possibly know. In turn, I, through the Secretary of the Treasury, know more about the financial condition of the Government, its ability to render aid, etc., than any person disconnected with the administration of its affairs can know. I allude to the fact that the \$40,000,000 reserve notes in the Treasury would be regarded as money in the Treasury subject to use, for the purpose of showing that the means are at hand to give the relief we promise. I do not believe the present panic will work to individuals half the injury it will work general good to the country at large. Our monetary system is the creation of necessity. It has no elasticity; but, in other respects, it is the best that has ever been devised. No one now distrusts the value of his paper dollar; on the contrary, it is seized and hoarded with the same avidity now that the gold dollar has been in former like adversities. The panic will call attention to the defects in our monetary system, and will, no doubt, lead to legislation to relieve the want of elasticity.

This panic has brought greenbacks about to a par with silver. I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. When it does come—and I predict that it will soon—we will have made a rapid stride toward specie payments. Currency will never go below silver after that. The circulation of silver will have other beneficial effects. Experience has proved that it takes about \$40,000,000 of fractional currency to make the small change necessary for the transaction of the business of the country. Silver will gradually take the standard of values, which will be hoarded in a small way. I estimate that this will consume from \$300,000,000 to \$350,000,000 in time of this species of our circulating medium. It will leave the paper currency free to perform the legitimate functions of trade, and will tend to bring us back where we must come at last, to a specie basis. I confess to a desire to see a limited hoarding of money. It insures a firm foundation in time of need. But I want to see the hoarding of something that has a standard of value the world over. Silver has this; and, if we once get back to that, our strides toward a higher appreciation of our currency will be rapid. Our mines are now producing almost unlimited amounts of silver, and it is becoming a question, "What shall we do with it?" I suggest here a solution that will answer for some years, and suggest to you bankers, whether you may not initiate it; to put it in circulation now; keep it there until it is fixed, and then we will find other markets. The South and Central American countries have asked us to coin their silver for them. There has never been authority of law to do so. I trust it will now be given. When it is given, it will be more than the equivalent of becoming exporters of articles of

manufactures which were previously articles of import. Orders will come for large amounts of coin. It will be all in silver, while payments are not necessarily so. We become the manufacturer of this currency, with a profit, and will probably secure a portion of our pay in the more precious metal. I have thought much about the recommendations I should make to Congress, and have changed my mind slightly in regard to banking laws since I last had the pleasure of a personal interview with you. It is not necessary to state what those changes are, because they may undergo further modification. I shall give to the subject, however, my sincerest thoughts, and will court the views of others.

I have written this hastily, but, if it calls forth any views you would like to express, I would be glad to hear them. Yours truly, U. S. GRANT.

The great excitement and distress of the panic were chiefly limited to a period of ten days. Its most prominent features were an immense decline in the value of securities, especially railroad and miscellaneous stocks; an entire lack of confidence in every thing except United States bonds, inducing many persons to withdraw deposits from banks and lock up the currency; and the stoppage in foreign exchange from the impossibility of negotiating exchange, which for a time almost suspended the movements of all produce.

The chief remedies used in New York during the existence of the panic, to prevent its spread, were: 1. "An immediate meeting of bank-managers, at which it was resolved to issue \$10,000,000 loan certificates, and still later a further amount of \$10,000,000, which was afterward followed by a decision to issue a further amount if needed. 2. A general movement on the part of the banks to make large payments in checks only, certified as 'good through the Clearing-House.' In extreme instances, and where small demands were made, greenbacks were allowed. 3. Purchases of bonds by the Treasury, amounting to about \$13,500,000, which operation released

an equal amount of legal tenders. 4. The advantage taken by the savings-banks of the thirty days' notice of withdrawals by depositors. 5. The closing of the Stock Exchange from the 20th to the 30th of the month. The certificates referred to were given out at par on Government bonds, or other good securities, including commercial paper. The banks thus 'pooled' their greenbacks, and strengthened those who were weak. The above course was followed by similar action on the part of banks in all the leading cities. The Treasury refused all solicitations to trench on its so-called reserve of \$44,000,000."

It was generally regarded as the immediate cause of the crisis, that the money market had become overloaded with debt. The cost of railroad construction for five years previous was estimated as having amounted to \$1,700,000,000, or about \$340,000,000 annually; while debt based on almost every species of property, State, city, town, manufacturing corporations, and mining companies, had been sold in the market. Such bonds and stocks had been disposed of to a considerable extent in foreign markets, and, as long as this continued, the sale of similar securities was stimulated, and additional amounts offered. When the sales of such securities could no longer be effected abroad, the bonds of railroads and other enterprises of like nature which were in process of construction were thus forced upon the home market, until their negotiation became almost impossible. The bankers of the city of New York, who were burdened with the load, could not respond to the demands of their creditors, the numerous holders of similar securities became alarmed, and the panic soon extended throughout the country. The sales of United States bonds in New York during this excitement are shown by the following table:

Relative to the redemption of the national bank notes, and the elasticity of the currency, the Controller of the Currency thus expressed himself:

The amount of national bank notes now authorized to be issued is \$351,000,000, and of legal-tender notes \$356,000,000; so that the amount of legal-tender money, in which the national bank notes are now redeemable, is nearly identical with that of such notes, though slightly in excess. If the national banking law were so amended as to require the redemption of the national bank notes in the

legal-tender notes at one-fourth of one per cent. discount, as in the New York State law, instead of at par, as provided in the national-currency act, and the national banks of the whole country would agree to such a provision of the law, the prompt redemption of the national bank notes would be insured; but the redemption of this vast amount of circulating notes, if redeemed but once a year, would result in a loss to the people of the United States of \$900,000; if the notes were to be redeemed four times annually, \$3,600,000; and if redeemed six times annually, \$5,400,000. A system of redemption of this kind would also at once increase the

rate of exchange from the rate of one-tenth of one per cent., now existing at most periods of the year between the different cities of the Union, to from one-half per cent. to one per cent., thus restoring, to a considerable degree, the condition of the exchange at the time of the inauguration of the national banking system, and causing an annual loss to the people of millions of dollars. Such a system would, however, undoubtedly result in the return of the notes of the national banks at certain seasons of the year, when they were not needed, to the vaults of the country banks, to be paid out when the demand for currency increased. Such a system would also give, what is exceedingly desirable at the present time, elasticity to the currency.

The profit upon the circulation of national banks organized in the Southern and Western States during the past year did not much exceed one per cent. for the country banks, and was less than one-half per cent. in the redemption cities. Under such a condition of things, with so small a margin of profit to be derived from the issue of circulating notes, there would be little demand for circulation, and consequently but little danger in throwing the doors wide open for the issue of circulating notes to any association properly organized that might desire such circulation; but, with the reduction of the value of the bonds, and the approximation of the value of the bank-note to the value of specie, the profit would increase, and with the increase of profit the demand for the issue of additional bank-notes would also

increase; so that under such a system the issue of bank-notes would have a continual tendency to lessen the value of the paper dollar, and prevent its approximation to the value of the gold dollar, and all ideas of specie payment might forever be abandoned.

In order to insure the prompt redemption of the national bank-notes, the amount issued must be so much increased that the notes will be, say, at one-eighth of one per cent. discount, and this would probably not be accomplished until an addition should be made to the present circulation of one hundred millions of dollars. The same result would follow from the reduction of the volume of legal-tender notes simultaneously with the increase of the issues of the bank-notes; but Congress has so frequently refused to diminish the amount of legal-tender notes, that, in the opinion of the Controller, any general system of free banking, accompanied with redemption, must be postponed until the resumption of specie payment.

The following table exhibits the resources and liabilities of the national banks of New York and the United States at the close of business, September 12, 1873, the returns from New York City, from other redemption cities, and from the remaining banks, being given separately, together with the aggregate resources and liabilities of all the banks:

* To 1861, when the coinage was interrupted by the civil war.

The views of the Government relative to the expansion and contraction of the currency are expressed in the following remarks of the Secretary of the Treasury:

There is a prevailing sentiment that more elasticity should be given to the volume of the currency, so that the amount in circulation might increase and diminish according to the necessities of the business of the country. But the difference of opinion on this subject is so great, and the real difficulties attending its solution are so numerous, that, without discussing any of the multitude of plans which have been presented to the public through the press and otherwise, I earnestly commend to the wisdom of Congress a careful and thorough consideration of this important subject, rendered more obviously important by the present embarrassed condition of large business interests which have suffered by the recent financial crisis; and that, in such inquiry, avoiding further inflation of the issue of irredeemable legal-tender notes, the most desirable of all financial results to be attained, namely, a permanent return to the sound basis of specie payments, and a gold standard to which all our paper issues shall be made of equal value, shall be the aim.

To allow national banks to use part of their reserves at seasons of the greatest pressure, under proper restrictions and regulations, would afford some flexibility.

Rigid statute laws applied to all banks, at all seasons, and in all places alike, often prove an embarrassment and injury when they conflict with economic principles and the laws of trade and business, which are stronger than legislative enactments, and cannot be overthrown thereby. Associated banks at the several redemption cities named in the banking law, which are the great controlling centres of business, might do much to give steadiness and safety, if they were authorized, through properly-constituted boards or committees of their own officers, to exercise a large discretion in the use of their reserves, in the rate of interest to be charged at different seasons and under different circumstances, and in other matters, within limits prescribed by law.

Should it be deemed necessary or expedient to temporarily enlarge the paper-money circulation in cases of great emergency, provision may be made to permit the national banks, under certain circumstances to a limited extent, to increase their note circulation by a pledge of United States bonds, bearing no interest while so pledged, or subjecting the banks to special taxation upon the circulating notes obtained thereon, or upon such other terms that it would be for their interest to recall the notes and redeem the bonds at the earliest possible day after the pressure and their necessities should have ceased.

But any large augmentation of the issue of United States legal-tender notes in time of peace would not only be a departure from that "declaration of public policy and pledge of the public faith to the national creditors," made in the act of June 30, 1864, that the total amount of such notes shall never exceed four hundred million dollars, as well as from that more solemn pledge contained in the first act of the Forty-first Congress, "to make provisions at the earliest practicable period for the redemption of United States notes in coin," but would postpone the day of specie payments and render it more difficult to attain in the distant future, unsettle confidence in our national finances and be a serious detriment to public credit at home and abroad.

There can be no doubt that during the eight years since the rebellion there has been a growing desire among the people to restore the paper circulation to a specie standard, and that any steps taken to accomplish that object will be received with general favor.

It is not possible to resume and maintain specie payments with so large an amount of notes in circulation and so small an amount of gold in the country. The volume of currency must be reduced or that of

coin greatly increased. Should the national banks be prohibited from selling the coin received by them as interest upon bonds pledged to secure circulation, retaining the same in whole or in part in reserve, or loaning it in the discount of bills and notes payable in coin, as Congress might prescribe, there would be a gradual accumulation of gold in the banks, which would do something toward preparing for resumption. This, with a constant increase of coin in the Treasury, undertaken with the approval of Congress, would ere long lead to the desired result, when other conditions required for the maintenance of specie payments should become favorable.

The acts of Congress of February 25, 1862, July 11, 1862, and March 3, 1862, together authorize the issue of \$400,000,000 of United States notes, in addition to \$50,000,000, of such notes, reserved for the purpose of securing prompt payment of temporary loan deposits, and the act of June 30, 1864, contains these words: "Nor shall the total amount of United States notes issued, or to be issued, over exceed \$400,000,000, and such additional sum, not exceeding \$50,000,000, as may be temporarily required for the redemption of temporary loan."

The range in prices at New York for Government securities, during the year 1873, has been as follows:

The price of gold opened in January, 1873, at 112½, and advanced pretty steadily until it reached 119½ on the 12th of April, which was the highest point reached during the year. There was nothing of special significance in the movements of gold, and the variations of the market were generally the result of speculative influences brought to bear by parties who were immediately interested in procuring an advance or decline. During the financial crisis gold declined materially, and on the 6th of November touched 106½, the lowest point made since 1862. The decline to so low a point was simply the result of the monetary disturbances, and the fact that there was, for the time being, no demand for gold either from speculators or importers:

1873.	Opening.	Highest.	Lowest.	Closing.
January.....	112½	114½	111½	113½
February.....	112½	115½	112½	114½
March.....	114½	118½	114½	117½

September.....	115½	116½	110½	111½
October.....	111½	111½	107½	108½
November.....	109½	110½	106½	109
December.....	108½	112½	108½	110½

Foreign exchange opened firmly, and so continued during the early months of the year, till the extraordinary money stringency depressed the price to 107 for prime 60 days sterling. Under the law of March 3, 1873, the value of the pound sterling was fixed at \$4.8665, and in pursuance of this law the method of quoting exchange was altered, and the new style of quotations went into effect on the 1st of January, 1874, the price of \$4.8665 being equivalent to 109.45½ under the old

method. The old and new methods show the following approximate equivalents as nearly as can be given:

New Method.	Old Method.	New Method.	Old Method.
\$4 70	103½	\$4 78½	107.46½
4 70½	103.80½	4 79	107.77½
4 71	105.97½	4 79½	107.88½
4 71½	106.05½	4 80	108.00
4 72	106.20	4 80½	108.11½
4 72½	106.31½	4 81	108.22½
4 73	106.42½	4 81½	108.33½
4 73½	106.53½	4 82	108.45
4 74	106.65	4 82½	108.56½
4 74½	106.76½	4 83	108.67½
4 75	106.87½	4 83½	108.78½
4 75½	106.98½	4 84	108.90
4 76	107.10	4 84½	109.01½

British Columbia.....	1,011,696	206,339			1,250,035
Total.....					\$72,258,698

The combined product of all shows: For 1872, \$62,236,913; for 1873, \$72,258,698—undoubtedly the largest yield for one year in the history of the Pacific coast.

Dunn, Barlow & Co.'s circular gives the failures in the different States in 1870 to 1873 inclusive. The totals are:

FOR CONNECTICUT.		
YEAR.	Number.	Amount.
1870.....	68	\$1,820,000
1871.....	77	3,915,000
1872.....	70	2,570,000
1873.....	104	1,452,000
FOR ALL THE STATES.		
1870.....	3,551	\$68,242,000
1871.....	2,915	85,252,000
1872.....	4,069	121,056,000
1873.....	5,183	228,499,000
FOR NEW YORK CITY.		
1870.....	430	\$20,573,000
1871.....	324	20,740,000
1872.....	385	20,684,000
1873.....	644	92,635,000

From the above it will be seen that there were more failures by 1,100 in 1873 than in 1872, with an increase in liabilities of \$107,443,000. Of this increase in liabilities, New York City is chargeable with \$71,000,000, showing that, throughout the balance of the entire country, the increase in liabilities is only \$36,000,000. Of the New York liabilities, a very large amount are those of banking firms who owed largely to depositors and on call loans on collaterals, a large quota of which have been liquidated and adjusted.

FLAGG, AZARIAH C., an eminent political leader and financier of New York, born in

Clinton County, N. Y., in 1790; died in New York City, November 24, 1873. When he was nine years old, his father removed to Richmond, Vt., and at the age of eleven years he was apprenticed to a cousin of his father's in Burlington, Vt., to learn the printer's trade. When he was sixteen, his father made an arrangement with a printing and publishing house there for his receiving a stipulated price for his services, and that he should be allowed to do over-work, and have opportunities for reading. He remained in Burlington till about 1811, when he removed to Plattsburg, N. Y., and served as a soldier in one of the New York regiments in the War of 1812, participating in several engagements. It was in 1812 or 1813 that Mr. Flagg established the *Plattsburg Republican*, of which he was for a number of years editor and proprietor. In 1823-'24 he represented Clinton County in the Assembly. Governor DeWitt Clinton appointed him Secretary of State in 1826, and this office he held until 1833, when he was succeeded by Hon. John A. Dix, now Governor. In the following year he was appointed State Controller by Governor Marcy. This position was held by him for five years. In 1842 Governor Bouck again appointed him State Controller; and he was reappointed by Governor Silas Wright, and served until the adoption of the new constitution in 1846. During all these years, dating almost from his first appearance in the Legislature, and after his removal to New York City, which took place in about 1846, Mr. Flagg was one of the leaders of the

Democratic party in New York. He bore the reputation of being one of the ablest financiers in the State, and his honesty in all official and private acts was unquestioned. He was for many years one of the contributors to *The Albany Argus*, and the political questions of the day were discussed by him in its columns. He was one of the most determined opponents of the United States Bank; he rendered efficient aid to De Witt Clinton in moulding public opinion in regard to the canal policy; and later he was an outspoken opponent of the pro-slavery policy of the Democratic party. He was one of the founders of the Barnburner party, subsequently known as the Free-soil party. He was elected Controller of New York City in the fall of 1852, and was reelected three years later. Soon after leaving the Controller's office, in 1859, he became blind. He never lost his interest in political matters, and the daily papers were read to him by his daughters.

FLORIDA. The Legislature met on the 17th of January. The first business of importance brought before it was the electing of a United States Senator for the term commencing March 4th. The struggle between the two parties lasted for many days, and excited the most intense interest. It finally concluded in the election of Hon. Simon B. Conover, Republican, Speaker of the Lower House of the State Legislature.

Mr. Conover was born in Middlesex County, N. J., September 23, 1840. Having graduated as a Doctor of Medicine in 1863, he was appointed assistant surgeon in the Army of the Cumberland, and was stationed at Nashville, Tenn. He was ordered to Florida in 1866, and shortly afterward resigned his position in the army. In politics he has always been a Republican. He was a member of the convention which framed the present constitution of Florida and was subsequently appointed State Treasurer by Governor Reed. He was next elected to the Lower House of the Legislature from Leon County, and was chosen Speaker of that body. In 1868 he was a member of the Chicago Convention, and was there appointed a member of the National Republican Committee, in which capacity he served for four years. He has also been a member of the State Executive Committee of Florida.

Some reports having been circulated to the effect that certain persons had resorted to bribery in connection with the election of the United States Senator from the State, a committee of three was appointed by the Assembly to investigate the reports. After examining these rumors, and all the evidence upon which they were founded, the committee reported that they had "not been able to find any direct proof of bribery on the part of any one, and begged leave to be discharged."

Among the more important acts of the Legislature was the passage of a bill "to protect the citizens of the State of Florida in their

civil rights, and to furnish the means for their vindication." The first section of the act provides—

That no citizen of this State shall, by reason of race, color, or previous condition of servitude, be excepted or excluded from the full and equal enjoyment of any accommodation, advantage, facility, or privilege furnished by innkeepers, by common carriers, whether on land or water, by licensed owners, managers, or lessees of theatres or other places of public amusement; by trustees, commissioners, superintendents, teachers, and other officers of common schools and public institutions of learning, the same being supported by moneys derived from general taxation, or authorized by law, also of cemetery associations and benevolent associations, supported or authorized in the same way: *Provided*, That private schools, cemeteries, and institutions of learning established exclusively for white or colored persons, and maintained respectively by voluntary contributions, shall remain according to the terms of the original establishment.

The second section declares that any person violating any of the provisions of the act, "or aiding in their violation or inciting thereto," shall pay \$100 to the person aggrieved, "and shall also for every such offense be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$100, nor more than \$1,000, or shall be imprisoned not less than thirty days nor more than one year." Every discrimination against any citizen on account of color, by the use of the word "white," is annulled, and it is enacted that "no citizen possessing all other qualifications prescribed by law shall be disqualified for service as a juror in any court in this State by reason of race, color, or previous condition of servitude; any officer or other person charged with any duty in the selection or summoning of jurors, who shall exclude or fail to summon any citizen for the reason above named, shall, on conviction thereof, be guilty of a misdemeanor, and be fined not less than \$100 nor more than \$1,000."

The question of public improvements received the favorable attention of the Legislature. A memorial to Congress was adopted favoring the construction of a ship-canal across the Peninsula of Florida from the Gulf of Mexico to the Atlantic Ocean, along the line of the waters of the Withlacoochee, Blue Spring, Silver Spring, Ocklawaha, and St. John's Rivers, and their adjacent lakes.

Congress was also memorialized in relation to the construction of a Southern transcontinental interior line of water communication between the Mississippi River and the Atlantic Ocean. The memorial set forth:

That, through the channel of the St. John's and the inner lake-region of Florida, a path is opened for that important line of Southern inland transportation, traversing the Gulf States and touching New Orleans, Mobile, and Pensacola, by means of which some measure of relief may be afforded to the valley of the Mississippi, now suffering and stagnating under the immense weight of its own surplus productions—unprofitable through their immovability, while an adequate exit may be given, through the

channel suggested, by a canal whose cost of construction shall not exceed the annual aggregate loss on Western produce through insufficiency and expense of existing means of transportation. * * *

The interior lake-region of this State, mainly within the counties of Marion, Sumter, and Orange, gives a lake-surface of more than 200 square miles, having an average depth of more than 15 feet, thus insuring an abundant water-supply for a canal of any necessary magnitude, and so located upon an elevated plateau that it can with facility and economy be directed both east and west, and thus seems by natural selection to have been topographically designated as the most desirable route; and it is worthy of remark here that, through the private enterprise and public spirit of one of our own citizens, a canal sufficient for the passage of steamers of twenty feet beam is already considerably advanced in process of construction, under a contract made with the trustees of the Internal Improvement Fund of this State. And this canal, which only requires for completion an excavation of 14 miles farther, by making its course through the St. John's, the Ocklawaha, and the Withlacoochee, and its Gulf terminus at the mouth of the Withlacoochee, will have so much southing as measurably to secure the South American as well as Gulf trade.

This is only one of the routes across the Peninsula of Florida that is feasible and practicable. Another route can be obtained by improving the navigation of the Suwanee River and using its waters as a feeder, and connecting that river with the St. Mary's by canal, making the Atlantic terminus at Fernandina, which has one of the finest harbors in the South.

Copies of the memorial were ordered to be sent to the Florida Senators and Representatives in Congress, and to the Governors of all the other States.

On the 19th of February the Legislature adjourned, and on the following day it was convened in extraordinary session by the Governor for the consideration of a financial measure in relation to the large amount of bonds of the State that were under hypothecation in New York for less than half their value. Upon the reassembling of the Legislature an act was promptly passed refunding the indebtedness of the State. The funding bill provided for the issue of coupon bonds to the amount of \$1,000,000, payable in thirty years, with six per cent. interest, payable semi-annually, in gold, in New York City, or at the office of the Treasurer of Florida. Provision is made by taxation for the payment of the interest, and the creation of a sinking fund to meet the principal, it being provided that "there shall be levied annually, upon the assessed valuation of the real estate and personal property of this State, a tax of three mills upon the dollar, and a tax of one mill for the ultimate redemption of said bonds, but no taxes are to be levied until one-fourth of the bonds are sold." The taxes collected under the act to be applied solely to the payment of the interest, and to form a sinking fund for the redemption of the bonds. The Controller is authorized to exchange \$500,000 of the bonds at par, for a like amount of the principal and unpaid interest of the bonds to be redeemed. Except that the following described bonds shall not be so redeemed, to wit: Bonds held by the Seminary and School

Funds; the \$350,000 of bonds issued under the act of January 26, 1871; the bonds issued in aid of railroads, and bonds of 1868 and 1869, hypothecated in the city of New York, or elsewhere, and when any bonds are so exchanged or relieved from hypothecation they shall be returned to the State, and be immediately canceled and retired.

The act requires the remaining \$500,000 of the bonds to "be sold by the Governor and Controller in the city of New York, or elsewhere, as may be deemed best for the interests of the State, at a sum not less than eighty cents net on the dollar in United States currency, but in no case shall they be hypothecated; and out of the proceeds, to be deposited with the Treasurer or to his order, the Treasurer shall first pay the amount necessary to redeem the bonds of 1868 and 1869 from hypothecation, and next pay the indebtedness of the State accruing after the first day of July next ensuing."

It is further provided that no agent shall be employed in the negotiation and sale of the bonds; also that "no other or further bonds shall be authorized; and it is hereby made a condition of the issuing of the said \$1,000,000 of bonds, that no further bonds shall be issued while said bonds remain outstanding, and it is declared to be an express contract on the part of the State with the holders of said bonds that no further amount of bonds shall be issued."

According to the report of Controller Cowgill, submitted to the Legislature in January, 1874, the bonded debt of the State is represented as follows:

Total debt and interest, to be exchanged for the bonds of 1873.....	\$490,987 75
Bonds of 1871.....	350,000 00
Bonds of 1873, sold and delivered.....	265,000 00
Bonds of 1873, sold but not delivered, and held to obtain funds to pay for twenty-one hypothecated bonds of 1868.....	15,000 00
Bonds of 1873 exchanged for eighteen bonds of 1868 with accumulated interest.....	20,000 00
Bonded debt due School Fund.....	190,752 63
Bonded debt due Seminary Fund.....	71,292 45
	\$1,402,982 83
Deduct amount of bonds in Sinking Fund for payment of bonds of 1871.....	8,700 00
	\$1,394,282 83
Add interest due January 1, 1874, to School and Seminary Funds.....	9,960 01
Add interest due January 1, 1874, upon the bonds of 1871.....	29,575 00
Add interest due January 1, 1874, upon bonds of 1873.....	12,660 00
Total bonded debt and interest due thereon to January 1, 1874.....	\$1,446,477 84
Less money in Treasury, applicable to payment of interest of 1871 and 1873 bonds...	16,254 36
Total bonded debt and interest, less cash in Treasury, applicable in payment of interest.....	\$1,430,223 48

In this statement are not included the bonds, amounting to \$4,000,000, issued to the Jacksonville, Pensacola & Mobile Railroad Company, as the State has a statutory lien upon the road for the amount of these bonds, and it is hoped that arrangements may be effected

by which the bondholders will take the lien upon the road and the bonds of the road for the State bonds.

The receipts for the year ending December 31, 1873, from the collection of taxes and licenses, applicable to general State expenses, were \$320,836.66, and the expenditures, excluding the borrowed money and interest on 1871 bonds, were \$314,817.11. Of this, \$246,711.65 were for the regular expenses of 1873, and \$68,105.46 were used in payment of expenses incurred previous to 1873, including debt due Lunatic Asylums, to Bank Note Company, etc.

"Thus for the first time since reconstruction," says the Controller, "have the legitimate expenses of the government been defrayed, and not only so, but more than \$50,000 of floating debt of the State paid." The force of this statement will be made more apparent by the following review of the receipts and expenditures for each year from November 1, 1866, to January 1, 1873:

YEAR ENDING	Receipts.	Expenditures.
October 31, 1867.....	\$161,806 31	\$187,667 63
October 31, 1868.....	179,332 00	207,616 56
From October 31, 1868, to		
December 31, 1869.....	44,101 67	36,617 24
December 31, 1869.....	317,047 12	374,973 23
December 31, 1870.....	192,488 60	295,078 50
December 31, 1871.....	275,005 59	410,491 19
December 31, 1872.....	257,233 54	304,314 35
Total.....	\$1,457,064 73	\$1,806,636 70

In the reports of 1871 and 1872 there appears among the receipts the sum of \$88,432, under the heading of School and Seminary Fund interest, which does not properly belong there, as it was only a transfer of that amount by Controller's warrants from one account to another, and the warrants for this transfer were charged as expenditures.

Therefore, in estimating the receipts and expenditures for those years, \$88,432 should be deducted from each account. Making this deduction, the expenditures from November 1, 1866, to January 1, 1873, were \$1,718,225.72, and the receipts, \$1,868,631.75, showing an excess of expenditures of \$349,593.97. Among the receipts are estimated \$221,861.49 arising from the sale or hypothecation of bonds, which should be added to the above excess to show the expenditure over the receipts from taxation; which makes \$570,955.47 as the debt incurred during this period.

The Controller is of opinion that the levy of four mills upon the assessed valuation of the real and personal property of the State, which was authorized by the Legislature in February for the purpose of paying the interest and forming a sinking fund for the bonds of 1873, may be reduced to three mills. When the law was passed it was supposed that this valuation would not exceed \$24,000,000, whereas at the end of the year it approached \$30,000,000.

The \$4,000,000 bonds of the Jacksonville,

Pensacola & Mobile Railroad Company above alluded to are largely held in Holland. Some of these Dutch bondholders having written from Rotterdam to Attorney-General Cocke, of Florida, as to their rights, that official replied in a letter, dated July 15th, in which, among other things, he said:

There is no provision made by law for assessing a tax to pay either principal or interest on these bonds. Until this is done, neither can ever be paid. That the Legislature will ever authorize a tax to be levied for such purpose, no man, as far as I am informed, believes; no set of men, no party will attempt it. Not that the State will refuse to pay any debt it may owe, but the enormous frauds perpetrated in the issuing and circulation of these bonds, and the want of legal authority on the part of the Governor then in office to sign the bonds, convince all just and honest men that the State does not owe the sums indicated by said bonds.

The bondholders may hold those responsible from whom they obtained the bonds, but against the State they are without remedy in any court. Suits cannot be brought against a State.

I know not what better advice to give than that the bondholders appoint an agent to confer with the authorities of this State, and to make a negotiation for the return of the bonds, on condition that the lien of the road may be substituted therefor.

By the terms of the law under which the State bonds were issued to the Jacksonville, Pensacola & Mobile Railroad Company, that corporation was to pay to the State from its net earnings the interest on the bonds, and the State was to pay the interest to the bondholders. The road, however, has never paid this interest, owing, doubtless, to its want of success. In a communication made to Governor Hart in February, Attorney-General Cocke suggested that "the Legislature should make provision for the protection of the interest of the State in the public work it has loaned the credit of the State to complete, and to compel those who have fraudulently possessed themselves of money arising from a sale of the bonds to refund it with interest; to defeat the schemes that are on foot to work further wrong and injury to the State; and to insure proper application of the proceeds of the bonds and a completion of the important enterprise itself, that adventurers be no longer allowed to make the said public work a means of raising enormous sums of money to be dissipated with reckless profligacy."

Measures having been instituted for the sale of the road on January 1, 1874, an injunction restraining the sale was granted by the Supreme Court of the United States, on the application of Florida.

The question of annexing Western Florida to Alabama was agitated somewhat during the year, especially in Western Florida, where there seems to be a strong popular opinion in favor of the measure. In Alabama, an act was passed in the early part of the year in favor of annexation, but no action was taken during the year in Florida.

According to the report of the Superintendent of Public Instruction, dated September 30,

1873, the entire number of common schools in the State was 500, with an average attendance of 18,000 pupils, exclusive of private schools. About one-fourth of the children enrolled are in school, while the remaining three-fourths are without school privileges.

The interest on the Common-school Fund apportioned among the several counties for the past year was \$14,873.23. This amount was issued in warrants and sold for about 60 cents, which brought in cash \$8,923.93, a fraction less than last year, as there was no addition of back interest on bonds to be added this year, \$1.43 per child. From the defective character of the returns, it is difficult to state with precision the amount raised by taxation in the several counties.

Including the one mill constitutional tax, it may be estimated at about.....	\$80,000 00
Add to this private contributions.....	10,000 00
Peabody Fund.....	8,900 00
Interest on School Fund.....	8,923 93
Total.....	\$107,723 93

The aid bestowed by the Peabody Fund is of great value, as it enables the boards to sustain for about ten months in the year a class of excellent schools. This aid during the past year amounted to \$8,800. The Common-school Fund amounted to \$284,671, and the Seminary Fund to \$83,241.

The Agricultural College land scrip, received by Florida from the United States, representing nearly 90,000 acres, was sold during the year by the Florida Agricultural College to Mr. G. F. Lewis, of Cleveland, O., for 90 cents per acre; the Board thus realizing about \$80,000. The trustees advertised for propositions for a site on which to erect the college, but at the close of the year none had been determined upon.

The Southern Inland Navigation and Improvement Company are engaged in improving the navigation of the Upper St. John's River, and will connect the St. John's by canal with Indian River, and make a continuous navigation from Indian River through Lake Worth to Biscayne Bay. These improvements are feasible, as it requires less than twenty-five miles of canalling to connect the St. John's River with Biscayne Bay; the longest cut is between the St. John's and Indian River, which is less than six miles, and will require one lock, which is the only lock on the entire route.

The Pease Creek Improvement Company are commencing to improve that stream under a charter granted by the Legislature, and steamboats in a short time will navigate that river as high up as Fort Meade. These two improvements, when completed, will do much toward settling and developing this part of the State, as its inaccessibility and its constant Indian wars have prevented its settlement heretofore.

FOSTER, JOHN WELLS, LL. D., an American scientist and paleontologist, born in Brimfield, Mass., in 1815; died in Hyde Park, one of the

suburbs of Chicago, Ill., June 29, 1873. He graduated from Wesleyan University, Middletown, Conn., in 1835, and removed to Zanesville, O., where he studied law, and, being admitted to the bar, commenced practice, pursuing, however, without intermission his scientific studies, for which he had a strong predilection. The opportunity offering at this time, he became an assistant in the Geological Survey of Ohio in 1837, and investigated the extent of the great central coal-beds of that State. Returning to Massachusetts and establishing himself as a civil engineer, he gave every leisure moment to the study of geology and metallurgy, and soon became a recognized authority on these subjects, in whose judgment Eastern capitalists who desired to invest in Western mineral lands felt that they could place implicit confidence. As a result his name is connected with nearly all the important mineralogical discoveries in the Northwest. He had, as we have said, made himself familiar not only with the coal deposits but the various beds of iron ores of Ohio. In 1845, when the copper excitement first broke out in the Lake Superior country, he visited that region in the interest of several mining companies, repeating his visit the succeeding year. The Government instituted a geological survey of the same territory in 1847, under the direction of Dr. Jackson, and Mr. Foster was appointed one of his assistants, with Prof. J. D. Whitney, a geologist and naturalist, of California, as his associate. Two years subsequently the completion of the work was confided to them. The result was the volume entitled "Foster and Whitney's Report on the Lake Superior Region," which was published by direction of Congress, and first clearly established the richness and variety of the mineral resources of that region, and remains an authority on the subject of which it treats. In 1854 Mr. Foster became prominent in the local politics of Massachusetts, and was one of the leading men in organizing the Native American movement which placed Governor Gardner in the Executive chair of that State, and exercised such a decided effect upon national issues. In 1855 he broke from the American party upon the slavery issue, Vice-President Wilson being his main associate in this step, and aided in the formation of the Republican party. In 1856 he was a candidate for Congress in the Tenth or Springfield District, and was defeated by only a very small majority. This closed his political career, but during its brief continuance he displayed marked capacity as an organizer, and decided ability as a public speaker. In 1853 Mr. Foster moved to Chicago, where he was for some years land commissioner for the Illinois Central Railway. He had devoted the last sixteen years of his life chiefly to archaeological researches and writings, not intermitting for a day his industry and intensity of research, which made him almost as widely and favorably known in Europe as on this con-

minent. In his paleontological investigations he was one of the most illustrious and successful of modern scientists. He was a frequent contributor for many years to the *American Naturalist*, *Silliman's Journal*, and other periodicals, and had published two very valuable works, the first in 1869, upon "The Mississippi Valley," and the second in the summer of 1878, under the title of "Prehistoric Races of America." Mr. Foster was at one time President of the American Association for the Advancement of Science, and filled for some years the chair of Professor of Natural History in the University of Chicago. From that university, we believe, he received the degree of LL. D. in 1867. Personally he was a man of the purest character, of genial manner, and of fine social qualities. His death has removed a ripe scholar and a conscientious investigator from a field of great usefulness, and he leaves behind him no one who is his equal in thorough, intimate, and useful knowledge of the varied natural resources of the Northwest.

FRANCE, a republic of Europe. President, Marshal Marie Edmond Patrice Maurice de MacMahon, Duke of Magenta, elected May 24, 1873. Chief of the cabinet, Colonel Robert; Secretary of the President, Viscount d'Harcourt; Vice-President of the Council of Ministers at the close of the year 1873, was the Duke de Broglie.

The National Assembly consists of 738 members. President, Louis Joseph Buffet; Vice-Presidents, De Goulard, Benoist d'Azy, Martel; Secretaries, Desjardins, L. Grivat, F. Voisin,

E. de Ozenove de Pradine, Blin de Bourdon, Fr. Rive; Questors, Baze, General Martin des Pallières, Princeteau.

France was divided, in 1872, into 87 departments, and subdivided again into 363 arrondissements, 2,865 cantons, and 35,989 communes.

The area of France, according to the latest calculations, was 204,090 square miles. The population, according to the census of 1872, was 36,102,921. The table on page 297 exhibits the area and population of each department, and the number of arrondissements, cantons, and communes, into which each department is divided.

A comparison of the population in 1872 with that of the present French territory in 1866 shows a decrease of 856,715, or of 1.2 per cent. of the total population. This decrease is exclusive of the loss which France sustained by the cession of Alsace and Lorraine to Germany. The movement of population from 1866 to 1870 was as follows:

YEARS.	Births.	Deaths.	Surplus of Births (B.), or Deaths (D.).	Percentage of Increase (I.) or Decrease (D.) of Population.
1866...	1,006,258	884,573	B. 121,685	I. 0.33
1867...	1,007,515	886,887	B. 120,628	I. 0.31
1868...	984,140	922,638	B. 62,102	I. 0.16
1869...	948,526	864,320	B. 84,206	I. 0.21
1870...	944,115	1,046,909	D. 103,394	D. 0.28

The area and population of Algeria, according to the census of 1872, were as follows:

PROVINCES.	Area in Square Miles.	Frenchmen and Naturalized Jews.	Foreigners.	Mohammedans.	In Government Institutions.	Total.
Algiers.....	39,120	67,008	42,181	757,908	5,854	872,951
Oran.....	111,631	51,789	47,433	411,874	2,456	513,492
Constantine.....	107,366	45,438	25,902	933,263	3,173	1,027,775
Total.....	258,117	164,175	115,516	2,103,045	11,483	2,414,316

The European population of Algeria was composed, with regard to nationality, as follows:

NATIONALITIES.	1866.	1872.
French.....	122,119	129,601
Spaniards.....	58,510	71,366
Italians.....	16,655	24,351

The results of the census of 1872, relating to the religious denominations of the inhabitants, had not been published at the close of the year 1873. The following estimate is based upon the statements of the census of 1866: Catholics, about 35,500,000; Protestants, 500,000; Israelites, 45,000; other religions, 8,000.

The following table exhibits the population of all the French cities which, according to

the census of 1872, have a population of more than 30,000 inhabitants:

Paris.....	1,851,792	Orleans.....	49,978
Lyons.....	323,417	Le Mans.....	46,981
Marseilles.....	312,864	Tours.....	43,368
Bordeaux.....	194,055	Tonrcoing.....	43,322
Lille.....	158,117	Grenoble.....	42,660
Toulouse.....	124,852	Dijon.....	42,573
Nantes.....	118,517	Caen.....	41,210
St.-Etienne.....	110,814	Boulogne.....	39,700
Rouen.....	102,470	Avignon.....	38,196
Le Havre.....	86,825	Troyes.....	38,113
Roubaix.....	75,987	Clermont.....	37,357
Reims.....	71,394	Cherbourg.....	35,580
Toulon.....	69,127	St.-Quentin.....	31,811
Brest.....	66,272	Lorient.....	34,600
Aufens.....	63,747	Dunkirk.....	34,350
Nimes.....	62,394	Beziers.....	31,163
Versailles.....	61,686	Bourges.....	31,312
Angers.....	58,661	Poitiers.....	30,036
Montpellier.....	57,727		
Limoges.....	55,134	ALGERIA.	
Nancy.....	52,978	Algers.....	48,906
Nice.....	52,377	Oran.....	40,674
Bennes.....	52,044	Constantine.....	33,251
Remançon.....	49,401		

The budget for 1873, voted by the National Assembly, comprised the following sources of revenue and branches of expenditures.

DEPARTMENTS.	Area in Sq. Miles.	Population in 1886.	Population in 1872.	Increase (+) or Decrease (—) Per Cent.	Arron- disse- ments.	Cantons.	Communes.
Ain.....	2,339	371,643	363,290	— 2.3	5	36	452

The public debt, according to the budget of 1878, was as follows:

	Interest.	Nominal Capital.
	Francs.	Francs.
1. Consolidated debt.....	541,796,216	15,787,090,033
2. Capital that may be called in.....	442,238,695	6,969,000,000
2. Dette Viagère.....	113,259,233	
Total.....	1,097,284,134	22,756,000,000

On January 1, 1878, the new army law of August 16, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for twenty years, namely, four years in the standing army, five years in the reserve of the standing army, five years in the territorial army (landwehr), and six years in the reserve of the territorial army. By a law of July 24, 1878, on the reorganization of the army, France is divided into eighteen districts and subdivisions. Every district is occupied by an army corps. One army corps, moreover, is organized for Algeria. Every district has one or several general magazines of provisions; every subdivision has one or several magazines, which are supplied by the general magazines of the district. In every subdivision of a district, there are one or several recruiting-offices. The active army comprises, therefore, eighteen army corps, exclusive of that of Algeria. Each of the eighteen army corps consists of two divisions of infantry, one brigade of cavalry, one brigade of artillery, one battalion of engineers, one squadron of the train, a general staff, and the subordinate staffs.

The composition of the army, in time of peace, will be as follows:

Infantry (156 regiments, 505 battalions, 2,445 companies).....	279,956
Cavalry.....	67,898
Artillery.....	58,086
Engineers.....	13,551
Train.....	11,486
Total.....	441,007

To this number may be added the second division of the yearly contingent, amounting to about 60,000 men, who serve from six to twelve months, and swell the number of the army to 501,007 men. In time of war, the army will be composed as follows:

Standing army.....	795,000
Reserve of standing army.....	510,000
Territorial army (landwehr).....	600,000
Reserve of territorial army.....	600,000
Total.....	2,505,000

The navy, according to the budget for 1878, was composed as follows:

VESSELS.	Iron-clad.	Unarmed.	Total.	Men.
Vessels fitted out.....	8	86	94	28,431
Vessels for service in the ports and on trial	19	48	67	
Total.....	27	129	156	28,431

According to the plan for the reorganization of the navy, it is to be composed in future as follows: 12 iron-clads, first class; 19 iron-clads, second class; 20 iron-clad gunboats; 8 frigates, 8 corvettes, 38 avisos, 25 transports, 32 gunboats; and, besides, a number of school-ships, tenders, etc.

The following table exhibits the movement of commerce from 1856 to 1872 (in francs):

YEARS.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1873....	?	?	3,447,400,000	3,678,900,000	400,000,000	893,000,000
1871....	?	?	3,393,200,000	2,865,000,000	286,000,000	529,000,000
1870....	3,497,800,000	3,455,900,000	2,997,400,000	2,402,100,000	416,000,000	261,000,000
Annual average, 1866-1870....	3,038,100,000	3,887,100,000	3,028,800,000	2,334,700,000	733,000,000	465,000,000
1861-1865....	3,231,100,000	3,448,800,000	2,147,100,000	2,564,800,000	576,000,000	526,000,000
1856-1860....	2,521,100,000	2,812,800,000	1,792,700,000	2,037,900,000	701,000,000	339,000,000

The foreign countries chiefly interested in 1870, were the following (the value being expressed in francs):

COUNTRIES.	IMPORTS.		EXPORTS.	
	1869.	1870.	1869.	1870.
Great Britain.....	549,100,000	523,300,000	904,100,000	842,800,000
Belgium.....	315,800,000	272,000,000	295,000,000	310,860,000
Zollverein.....	230,100,000	85,000,000	253,400,000	80,600,000
Italy.....	321,000,000	234,700,000	230,200,000	201,400,000
Switzerland.....	133,000,000	102,400,000	261,300,000	262,800,000
Spain.....	103,600,000	74,000,000	96,700,000	91,000,000
Russia.....	102,300,000	168,400,000	30,600,000	28,400,000
Turkey.....	142,500,000	133,400,000	61,400,000	64,400,000
United States.....	174,500,000	217,600,000	192,900,000	306,800,000
Argentine Republic.....	99,200,000	104,300,000	68,900,000	62,400,000
British India.....	137,600,000	123,200,000	10,500,000	6,500,000

The movement of shipping, from 1870 to 1872, was as follows:

FLAG.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
French.....	10,261	2,327,000	9,181	2,188,000
Foreign.....	19,662	4,395,000	18,375	2,986,000
Total, 1872....	29,923	6,722,000	27,556	5,174,000
" 1871....	?	6,376,000	?	3,989,000
" 1870....	?	6,582,000	?	3,979,000

The merchant navy, in 1872, was composed as follows:

	Vessels.	Tons.
Sailing-vessels of more than sixty tons.....	4,799	902,096
Steamers of more than sixty horse-power.....	316	240,273

According to the report of the Committee of the National Assembly on Railroads, there were, on June 1, 1873:

	Kilometres.*
In operation.....	18,230
In course of construction.....	3,000
To be constructed.....	1,176
Chartered.....	556
Total.....	22,962

Algeria has three roads in operation, from Algiers to Oran, 420 kilometres; from Philippeville to Constantine, 86 kilometres; and the little road from Bona to the mines of Ain-Mokra, 80 kilometres.

The number of letters forwarded by the French post-office in 1870 was 281,352,000, exclusive of 8,660,000 registered letters. It also forwarded 347,959,000 printed matter and parcels, and issued 6,260,000 money-orders. The revenue of the department was, in 1870, 72,246,000 francs; in 1871, 91,242,000. The expenditures, in 1870, for administration, 38,771,000 francs; on subsidies for mail-steamers, 24,590,000; in 1871, for administration, 44,630,000; on subsidies for mail-steamers 22,228,000; surplus in 1870, 8,884,000; in 1871, 24,878,000.

At the end of the year 1871 there were 43,811 kilometres of lines of telegraphs in operation, comprising 122,653 kilometres of wires. The number of telegraph-offices was 3,187.

* One kilometre = 0.62 English mile.

The aggregate revenue, in 1871, 8,484,000 francs; the expenditures, 12,570,000 francs.

At the beginning of the year 1873 the eyes of all France were turned upon the Committee of Thirty, which, in December, 1872, had been elected to draft laws regulating the powers of the President of the Republic and of the National Assembly. The report of the committee was made on February 20th, by the Duke de Broglie. After a brief review of the history of the committee, the report states the reasons which, in the opinion of the majority, made it necessary to restrict the power of the President in his relation to the National Assembly. He is not to have the right to take part in the debate, but on important occasions he shall have the power of setting forth his views to the Assembly. In such cases the Assembly is to adjourn after the President has spoken, and the debate is to be continued on the next day. The report then enumerates the labors which the Assembly has still to perform before being dissolved; it must reorganize the army and the administration, solve the question of municipal government, complete the liberation of the French territory, and prevail upon the Government to assume a resolute attitude with regard to the anti-social question. De Broglie gratefully referred to the services which Thiers had rendered to the country, an acknowledgment which provoked the laughter and noisy remonstrance of the extreme Right. One member accused the committee of servility, and the Duke de Broglie and the Duke d'Audiffret Pasquier of being the authors of this compromise. The debate began on February 28th, and the several parties defined their positions. The left centre demanded the consolidation of the republic; the monarchists the reestablishment of the throne; and the Bonapartists an appeal to the *plébiscite*. Gambetta, on February 28th, vehemently attacked the draft, and demanded to know whether the Government adhered to the message of November 13, 1872, or renounced it. He and all radical republicans did not want a republic which trampled under foot the democratic principle; they demanded a republic with all its liberties, with the right of meeting and association, which are even above the law; they demanded a republic

based on the rights of man, and indignantly repelled the draft of the committee. On the part of the extreme Right, General du Temple made another violent attack upon the President, whom he charged with having said every thing, defended every thing, and attacked every thing; with having attacked his legitimate king, dethroned his benefactor, and presided in 1831 at the plundering of the archiepiscopal palace of Paris and the demolition of the cross on the tower of Notre-Dame. In the name of the Government, Dufaure, on March 1st, declared that the Pact of Bordeaux, which left the constitutional question undecided, and regarded the republic for the present as the neutral ground for all parties, must be maintained, and that the report of the committee was not at variance with the message of November 13th. The opposition which the speech of Dufaure met with called out, March 4th, the President himself, who, as he expressed it, desired to "supplement" it. The most important portion of the President's speech was a declaration that he would not advise the proclamation of the "definite republic," but that the National Assembly must not disband without providing good institutions for the provisional republic as it now exists. He was of opinion that, after the conclusion of peace by the liberation of the French territory, the work of the Assembly was fulfilled, and during the present year its labors should be finished. Against Gambetta he declared in favor of a second Chamber as it exists in the United States, and against the Right, that he regarded the republic as the legally-proclaimed Government. In conclusion, he asked the Assembly to accept the draft of the committee. His wish was complied with. The introductory section was adopted by 475 votes against 199. The first four articles which regulate the relations of the President to the National Assembly offered but little interest. An amendment proposed by Belcastille, who demanded that the suspensive veto should not apply to constitutional laws, was rejected. The debates on the fifth article, which was to give fixed institutions to the Provisional Government, were more important. The opposition to this article proceeded from the extreme Right, which considered it as paradox to strengthen a provisional state of things, and from one portion of the Left which was dissatisfied with the forms of this consolidation. The section on the transfer of the constitutional powers was adopted on March 12th by 434 votes against 196, the section on the formation of a second Chamber by 381 votes against 213, the section on the electoral law by 470 against 163 votes, and the whole article by 367 against 227 votes. Finally, on March 18th, the whole draft of the committee was approved by 411 against 234 votes.

On March 15th a new treaty was concluded with the German Government at Berlin, concerning the evacuation of the French territory.

Thanks to the able financial management of President Thiers, the French Government was able to notify Germany that the fourth milliard of the indemnification of war could be paid on May 5, 1873, instead of March 1, 1874, and that the fifth and last would be paid before the close of the year 1873. In consideration of this advanced payment, Germany agreed to evacuate France in July, with the exception of the fortress Verdun, which they would occupy, in the place of Belfort, until the payment of the last milliard. The Minister of Foreign Affairs, Rémusat, announced the new treaty to the National Assembly, which unanimously adopted a vote of thanks to President Thiers for having well deserved of the country.

The protest of Prince Napoleon against his expulsion from France gave rise, on March 30th, to an animated debate. The Committee of the Assembly moved to pass to the order of the day, but indirectly blamed the Government, declaring itself to be in principle opposed to the expulsion. Minister Dufaure, in defense of the Government, spoke in favor of a simple order of the day, and proposed a law which forbade the members of the ex-imperial family from entering France without the special consent of the Government. The Assembly voted the simple order of the day, in accordance with the wishes of the Government, by a majority of 58. In reply to this vote, Prince Napoleon issued a proclamation to the Corsicans, in which he defended the claims of the Napoleonic family to the throne of France. He protests against the Revolution of September 4, 1870, and against the arbitrary rule of Thiers; he insists that the country was never so oppressed, poor, and unhappy, as under the present rule; and that, by his present conduct, Thiers fully justified the measures which were adopted against him in 1851. As for himself, he claims that he at all times was opposed to any kind of proscription. The secret of the strength of Napoleonism, according to him, consists in the fact that the Napoleonic family twice saved France, and gave to it those social guarantees, without which every state falls into anarchy, and that France twice, by a *plébiscite*, approved these acts. Napoleonism, he says, is feared, because, outside of it, there are only two minorities, one of which desires order without democracy, and the other democracy without order.

On April 1st the President of the National Assembly, Grévy, gave in his resignation. The Assembly on this day had an excited debate on the proposed change of the municipal administration of the city of Lyons. The Committee of the Assembly, in the interest of the Conservative party, proposed to abolish, as has been done in Paris, the office of one maire for the entire city, and to substitute for him a prefect, while the Government will divide the city into as many municipal districts as there are members of the Municipal Council.

The Radicals desired to leave the constitution of the city unchanged. A member of the Left (Lerryer) applied the expression "baggage" to the report, a remark which the Marquis de Gramont designated as "*impertinence*." The President, Grévy, called the latter to order, whereupon the Right showed such marks of disrespect, that the President gave in his resignation. He was immediately reelected by a large majority, but persisted in his refusal to resume the chair. On April 4th the Assembly elected the candidate of the Right, Buffet, as President, by 304 votes against 285, which were given to Martel. Grévy took his seat among the members of the Left. The ex-Maire of Lyons, Barodet, against whom this law for the municipal reform of Lyons had been chiefly directed, was nominated by the Radical party as their candidate for the National Assembly, at a supplementary election held in Paris on April 28th, and he was elected by 180,146 votes against 135,487, which were given to Ch. de Rémusat, the Minister of Foreign Affairs, and 27,000 given to Colonel Stoffel, the candidate of the Legitimists and Orleanists. At another supplementary election, held on May 12th, the Radicals elected four of the five deputies to be chosen.

These successes of the Radical party greatly alarmed the Conservatives. A change in the ministry, which occurred in consequence of the resignation of the ministers Goulard and Jules Simon, greatly increased their dissatisfaction with the Government. Casimir Périer was appointed Minister of the Interior, Béranger, Minister of Public Works, and Waddington, Minister of Public Instruction. Fortoul, thus far Minister of Public Works, was appointed Minister of Public Worship, which department was separated from that of Instruction. This reconstruction of the ministry, and especially the appointment of Casimir Périer, indicated a design of the Government to secure the support of the Left Centre, and to proceed further in the permanent establishment of the conservative republic. Accordingly, the Right Centre, under the presidency of the Duke de Broglie, on May 17th, passed resolutions in behalf of the adoption of stringent measures against the dangers of radicalism. On May 18th the Right, under the leadership of De Larcy, concurred in the resolutions of the Right Centre. When, therefore, on the next day (May 19th) the Government brought in a bill for the organization of the public powers, accompanied by an *exposé* on the necessity of establishing a regular republican government in the place of the provisional republic, the President of the Assembly, Buffet, read an interpellation signed by 106 members of the Right, in which a decidedly conservative policy was demanded. On May 23d the Duke de Broglie attacked the Government for its vacillation and its concessions to the Radical party. On the following day (May

24th) President Thiers himself explained and defended the principles of his administration. He had endeavored not to govern in the interest of any one party, but for the benefit of the whole country; and he assumed the entire responsibility for the reconstruction of his ministry. The Conservatives declared themselves not satisfied with this declaration, and, in the afternoon, Ernoul moved a resolution that the Assembly express their regret that the recent changes in the ministry did not afford to the conservative interests the desired satisfaction. The order of the day, proposed by Minister Dufaure, was rejected by 362 votes against 348, and the motion of Ernoul adopted by 360 against 344. President Thiers at once gave in his resignation, and the same was done by the ministry. A motion, made by the Left, not to accept the resignation of Thiers, was lost, by 368 against 339 votes. By 390 votes Marshal MacMahon was then elected President of the Republic. In reply to the deputation which notified him of the election, MacMahon declared that he accepted the offered dignity, and that, with the assistance of God, and with the support of the army—which would always be an army of the law—he would complete the work of the liberation of the country and the restoration of moral order. The new ministry, appointed by the President was composed of the following members: Vice-President of the Council of Ministers, and Minister of Foreign Affairs, Duke de Broglie; Keeper of the Seal, and Minister of Justice, Ernoul; Minister of the Interior, Beulé; Minister of Finances, Magne; Minister of War, General de Cissey; Minister of the Navy, Vice-Admiral de Dampierre d'Hornoy; Minister of Public Instruction, Worship, and Fine Arts, Bathie; Minister of Public Works, Deseilligny; Minister of Agriculture and Commerce, De la Boullerie. The Minister of War, Cissey, resigned after a few days, and, in his place, General du Barail was appointed (May 29th). Of the new ministers, the Duke de Broglie was regarded as a moderate Orleanist, Magne as a devoted, and Deseilligny and Dampierre d'Hornoy as moderate Bonapartists; most of the others as Legitimists. Nearly all, with the exception of Magne, were believed to be decided Catholics. In his first message to the National Assembly, the new President announced that he would loyally carry out the will of the majority of the Assembly.

The long negotiations for a fusion of the two French branches of the Bourbon family appeared at the beginning of the year so near a successful close, that papers of both parties announced the fusion as an accomplished fact. The report proved, however, to be premature. Count de Chambord, in a letter to Bishop Dupanloup of Orleans, one of the most active leaders of the fusion party, declined to make the least concessions to the flag of the revolution, and both the heads of the Orleans family and

the bulk of the Orleanist party were not ready yet for an unconditional surrender. The negotiations for a union were, however, continued, and on the 5th of August the chief of the house of Orleans, the Count de Paris, took the decisive step and paid to the Count de Chambord a visit at the latter's residence at Frohsdorf, in which he formally and unreservedly recognized the head of the elder Bourbon line as the only legitimate claimant to the throne of France. This important act had received the approval of all members of the house of Orleans. The Duke de Nemours and the Count de Chartres had been foremost in advocating it. As the Duke d'Aumale, as the president of the court-martial which had to try Marshal Bazaine, could not leave Paris, the Prince de Joinville offered to accompany the Count de Paris. He preceded the latter to Frohsdorf, and arranged the ceremonial. The Count de Chambord awaited the Count de Paris in his *salon*, received him standing, reached out his hand to him, seated himself, while at the same time he asked his guest also to be seated. The Count de Paris in his own name and in the name of all the members of his house paid his respectful homage to his majesty King Henry V., not only as the head of the house of Bourbon, but as the only representative of the monarchical principle in France, and expressed the hope that the time would come when the French nation would understand that its salvation was only in this principle. The Count de Chambord embraced his cousin, and on the same day returned the visit.

It was expected that this fusion of the two branches of the house of Bourbon would soon be followed by the formal proclamation of Henry V. as King of France. The prominent men of the party, among them the Duke de Broglie, announced the restoration of royalty as near at hand. It was hoped that the Count de Chambord would find it compatible with his ultra-conservative principles to conciliate the moderate Liberals and all the vacillating elements which were not unconditionally opposed to his return, by some concessions. These hopes were rudely cut short by a letter which the count, on October 27th, addressed to a prominent Legitimist, M. de Chesnelong. In this letter the count declares that he will never consent to become the legitimate king of the Revolution, to sacrifice his honor and to inaugurate the restoration of monarchy by an act of weakness. He refers to the fact that the Count de Paris made his submission to the legitimate king contingent on no conditions, and that the offer of the presidency to Marshal MacMahon was likewise unconditional. He claims the right of expecting the same confidence, and of inspiring the same feeling of security. "My person," the prince says, "is nothing; my principle is every thing. France will see the end of all trials as soon as she will understand this. I am the pilot who alone is able to lead the vessel into

the port. France cannot perish, for our Saviour still loves his Frenchmen, and, if God has decreed the salvation of a nation, he sees to it that the sceptre of justice is placed in such hands only as are strong enough to carry it."

This letter fell like a bomb-shell among the royalists. When the National Assembly met, on November 5th, all idea of an immediate restoration of the monarchy under Henry V. had been abandoned, and the best expedient was thought to be, to prolong the powers of President MacMahon. The Right favored an extension of the presidency of MacMahon to ten years, the Bonapartists preferred to limit it to five years; the President himself declared in favor of seven years. In his message to the National Assembly, the President strongly expressed his desire that the proposal to determine the duration of his power should be discussed and voted upon before the other constitutional bills. Immediately after the reading of the message, a motion made by General Changarnier, in the name of the entire Right, to prolong the powers of the President for a period of ten years, was declared to be urgent, and referred to a special committee; while a motion by the Bonapartist Echasseriaux, to take on January 4, 1874, a general vote of the French people on the question, whether the empire or the Bourbons should be restored, or the republic be maintained, was not taken into immediate consideration. The special committee of fifteen, to which the motion of Changarnier had been referred, and in which the Left happened to have a majority, declared itself in favor of discussing the constitutional bills, before the prolongation of the powers of the President (to which in that case they were not opposed) should be granted. The National Assembly, on November 19th, rejected the amendment of the Bonapartist Echasseriaux, which was supported by Rouher, and a member of the extreme Left, Naquet, by 499 against 88 votes, and on November 20th adopted, by 878 against 810 votes, the amendment offered by Depeyre, which provides for a prolongation of the powers of the President to seven years, and for the appointment of a committee of thirty, for preparing a report on the constitutional bills. Immediately after the adoption of this amendment, the ministry offered to the President their resignations. The President requested them to remain in office until he could reconstruct the cabinet. This took place on November 25th. The Duke de Broglie remained the Vice-President and the head of the Council; the Bonapartist Magne retained the important department of the finances; of the other members of the old cabinet, Du Barail, De Fourton, Deselligny, and Dampierre d'Hornay, likewise entered the new. Of the new members of the cabinet, the Duke de Decazes was Minister of Foreign Affairs; Depeyre, Minister of Justice; De Larcy, Minister of Public Works.

On the day before, Leon Say had made a violent attack upon the old cabinet. He brought forward his interpellation, asking the ministry why it had delayed ordering elections for the vacant seats in the Assembly. He accused the Government of having postponed those elections in the interest of their own party, and concluded with the words: "History will say of the cabinet of May 24th, that it began with the corruption of the press, and ended with the falsification of the elections." The Government was defended by M. Beulé, the Minister of the Interior, and the order of the day "pure and simple," which was proposed by a member of the Right and accepted by the ministry, was adopted by 364 against 314.

On December 14th, the Republican party obtained a great success at four supplementary elections for the National Assembly, in the departments of Seine-et-Oise, Finistère, and Aude. All the four seats were carried by the Republican candidates; the next greatest number of votes were received by the Bonapartists, the royalists being everywhere lowest on the poll.

Among the memorable events of the year belongs the trial of Marshal Bazaine. This began on October 6th, the Duke d'Aumale being president of the court. On December 10th, the court sentenced Bazaine to degradation and death; but immediately after the sentence all the members of the court signed the following appeal to mercy: "The court-martial has just pronounced judgment, and with the sanction of the Minister of War we have the honor to communicate to you. As jurymen our consciences alone must guide us, and as judges it has been our duty to apply an inexorable law. The marshal, however, received the command of the army under the most unfortunate circumstances, and the court cannot forget that every time he was engaged on the battle-field he was equal to himself. Neither can the army forget the glorious services rendered by the volunteers of 1831." In compliance with this appeal, Marshal MacMahon commuted the sentence of death into twenty years of seclusion. He also decided that Marshal Bazaine is to bear the effects of military degradation, but spares him the humiliating ceremony usually attending it. The sentence of the marshal will be carried out on the Island of Sainte-Marguerite, opposite Cannes.

Although the conservative majority of the National Assembly did not dare to accomplish, as it desired, the restoration of a monarchy in the course of the year 1873, the party which prefers a monarchical form of government under Henry V. as King of France to any other form of government, continues in the ascendancy in the National Assembly, and is eagerly intent upon smoothing the way for the realization of its projects. Though not on the throne, the Count de Chambord is now re-

garded as their legitimate king by a larger number of Frenchmen than at any previous period of his life. His movements during the coming year will therefore be of greater importance and command general attention. It is a noteworthy fact that the legitimacy of the uncompromising standard-bearer of legitimate principles is not beyond dispute. During the violent conflicts between monarchists and republicans in 1873, the latter recalled the fact that soon after the deliverance of his mother, the Duchesse de Berry, on September 29, 1820, which took place seven months after the death of the Duke de Berry, a protest of the Duke Louis Philippe of Orleans, then in London, was published, in which the pregnancy of the duchess was declared to be simulated and the child to be spurious. The duke disowned subsequently the project, but, when it was republished after he had become King of France, he did not consider it necessary to repeat his disavowal. Another doubt of the legitimacy of the Count de Chambord is based upon the fact that his father, before his marriage with the Neapolitan princess, the mother of the count, lived in morganatic union with a young English lady, Miss Brown, which was not recognized by Louis XVIII., but was never lawfully dissolved. A number of republican papers discussed these questions, without, however, producing the least impression upon the minds of the Legitimists. Although a number of letters and manifestoes of the count have been published since 1871, in which year he assumed for the first time, in signing a proclamation, dated from Chambord, the title of King, he has never officially announced his political programme. He has invariably professed himself a devoted partisan of the Catholic religion and the rights of the papacy, and has repeatedly declared that he would not make the acceptance of the throne contingent upon any previous conditions; but that, when restored to the throne, he would be willing to make reasonable concessions to public opinion. The count has been married since November 16, 1846, to the Princess Maria Theresa, Archduchess of Austria-Este, but the marriage has remained without offspring, and with his death the elder and main line of the French Bourbons is therefore likely to become extinct. The heir-apparent to the throne is the chief of the younger line of the French Bourbons, or the house of Orleans, Louis Philippe, Count de Paris.* Born on August 24, 1838, he was only four years old when he lost his father, Duke Ferdinand of Orleans, the eldest son of King Louis Philippe. When he was ten years old, the house of Orleans lost the throne by the Revolution of 1848. During the civil war in the United States, he served for some time

* In view of the political importance which the events in France and Spain have again given to the famous house of Bourbon, we give this year a genealogical table (see page 304) of this house, which shows the relationship of all the different branches, and the names of all the living male members.

MEMOIRS OF THE HOUSE OF BOURBON.

LOUIS XIII., KING OF FRANCE, 610 (d. 1643).

[illegible]

with his brother, the Duke de Chartres, in the Federal army. Since then, he has lived mostly in England and written a work on "Trade Unions." Like most of the princes of his house, he has anxiously courted popularity by a liberal appearance, while on the other hand he has been equally eager in desiring the reconciliation with the Count de Chambord. He is married to Maria Isabella, the eldest daughter of his uncle, the Duke de Montpensier, and in 1873 had three children, two daughters and one son, Louis Philippe, born February 6, 1869. The only brother of the Count de Paris, Robert, Duke de Chartres, is married to a daughter of the Prince de Joinville, and has four children, two daughters and two sons, Robert, born 1866, and Henry, born 1867. Of the four uncles of the Count de Paris, the oldest, Louis, Duke de Nemours, born 1814, has of late taken but little part in political life. The second uncle, Francis, Prince de Joinville, born 1818, is a member of the National Assembly, and has again been recognized by the government of the republic as a vice-admiral of the French Navy. The third, Henry, Duke d'Aumale (born 1822), has been, since the overthrow of the empire, the most active among the princes of the house of Orleans in promoting the interests of the family. He became a member of the National Assembly for the department of Oise, joined the Right Centre, and by an impressive speech, made in May, 1871, in vindication of the tricolored flag, for a time arrested the fusion movement between the Orleanists and Legitimists. In December, 1871, he was elected a member of the French Academy, and in 1872 he was appointed president of the court-martial by which Bazaine was tried. His name has repeatedly been mentioned in connection with the temporary presidency of the republic, whenever the Right and the Right Centre thought of displacing Thiers. The fourth uncle, Antony, Duke de Montpensier, who is married to the only sister of ex-Queen Isabella of Spain, born 1824, has, since the Revolution of 1868 drove him from Spain, not taken part in political life. The prospects of the second monarchical party, the Bonapartists, seemed to receive a fatal blow by the death of the ex-Emperor Napoleon III., which occurred at Chiselhurst, on January 9, 1873. The princes of the houses Bonaparte and Murat, and a number of prominent statesmen and generals, as Rouher, the Duke de Palikao, Marshal Canrobert, and General Fleury, assembled at the funeral, and the prince imperial was announced as Napoleon IV. to the party; but the funeral, though very numerous attended, did not give a favorable impression of the political strength of the Bonapartist party. In the course of the year the prospects of the party appeared, however, to improve. The superior talent of the parliamentary leader of the party, Rouher, was generally recognized and widely felt. When

Marshal MacMahon was elected President of the Republic, an ardent Bonapartist, Magne, was appointed Minister of Finance, and he retained this influential position when the ministry was reconstructed in November. Among the new prefects who were appointed by Marshal McMahon in place of the removed republicans, the Bonapartists were believed to have secured the lion's share, as most of the new prefects were believed to sympathize, at least secretly, with the schemes of the Bonapartists. The young Prince Napoleon (Napoleon IV.) declared in a speech which he made on the Napoleon-day, August 15th, that in the paternal inheritance he found the principle of popular sovereignty, and that he would always remain faithful to the principle: "Every thing for the people and through the people." The more anxious the Legitimists appeared to curtail universal suffrage, the more confident the Bonapartists became in their urgent demands for a new *plébiscite*. The "Red Prince," faithful to his liberal professions under the empire, advocated a fusion of Bonapartists and republicans in defense of universal suffrage, which, however, found but little favor with the outright republicans.

The head of the republic, Marshal MacMahon, observed the most absolute silence with regard to the rival schemes of the two great monarchical parties. He claimed to have no other aspiration than to be the defender of society and of the conservative interests against the subversive theories of the Radicals. When he returned from his captivity in Germany to Paris, on March 18, 1871, the government of Thiers placed him at the head of the army against the insurgents. He justified the confidence placed in him so fully, that Thiers, in a report made to the General Assembly on April 27th, called him the chevalier without fear and reproach of our times. At the supplementary elections, held on July 2, 1871, several departments requested MacMahon to be a candidate, and a large portion of the Assembly at that time desired to lean on him against Thiers, and even, if it should appear necessary, to substitute him for Thiers. But MacMahon emphatically declared that he was not now and did not wish to become a politician, and that he intended to keep entirely aloof from political struggles, both in defense of the republican form of government and against it. When a committee of the Assembly investigated the causes of the revolution of September 4th, he assumed the entire responsibility for the misfortunes which followed the march of his army from Châlons to Sedan. A subscription started by the *Figaro* to offer him a sword of honor after the battle of Reichshofen, produced more than 40,000 francs, but MacMahon refused the sword, and presented the sum collected to a charitable institution. In January, 1872, the conservative party in Paris again urged him to become a candidate for the National Assembly, but he again de-

clined. When Thiers, in the same month, intended to offer his resignation, MacMahon, in the name of the entire army, asked him to withdraw it. Thus he remained entirely aloof from the progress of the political strife, until in May, 1873, the conservative parties unanimously appealed to his patriotism, to assume the presidency. Since then he has given no indication whether he favors the now united royalists, or the Bonapartists; he only claims to be determined to protect the conservative interests represented by the majority of the National Assembly. He appears to be in strong sympathy with the Catholic tendencies, which have made so great progress among the politicians of France since 1870.

The new President of the National Assembly, Louis Joseph Buffet, had been Minister of Finance in the imperial ministry, formed by Emile Ollivier, on January 2, 1870. He distinguished himself by a cautious and economical administration, and inspired the mercantile circles with great confidence. When Ollivier was prevailed upon, in 1870, by the Right, to consent to a *plébiscite*, he resigned. He was elected to the National Assembly for the department Vosges, and joined the Right Centre. Thiers, having been elected chief of the executive power, offered to him again the ministry of finance, which he declined. As one of the leaders of the Right Centre, he has repeatedly made severe attacks upon the policy of Thiers. With regard to the rival claims of royalists and Bonapartists, he has observed a great reserve.

The most prominent of the now united royalist party, embracing the former Legitimists and Orleanists, is Duke Albert de Broglie, a son of Duke Achille Léone Victor Charles de Broglie, and grandson, by his mother, of Madame de Staël. He was, until 1869, entirely foreign to political life, devoting himself entirely to literary labors, which early gained him a great reputation, and in 1862 the reception into the Academy. In 1869 he presented himself in the department of Eure as a candidate of the Opposition for the Corps Législatif, but was defeated, the Bonapartist candidate receiving over 14,000 votes against 8,800 which were given to him. In February, 1871, he was elected as a representative of the department of Eure to the National Assembly. On February 19th he was appointed ambassador and plenipotentiary extraordinary in London, but attended, nevertheless, frequently the National Assembly. As he several times voted against the Government, of which he was the diplomatic agent, the republican press demanded his removal, and at his own request the Count d'Harcourt was, on May 1, 1872, appointed in his place. In the National Assembly he was head of the Right Centre and the leader of the entire conservative opposition against Thiers. In February, 1873, he made the report of the Committee of Thirty on the powers of the President and the National As-

sembly; in May he forced the resignation of Thiers, and became prime-minister under the new administration of MacMahon. This position he retained when, in November, the cabinet was reconstructed. Broglie was, with Dupanloup, Montalembert, and Lacordaire, a founder of the *Correspondant*, the organ of a liberal Catholic school, which believes in the possibility of reconciling the Catholic Church with the progress of science. Bishop Dupanloup, of Orleans, is now, with his friend Broglie, one of the acknowledged leaders of the royalist party in the Chamber, and several other contributors to the *Correspondant* are among the prominent men of the party. Before the meeting of the National Council, the entire school, including Bishop Dupanloup, declared themselves opposed to the dogmatization of papal infallibility, but they all submitted to the promulgated decree of the Council, except Father Hyacinthe, who joined the Old Catholics, and became Old Catholic parish priest in the city of Geneva. The bitter quarrels of the school of the *Correspondant* with the *Unités* and the ultramontane party appeared for a time to have subsided, but at the end of the year again broke out with great violence in a correspondence between Bishop Dupanloup and Louis Veuillot.

On the whole, the Catholic Church appeared, in 1873, to exercise greater influence upon the popular mind than at any time since 1830. During the summer months, the pilgrimages to several places where the Blessed Virgin Mary was reported to have appeared assumed extraordinary dimensions, and even became of political importance, as it was common at the pilgrimages to sing hymns, in which the restoration of Henry V. was prayed for. A large portion of the National Assembly declared itself in favor of the restoration of the temporal power of the Pope, and the office of a special ambassador near the Pope was continued.

The Reformed Church of France had another important session of the General Assembly, which completed the reorganization of the church on an orthodox basis. (See REFORMED CHURCH.)

The thirteenth biennial meeting of the Synod of the Union of Evangelical Churches in France opened on the 21st of August, at St. Jean-du-Gard, in the valley of the Cevennes. The meeting attracted more than the usual degree of interest. M. Bersier, of Paris, was chosen president; M. Théodore Monod preached the opening sermon. Application for admission to the Union was made by the church at Rion, consisting of ninety-three members. The total number of members of the churches, exclusive of this one, was estimated to be 2,551, showing an increase of thirty members since the preceding meeting of the Synod. It was represented that the church at Nice, of which the Rev. M. Pilatte was pastor, and the Evangelical Church at Lyons, would join the Union before the next meeting.

The anniversaries of the French Protestant religious and benevolent societies were held in May. Their various reports give the following facts in relation to their condition and operations:

The receipts of the *French Bible Society* for the year were 89,000 francs, and its expenditures 83,000 francs. The society had sent forth 16,784 copies of the Bible. The British and Foreign Bible Society had also circulated 88,312 copies, of which 75,000 were sold.—The library of the *French Protestant Historical Society* was increasing in interest and value by occasional additions of manuscripts and documents. The important work, "La France Protestante," was being supplemented by a committee, of which M. Berdier was president. Papers were read at the anniversary on "The Origin of Protestantism in Hungary," and on "The Foundation of a College in Geneva."—The *Tract Society* had met its deficit, and had a capital of 25,000 francs. It was reprinting the tracts which its efforts during the war had exhausted. The legality of tract-distribution was discussed. The conclusion was reached that there is no possibility of placing one's self in a perfectly legal position on this point.—The receipts of the *Protestant Bible Society* were 89,000 francs, and its expenses 28,000

francs. It had circulated 25,000 copies of the Scriptures.—The receipts of the *French Missionary Society* were 175,574 francs; its expenses 191,862 francs. At the Basuto mission, the French missionaries were assisted by 57 native catechists. The schools were attended by 2,061 children, and 321 adults; and 200 children had been baptized. Hopeful reports were received from the missions at Senegal and Tabiti.—The receipts of the *Central Protestant Evangelization Society* were 183,000 francs; its expenses were 199,000 francs. The society employed 95 agents, and was acting on 200 different points in France. Twenty-five stations had become official parishes. The theological school at Batignolles was prosperous.—The receipts of the *Society for the Encouragement of Elementary Schools* were 91,000 francs. The society needed a more liberal supply of funds. It had helped 168 schools. Its normal school for girls at Boissy St.-Leger, and that for boys at Courbesois, were prospering. The Protestant church at Reims had built a very fine school establishment, at a cost of 200,000 francs.—The expenses of the *Sunday-school Society* had been met; 950 Sunday-schools were known to exist in France. The celebrations of the 1st of May were attended by 9,000 children of the Sunday-schools.

G

GEARY, JOHN WHITE, Governor of Kansas, and of Pennsylvania, major-general of volunteers in the late war, an American soldier and statesman, born near Mount Pleasant, Westmoreland County, Pa., December 30, 1819; died in Harrisburg, Pa., February 8, 1873. His father was of Scotch-Irish descent, but a highly-educated and refined gentleman. He had attempted to give his sons, of whom John was the fourth, a collegiate education, but his loss of property and subsequent sudden death compelled the son to leave Jefferson College, which he had entered, and contribute his part toward the support of the family. He taught school for a little time, then went into a commercial house in Pittsburgh, but presently turned to mathematics and the study of civil engineering, and at the same time studied law and was admitted to the bar, but never practised. Finding ample employment as a civil engineer in Kentucky, he after a little time accumulated enough to pay off his father's debts, which he did, through his mother. He was next appointed assistant-superintendent and engineer of the Alleghany Portage Railroad. He was thus engaged when war was declared against Mexico in 1846. Pennsylvania furnished two regiments for that war, and the Highlanders recruited by Captain Geary were attached to the Second Pennsylvania Regiment, which organized by the election of Wm. B. Roberts, of Uniontown, as

colonel, John W. Geary as lieutenant-colonel, and Wm. Brindle as Major. Early in January, 1847, this regiment left Pittsburg for New Orleans, the First having gone a few days before. The regiment joined the army of General Scott, at Vera Cruz, having been assigned to Quitman's division, and participated in all the battles and conflicts in and around the city of Mexico. Colonel Roberts, from failing health, was too ill to command his regiment at Contreras and Garita de Belen, in which engagements Lieutenant-Colonel Geary commanded, and handled his men with skill. After the capture of the city of Mexico, Colonel Roberts died, and Geary was elected to the colonelcy, returning with his regiment after nearly two years of arduous service. In January, 1849, he was appointed, by President Pierce, first Postmaster of San Francisco, with authority to establish the postal service throughout California. He was the first American Alcalde of San Francisco, and "Judge of the First Instance in and for the District of San Francisco." These positions were of Mexican origin, the alcalde being sheriff, probate judge, etc., with the functions of a mayor or police magistrate. The Judge of First Instance held a court, with civil and criminal jurisdiction, as well as admiralty powers. The manner in which Colonel Geary exercised these varied functions may be inferred from the fact that he was unanimously reelected, and con-

tinued to hold the offices until the new constitution abolished them. In May, 1850, he was chosen the first Mayor of San Francisco, and controlled the dangerous element of that day with marked ability. He took a leading part in the formation of the new constitution for California, and, being chairman of the Territorial Democratic Committee, aided materially in the election of John Bigler, the first Governor of California. He returned home in 1852, and did not take any public part in the affairs of the country until 1856, when, after declining the governorship of Utah, he was appointed Territorial Governor of Kansas. One of Governor Geary's first acts was to interpose a force of United States troops against three Missouri regiments, well armed and supported by artillery. He prevailed upon them to retire, a conflict was prevented, and in a few months he was able to report to Washington that order had been completely reestablished. The murder of Haynes, almost in the presence of Governor Geary, and the action of Judge Lecompte in turning the murderer loose, brought about the resignation of Governor Geary. In June, 1861, he raised the Twenty-eighth Regiment of Pennsylvania Volunteers. His first laurels were won at Bolivar Heights, where he received his first wound. His next achievement was the routing of General Hill, at Leesburg. On the 25th of April, 1862, Colonel Geary was commissioned a brigadier-general. At the battle of Cedar Mountain, on the 9th of August following, he was wounded in the foot and arm, and was compelled to retire from the field. In consequence of these wounds he did not participate in the battle of Antietam, but returned on the 25th of September with his arm still in a sling, and was enthusiastically received. The command of the Second Division of the Second Corps devolved on General Geary soon after, and the conspicuous part which he acted in the battle of Chancellorsville, in May following, earned for him the highest commendations. At the memorable battle of Gettysburg, in July, 1863, General Geary again distinguished himself. Single-handed his division fought Ewell's corps at great disadvantage but with signal success. Two hundred prisoners and four thousand small-arms were captured by the Second Division, and twelve hundred lay dead in front of his lines. In September, 1863, the corps to which General Geary's division was attached was ordered to join the Army of the Cumberland, under General Hooker, to aid in repairing the fearful disaster at Chickamauga. The battle of Wauhatchie was the first considerable engagement in which General Geary took part in the West. This victory was highly important, as the subsistence of the army at Chattanooga depended upon it. Generals Grant, Hooker, Thomas, and others, rode upon the field after the battle, and personally congratulated General Geary upon his achievement. In the following month, Geary's divi-

sion was selected to storm the enemy's stronghold on Lookout Mountain, which, after a terrible struggle, was successful. It was here that his son, a most promising young man of eighteen, who had left his class in Jefferson College to enter the service of his country, a lieutenant in Knapp's battery, fell while sighting his gun. Then followed the battles of Mission Ridge, Pine Knob, Pine Hill, Lost Mountain, and Peach-Tree Creek, terminating with the triumphant entry into Atlanta, September 2, 1864. General Geary, in his official report, gives a striking summary of the "hundred days' fight" of this eventful campaign, terminating so brilliantly for the Federal forces. The part which General Geary enacted in Sherman's famous "march to the sea" was equally creditable. His command was the first to enter Savannah, after its evacuation; and, in consideration of the services of his division in the capture of Fort Jackson, he was appointed Military Governor of Savannah. In January, 1865, having been promoted to be major-general, he started upon the "march through the Carolinas," encountering and overcoming innumerable difficulties, until he reached Raleigh, in April, at which time General Lee had surrendered, and the civil war had come to an end. Peace soon followed, and the troops of the Twentieth Corps, to which Geary's division was then attached, were marched, through Richmond, to Washington, and disbanded. It was impossible for one who had taken so prominent a part in public affairs, and who had gained so wide a reputation, to remain long in private life. Toward the close of Governor Curtin's term, General Geary was widely spoken of as his successor. His great popularity among the soldiers, and his general acceptability, rendered his nomination almost certain. He was elected in 1866, by a large majority, and was reelected in 1869. He had retired from the gubernatorial office only two weeks previous to his death. In person Governor Geary was tall, erect, and finely proportioned; in manners genial, courteous, and easily accessible; possessed great powers of application, force of will, clearness of perception, and soundness of judgment; and he was as exemplary in his moral and religious character as he was energetic in action and firm in judgment.

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1878. Another year has passed, and though great and important discoveries have been made, yet the two questions which for years past have occupied the minds of all those who are interested in geographical research remain not wholly solved. Of all the expeditions to the arctic regions, not one has been able to reach a latitude which qualified them to assert positively the existence or non-existence of an open circumpolar sea. Our gallant but unfortunate fellow-citizen Captain C. F. Hall attained the highest latitude yet made by any modern explorer, and, had he

lived, he might have reached and entered this circumpolar sea, if one exists; the European expeditions, though making some discoveries on other points, threw no light on this question, and did not reach so high a latitude as in former years.

In African discovery, though we have learned many interesting facts concerning some tribes hitherto unknown or but little known, and a British army has penetrated to Coomassie, yet the question of the ultimate sources of the Nile can hardly be said to be solved.

At no period of the century has death reaped such a harvest among geographers as in the two years ending with November, 1873.

Captain C. F. HALL, whose death occurred from apoplexy or heart-disease November 8, 1871, was a man whom the cause of geographical research could ill afford to lose. He was not an eminent scientist in any direction; bred to journalism, he knew little of astronomy, and less probably of the other physical sciences; he was not a sailor, and had found it necessary to confide the actual command of his vessel to an experienced whaling-captain; but with all these deficiencies he was full of a grand and noble enthusiasm which enabled him to surmount all obstacles, and to push on in spite of obstructions till he reached a latitude within 74° of the pole. He was, moreover, a keen observer, a careful and thorough explorer, and his brave heart and strong common-sense compensated in a large degree for his lack of science.

Of Dr. LIVINGSTONE we have spoken at length elsewhere (*see* LIVINGSTONE, DAVID, in this volume).

But, aside from these, there are many others to whom geographical science owes a debt of gratitude, who have passed away within the year. Vice-Admiral Sir ROBERT J. L. MCCLURE, the arctic explorer, died October 17, 1873. He first practically demonstrated the possibility of the Northwest passage (*see* MCCLURE, Vice-Admiral ROBERT J., in October Foreign Obituaries, in this volume); JOHN ARROWSMITH, F. R. G. S., F. R. A. S., the celebrated map-maker of London, died May 2, 1873, whose maps for half a century have maintained the highest reputation for accuracy and beauty (*see* ARROWSMITH, in May Foreign Obituaries in this volume); Mrs. SOMERVILLE, the author of works on "Physical Geography," "The Connection of the Sciences," etc., died in December, 1872; MATTHEW F. MAURY, LL. D., hydrographer and professor in Washington and Lee University, Lexington, Va., and author of "Physical Geography of the Sea," and of a series of geographical text-books, died February 1, 1873 (*see* MAURY, MATTHEW F., in this volume); Count de STRZELECKI, a famous Australian explorer of thirty or forty years ago, died October 6, 1873 (*see* STRZELECKI, in October Foreign Obituaries in this volume); Captain HENRY BLOSSE LYNCH, O. B., of the late Indian navy, died in Paris, April 14, 1873, a brilliant and daring explorer, whose discoveries in

Asiatic Turkey, Persia, and India, were of great importance (*see* LYNCH, H. B., in April Foreign Obituaries in this volume); Rev. Prof. ADAM SEDGWICK, LL. D., an eminent geologist and geographer in the infancy of geological science (*see* SEDGWICK, ADAM, in this volume); and General CHARLES RICHARD FOX, son of the third Lord Holland, an extensive traveller and accurate observer, died in April, 1873. His services to the Royal Geographical Society of London were of great importance (*see* FOX, General CHARLES RICHARD, in April Foreign Obituaries in this volume). The literary contributions of the year to geographical science have been somewhat numerous. The principal volumes published in this country, having a direct relation to geography during the year, were the following:

Report of the Colorado River Expedition to the Smithsonian Institution.

Lieutenant George M. Wheeler's Second Report to the War Department of Explorations in Arizona and Nevada.

Report of the Colorado Expedition (Professor F. V. Hayden's) to the Bureau of Geography.

Report of the Chief Signal-Officer to the War Department. By General A. J. Myer.

Vol. II., Geological Survey of Ohio. By Prof. J. S. Newberry, State Geologist.

Report of Geological Survey of Maine. By Prof. C. H. Hitchcock, State Geologist.

Report of the Yale College Expedition of 1873 to the Rocky Mountain Region. By Prof. O. C. Marsh.

Topographical Survey of the Adirondack Wilderness. By V. Colvin.

The Land of Moab. By Rev. H. B. Tristram.

Physical Geography. By Matthew F. Maury, LL. D.

Physical Geography. By A. Guyot, Ph. D., LL. D.

Physical Geography (Science Primer). By A. Geikie.

A "Deep-Sea Exploring Expedition" left England on board H. M. ship *Challenger* in December, 1872, for a three years' cruise in all the oceans, to make constant observations on the depth and temperature of the waters, and also collections of marine vegetable and animal products. The scientific corps of naturalists who accompany the naval surveyors in this expedition are under the direction of Prof. Wyville Thomson, F. R. S. Accounts of their progress and discoveries have been forwarded by Prof. Thomson to *Nature*, a periodical of which he is one of the editors. It is expected that the expedition will throw much light on the variations of temperature in different parts of the great oceans, on the possibility of the maintenance of the lower forms of animal life at great depths and under enormous pressures, and on the countless new forms of life in the ocean-depths. The English Admiralty have for many years been engaged in surveys of the coast-lines as well as of the oceans and large seas which at any point wash the coasts of their numerous colonies. The United States Coast Survey has been doing a similar work on its coasts, and has also established in the interior stations connecting geodetically with the triangulation of the coasts,

to determine the true latitude and longitude of points in each State and Territory of the central belt. Chief-Justice Daly gave the following *résumé* of the Coast Survey work for the year 1873 before the American Geographical Society, in January, 1874:

It has embraced operations upon the Atlantic and Pacific coasts, which in the summer have been carried on on the northern coasts, and during the winter on the southern. The Atlantic portion has embraced surveys around the coast of Maine, Massachusetts, Rhode Island, New York, and New Jersey, particularly on the coast of Maine and adjacent islands, with which have been connected hydrographical labors, especially with reference to the tides and currents. The harbors between Portland and New York, and the harbors in the Chesapeake, have been examined for the preparation of sailing directions. On the coast of Virginia, North Carolina, Georgia, and Florida, the surveys of rivers, inlets, bays, etc., have either been begun or continued, and many observations have been made at different stations for latitude and longitude. Special observations have been made near North Adams, Mass., for the determination of terrestrial gravity; at Port Jervis, N. Y., for the magnetic elements; and, in the geodetic connection between the Atlantic and Western coasts, points have been occupied as far as Colorado; so that now every State and Territory of the Union along the belt including the thirty-ninth parallel has at least one point accurately determined in latitude and longitude. The same kind of general labors has been carried on upon the Pacific coast. It has consisted of field and hydrographic work on the coast of California and the neighboring islands and bays; the continuation of the important surveys of Columbia River, Puget Sound, and the adjacent bays and inlets, deep-sea soundings, the geographical reconnaissance of the coast, and special surveys of the harbors of Alaska. The expedition under the direction of William H. Dall to the Aleutian Islands and vicinity for observations is especially interesting. It has embraced observations upon the meteorology, specific gravity, and temperature of the sea-water, both at the surface and at various depths, and of the nature and direction of the oceanic currents of the North Pacific, as well as of the tides of the Aleutian Islands, which have been found to be of a compound and very complex character. The climate of the islands is found to be mild and uniform, not as cold as Philadelphia, but the barometer is subject to many and extreme fluctuations. Surveys have been made of several harbors, especially of the harbor of Kyska, with reference to its feasibility as the landing-station of the Japanese cable, which after the examination of the other harbors appears to be the only one that meets all the requirements. Islands were ascertained to be erroneously located, and reefs assumed as connecting islands were found not to exist. Deep-sea soundings were taken, and no current appears to exist in the eastern part of Behring Sea. Collections were made of prohibitory crania from caves, and of bone and stone implements and carvings. It was found that the fauna and flora do not exhibit Asiatic influences in a westerly direction, but, on the contrary, become more arctic and meagre in their character until at last, on the westernmost island, they are nearly wholly arctic. An important survey of the Mexican portion of the Gulf coast has, under the direction of the Navy Department, been made by Commander F. H. Baker, U. S. N.

The approaching transit of Venus, which will be best observed in the Southern Hemisphere, and in its higher latitudes, has given a new impulse, though not a very powerful one, to Antarctic explorations, having mainly in view the selection of a place or places on or

near the Antarctic Continent, which should be adapted for taking the necessary observations.

But the interest in oceanic geography has mainly centred in Arctic discoveries and explorations. First among these is the American expedition of the *Polaris* under the direction of Captain Charles F. Hall. The detailed account of the events of this expedition, the death of Captain Hall, the exposure of nineteen of the crew for nearly six months on a floating field of ice; and the rescue of the remainder of the crew by Scottish whalers, is given in full in the article *NAVY, U. S.*, in this volume. The results of their explorations were rather negative than positive, but nevertheless of considerable importance. The open Polar Sea of Drs. Kane and Hayes was found to be only a broad sound terminating in Robeson's Channel. There may be still farther north an open Polar Sea, but as yet there is no proof of its existence. There were, of course, observations of temperature, and of botanical and zoological productions, as well as of coast lines and soundings, and a higher latitude was attained by fifty miles or thereabouts on the water, and by more than that amount on land, than has ever been recorded. Had Captain Hall's life been spared, it was his intention to have pushed his explorations by land to the pole. He was convinced that there was no water-passage practicable to a point much above that he had already reached. But his death so far disorganized the expedition that very little was done subsequently in the way of exploration, and that little was not productive of any beneficial results.

The Swedish expedition under Prof. Nordenskiöld accomplished even less than that of Captain Hall; for, having failed in their attempt to reach Parry Island, they went into Mossel Harbor in Spitzbergen, and in three days were inextricably shut in by the ice. This had scarcely occurred when the startling news reached them that six Norwegian fishing-vessels, with an aggregate of fifty-eight men, were frozen in near a neighboring promontory. Nordenskiöld's own resources were limited, as one of his vessels was to return to Sweden when they were all frozen in. He said, however, to the Swedish fishermen, that if they would conform strictly to discipline he would share his food with them, and advised them of an abandoned house at Ice Fiord, to which eighteen of the Norwegians went. Two of the Norwegian vessels were relieved by a storm in November, 1872, and thirty-eight men reached home after vainly attempting to rescue their countrymen at Ice Fiord. In the spring of 1873 Captain Mack went to their rescue and found them all dead. A diary had been kept from October 7 to March 8, 1873, the perusal of which showed beyond doubt that they lost their lives from want of experience, having practised no bodily exercise nor busied themselves in any employment. The preservation of the Swedes, who returned safely last August,

and who were in the same situation, was due to their constant employment, discipline, and active bodily exercise. They lost but two men; the remainder returned in good health. This admirably organized expedition were unable to approach nearer to the pole than about $78^{\circ} 30'$. It adds but another proof to the difficulties that exist in that direction. The scientific results of the voyage, however, are considerable. By dredging and by magnetic, meteorological, botanical, and geological observations, they gathered a large amount of information throwing light on the nature of organic life in the arctic and upon the physical changes which that region has undergone.

The other arctic expeditions, the Austro-Hungarian of Payer and Weyprecht, the Russian, and the private Norwegian and Scottish excursions, the exploring tour of Mr. Leigh Smith to Spitzbergen, and the visit of Captain A. H. Markham to Smith's Sound on a whaling-steamers, have not added much to our knowledge of these northern seas and lands. Payer and Weyprecht were ice-bound on the coast of Novaya Zemlya; and the Norwegians, though they circumnavigated these great islands, and explored their coasts, and the coast-line of mountains very thoroughly, adding materially to our knowledge, both of the islands and the Sea of Kara, were unable to reach a more northern point than the seventy-eighth degree. The indications of the last six years of explorations in these seas, at the north of Europe and Asia, seem to point to the fact of lands in the circumpolar region here, as well as to the north of the American Continent. It is not necessary to suppose that the cold increases with each degree till the pole is reached. On the contrary, the maximum winter temperature registered at the winter-quarters of the *Polaris*, $81^{\circ} 38'$, was 48° Fahr., while the maximum at Kane's winter position, 180 miles farther south, was 69° F. The pole of greatest cold seems to be nearer to the arctic circle than to the pole of the earth. In the comparatively mild climate between 81° and 82° north latitude, the crew of the *Polaris* found fifteen species of plants, and the herbage was sufficient to sustain herds of musk-oxen, twenty-six of which were shot by the crew. Seals of three kinds were found as far north as $82^{\circ} 16'$, besides foxes and lemmings (the Norway rat), ptarmigan and seventeen other species of birds. They found evidence of inhabitants in this far northern region, in portions of boats supported by whales' ribs, and other manufactured articles drifting down from the extreme north.

I. From this region of ice let us now turn to the AMERICAN CONTINENT, and I. TO NORTH AMERICA. 1. *Greenland*.—Mr. R. H. Major, the secretary of the Royal Geographical Society, made, in the spring of 1873, a very elaborate investigation in regard to the old Scandinavian colony in Greenland, and incidentally the colonies on the coast of North America. In this investigation he vindicated the authen-

ticity of the letters, narrative, and maps of the Venetian navigators, Nicolo and Antonio Zeno, who, between A. D. 1389 and 1400, were in the employ of Henry Sinclair, Earl of Orkney and Caithness, as pilots of his fleet, and in that capacity repeatedly visited Greenland, the Farøe Islands, Iceland, and probably, once, the eastern coast of North America. With the narrative of these Venetians he coupled the testimony of a Greenlander, Ivar Bardsen, who in the fourteenth century was steward to the Bishop of Gardar, in what he called the East Bygd of Greenland. Mr. Major identifies the various localities spoken of by these writers, and showed very conclusively that the colonies, both in Greenland and on the North American coast, were in a flourishing condition in the fourteenth century.

In *British America* there have been no geographical explorations of special interest.

The Boundary Commission, of which Mr. G. M. Dawson is geologist, have completed a survey of the Lake of the Woods, and its neighborhood; Messrs. Selwyn and Bell have been engaged in the regions watered by the North Saskatchewan; and Mr. Richardson has been on the other side of the Rocky Mountains in British Columbia.

There have been some explorations of the Gulf of St. Lawrence, and of St. George's Bank and the adjacent waters, but rather in the interests of hydrography and zoology than of geography proper. One fact, however, of some importance seems to have been settled, viz., that over the banks the Gulf Stream exerted but a moderate influence, and that the low surface temperature of the Bay of Fundy is largely due to its geographical position, and to the powerful tides which bring up constantly the cold water from the bottom of the sea to mix with that of the surface.

2. *The United States*.—The activity in geographical exploration which was manifest in 1872 continued and increased in 1873. There were eleven distinct expeditions in the field in 1873, seven of them sent out by some department of the Government, one a State expedition, and three by private parties. Besides these there were the reports of the Yellowstone Park superintendent, and of other explorers, of the work of the previous year; the report of the Adirondack Park Commissioners to the New York Legislature, etc., etc. Of the Government exploring expeditions, that of the new Geographical Bureau, under the lead of the veteran Prof. F. V. Hayden and Mr. James F. Gardner, in Colorado, is first in importance and interest. (*See TERRITORIES—Colorado.*)

In the *ANNUAL CYCLOPEDIA* for the year 1872 we gave some account of Lieutenant George M. Wheeler's (U. S. Engineers) expedition for the examination and determination of the physical and natural history of the regions west of the hundredth meridian. This expedition was sent out by the War Department, and during 1873 was busily employed in

the prosecution of its surveys, which had been planned according to his previous report.

Another expedition, under the immediate direction of the Smithsonian Institution, though we believe with some aid from Government, is that of Colonel or Prof. Powell, of the valley of the Colorado River. This has been in progress for about three years, and Prof. Powell's past discoveries have been duly chronicled in the previous volumes of the *ANNUAL CYCLOPEDIA*. During the year 1873 his topographical surveys had been continued from the point where they closed the previous year on both sides of the river, so as to include all the country drained by the Rio Virgin, Kanab, Tapete, Paria, Escalanti, and Dirty Devil Rivers, and the head-waters of the Sevier, and an extensive district of country east of the Colorado River, and south of the Grand Cañon.

The Northern Boundary Survey, along the forty-ninth parallel between the United States and British America, was actively prosecuted during the year 1873, under Mr. Archibald Campbell; and Dr. Elliott Cones, the naturalist of the expedition, brought home at the close of the year large collections of the *fauna* of that region, including several thousand insects, and the skins of over a thousand mammals and birds, besides a large number of alcoholic preparations of fishes and reptiles, many nests and eggs of birds, a valuable herbarium, and numerous miscellaneous objects. The survey is continued the present year, and the reports of Dr. Cones and other scientific members of the commission will undoubtedly place us in possession of new facts relative to the geography of that region.

Mr. W. H. Dall, under the direction of the United States Coast Survey, has been engaged since 1871 in exploring the Aleutian Islands and the adjacent region, and in 1873 performed a large amount of very valuable work in that remote part of our territory. His labors embraced determinations of the hydrography, the coast-line, the magnetic variation, and other physical phenomena, together with such observations in natural history and ethnology as the more important interests of the survey would warrant. The latitude and longitude of all the important harbors were determined with great accuracy, and errors, in some cases, of twelve miles on the charts, were corrected. What is known as the plateau of Behring Sea, which is shallow, and includes, in an archipelago, most of these islands, was found to terminate suddenly at the northwest end of Unalaska Island, where the bottom drops at once from sixty to over eight hundred fathoms, and within less than twenty miles from the shore is eleven hundred fathoms deep. In the western part of Behring Sea there seems to be a deep-sea valley. There is no well-defined or constant current in the east or middle portions of Behring Sea. The island of Kyska was the only one which offered the required facilities for landing the telegraph cable.

A new and good anchorage was found on the island of Adakh. The volcanic islands, especially Bogosloff, the Davidoff islands, and the Four Oraters, were carefully examined, and extensive corrections were found necessary on the existing charts. A reef, laid down as stretching from Bogosloff to Umnak, was found to have no existence, eight hundred fathoms of water being found along its supposed line. The fauna and flora were ascertained to be almost purely arctic, having a very slight admixture of Asiatic forms, and on some of the islands no traces of them were found. A considerable collection of prehistoric crania, implements of bone and stone, and wood-carvings, was secured from the caves on the islands. The winter of 1872-'73 was one of the coldest recorded in that region, and the field-ice in the Behring Sea entirely surrounded the fur-seal islands as late as the 20th of May, yet the thermometer in Unalaska did not fall below 10° Fahr. during the winter.

General Ord sent out an expedition in June, 1873, to explore the head-waters of several rivers having their source in the northwest corner of Wyoming Territory, or in the isolated tract adjacent, which, though hundreds of miles away from Dakota Territory, yet belongs to it. To this party, a geologist and a botanist and meteorologist were attached. This expedition explored the sources of all the affluents of the Yellowstone, and of the Jefferson, Madison, and Gallatin Rivers, the sources of the Missouri, as well as of Henry's Fork, an affluent of the Green and Colorado, and the tributaries of the Snake and Columbia Rivers, all taking their rise in or near the tract which forms the National Yellowstone Park. They found at the highest point of these mountain-passes a stream to which they gave the appropriate name of Two-Ocean Water. This stream flows down into a little valley, where it splits into two rivulets, one of which flowing westward falls into a tributary of the Snake and Columbia Rivers, and thus finds its way into the Pacific, and the other, through the Yellowstone and Missouri, discharges its waters into the Gulf of Mexico. They also discovered that the Madison River, one of the three forks which form the head-waters of the Missouri, is not, as was supposed, an outlet of Madison Lake (as that lake drains into the tributaries of the Snake River, and so goes to the Pacific), but takes its rise in some small mountain-stream. To this expedition also are we indebted for the discovery of a shorter and much more practicable route to the Yellowstone Park, by way of Wind-River Valley. A third Western Exploring Expedition was organized for the summer of 1873, by Prof. Marsh, of Yale College, and a corps of students. The two previous expeditions had been fruitful in scientific results, and in greatly adding to the natural history, geological and paleontological collections of the college, but that of 1873 far surpassed those of previous

years, in the extent and value of its acquisitions. It embraced a journey of seven hundred miles from Salt-Lake City to a point on the Columbia River west of the mouth of the Des Chutes River. The Blue Mountains were crossed, the Shoshone Falls visited, and the route on approaching the Columbia was through the valley of the John Day, a region as yet but imperfectly delineated upon our maps. The observations made during the journey seemed to warrant the conclusion that Salt Lake had formerly a northern outlet, and the terraces examined indicated that the lake is but the remains of what was once a vast body of water, equaling in magnitude our great lakes. That the lake had at an earlier period a southern outlet into the Colorado is already known. The region about the John Day River was carefully explored by Prof. Marsh, and is a very rough country. In the pliocene and miocene formations were found the remains of various species or bodies of rhinoceros, camels, and horses, as well as great numbers of oreodons, the anchitherium, and other carnivora. The collections made were numerous, and five tons of specimens were brought back. The explorers received great attention from the Mormons, which is thus explained: In the "Book of Mormon" certain events are related as occurring in the prehistoric period of America in which horses are mentioned. The Spanish historians state that no horses were found in America, and that they were introduced by the Spaniards, a statement relied upon as proof of the fabrication of the Mormon work. The discovery, therefore, by Prof. Marsh, of the fossil horses in Oregon, has given great satisfaction to the Mormons, being regarded by them as proof of the inspiration of the "Book of Mormon."

The State Geological and Natural History Survey of California, under Prof. Whitney, as well as the exploration along the fortieth parallel, by Clarence King, were both continued during 1873. There were but few items of geographical interest in their explorations, however. Mount Whitney has been for several years supposed to be the highest of the California summits, and indeed the highest peak in the United States. It was demonstrated in 1873 that this supposition was erroneous. A neighboring peak, called by Messrs. Johnson, Begole, and Lucas, who ascended it on the 18th of August, 1873, "Fisherman's Peak," overtops Mount Whitney by several hundred feet.

A wealthy citizen of San Francisco, Mr. James Lick, has made provision for the erection of an observatory of the first class on the summit of one of the Sierra Nevada Mountains, at a height of not less than ten thousand feet above the level of the sea. The site was selected in the autumn of 1873. It is to be provided with the largest telescope yet made, and with all other instruments necessary to the equipment of a perfect observatory.

One of the most interesting discoveries of

the year in California is that of a new Yosemite, in several respects surpassing the well-known valley, or cañon, through which the Merced River flows. It is situated in the Tuolumne River Cañon, seventeen miles north of the Yosemite. The main Tuolumne River, which is a much wider stream than the Merced, runs through the great Tuolumne Cañon. This cañon and its connections have an unbroken length of forty miles. For twenty miles of this distance the cañon is shut in by vertical walls of granite, some of which are from two to five hundred feet higher than the very highest in the Yosemite Valley. The Tuolumne Cañon or Yosemite, at its widest part, is only a quarter of a mile wide, while the Merced Yosemite Valley is from half a mile to a mile and a quarter wide. The falls in the latter surpass those of the Tuolumne Cañon in unbroken volumes of falling water; but in endless variety of cascades and water-shoots the Tuolumne Cañon is the most grand. There is one water-leap one thousand feet high in the latter! One of its water-falls spreads out at first like a great fan of silvery-threaded water; but, after a descent in this shape of about two hundred feet, it is whirled over, closed up, changed in color, and shot down a narrow groove worn in the rocks, like an arrow of steam. There are a greater display and variety of water-hues, tints, motions, and expressions, in the Tuolumne Cañon than in Yosemite.

We have, in previous volumes of the *ANNUAL CYCLOPEDIA*, referred to the Crater Lake in Oregon, twenty-five miles from Klamath Lake. A party have recently explored it, and find that it is thirty miles in circumference, without any shore, being entirely surrounded by high volcanic walls, and presented a scene of weird and wild magnificence. It is a place of great religious reverence among the Indians. Whence this vast body of water comes, or where it empties itself, is unknown. It is evidently the crater of a volcano, and probably one of the largest in the world.

General Hazen has published, under date of January 1, 1874, in an article on the Northern Pacific Railroad, statistics of the temperature, rainfall, etc., of Fort Buford, where he has been for some time stationed. His records are of value so far as Fort Buford is concerned, and we give the monthly mean of temperature for the eight years 1866-1873. For January, 8°. 75; February, 12°. 00; March, 21°. 14; April, 42°. 40; May, 56°. 38; June, 67°. 21; July, 72°. 30; August, 67°. 40; September, 54°. 81; October, 41°. 42; November, 26°. 63; December, 9°. 81. The warmest day of the eight years was in July, 1868, when the mercury stood at 106° in the shade, though the average of warmest days in July and August was 98°, and in June about 95°. The coldest day of the eight years was in January, 1869, when the spirit thermometer marked - 60; but the average of coldest days in January for the eight years was - 34°. The average annual rainfall

for the eight years was 12.44 inches, to which were to be added 4 inches which fell as snow. The variation in the amount of rainfall was very great in different years, being 1.40 inch. in 1866; 6.58 in. in 1867; 11.50 in. in 1868; 9.74 in 1869; 9.19 in 1870; 10.42 in 1871; 19.99 in 1872; and 21.11 in 1873. This is obviously insufficient for agricultural purposes without irrigation. June, July, and August, were the only months in which there was not a frost nearly every year.

But we must not lose sight of the geographical discoveries and progress of our better known Eastern, Central, and Southern States. During 1873 the commissioners appointed by the New York Legislature to report on the propriety of reserving the Adirondack Wilderness as a public park, after a general survey and triangulation of the region, reported in favor of its being retained as a timber preserve and as the source of water-supply for the Hudson River, and the middle and southern counties of the State. They indicated the eventual need of a reservoir near the junction of the Hudson River and the Schroon, to furnish a sufficient water-supply for an aqueduct extending to New York City; but this project is hardly to be thought of in the present century. Incidentally, the commissioners measured, both by theodolite and barometer, the heights of the principal summits of the Adirondack Mountains; of these the following are the most important: Mount Tahawna, or Marey, 5,383 feet; Gray Peak, 4,947 feet; White Face, 4,918 feet; Mount Santanoni, 4,607 feet; Mount Seward, 4,348 feet; a little lake lying in a chasm between Skylight Mountain and Gray Peak, 4,293 feet, being the summit water of the State; North River Mountain, 3,723 feet; Ragged Mountain, 4,126 feet; Bald Face, 3,859 feet; Mount Colvin, about the same; Orain's Mountain, 3,252 feet; Andrew Mountain, 3,180 feet; Speculation Mountain, 3,004 feet. None of the others rise to the altitude of 3,000 feet.

There has been considerable discussion during the year in regard to the height of the mountains of North Carolina, which are acknowledged to be the highest east of the Mississippi. A note from the eminent geologist, T. Sterry Hunt, puts the matter in its true light. He says: "We owe the accurate measurement of these heights to Prof. Arnold Guyot, of Princeton, whose results, obtained in July, 1856, were made known the following year in the *American Journal of Science*, and more fully in the same journal for May, 1861, in an admirable paper on the Appalachian mountain-system. The height of Mount Washington, in New Hampshire, is, according to the determination of Bache, 6,285 feet; but Guyot found in North Carolina not less than twelve higher summits, the most elevated of which, Olingman's Peak (rightfully called Mount Mitchell, after the distinguished astronomer, Ed.), is 6,701 feet.

There is nothing of special interest to report

concerning *Mexico*. The only topics of geographical interest in connection with the *Central American States* are the explorations undertaken by our Government to ascertain the practicability of interoceanic canals. There were two of these expeditions, and both have been noticed elsewhere. (*See NAVY, U. S.*)

II. SOUTH AMERICA.—One of our ablest geographers, Prof. James Orton, of Vassar College, author of a work on "The Andes," published five or six years ago, returned just at the close of 1873 from a long tour of exploration in the Peruvian Andes, and along the course of the Upper Amazona. The general object of this exploring tour was to supplement his expedition of 1867, when he crossed the continent from west to east, *via* Quito and the Napo wilderness. His route in 1873 was up the Amazona from Para to Yurimaguas, on the Huallaga River; thence up the Paravapura and its tributary, the Cachiyaco, to Balsa Puerto; thence traversing the plains on foot to Moyobamba; thence across and among the Andes to Chachapoyas and Cajamarca, crossing the Upper Marañon, at Balsas, and striking the coast at Pacasmayo; thence to Lima and its immediate region; thence to Mollendo, Arequipa, and Puno, on the shore of the Lake Titicaca. He was the first traveler to pass from the Pacific to the lake by the railway just finished by Mr. Meiggs. The prime object of his explorations was to study the physical geography, geology, and topography, of the Amazona. He found that the Upper Amazon (Marañon) has been greatly misrepresented in the more recent maps of Peru. He made everywhere, but especially in Northern Peru, large collections in natural history, to throw light upon the distribution of animal life. He was successful in unearthing a valuable collection of Inca art. He also studied the commercial resources of the region bordering the Amazona and its various tributaries. The locomotive, on the trial trip from Arequipa to Puno, reached Illica, 33 miles from Puno, and near the western shore of Lake Titicaca, on the 7th of September last, so that the difficulties of crossing the Andes by rail are now overcome.

On July 4, 1873, a party of American gentlemen ascended Mount Meiggs, the highest peak of the Peruvian Andes. Mr. Henry Meiggs, the well-known railroad-builder of South America, formerly a citizen of California, has, among his numerous railroad enterprises, constructed one called the Oroya Railway, which has its summit in the Galera Tunnel, so called from its passing under the village of Galera, 94 miles from Lima, and 15,581 feet above the sea. This town is now believed to be the highest inhabited settlement in the world. Near it rises the lofty summit of Mount Meiggs. The party making the ascent were provided with iron flag-staffs, and planted the flags of Peru and the United States on the highest point. They ascertained the altitude of the peak by three processes: boiling water, corrected by the bar-

ometer, by which they made it 17,751 feet; by the thermometrical apparatus, by which it was a few feet less, and finally by triangulation and actual levels, by which it was 17,574 feet, which is believed to be its real altitude. At 2 P. M. the thermometer indicated a temperature of 36° Fahr., and the barometer an atmospheric pressure of 8 pounds to the square inch. Galera is to be made a meteorological station.

A railway has been projected across the Andes, to be called the "Transandine Railway," from Buenos Ayres to Chili by the "Planchon" Pass, and the survey for it was made by Mr. R. Crawford, an accomplished English civil engineer, who has reported to the Royal Geographical Society many interesting facts concerning this little-known region. Much of the country is volcanic, though the volcanoes with one or two exceptions seem to be now extinct, but a part of the region through which the proposed railway would pass, that lying between the provinces of San Luis and Mendoza, was utterly barren, and covered with scoria, ashes, and volcanic cinders. The Rio Grande, whose course they followed for a long distance, proved to have a different and much longer course than the South American geographer Rosetti had assigned to it. Mr. Crawford explored it for a distance of 142 miles, and it was still far from entering the Pampas, though Señor Rosetti had made its whole course, from its junction with the Rio Tudillo to the Pampas, only 81 miles. It received also large tributaries which were not laid down on any map. The plains about 100 miles west of Buenos Ayres are from 150 to 160 feet above the sea-level, and rise to about 2,800 feet at the foot of the Andes. The highest point on the Planchon Pass is 8,225 feet above the sea. The principal animals were small deer (*Cervus campestris*), very numerous on the plains; the South American ostrich (*Rhea*), vizcachas (a small, slate-colored animal about the size of a cat), foxes, Patagonian hares, lizards four feet long, two or three species of armadillo, wild-cats, and pumas. The jaguar is said to inhabit this region, but none of Mr. Crawford's party had a glimpse of him. Of birds of prey there were condors, blue eagles, black, bald-headed, and other vultures, a great variety of hawks, and three or four kinds of owls. Numbers of wild-ducks frequented the little lakes and marshes, and numerous South American birds were discovered, but no wild-cattle, and few wild-horses. The distance from Buenos Ayres to Valparaiso by the proposed route was 1,103½ English miles, of which 819½ were already constructed.

A stone has been found on a farm in Parahyba in Brazil containing an inscription, which, upon examination by the director of the museum of Rio Janeiro, was pronounced to be in Phœnician characters.

Should this be corroborated, it gives plausibility to the theory urged some years ago by a French scientist on philological grounds,

that the Amazons was the Ophir of the Scriptures, and that it was visited regularly by the fleets of Hiram, King of Tyre, and Solomon. These Phœnician inscriptions refer to the time of Hiram and Solomon, and name the port of Ezion-Geber as that from which they set sail.

III. EUROPE.—The little Republic of Switzerland has been very active and persistent in its geographical investigations. Its mountains have been mapped and measured, its valleys examined, and their climate, soil, and temperature noted; its glaciers have been explored and their progress noticed, and every thing appertaining to its physical or political geography, chartography, or geology, has been carefully recorded. At some time every peak of the Alps has been measured accurately or approximately, and in 1873 we have the measurement of the principal summits of the central Alpine chain, hitherto neglected for the more widely-known peaks of other portions of the Alps. The summits of this chain do not rise so high as those of Mont Blanc, the Jungfrau, or the Matterhorn. M. Ziegler, a Swiss corresponding member of the Royal Geographical Society, gives the altitude of several of them as follows: Monte de Piazz, 3,570 metres=11,602.5 feet; Monte della Neve, 2,805 metres=9,116 feet; Colmo d'Entova, in the Val Malenco, 3,226 metres=10,484.5 feet. The Pass della Tempesta, in the Val Lanterna, 2,560 metres=8,320 feet; the Colle Verva, in the district of Bernio, 2,400 metres=7,800 feet.

The Admiralty surveys of the British Government in the European seas have been, as usual, fruitful in good results. The harbors on the east coast of England have been resurveyed, and the changes in the depths produced by both natural and artificial causes carefully noted. The explorations in the Mediterranean, the Dardanelles, and the Sea of Marmora, have brought to light the fact that there are strong under-currents in these seas running eastward, while the surface-current sets from the Black Sea toward the Mediterranean.

Recent excavations made in Rome show that the ancient city, under the Tarquins, was large, strongly fortified, and contained an immense population. This is contrary to the impression of modern historical critics, and confirmatory of the tradition which prevailed in Rome in the time of Livy. Many photographs of the excavations in their present state have been exhibited in London, which show the great size and importance of the earliest buildings in Rome. The foundations of the ancient city have been laid open, which consist of enormous works, among of which were great tanks and wells. They are of oblong blocks of tufa, put together without mortar, the style of building resembling that of the ruins of Etrurian cities.

IV. ASIA.—On this great continent geographical discoveries are constantly going forward, and the past year they were more abundant and interesting than ever before. The explorations in Palestine have been con-

ducted principally by the officers detailed by the English Palestine Exploration Fund, and during the past year, east of the Jordan, by the American Palestine Exploration Society, that region having been assigned to them by the English Society. Other explorers in private parties, and particularly Rev. H. B. Tristram, and Messrs. Palmer, Tyrwhitt, and Drake, accomplished English explorers and geographers, Mr. Johnson, late Syrian consul, and several American missionaries, have added to the volume of discoveries of the past year. The officers of the Palestine Exploration Fund have been at work for three or four years, and reference has been made to them in previous volumes of the *ANNUAL CYCLOPEDIA*. Their work has been of two kinds: they have excavated at various points in and around Jerusalem, and have made many discoveries, though none which absolutely settle the question of the exact site of some points of greatest scriptural interest; and partly previous to these excavations and partly since they have been in progress, one of the divisions of their exploring corps made a reconnaissance survey from Beirut to Damascus; thence to the Sea of Galilee, and thence south through Galilee to Jerusalem, and subsequently to Philistia and to Gaza. The Peninsula of Sinai was afterward surveyed under the direction of the British Ordnance Survey, by Messrs. Palmer and Drake. Mr. Tristram and his party also explored with considerable thoroughness the ancient country of Moab east of the Dead Sea and the Lower Jordan, and found there the site and remains of the ancient tower of Magdala, the fortress of Machærus in which John the Baptist was imprisoned, and where he was beheaded by Herod's order; and the magnificent ruins of the Persian palace of Masmitha, erected by Chosroes, one of the Sassanian kings, about A. D. 700. These various reconnaissances have established the site of some important places both of Biblical and profane history, while others are still left in doubt.

Among those discovered may be said to be Laisha, the Dan of the historic books of the Bible; Kedes, the Kadesh or Kadesh Naphthali of Scripture, one of the ancient cities of refuge, and the identification of Jebel Jermak as the highest of the Galilean mountains. There are still conflicts of opinion as to the site of Capernaum; and Gerar, where Isaac lived, is yet one of the lost cities. The results of the survey of the Sinaitic peninsula have been thrown into some doubt by the elaborate exploration and essay of Dr. Beke, who claims that Jebel Musa is not Sinai, but that the true Sinai is at considerable distance from it in another part of the peninsula, and that this new mountain answers in full all the requirements of the Sinai of the Pentateuch, while Jebel Musa does not. The first American expedition of the Palestine Exploration Society, under command of Lieutenant Steever, U. S. A., set out in the autumn of 1872, and spent about five

months in exploring east of the Jordan. About 600 square miles were surveyed, a fine map prepared, and many places of interest identified. The explorations were in Edom and Moab. Various sites have been satisfactorily identified, and the position of Mounts Nebo and Pisgah determined. The levels of many important spots were taken, a number of ruins in Moab examined, and interesting inscriptions copied. Meantime, mainly through the active efforts of the Rev. Roswell D. Hitchcock, D. D., the Exploration Society was more thoroughly organized, and provision made for extending the surveys of the region east of the Jordan over five years; the preparation of complete and accurate maps or series of maps of the whole region, on a very large scale; and the thorough investigation of all ruins and sites of towns, etc., there, which can throw light on matters of sacred and profane history. For this purpose it was estimated that about \$150,000 would be needed during the five years, and that amount has been nearly all subscribed. A second expedition, in which a number of eminent Biblical scholars took part, left New York about Christmas, 1872, and are now engaged in active exploration.

There is frequent mention in the Bible of Gezer, in the land of Canaan, a very ancient city which was in existence before the Israelites entered Egypt. During the past year Mr. O. Ganneau, to whom the world is mainly indebted for securing the fragments of the Moabite Stone, has succeeded, through a reference in an Arab chronicle, in discovering its site. The ruins show a large and ancient city, occupying a vast plateau on the summit of Jeb Azar, which is about half-way between Jerusalem and the Mediterranean. The Rev. Samuel Jessup, an American missionary, has recently given an account of the ruins of Hsan Suleyman. They lie in a secluded spot in the heart of the Nusaireeyeh Mountains in Syria, two days' journey from Tarabulus, or Tripoli, on the Mediterranean, of which hitherto but little has been known. The name denotes the stronghold of Solomon, but the principal inclosure has not the situation or appearance of a fortress; it may have been a summer palace of some forgotten Syrian ruler, or a sacred inclosure erected in this secluded mountaintop for the worship of the sun. Mr. Jessup's article, with engravings of the ruins, is published in the second statement of the American Palestine Exploration Society. Mr. J. Augustus Johnson has recently visited the people who dwell in the mountains which connect the Taurus with the Lebanon range, and lie along the Syrian coast. This strange people, he thinks, are the descendants of the ancient Canaanites, who, driven by successive conquerors from their former homes, found a secure refuge in these dark mountains. Their religion is a mixture of the worship of Baal, of Astarte, the Phœnician Venus, of fire, of the heavenly bodies, and of Mohammedanism and

Christianity, with traces of the Jewish law, all strangely blended. The report of the Palestine Exploration Society also contains facsimiles of the casts or "squeezes" from the famous "Hamath inscriptions," which are supposed to relate to the exploits of two Hamath kings who flourished about 800 years B. C.

The Russian campaign of the summer of 1873, which culminated in the capture of Khiva, has produced and will continue to produce important geographical and political results.

Among the most important of recent geographical explorations is that of Mr. Jacob Halevy, in the southern part of the Arabian Peninsula, through the interior of Yemen, a country little known, and where traveling is perilous. His journey extended from Hodegda, on the Red Sea, in a northerly direction through the Wadi Flabouna, 18° 55' north latitude. The first civilization in Arabia was developed in Yemen, and was the work of a people who were not nomadic, but who were attached to the soil, and who believed in a plurality of gods. It was to study the monuments, ruins, and inscriptions of the ancient Sabeen civilization that this perilous journey was undertaken, which involved an examination of the geographical features of the country, the ruins of ancient cities and of interesting monuments, from which Mr. Halevy brought back 686 inscriptions. On several occasions he owed his safety to being an Israelite, to whom he found the inhabitants comparatively tolerant, especially in Djaouf, east of Cana. In this part of the country he found many Sabeen inscriptions, and saw the source of the river Kharid, which runs toward the interior of Arabia and disappears, after fertilizing the numerous oases of the Djaouf. This seems to be the river alluded to by Strabo as having been crossed by the Romans under Ælius Gallus, before entering the country of the Sabeans. Innumerable ruins in a crumbling condition cover the soil on the banks of the Kharid and its affluent, the Medheb.

Mr. Ney Elias, an English geographer, with but a single Chinese servant, made an important and difficult journey from Peking through Chinese Tartary and across the desert of Gobi to St. Petersburg, determining positions by astronomical observations at certain points on the route. The geography of the region can now be correctly laid down. One of his chief objects was to search for the ruins of the ancient capital of Genghis Khan, Karakorum, but they could not be found in the vicinity where the city was said to be by Du Halde and Ydle. In the thirteenth century it was a vast camp of the great Khan, and the traveler Rubruquis found there goldsmiths from Paris, and traders from other parts of Europe. Mr. Elias has also given in the "Proceedings of the Royal Geographical Society," vol. xviii., No. I., for January 16, 1874, a very interesting *résumé* of Captain Prshewalsky's explorations in Mongolia and

Northern Tibet from 1870 to 1878. Captain Prshewalsky is a well-known Russian officer and geographer, and the region over which he passed, traversing part of it several times, coincides in part with that of the Abbé Huc, but has not been visited by any other European traveler except in some small portions. His narrative will throw much light on the country and condition of the Tibetans. Dr. Martin, the physician of the French legation of Peking, has written a paper upon the population, geographical position, and climate of Peking. His conclusion respecting the population is that it has been greater than it is now, that it has decreased during the present dynasty, that it has never been as great as has been supposed in Europe, and that it now consists of between 800,000 and 900,000 Chinese, 85,000 Mohammedans, and about 200 Europeans.

Rev. Francis Mason, D. D., an American missionary in Burmah, and well known as an eminent naturalist, explored in November and December, 1873, Bhamo and the region around it, in Upper Burmah, and gave in the *Missionary Magazine* for April, 1874, a very full description of the scenery, climate, people, and geography of that region. Bhamo is in N. lat. 24° 6', E. long. (from Greenwich) 96° 54'. It is a place of great enterprise and trade, being situated at a navigable point on the east bank of the Irrawaddy, and is surrounded by mountains peopled by tribes of Shans, mostly independent, and Ka Khyens, a branch of the great Karen family. The mountains rise to a height of from 6,000 to 10,000 feet above the sea near the city, and render its climate very mild and pleasant. Dr. Mason died at Rangoon, on his return from Bhamo, March 3, 1874. Mr. Vincent's "Land of the White Elephant," published February, 1874, is a contribution of great value to the geography, natural history, and life in Burmah and Siam.

Dr. Schliemann, a German archaeologist, a man of large wealth, and self-educated, has been for nearly two years engaged in exploring and excavating on the supposed site of ancient Troy. After long and difficult labor he succeeded in laying bare what he believes on very good grounds to be Priam's house, and in exhuming a box of treasure of undoubtedly remote antiquity, containing an immense gold goblet, jewels, precious stones, battle-axes, shields, ornaments, and arms of offense, but was robbed of this by the Greeks. His discoveries threw much light on the "Iliad," and especially suggest a new reading of the term "Glaukopis Athene," which he in the light of the thousands of terra-cotta images of Minerva, with prominent breasts and the face of an owl, renders the "Owl-faced Minerva." The representation of the owl by the side of the armed goddess, was, he says, centuries later.

Mr. J. T. Wood, whose labors in exploring the site of the Ephesian Temple of Diana we have noticed in previous volumes, has at last

exhumed the temple sufficiently to determine its size, its style of architecture, and the number and size of its pillars or columns. Of these last, he says there were 100 nearly six feet in diameter. Some of the sculptured figures on the columns are of rare beauty and perfection. There were 36 of these sculptured columns, mostly the gifts of kings. The dimensions of the temple itself were 163 feet 9½ inches by 308 feet 4 inches. The platform on which it was built was 288 by 425 feet.

V. AFRICA.—On this great continent the geographical event of the year was the death of Dr. Livingstone. The result of his exploration, west and northwest of Tanganyika, seems to be, that the five lakes are the sources of the Congo, and that the Lualaba, or Luapula, is a tributary of that great river. Of the various expeditions sent in search or in aid of Livingstone, some failed, others returned without accomplishing their object, and others still are pursuing other branches of geographical research. Dr. Nachtigall reached Wadai (the country where Dr. Vogel lost his life), whence he traveled by Darfour to Kordofan, reaching Khartoum near the close of the year. He is the first European who has communicated any information respecting Wadai. Dr. Gerhard Rohlfs started near the close of the year upon an expedition, at the expense of the Viceroy of Egypt, for the exploration of the Libyan Desert, having with him a botanist, a geologist, and a geographer; and Dr. Hildebrand, a German botanist, has undertaken an expedition to East Africa, from which important results are anticipated. The return of Sir Samuel Baker was very gratifying, the greatest interest having been felt in this country for his personal safety, and for the success of his expedition for the suppression of the slave-trade in the regions of the Upper Nile. He was several times in great peril of assassination, but at last triumphed so far as to overcome the principal chiefs engaged in that traffic. It is doubtful, however, whether it will be permanently suppressed. Mr. Miani, the celebrated Italian traveler in Africa, a native of Venice, about two years ago undertook a journey of exploration southwest of the White Nile, and partly through the country first visited by Dr. Schweinfurth, with a design of reaching and exploring the western shores of Lake Mwanzi (the Albert Nyanza). His death occurred in the Monbutta country, October 21, 1872. He had spent the best years of his life in Africa, and had traveled farther up the Nile, following the course of the river, than any other white man. On the west coast, MM. Compaigne and Marche have undertaken to penetrate equatorial Africa in the vicinity of the Gaboon. Their object was, to trace the course of the Ogowai and the lakes to which it is supposed to lead, one of which is reported to be a very large one. A German expedition, organized by Dr. Bastian and the Berlin Geographical Society, left last spring for the ex-

ploration of Loango. The doctor and his associates passed some time on the coast gathering information and preparing for this important expedition, in the course of which they made several excursions. The information they received led them to believe that after a three weeks' journey from the coast they would reach an open country with metalliferous mountains, where a people dwell who understand the manufacture of gunpowder, and that a great river is there spoken of by the natives, variously called the Congo, Bongo, and Lualaba. They are confirmed in their belief that they will find an indigenous race of dwarfs in these lands similar to those seen by Du Chaillu, several specimens of this type having been met with upon the coast. They are called Obongo, Babongo, or Vambuta, but Dr. Bastian declares their proper name to be Bari or Bali. A renewed interest has been excited in the gold and diamond fields of South Africa during the past year, by the report of other and richer discoveries of both gold and diamonds in that region. Mr. Dixon, an English archaeologist, has for some time been exploring the two remarkable chambers known as the king's and queen's chambers, in the interior of the Pyramid of Ghizeh. By means of a wire, introduced between the joints of the masonry, he found a space, and was thereupon induced to bore into the walls of the queen's chamber, when he discovered a passage-way, eight by nine inches in dimensions, evidently a ventilating-flue. Its terminus has not yet been found. Within the passage-way he found a bronze hook, which is supposed to be the most ancient specimen of bronze now existing.

AUSTRALASIA AND POLYNESIA.—*New Guinea*, or *Papua*, one of the largest islands of Australasia, discovered about three hundred years ago, has long remained unexplored, except at a few points on its coast. It is inhabited by two distinct races: a black race, of gigantic stature, supposed to be cannibals, of low grade mentally, the men going nearly or entirely nude, and resisting all attempts on the part of white men to explore their country; and a copper-colored race of higher intelligence and gentler manners, decently clothed (after the native fashion), the women profusely and artistically tattooed—a friendly race, and but slightly inclined to cannibalism. This latter race inhabit the southern or southeastern portion of the island. Captain Moresby, of H. B. M. ship *Basilisk*, made in 1873 an extensive exploration of the southern coast, and was very favorably impressed with the character of the natives; and Rev. W. Wyatt Gill, one of the missionaries of the London Missionary Society, who has visited this coast three times, confirms Captain Moresby's narrative. Mr. J. Thompson and Dr. Maxwell penetrated to the great mountain-ranges which traverse the island of Formosa from north to south, and found it inhabited by a robust, well-built race of savages of aggressive disposition.

GEORGIA. The Legislature met on the 8th of January, and remained in session until February 17th, during which time 321 acts and 15 resolutions were passed. The principal acts were one "to repeal the usury laws, and to fix the rate of interest in cases where the contracting parties make the contract in writing in reference thereto;" another providing a public school fund for the State; an act reapportioning the representatives among the different counties; and an act "authorizing the issue of bonds for the payment of past-due interest, for the redemption of past-due bonds, and for such bonds as may fall due within the next three years."

By this act the Governor is directed to issue bonds of the State to the amount of \$2,100,000, and bearing eight per cent. interest, with semi-annual coupons attached, payable in the city of New York, on the 1st day of April and the 1st day of October in each year; \$100,000 of these bonds are to be made payable on the 1st day of April, 1874, and the same amount on that day in each succeeding year until the whole amount is paid. The Governor is directed to increase the percentage on the taxes to be collected in the year 1874, and in every succeeding year until the whole of the bonds issued under this act shall be paid, so that the taxes to be collected in these years shall exceed the amount otherwise authorized to be collected by the sum of \$100,000; and the faith of the State is pledged that the money thus raised shall be applied to the redemption of these bonds. The leading appropriations were as follows, viz.: Contingent fund, \$20,000; Atlanta University, colored, \$8,000; Academy of the Blind, \$11,000; Deaf and Dumb Institution, \$13,500; interest on the public debt, \$600,000; State public buildings, \$20,000; State Lunatic Asylum, \$105,000; estate of Linton Stephens, \$5,250; claims of proclamation printers, \$27,689.15; Russel Sage, \$375,000.

General John B. Gordon was chosen United States Senator. Towards the close of the year some discussion was had upon the question of calling a Constitutional Convention, but the general sentiment of the people seemed to be adverse to the scheme, owing to the expense it would entail, though the propriety of some changes in the organic law was admitted. The subject of cheap transportation between the cotton States and the grain-growing region of the West attracted much attention in the State in the early part of the year. The States of Georgia, South Carolina, Alabama, and Florida, had in 1870 an aggregate population of 3,074,455. They produced 57,215,600 bushels of grain, while the annual consumption is 104,521,470, leaving a deficit of 47,305,870 bushels. Owing to the cost of transportation and the consequent high price of grain, more than 5,000,000 acres of land in these States are forced into the production of cereals, while, if planted in cotton, they would

add 2,500,000 bales to the foreign exports, increasing the value of those exports to about \$100,000,000 annually. To remedy these difficulties, the most favored plan was the construction of the Atlantic and Great Western Canal. To discuss this project, a convention was called by Governor Smith to meet at Atlanta on May 20th, to which the Governors of the various States of the South, West, and Northwest, and delegates from various municipalities, and from the farmers' granges, were invited. It met at the appointed time, was attended by over 150 delegates, and after two days' deliberation adopted a memorial to Congress, the concluding portion of which, explaining the plan, and setting forth its advantages, was as follows:

A glance at the map will be sufficient to show that, from the great lakes to the Mississippi River, there is a vast expanse of country, divided by the Appalachian chain, which separates the waters of the Atlantic from those which flow into the Gulf of Mexico. The Ohio and the James Rivers have their sources among the mountains of this chain, and, farther south, also the Tennessee, the Coosa, and the Ocmulgee. Present surveys have demonstrated that it is feasible to connect by canal the Ohio with the James River, and the Tennessee with the Ocmulgee; and thus, so to speak, turn the Mississippi into the Atlantic at Norfolk and at the Southeastern Atlantic ports. The merits of the James River and the Kanawha Canal have been fully discussed, and we will not pause here to repeat the many reasons which have been offered in favor of this great work. We crave your attention, however, for a moment, while we point out some of the advantages which would flow from the construction of the Atlantic and Great Western Canal, connecting the Mississippi, through the Tennessee River, with the Southeastern Atlantic ports.

The Tennessee enters the Ohio a short distance above the confluence of the latter with the Mississippi. From this point the general direction of the Tennessee is southeast, to its great bend at Gunter'sville, in the State of Alabama. At that point the Coosa and the Tennessee approach each other—there being only a narrow neck of land between them. Across this isthmus a canal thirty miles long would connect these two rivers, and open navigation to Rome, Georgia. From Rome the route follows the Etowah to its nearest point of approach to the Ocmulgee River, and down the latter to the city of Macon, and thence to the sea. Nature has already supplied the greater portion of this route, and it remains for us to complete the work which she has so well begun. The route has been surveyed by distinguished engineers of the War Department, and has been pronounced by them eminently feasible.

It offers the following advantages:

1. Cheap transportation. According to the official reports the cost of transporting a ton of grain from St. Louis to the Southeastern Atlantic ports, by this route, would be \$4.88. It costs, by rail, \$14.40. The saving upon each ton would be \$9.52—amounting in the aggregate to about \$14,000,000 per annum, upon grain alone, to be divided between the producer and the consumer.

2. This route would be open the entire year, never rendered impracticable by ice in winter, nor by drought in summer.

3. It would greatly increase the coasting-trade, furnishing employment during the winter months (when the Niagara Ship-Canal shall be opened) to the steamers and other vessels engaged during summer upon the lakes.

4. The route passes through immense forests of

yellow pine; and the West would be able to obtain the best lumber in unlimited quantities, and at low prices.

5. It opens all the Southern States east of the Mississippi River, as a market for its grain, bacon, hay, and other products, the demand for which will constantly increase. In this the West would be absolutely without a competitor.

6. It will furnish cheap transportation for raw cotton to the other sections, and for the manufactured article in return. Such advantages would certainly develop the manufacture of cotton to a vast extent in the Western, Northwestern, and Eastern States.

In view of these considerations, we most respectfully and earnestly urge the Government of the United States to extend such aid to these works as will insure their speedy construction.

A resolution was also passed requesting Congress to have surveys made for a canal from the mouth of South Chickamauga Creek, in the Tennessee River, to Rome, Ga., on the Coosa River.

The Atlanta & Richmond Air-Line Railroad, from Atlanta, Ga., to Charlotte, N. C., was completed in May. The gross earnings of the Central Railroad and Banking Company, with branches, were \$3,489,398.08; net earnings, \$777,296.48. The assets at the close of the year amounted to \$4,104,990.49; direct liabilities, \$3,686,500; liabilities as indorser, \$1,492,500. The number of bales of cotton carried in 1871-'72 was 392,804; in 1872-'73, 439,826.

Two important decisions affecting Georgia were rendered in the Supreme Court of the United States during the year; one declaring the retrospective features of the homestead act, and the other the relief or stay law, unconstitutional.

In the State courts, the most noteworthy decision was rendered by Judge Head, of the Supreme Court, maintaining that the marriage of slaves was valid at common law, and that their offspring must be regarded as legitimate, whether born in slavery or since emancipation.

The finances of the State appear to be assuming a sounder status. The receipts into the Treasury from all sources, for the year ending December 31, 1873, including the proceeds of the sale of bonds, and the balance on hand January 1, 1873, amounted to \$3,172,788.74; disbursements, including the amount for principal and interest paid upon the public debt, \$2,260,282.49. The amount of public debt, principal and interest, paid, was \$1,385,767.73. The bonded debt outstanding at the close of the year aggregated \$8,342,500, of which \$237,000 are payable in 1874. The annual interest on this debt is \$586,460. The eight per cent. bonds to the amount of \$1,200,000, provided by the act referred to above, were all placed at par at an expense of less than one per cent., the greater portion being disposed of in the State.

The taxable property in 1873 amounted to \$242,487,382; in 1874 it is estimated at \$250,000,000. A tax of four and a half tenths of one per cent., producing \$1,125,000, it is be-

lieved, will be sufficient, with the income from other sources, to meet all just demands upon the Treasury. Of the special tax of one-tenth of one per cent., levied under the act to provide for the payment of claims due to teachers of 1871, there had been collected, prior to December 1st, the sum of \$176,287.01, of which \$174,000 were apportioned among the different counties; \$250,000 were distributed to the counties by the State for the current expenses of schools during the year. At the close of the year the State School Commissioner had received reports of school operations in 118 counties, in most of which three months' schools had been maintained.

The State University is in a flourishing condition. At the close of the session, on August 6th, thirty-three degrees were conferred; the number of students matriculated during the year was 318, viz.: classical course, 58; scientific course, 26; eclectic course, 19; Sophomore class, 51; law school, 16; State college, 153. Of the whole number, 219 belonged in Georgia. The State College of Agriculture and the Mechanic Arts has three departments—agriculture, engineering, and applied chemistry. Toward the close of 1872 the North Georgia Agricultural College, located at Dahlonega, became a branch of the State College, and a department of the university. It was formally opened in January, 1873, and during its first session had 177 students. The income of the university during the year was \$34,798.92; disbursements, \$32,902.26. The expenditures on account of the State College, not including repairs, were \$12,966.09. The number of pupils admitted to the Deaf and Dumb Asylum was 67, and six completed their term of instruction during the year. The ordinary expenses were \$18,500. The expenditures for the Academy for the Blind were \$14,200. The number of patients in the Lunatic Asylum was 576; convicts in the penitentiary, 664, of whom 98 were white, and 571 colored; one white and 19 colored were females. The buildings at Milledgeville have been unoccupied for several years, the convicts being leased and employed on public works in various parts of the State. This lease expires on April 1, 1874, and, if the Legislature should decide not to renew it, the buildings would have to be enlarged and repaired.

The State indorsement was given to bonds of the North & South Georgia Railroad Company to the amount of \$240,000, being \$12,000 per mile on twenty miles of completed road. The Macon & Brunswick Railroad, having failed to pay the interest on its bonds indorsed by the State, was in July, in pursuance of the act authorizing the indorsement, by an Executive order, turned over to a receiver, who has since managed it in the interest of the State. The Governor, in his annual message at the beginning of the new year, recommends the establishment of a department of agriculture, to have the supervision of the mineral inter-

ests and resources of the State, as well as of the application of chemistry to agriculture and the mechanic arts.

The movements of cotton in the State for the year, as compared with the preceding year, according to the *Financial Chronicle* of New York, were as follows:

EXPORTED FROM SAVANNAH.	1872-73.	1871-72.

The consumption of cotton in the mills of the State, according to the census in 1870, was 24,820 bales, or 10,921,176 lbs.; in 1873, according to the *Chronicle*, 39,122 bales, or 17,213,790 lbs.

GERMANY, an empire in Europe, reestablished January 18, 1871. The Emperor, William I., was born March 22, 1797. He is a son of King Frederick William III., of Prussia, and Queen Louisa, and was married June 11, 1829, to Augusta, daughter of the Grand-duke Charles Frederick of Saxe-Weimar. The heir-apparent, Frederick William, born October 18, 1831, has the official title of Crown-prince of the German Empire, and Crown-prince of Prussia. He was married January 25, 1858, to Victoria, Princess Royal of Great Britain and Ireland, born November 21, 1840. Offspring of the union are, three sons, Frederick William, born 1859; Henry, born 1862; Waldemar, born 1868; and four daughters, Charlotte, born 1860; Victoria, born 1866; Sophia, born 1870; Margaretha, born 1872. Imperial Chancellor (Reichskanzler), Otto, Prince von Bismarck-Schönhausen; President of the Imperial Chancery (Reichskanzler-Amt), Delbrück, Minister of State.

The following table exhibits all the states of the German Empire, the area, the population, the number of representatives of every German state in the Federal Council, and the number of deputies who represent each state in the Reichstag.

The Federal Council has nine standing committees: 1. For the army and fortresses; 2.

STATES.	Square Miles.	Population in 1871.	Votes in Federal Council.	Deputies to the Reichstag.

navy; 3. taxes, tariff, and excise; 4. commerce; 5. railroads, posts, and telegraphs; 6. justice; 7. accounts; 8. Foreign Affairs; 9. Alsace-Lorraine. The Emperor appoints the members of the first committee, except the member of Bavaria, and all those of the second; the members of the other committees are elected by the Federal Council.

The members of the Reichstag are elected by universal suffrage and ballot, for the term of three years. The first Reichstag, elected in

1871, consisted of 382 members; the second, elected in 1874, was to contain also 15 members for Alsace-Lorraine.

The census of 1871 showed the religious division of the population composing the German Empire as follows: Evangelical Church (under which head the census embraces the United Evangelical Church, Lutherans, and Reformed), 25,581,709; Roman Catholics, 14,867,091; Greek Catholics, 2,660; Christian sects of various denominations, 79,553; Israel-

ites, 512,171; other forms of religion, 1,917; religious profession unknown, 15,594. The Roman Catholics constitute a majority in Alsace-Lorraine (79.7 per cent.), Bavaria (71.3 per cent.), and Baden (64.5 per cent.); they are a considerable minority in Prussia (33.5 per cent.), Wurtemberg (30.4 per cent.), Hesse (27.9), and Oldenburg (22.6 per cent.); they only number from 3 to 1 per cent. in Saxony, Weimar, Bremen, Lippe, Waldeck, Brunswick, Hamburg, Saxony, Anhalt, and Schaumburg-Lippe, and less than 1 per cent. in all the other States. The Jews number 4.1 per cent. of the population in Hamburg, 3.0 per cent. in Hesse, 2.6 per cent. in Alsace-Lorraine, from 2 to 1 per cent. in Bavaria, Baden, Prussia, Waldeck, Schaumburg-Lippe, and Lubeck, and less than 1 per cent. in the other states. Of the German princes, only two are Catholics, the Kings of Bavaria and Saxony. The Old Catholics have about 100 congregations and 55,000 members.

All the states of Germany, with the exception of the three Hanse towns, which are democratic republics, are constitutional monarchies; in the two grand-duchies of Mecklenburg the political institutions had, in 1873, an entirely feudal character; but, in accordance with an imperial law, passed in 1873, a constitutional form of government, providing for the representation of all classes of the people, will be introduced in 1874. Prussia, Bavaria, Saxony, Wurtemberg, Baden, and Hesse, have Diets consisting of two Chambers; all the other states have only one Chamber. In Prussia, Bavaria, Saxony, Wurtemberg, Baden, Hesse, Brunswick, Schwarzburg, Waldeck, and Schaumburg-Lippe, women can succeed after the extinction of the male line; but not in the other states.

The number of professors and students at the German universities, in 1873, was as follows:

UNIVERSITIES.	States.	Professors.	Students.
Berlin.....	Prussia.....	181	3,714
Bonn.....	".....	88	415
Breslau.....	".....	103	1,005

—In all, twenty universities, of which nine are in Prussia, three in Bavaria, two in Baden, one each in Wurtemberg, Hesse, Saxony, Saxe-Weimar, Mecklenburg, and Alsace-Lorraine. Sometimes the Academy of Munster, containing the two faculties of Catholic theology and

philosophy, is counted among the German universities. Each university has at least four faculties: theology, philosophy, law, and medicine. In Breslau, Bonn, and Tübingen, there are a Catholic and a Protestant theological faculty; Munich, Würzburg, and Freiburg, have only a faculty of Catholic theology; the others only of Protestant theology. In Breslau, Bonn, and Munich, some of the professors of Catholic theology are Old Catholics. Munich, Würzburg, and Tübingen have, moreover, a faculty of political economy; and Tübingen one of natural science.

At the following universities, outside of the German Empire, the German language is exclusively or predominantly used, and in the province of literature they may be counted as German universities:

Zürich.....	Switzerland.....	78	469

The German Empire has 10 polytechnic institutes, namely: 2 in Berlin, 1 in Munich, 1 in Stuttgart, 1 in Carlsruhe, 1 in Dresden, 1 in Hanover, 1 in Aix-la-Chapelle, 1 in Darmstadt, 1 in Brunswick, with an aggregate of 360 teachers and 4,428 students. The number of gymnasia in 1871 was 380 (209 in Prussia, 28 in Bavaria, 17 in Saxony, 16 in Wurtemberg, 13 in Baden, 6 in Hesse, 12 in the Thuringian States, 9 in Mecklenburg, 4 in Oldenburg, 5 in Brunswick, 4 in Anhalt, 7 in the other German States, exclusive of Alsace-Lorraine), of Realgymnasias 14, of progymnasias and Latin schools 214, of Realschulen and Bürgerschulen of a higher grade 485, with an aggregate number of 177,379 students, of whom 72.5 per cent. were Protestants, 18.8 per cent. Catholics, and 8.7 per cent. Israelites.

The budget estimates of the empire for the year 1874 fix the total expenditures at 148,000,000 thalers. The sources of revenue were calculated at 126,000,000 thalers; the remainder, amounting to 22,000,000 thalers, falling to the charge of the individual States, assessed pro rata of population. The sum of 121,000,000 was placed under the head of ordinary or continuing (fortlaufende) expenses, and the sum of 27,000,000 under the head of extraordinary expenses. The ordinary expenditures were distributed as follows:

	Thalers.
Imperial Chancery.....	1,571,000
Reichstag.....	67,000
Foreign Office.....	1,660,000
Imperial Army.....	62,838,000
Imperial Navy.....	4,611,000
Interest on the Imperial debt.....	2,450,000
Imperial Audit.....	25,000
Supreme Court of Commerce.....	100,000
War pensions.....	12,680,000
Remunerations for rent.....	5,361,000
Imperial Railroad-Office.....	40,000

The public debt on April 8, 1873, amounted to only 1,717,150 thalers, which was to be paid off in the course of the year. The debts of the particular States were as follows (value expressed in marks; one mark = 24 cents):

STATES.	YEAR.	Public Debt proper.	Public Money (included in preceding column).	Railroad Debt.	Total Debt.
		Marks.	Marks.	Marks.	Marks.
Prussia.....	1873	673,650,156	61,387,639	644,288,378	1,317,888,534

Train, 18 battalions.....	242	5,049	2,406
Special troops.....	58	1,375	16
Total.....	17,036	401,659	96,153

The total strength of the imperial army on the war-footing is as follows:

TROOPS.	Officers.	Rank and File.	Horses.
Field army.....	16,976	676,496	290,543
Reserve troops.....	4,431	245,793	31,735
Garrisons.....	9,599	354,247	35,469
Total.....	31,006	1,276,536	297,745

The imperial fleet-of-war consisted in July, 1873, of 47 vessels, of which 5 were iron-clads, and 5 sailing-vessels, with an aggregate of 371 guns, 47,354 tons, and 45,070 horse-power. In the course of construction were 8 vessels (of which 6 were iron-clads) with an aggregate of 54 guns, and 39,700 horse-power. The German Navy was manned by 3,840 sailors, and officered by 1 admiral, 1 vice-admiral, 3 rear-admirals, 44 captains, and 237 lieutenants.

According to the new German Constitution, the German Empire constitutes one customs and one commercial territory, with a common customs line. Hamburg and Bremen have the right to remain outside the common line of customs until they themselves demand admit-

tance. Both have entered the customs union for a part of their territory. Besides a part of Hamburg and Bremen, a few small districts of Baden (on the frontier of Switzerland) and of Prussia do not belong to the customs union. On the other hand, the customs union comprises the entire grand-duchy of Luxemburg, and one small commune of the Tyrol.

The administration of the Zollverein, according to a treaty signed July 8, 1867, and in force from January 1, 1868, till December 31, 1877, is at Berlin. All the receipts of the Zollverein are paid into a common exchequer, and distributed *pro rata* of the population among the members of the league. The chief sources of revenue are custom duties, mainly on imports and taxes upon spirits, wine, beet-root sugar, and tobacco.

The movement of shipping in the German ports was, in 1872, as follows:

STATES.	TOTAL VESSELS.		TOTAL STEAMERS.	
	Vessels.	Tons.	Vessels.	Tons.

Wires.....	98,080	22,372	4,838	125,290

The fourth and last session of the first German Reichstag was opened by the Emperor in person on March 12th. The speech from the throne enumerated the subjects which would engage its attention. The Emperor again expressed his confidence in the peaceful development of France, and announced that in consequence of the earlier payment of the war indemnity her territory was likely to be evacuated before the stipulated time. The continuance of the amicable relations with the Emperors of Austria and Russia was represented to be a guarantee of the continued peace of Europe. The Reichstag reflected by acclamation Dr. Simson as President, and Prince Hohenlohe and Herr von Bennigsen as Vice-Presidents. In accordance with the proposition of the Federal Council, the law on the

imperial mail was so amended as to reduce considerably the postage on money-letters. Two new postal treaties had been concluded with Italy and Sweden, which the Reichstag readily ratified. They extend the uniform postage of 2½ Silbergroschen (= 6 cents) now prevailing for all letters to any place within the German Empire to the postal intercourse with these two countries. How largely the former rates are reduced by these treaties may be seen from the fact that only a short time ago the postage on a letter to Naples was 18 Silbergroschen (= 81 cents). The provision of postal cards and money orders has been included in the treaty with Italy. Communications from the imperial Postmaster-General Stephan announced it as probable that similar treaties, accepting the uniform postage of 2½ Silbergroschen, would be concluded with Spain, Portugal, France, and Greece. It was even ascertained that preparations had already been made by the Postmaster-General, whom the Germans frequently call "our post-Moltke," for an international congress to deliberate on the introduction of an "international" or "world's postage."

Of equal importance for the commerce of

Germany was the law on the new coinage which the Reichstag adopted for the purpose of carrying out the law of December 4, 1871. The chief provisions of the latter were: 1. An imperial gold coin will be struck, of which 189½ pieces will contain a pound of fine gold. 2. The tenth part of this gold coin will be named a "mark," and be divided into one hundred pfennigs. 3. Besides the imperial gold coin of ten marks, there shall also be struck imperial gold coins of twenty marks, 69½ pieces of which will contain a pound of fine gold. 4. The mixture of alloy in the coins will be fixed in the proportion of 900 parts gold to 100 parts copper. Accordingly, 125,55 ten-mark pieces, and 62,775 twenty-mark pieces, will respectively weigh a pound. The imperial gold coins bear upon the one side the imperial eagle, with the inscription "Deutsches Reich," and a statement of the value in marks, as well as the year of the coinage; on the other side, the likeness of the sovereign princes, or the symbols of sovereignty of the free towns, with a corresponding device. 5. All payments which by existing law are made in silver money of thaler currency, of South-German currency, of Lubeck or Hamburg customary currency, or in thaler of the Bremen gold reckoning, may be effected in the imperial gold coins, reckoned—the ten-mark piece for the value of 8½ thaler, or 5 fl. 50 krenzer of South-German currency, or 8 mark 5½ shilling of the Lubeck and Hamburg currency, or 8½ thaler of the Bremen gold reckoning; the twenty-mark piece, for the value of 6½ thaler, or 11 fl. 40 krenzer of South-German currency, or 16 mark 10½ shilling of the Lubeck and Hamburg currency, or 6½ thaler of the Bremen gold reckoning. 6. The coinage of other gold coins besides those introduced by this law, as well as of large silver coins, with the exception of memorial medals, is prohibited. 7. The gold coins now current in the States of Germany will be withdrawn for the account and at the cost of the empire in proportion to the issue of the new coins. The total amount of the new gold coinage produced by the mint, partly in twenty-mark, partly in ten-mark pieces, up to March 15, 1873, was, according to a statement of the federal Commissioner Michaelis, 581,200,000 marks; the larger portion of the former gold coins has already been withdrawn. Of silver coins, there are to be coined about 400,000,000 marks, namely, 50,000,000 five-mark pieces, 150,000,000 one-mark pieces, 100,000,000 one-half-mark pieces, 100,000,000 one-fifth-mark pieces. Of nickel and copper coins about 100,000,000 are to be coined.

The Reichstag ratified a new commercial treaty which had been concluded with Persia. The Chancellor of the Empire, on this occasion, declared it to be necessary that Germany should in future be more effectually represented in Persia by an ambassador and by consuls. The Shah, he stated, during his recent stay in Berlin, had expressed a wish for closer con-

nection between the two empires, and had announced the establishment of a permanent Persian embassy in Berlin.—In presenting the budget for the year 1874, the President of the Imperial Chancery made interesting statements on the indemnity paid by France. The total amount, inclusive of interest, the contributions of Paris, etc., and exclusive of the amount deducted on account of the railroads of Alsace-Lorraine, was 1,895,000,000 thaler. Of this sum, 655,000,000 will be expended for common disbursements of the empire, and 740,000,000 will be distributed among the States; namely, 596,000,000 among the States of the former North-German Confederation, and 144,000,000 among the South-German States. Of that portion which falls to the North-German Confederation, a number of common expenditures are likewise to be met; the amount which would actually be distributed was estimated at about 150,000,000 thalers. With regard to the actual revenues and expenditures of the empire during the year 1872, it had been found that the actual revenue exceeded the estimate by 14,625,000 thalers, and the actual expenditures fell below the estimate by 91,000, giving a surplus of 14,716,000 thalers.

The proposition of the Federal Council, that the constitution of the empire shall take effect in Alsace and Lorraine on January 1, 1874, was acceded to by the Reichstag. Henceforth all laws for Alsace-Lorraine require the co-operation of the Reichstag, though in cases of emergencies the Emperor may issue decrees with the consent of the Federal Council. The Reichstag rejected only one provision of the draft by which those inhabitants of Alsace and Lorraine who had expressly declared that they wished to remain French citizens and had remained in the Reichsland, in all about 120,000, were excluded from the right of voting as long as they would not withdraw their "option." It was hoped that this element of the population might more easily be reconciled to Germany if it was allowed to take part in all the rights of German citizens.

The majority of the Reichstag adhered to its former votes on the question of a compensation for its members. A motion to that effect by Schulze-Delitzsch and others was again opposed by Bismarck, but adopted by 145 against 85 votes. The important motion by Lasker for extending the legislation of the empire over the entire civil law was again adopted by a large majority. The deputy Wilms, in the name of the Right, and the deputy Ackermann, for himself and his Saxon friends, declared that they receded from their opposition to the law, and the President of the Imperial Chancery announced that the adoption of the law by a constitutional majority of the Federal Council was fully secured. A motion for the establishment of a representation of the people with constitutional rights in all the States of the German Empire was adopted by 174 against 62 votes.

The motion has reference chiefly to the grand-duchies of Mecklenburg-Schwerin and Mecklenburg-Strelitz, the political institutions of which States have still an entirely feudal character. But, besides Mecklenburg, the little principality of Lippe was this year concerned in the debate, as a petition from the people demanded the restoration of the lawful constitution of 1849, which had been abolished by a resolution of the late Federal Diet. The representative of Lippe in the Federal Council, Minister von Flottwell, became so excited in the course of the debate that the President of the Reichstag had to call him to order. In accordance with an express wish of Bismarck, a motion was made by Deputy Elben for the establishment of an imperial railroad-office (*Eisenbahnamt*), and adopted by the Reichstag. Among the motions which were not disposed of, but postponed to the second Reichstag, were one by Volk and Hinschius for the introduction of the obligatory civil marriage throughout the empire, and another by Windthorst (deputy of Berlin), Biedermann, and Völk, for an imperial press-law. The Reichstag was closed on June 25th, and dissolved on November 29th. The elections for the second Reichstag were ordered to take place on January 10, 1874, throughout the empire, except in Alsace-Lorraine, where they were to be held on February 1st.

The relation of the Emperor and the Central Government to the Governments of the several States continued to be of a friendly character. The Diets of Bavaria, Wurtemberg, and Saxony, gave their consent to the extension of the jurisdiction of the empire over the entire civil law. In Saxony, the Government and the first Chamber appeared to be inclined to rest the validity of imperial laws on the previous consent of the Diets of the particular States; but, in view of the resolute attitude of the second Chamber, they receded from their position. In Wurtemberg, the large majority of the Diet is in favor of a strong Central Government, and the ministry was prevailed upon by it to abolish there the office of a Minister of Foreign Affairs. In Bavaria, the National Liberal party elected its candidates for President and Vice-President of the second Chamber, and a ministry sympathizing with it remained in power until the close of the year; but the first Chamber is strongly attached to a defense of all the present rights of the separate States, and opposed to a further extension of the powers of the Central Government; and the same tendency appeared to be on the increase in the country, particularly in the rural districts. In Saxony, King Johann, equally distinguished for profound scholarship and nobility of character, died, and was succeeded by his eldest son Albert, who, in the French-German War, had been one of the most prominent German generals, and, in acknowledgment of his military distinction, had been created by the Emperor a field-marshal of the

German Army. It is expected that he will remain loyal to the maintenance of national unity. The grand-duchy of Hesse made some concessions to the National Liberal party, which has long been in the ascendancy in the second Chamber. In the grand-duchy of Mecklenburg, the Government laid before the Diet, on November 12th, the draft of a new constitution, which the Diet found unacceptable; the Government accordingly, on December 20th, withdrew it, and promised to abolish the present federal institutions by the introduction of a uniform representation of the entire people. The death of the ex-Duke Charles of Brunswick again called attention to the question of succession* in this duchy. The two Diets of Saxe-Coburg and Gotha, which, although the duchies have been united for nearly fifty years, have thus far remained separate, agreed at length upon a fusion and the establishment of a united Diet for the entire duchy. The constitutional troubles in the little principality of Lippe were brought to the notice of the Reichstag.

The important bill of the Reichstag on the extension of the federal jurisdiction over the entire civil law was, on December 12th, adopted in the Federal Council with only four dissenting votes (of which three belong to the two grand-duchies of Mecklenburg, and one to the principality of Reuss, elder line. On December 20th it was proclaimed by the Emperor as a part of the German Constitution.

The greatest difficulty for the imperial Government of Germany was the continuance of its conflict with the heads of the Catholic Church. During the year 1873 this conflict assumed greater dimensions than it had before, and toward the close of the year attracted the attention of the entire civilized world. It chiefly concerns the kingdom of Prussia (*see PRUSSIA*), where the Government, in union with the majority of the Diets, enacted laws on the relation of the state to the clergy of the state churches, to which the bishops refused to submit. The Government therefore proceeded against them by the imposition of fines, and severer measures were threatened for the future. It also recognized the Old Catholics as still constituting a part of the Catholic state church, and still entitled to all the rights of membership. The Old Catholic bishop, Dr. Reinkens, was recognized as a Catholic bishop, a step which was followed by the Governments of Baden and Hesse. In this conflict, the overwhelming majority of the Prussian Catholics sympathized with the bishops, as was again signally shown by the result of the elections for the Prussian Diet which took place in October and November. In Bavaria, a decree of the Government authorized the com-

* The *ANNUAL CYCLOPEDIA* for 1873 gives a genealogical table of the house of Brunswick, which illustrates this question, and shows the relations of the royal family of Great Britain and the ex-royal family of Hanover to the house of Brunswick, which, in its ducal line, is now on the point of becoming extinct.

munes to establish undenominational instead of denominational public schools, and forbade the students of Catholic theology from attending the Collegium Germanicum, in Rome, which is conducted by the Jesuits. The bishops of Bavaria held a conference at Eichstätt, and in a joint pastoral letter warned the Catholics to send their children to undenominational schools.

A correspondence, the importance of which was duly appreciated by all parties, took place in August and September between the Pope and the Emperor. (For the letter of the Pope, of August 9th, *see* ROMAN CATHOLIC CHURCH.) The answer of the Emperor is dated September 3d, and runs as follows:

I am glad that your Holiness has, as in former times, done me the honor to write to me. I rejoice the more at this, since an opportunity is thereby afforded me of correcting errors which, as appears from the contents of the letter of your Holiness of the 7th of August, must have occurred in the communication you have received relative to German affairs. If the reports made to your Holiness respecting German questions only stated the truth, it would not be possible for your Holiness to entertain the supposition that my Government enters upon a path which I do not approve. According to the constitution of my States, such a case cannot happen, since the laws and government measures in Prussia require my consent as sovereign. To my deep sorrow, a portion of my Catholic subjects have organized for the past two years a political party, which endeavors to disturb, by intrigues hostile to the state, the religious peace which has existed in Prussia for centuries. Leading Catholic priests have, unfortunately, not only approved this movement, but joined in it to the extent of open revolt against existing laws. It will not have escaped the observation of your Holiness that similar indications manifest themselves at the present time in several European and some transatlantic States. It is not my mission to investigate the causes by which the clergy and the faithful of one of the Christian denominations can be induced actively to assist the enemies of all law, but it certainly is my mission to protect internal peace and preserve the authority of the laws in the States whose government has been intrusted to me by God. I am conscious that I owe, hereafter, an account of the accomplishment of this my kingly duty. I shall maintain order and law in my States against all attacks as long as God gives me the power. I am in duty bound to do it as a Christian monarch, even when, to my sorrow, I have to fulfill this royal duty against servants of a church which, I suppose, acknowledges, no less than the Evangelical Church, that the commandment of obedience to secular authority is an emanation of the revealed will of God. Many of the priests in Prussia, subject to your Holiness, disown, to my regret, the Christian doctrine, in this respect, and place my Government under the necessity—supported by the great majority of my loyal Catholic and Evangelical subjects—of exerting obedience to the law by worldly means. I willingly entertain the hope that your Holiness, upon being informed of the true position of affairs, will use your authority to put an end to the agitation carried on amid deplorable distortion of the truth and abuse of priestly authority. The religion of Jesus Christ has, as I attest to your Holiness before God, nothing to do with these intrigues, any more than his truth, to whose banner, invoked by your Holiness, I unreservedly subscribe. There is one more expression in the letter of your Holiness which I cannot pass over without contradiction, although it is not based upon the previous information, but upon the belief of your Holiness—namely, that ex-

pression that every one that has received baptism belongs to the Pope. The Evangelical creed which, as must be known to your Holiness, I, like my ancestors and the majority of my subjects, profess, does not permit us to accept, in our relations to God, any other mediator than our Lord Jesus Christ. The difference of belief does not prevent me from living in peace with those who do not share mine, and offering your Holiness the expression of my personal devotion and esteem.

The correspondence was published by the Prussian Government on October 14th, on the eve of the elections for the Prussian Diet; but it did not have the expected effect of weakening the strength of the Catholic party, whose candidates, on the contrary, obtained a most extraordinary success.

Among the works undertaken by Germany for strengthening the western frontier is the establishment of a flotilla of iron-clad gunboats on the Rhine. The nucleus of this flotilla consists of four French gunboats, which were captured in the second battle of Orleans, and were stationed at Mayence last year. Two others, which are now being built by the Weser Ship-building Company, are to be ready next spring. The strength of the flotilla is to be gradually raised to twelve boats, and they will draw only five feet of water, so as to be used on the Moselle as far as Thionville and other affluents of the Rhine. They cannot at present go on the Rhine any farther than Rastatt, but it is proposed to deepen the bed of the river so as to make it navigable for these gunboats as far as Strasburg, or even Breisach. They will be covered with iron plates an inch thick, and armed with two short fifteen centimetre guns. Similar gunboats have been established by Austria and Turkey on the Danube, and others are being constructed by the Dutch, Russian, and Italian Governments.

On September 16th the Emperor was visited in Berlin by King Victor Emmanuel, who was received by the population of Berlin and by the liberal press of Germany with marks of enthusiastic sympathy. On the other hand, the telegrams describing his reception in Germany called forth in the large cities of Italy numerous demonstrations in favor of the closest alliance between Germany and Italy against common enemies, and chiefly against France, which was believed to threaten the unity of Italy by favoring the restoration of the temporal power of the Pope, and the unity of Germany, by widening the breach between the German Catholics and the imperial Government of Germany. In October, the Emperor of Germany paid a visit to the World's Exhibition in Vienna, when he likewise met with an enthusiastic reception.

Public opinion in the new Reichsland Alsace-Lorraine remained in sympathy with France and in favor of a reannexation thereto, on the first favorable opportunity. In opposition to the ultra-French party, which unconditionally rejected any approach toward Germany, there was, however, formed an "Alsatian party," which, while admitting that it

would have preferred to remain with France, accepted the separation and the present incorporation with Germany as an accomplished fact, and believed that the representation of Alsace and Lorraine in the Diets of the Circles and of the Districts ("Kreistage" and "Bezirkstage"), as well as in the German Reichstag, should look out for the particular interests of Alsace and Lorraine, without regard for either France or Germany. The second annual report on the administration of the Reichsland, which was made to the Reichstag represented the progress of education as entirely satisfactory. The introduction of compulsory education has imparted a new interest in the public schools. The Lyceum of Strasburg was attended by 530, that of Colmar by 200, that of Metz by 270 pupils. The University of Strasburg, which during the first six months after its opening on May 1, 1872, had had 212 students, had 390 during the winter months of 1872-'73. The leading men of the Reichsland paraded, however, on many occasions, their French sympathies. The burgomaster of Strasburg, Lauth, frankly declared to the Oberpräsident of Alsace-Lorraine that he had remained in the country only because he expected the return of the French. He was therefore deposed by an order of the Emperor, dated April 12th, whereupon the town council of Strasburg also resigned.

An important change took place, during the year 1873, in the relation of Germany to the three Scandinavian kingdoms. The idea of establishing intimate relations with Germany found an influential champion in the Norwegian poet and publicist, Björnsterne Björnson, whose articles on the subject in the Norwegian press called forth a very animated controversy. Even in Denmark several newspapers and even magazines expressed the highest admiration of the progress of Germany, and one of the most prominent papers, the *Nyt Aftenblad*, openly advocated the alliance. When King Charles XV. of Sweden, a devoted friend of France, died, he was succeeded by his brother, Oscar II., who is married to a German princess, and favors the establishment of friendly relations with Germany. Soon after his coronation at Drontheim, on July 18th, King Oscar invited the Crown-prince of the German Empire to a visit. During his stay in Norway and Sweden, from August 7th to the 17th, the crown-prince met with a very friendly reception both on the part of the people and of the press. On his return, he was met by the Crown-prince of Denmark at Malmo, and upon his invitation visited the Danish court, where his reception was of so friendly a character that public opinion considered the relations between the reigning houses of Germany and Denmark as permanently reestablished on a friendly basis.

GOVONE, Lieutenant-General GIUSEPPE, an Italian soldier, diplomatist, and statesman, born in Piedmont, in 1826; died at Alba, Piedmont,

January 26, 1873. He was from an eminent Piedmontese family, and was sent when very young to the Military Academy at Turin, and graduated as lieutenant on the staff in 1845, before he was nineteen years of age. In 1848 he served on the staff of the Duke of Genoa's division, under the orders of General (then Colonel) Alfonso La Marmora. He fought in the campaigns of 1848-'49, and in the latter year, attached to the division General La Marmora then commanded, he took part in the siege of Genoa, where, by his courage and coolness in the execution of an order at a critical moment, he was considered to have contributed not a little to the surrender of the place and to the lessening of bloodshed. La Marmora noted his fine military qualities, and never afterward lost sight of him. A captain in 1853, he was sent by the Sardinian Government to watch the military operations on the Danube. He was in Silistria during the siege. His reports to his Government were so able that they particularly attracted the attention of Cavour, ever watchful of ability in young men, and prompt to avail himself of it. Some of those reports, says an old friend of Govone, Deputy Massari, who was then in a position to be cognizant of this little-known fact, were printed in the *Piedmontese Gazette*, and the Emperor Napoleon was so struck by them that he requested Cavour to send him all Captain Govone's reports. From the Danube Govone went to the Crimea, where he was known to a great number of English officers. He was present and wounded at the battle of Balaklava. When the Sardinian contingent joined the allied army, Govone took his place as second chief of La Marmora's staff, of which General Pettiti was then at the head. His activity in that campaign was remarkable, and his blue plume (the color of the Sardinian staff) was everywhere to be seen. On the Tchernaya and under the walls of Sevastopol he won fresh distinction, and proved himself well worthy of the field-officer's rank to which he was promoted. He was a hard worker in peace-time as well as a good leader in the field, and had his full share in the various improvements made in the Sardinian army. He served in the campaign of 1859, distinguished himself on every occasion; also in 1860, and was afterward actively engaged in the repression of brigandage in Sicily. In 1866 General La Marmora was President of the Council, and Minister of Foreign Affairs. Govone enjoyed his full confidence, and he knew that his talents were diplomatic as well as military. He did not scruple to intrust him with the very delicate mission of arranging that alliance between Prussia and Italy which resulted in the campaign of 1866. It was a difficult negotiation, and many despaired of its success. History will record Govone's dexterity in bringing it to a happy issue. When he had done his duty as negotiator, he hastened to do it as a soldier. He had already been lieutenant-general for

two or three years (the youngest, probably, in any European army), and he received the command of a division in the numerous armies destined to operate against the Austrians in Venetia. At Custozza he commanded the Ninth Division, and was one of the three generals who that day most distinguished themselves, and, by their bravery and skill, and by the steadiness of their troops, prevented the defeat from becoming a much greater disaster than it was. If Govone owed a debt of gratitude to La Marmora—and that he did so he was ever ready to acknowledge—he that day did much toward repaying it. After the war he was for some time in command of the Italian Staff Corps, which had its headquarters at Florence. About the same time he was sent to the Chamber as Deputy for Spoleto. In 1869, the Menabrea ministry having resigned, Govone became Minister of War in the Lanza cabinet. His acceptance of a post at that time particularly arduous and ungrateful, was considered by his friends to be a fresh proof of his readiness to sacrifice himself to the service of his country. He never spared himself work, but that was not all he had to encounter. He was made the object of furious and bitter attacks, such as only the most unsparing rancor of party feeling could dictate, and from which his distinguished career, his unquestioned probity, and his amiable character ought certainly to have exempted him. Of a nervous, sensitive nature, and with little power as an orator, he was ill suited to stand the rude ordeal of Italian parliamentary life. There seems little doubt that the mortifications he then encountered contributed to bring about the mental alienation with which he was afflicted during some of the last months of his life. Small in person, and of fair complexion, he had almost a boyish look when already an old soldier, and to the last looked younger than his age. His countenance and his manners were remarkably gentle and pleasing.

GRANGE. The name given to the organized associations of the members of the new order of **PATRONS OF HUSBANDRY** (see **PATRONS OF HUSBANDRY**). The *Granges* answer to the *Lodges* of the Masonic order and the order of Odd-Fellows, and the *Councils* of the order of "Sovereigns of Industry." The word is of English origin, and signifies a small farm or homesteading. As used by this order it is applied to the association of members, and their place of meeting is called "the Grange-Room." There are three classes of *Granges*: the National Grange, which makes laws for and controls the entire order; the State Grange, which controls the *Granges* of the State; and the subordinate Grange, of which there may be one or many in each town.

GREAT BRITAIN, or, the **UNITED KINGDOM OF GREAT BRITAIN AND IRELAND**. Area, 121,115 square miles, or 77,680,464 statute acres. Population in 1871, 31,857,388. This

area and population is, however, but a very small fraction of that of the British Empire as a whole. The possessions of Great Britain in India alone occupy an area of 1,558,254 square miles, and include, according to the latest census, a population in round numbers of 240,000,000, while the vast but more sparsely inhabited possessions of Great Britain in other portions of the East, in Australasia, North and South America, West Indies, Africa, and Europe, make up a grand total of 7,788,347 square miles, and a total population for the empire of 283,639,422. The government of this vast empire is a limited constitutional monarchy, consisting of the sovereign, and the Houses of Lords and Commons, without whose joint approval no legislative measure is complete, though a large discretion is left to the Executive. For the proper exercise of this discretion the ministers of the crown are responsible, as it is a legal maxim that the sovereign can do no wrong. Within the past two hundred and fifty years, and indeed within the past seventy-five, the prerogatives of the sovereign have been greatly curtailed, until now the reigning Queen (or King, as the case may be) possesses but little more than nominal authority, and may be regarded in all except matters of minor importance as only a gilded figure-head, whose principal duty is to sign and approve such bills and laws as have passed the two Houses of Parliament, and to perform those merely formal and ministerial acts which require her official sanction. Whatever may be her own private or personal political convictions, she can have no public views on any political question different from those of her prime-minister and cabinet for the time being, the prime-minister being, by virtue of his office, conscience-keeper of the Queen. The real sovereign of the United Kingdom is the prime-minister, who may be, in addition to his office of premier, either First Lord of the Treasury, or Chancellor of the Exchequer, or both, if he pleases. His tenure of office depends upon his ability to retain the confidence and support of a majority of the House of Commons. Failing in this he may either resign at once and advise the Queen to call upon some statesman of the opposing party to form a new cabinet, or may ask for the dissolution of the Parliament, and the issuing of warrants for a new election, thus appealing to the nation. If he finds himself in a minority in the new Parliament, he resigns before its meeting, and leaves the way open for the opposing leader to organize the party and the Government. If, on the contrary, the election results in a majority in his favor, he organizes the new House, making changes if he desires in the composition of his cabinet, but is assured of his position for the time being.

The present sovereign is her Majesty Alexandra Victoria I., of the United Kingdom of Great Britain and Ireland Queen, and of the Colonies and Dependencies thereof, Empress

of India, Defender of the Faith; born May 24, 1819; succeeded to the throne, June 20, 1837; crowned, June 28, 1838; married, February 10, 1840; widowed, December 14, 1861. The heir-apparent to the throne is H. R. H. Albert Edward, Prince of Wales, born November 9, 1841. The cost of this nominal sovereignty to the British nation is somewhat heavy. The allowances to her Majesty from the civil list (embracing the maintenance of her Majesty's household and retainers) for the year 1872-'73 were £407,000=£2,035,000, to which were to be added the allowances to other members of the royal family, all but four, children of the Queen—£132,000=£660,000—and in view of the then approaching marriage of Prince Alfred (Duke of Edinburgh), second son of the Queen, to a Russian princess, £10,000=£50,000 were added to his allowance, and £6,000=£30,000 to his wife. To these again are to be added the annual expenditure on the royal palaces, which in 1873 was £30,615=£153,075; the revenues of the duchy of Lancaster, which accrue to the Queen (these were, in 1873, net £65,658=£328,290); and those of the duchy of Cornwall, which accrue to the Prince of Wales (these were, in 1873, net, after deducting all expenses of management, salaries, etc., £62,349=£311,745). The total annual revenue of the royal family is therefore £3,567,714. But the actual rulers, the premier and cabinet, are paid also, if not so liberally, yet fair salaries for their duties. The income of the premier, aside from all expenses of rent, clerkship, etc., from his office is £37,500, together with fair salaries to any member of his family who may be able to fill any subordinate office in the Treasury. The Lord High-Chancellor receives \$50,000; the Attorney-General, \$85,000 and fees; the Solicitor-General, \$30,000 and fees; the Secretaries of the Home, Foreign, Colonial, India, and War Offices, \$25,000 each; the First Lord of the Admiralty, \$22,500; the Chief Secretary for Ireland, \$22,125; and the other eight or ten officers who are sometimes in the cabinet, and sometimes not, \$10,000 each, except the Postmaster-General, who was not in Mr. Gladstone's last cabinet, and who receives \$12,500.

The ministry during the year 1873 were as follows, the first fourteen names constituting the cabinet: Rt. Hon. William Ewart Gladstone, First Lord of the Treasury and Chancellor of the Exchequer; Rt. Hon. Lord Selborne, Lord High-Chancellor; Rt. Hon. Lord Aberdare, Lord President of the Council; Rt. Hon. Viscount Halifax, Lord Privy Seal; Rt. Hon. Robert Lowe, Secretary of State for the Home Department; Rt. Hon. Earl Granville, Secretary of State for the Foreign Department; Rt. Hon. Earl Kimberley, Secretary of State for the Colonial Department; Rt. Hon. Edward Cardwell, Secretary of State for the War Department; his Grace the Duke of Argyll, Secretary of State for India; Rt. Hon. G. Joachim Göschen, First Lord of the Admiralty; Rt. Hon. the Marquis of Hartington, Chief Sec-

retary for Ireland; Rt. Hon. James Stansfeld, President of the Local Government Board; Rt. Hon. William E. Foster, Vice-President of the Committee of the Privy Council on Education; Rt. Hon. John Bright, Chancellor of the Duchy of Lancaster. The other members of the ministry were: Field-Marshal, H. R. H. the Duke of Cambridge, Commander-in-Chief; Lord Frederick Cavendish, William Henry Gladstone, Esq., and Hon. W. A. Fulke Greyville, Junior Lords of the Treasury; Rt. Hon. J. G. Dodson, and Arthur Wellesley Peel, Esq., Joint Secretaries of the Treasury; Admiral Sir Alexander Milne, G. C. B., Vice-Admiral Sir J. W. Tarleton, K. C. B., Rear-Admiral F. B. P. Seymour, C. B., and the Earl of Camperdown, Junior Lords of the Admiralty; G. J. Shaw Lefevre, Esq., Secretary of the Admiralty; Rt. Hon. William Patrick Adam, Commissioner of Works and Public Buildings; Dr. Lyon Playfair, C. B., Postmaster-General; Rt. Hon. Chichester P. Fortescue, President of Board of Trade; Sir Henry James, Attorney-General; Sir William Vernon Harcourt, Solicitor-General. The changes in the ministry in 1873 were: Lord Aberdare (formerly Rt. Hon. Henry Austin Bruce) succeeded the Marquis of Ripon as Lord President of the Council; Mr. Gladstone added the duties of Chancellor of the Exchequer to those of First Lord of the Treasury which he already filled, and Rt. Hon. Robert Lowe was transferred from the chancellorship of the Exchequer to the office of Secretary of State for the Home Department, succeeding Rt. Hon. H. A. Bruce in that position; Rt. Hon. John Bright resumed his seat in the cabinet, as Chancellor of the Duchy of Lancaster, succeeding Sir H. C. E. Childers; Dr. Lyon Playfair succeeded Rt. Hon. William Monsell as Postmaster-General. The House of Lords in 1873 consisted of 477 members, of whom, however, a large proportion do not habitually take their places. The House of Commons, elected in 1868, consisted of 658 members, of whom nearly 600 were present on the occasion of important votes.

The recess of Parliament from August, 1872, to February, 1873, was a period of more than usual activity with the members, many of whom discussed before their constituents the proposed measures of the ministry, defending or denouncing them, according to their own views of their tendency. When Parliament assembled on the 6th of February, 1873, it was evident that the session was to be a stormy one, and that the number of Mr. Gladstone's staunch adherents was, from one cause or another, diminishing. Much of this alienation of feeling was due to the tenacity with which he had pressed legislation which had given offense to the aristocracy, who were unwilling to accept measures curtailing their powers and authority, especially when urged by a commoner. There was dissatisfaction also on the part of the working-classes, who, though

they had but a very slight representation in the House of Commons, yet exerted considerable influence over a portion of the members. These complained that Mr. Gladstone, while professedly a Liberal, had no sympathy with, and no feeling for, the working-classes. These two classes of objections to the premier, though coming from opposite directions, were creditable to Mr. Gladstone, as indicating his impartiality, yet lost him a considerable number of votes. Very early in the session the University Education Bill (Ireland), a favorite measure of Mr. Gladstone, and one which he had laid before Parliament at the previous session, was introduced, and occasioned considerable bitter discussion. It was debated at intervals for nearly three weeks, and when it was moved, on the 11th of March, that it be advanced to a second reading (a test vote), the motion was lost by 287 votes against 284. Interpreting this vote as equivalent to a declaration of a want of confidence in the ministry, he asked for an adjournment of the House to the 13th, that the ministers might decide upon their course. On the 13th, it being announced by Mr. Gladstone in the Commons, and by Earl Granville in the Lords, that the ministry had resigned, owing to the adverse vote of the Commons, and that the Queen had sent for Mr. Disraeli to form a Conservative cabinet, a further adjournment to the 17th was agreed to. Meantime Mr. Disraeli had exerted himself to form a cabinet which would command the confidence of the Commons, but had been unsuccessful, and had been compelled to inform the Queen that he was unable to form an administration at that time. The Queen had then sent to Mr. Gladstone, and requested his return to office, with some modification of his cabinet, and on the 20th it was announced that he had resumed office, making the cabinet changes we have already noticed. The reasons why Mr. Disraeli was not ready to assume office as premier were, probably, that the House of Commons had a majority of Liberals, who, though a few of them might have been dissatisfied with some of Mr. Gladstone's measures or those of some members of his cabinet, were still more unwilling to submit to the rule of a Conservative, and especially one so fearless and reckless as they believed Mr. Disraeli to be, and that many of the old school of Conservatives would give him but a languid support. He knew very well that, with such material to be controlled, a month would not pass before a vote of want of confidence would overturn his cabinet. After the resumption of power by the ministry on the 20th of March, both parties were very cautious for some time, but it soon became evident that Mr. Gladstone held his position by a very frail tenure, and that his continuance in office, even to the close of the parliamentary session, would be due rather to the inability of the Conservatives to unite upon a programme which would be popular, and a cabinet which

could command the support of the House of Commons, than upon any inherent strength in the Liberal party. Two or three Government bills of some importance were defeated by decisive majorities, though in a very thin House, and Mr. Gladstone was compelled to withdraw several Government measures, to avoid their defeat. But, on the other hand, several important measures were carried, and the Ashantee War, which had occurred during the session, was so well managed as to give the premier some additional prestige. The odious task of having to ask for an additional allowance for the Duke of Edinburgh (the second son of the Queen), in view of his approaching nuptials, was performed by Mr. Gladstone with great skill, and in such a way as not to lose many votes. As he had taken upon himself the added duties of Chancellor of the Exchequer, his budget was somewhat anxiously looked for, and, when presented, did credit to his reputation as the ablest financier in Great Britain. About \$25,000,000 of the national debt had been paid off within the year, and there was a clear surplus of \$27,500,000 left from the revenue of 1872-'73. In his new budget, Mr. Gladstone proposed reductions of expenditure wherever they were possible, the limiting of the expenses of the Ashantee War to a specified sum, and the abolition or material reduction of the income tax, the most odious of the burdens which British citizens were compelled to bear. He was doubtful, at that time, whether this tax, which had amounted, for the year ending March 31, 1873, to about \$37,000,000, could be wholly abolished, but was prepared to recommend a great reduction of it. Later in the season, however, though the expenses of the Ashantee War, in consequence of the unexpected protraction of the resistance, were larger than his first estimates, he resolved to recommend the entire abolition of the income tax in the budget for 1874-'75. The adjournment of Parliament took place on the 5th of August, 1873, and without any noticeable event. Mr. Gladstone, during the recess, carefully studied the state of public feeling, and put himself in a position to ascertain as nearly as possible the exact strength of the parties which would be arrayed against him. He found these very formidable. The Roman Catholics, under the lead of their bishops, were to a man opposed to his Irish Educational Bill, or to any modification of it which he might be disposed to make; and, though this might not be a measure to be pushed at the next session, it was doubtful whether this hostility would not extend to his other measures. The aristocracy, and especially the clerical portion of it, the bishops and the clergymen of aristocratic families, were hostile to him, because they suspected him of being in favor of disestablishment in England as he had been in Ireland; and the Scottish peers and members who were connected either with the

Roman Catholic Church or the Kirk of Scotland were disposed to turn to the Conservatives for aid and protection. In Ireland, the doctrine of Home Rule was greatly agitated, and, though there were but few Home-rulers in Parliament, a large proportion of the people of Ireland sympathized with them, and he could not rely upon these to stand by him on any critical occasion. The working-men were greatly dissatisfied with him; they had asked for a further extension of the suffrage, but had been somewhat sternly lectured for bringing that question before Parliament, which they were told was fully occupied without it. There were then, with a few exceptions, only the middle class, the merchants, manufacturers, commercial men, farmers, yeomen, and gentry, including the dissenting bodies, to whom he could look for support, and of these full one-half, by education, affiliation, or deliberate choice, were Conservatives. His own infirmities of temper, too, the result in part, doubtless, of an overwrought nervous system, had a tendency to alienate some who might otherwise have been his staunch friends. Altogether the outlook was not cheering. But the premier was a man of great pluck and resource, and he made a gallant fight through the autumnal and early winter months, until he found that the next session of Parliament was likely to open without an assured working majority of Liberals. He then at once decided to dissolve the existing Parliament and appeal to the people by a new election. The forms of the British Government require that this act should be nominally performed by the Queen, with the advice and consent of her ministers, and the premier issues an address professedly to the electors of his own borough, town, or county, but really to the party which he represents throughout the country. The dissolution of Parliament was proclaimed on the 24th of January, 1874, and the writs for a new election ordered at once. In his address to the electors of Greenwich, Mr. Gladstone said that the welfare of the country could not be effectually promoted by a Government which was not invested with adequate authority. That authority, when sunk below the point necessary for the due defense and prosecution of the public interests, could in no way be so effectually restored as by an appeal to the people. The Government, weakened last March in its effort to settle, upon "just and enlarged principles," the question of Irish education, was reminded of its diminution of strength during the session by the "summary and rapid dismissal" in the House of Lords of measures which had cost much time and labor in the House of Commons.

Mr. Gladstone continued: "This state of things, which was not satisfactory at the close of the last session, and which has not admitted of remedy by the method of resignation and a change of Government, has not improved

during the recess, especially the latter part of the recess; and the time has now arrived when the Administration, able to anticipate and survey the principal parts and the general character of the work which awaits it, has been called on to consider whether it could reasonably undertake such work without a fresh access of strength, and to frame its advice to her Majesty accordingly. The question whether ministers ought to retain or abandon office should be decided by a general election, with the opportunity which it affords for broad declarations of policy and issues truly national, and cannot be satisfactorily solved by isolated contests of which the issue is in a greater degree dependent on close discipline and finished and concentrated organization."

In stating what work the new Parliament would have to do, Mr. Gladstone made a very rapid review of the conditions of the foreign relations of the country, and of the important measures which were likely to come before it—a review more remarkable for what it did not contain than for what it did—and then based his claims for the maintenance of his party and ministry in power not on what they had done or might do to improve the intelligence, education, and prosperity of the country, but solely on their economy and their intention of abolishing the income tax. It was an appeal wholly directed to the pockets of the tax-payers. That it failed is not to the discredit of the British nation. The result of the elections, though belonging properly to the year 1874, may be briefly stated as being—the return of a decided though not a large majority of Conservatives to the House of Commons, and the promotion of Mr. Disraeli for a second time to the premiership.

One of the most important acts of the Parliament which was dissolved January 24, 1874, and one of considerable interest to the members of the legal profession in the United States, was one constituting a new Supreme Court of Judicature. This act comes into operation on November 3, 1874. The following is an outline of its principal provisions:

The first part of the statute relates to the constitution and Judges of the Supreme Court. All the existing courts are to be united and consolidated together, and to constitute one Supreme Court of Judicature in England. Of this court there are to be two permanent divisions—one of which, under the name of "Her Majesty's High Court of Justice," is to exercise original jurisdiction as set forth in the act; the other, to be called "Her Majesty's Court of Appeal," is to exercise such powers as may be incident to the determination of any appeal.

The "High Court of Justice" is to consist of (as first Judges) the Lord-Chancellor, the Lord Chief-Justice of England, the Master of the Rolls, the Lord Chief-Justice of the Common Pleas, the Lord Chief-Baron of the Exchequer, the several Vice-Chancellors, the

Judge of the Probate Court, the several Puisne Judges, and the Judge of the Court of Admiralty, except such of those Judges as shall be appointed ordinary Judges in the Court of Appeal.

The "Court of Appeal"—to which the jurisdiction of the Judicial Committee of the Privy Council will pass—is to be constituted of five *ex-officio* Judges, and also so many ordinary Judges (not to exceed nine at any one time) as her Majesty shall appoint; the *ex-officio* Judges to be the Lord-Chancellor, the Lord Chief-Justice of England, the Master of the Rolls, the Lord Chief-Justice of the Common Pleas, and the Lord Chief Baron; the first ordinary Judges of the Court to be the existing Lords Justices of Appeal in Chancery, the existing salaried Judges of the Judicial Committee, and such three other persons as her Majesty may please to appoint by letters-patent. Such appointment may be made either within one month before or any time after the day appointed for the commencement of the act. But, if made before, it shall take effect at the commencement of the act. Besides the *ex-officio* Judges and the ordinary Judges, her Majesty may appoint additional Judges. The Lord Chancellor is to be the President of the Court of Appeal. Any new Judge to be appointed must be of ten years' standing, and on his appointment need not be made a sergeant-at-law.

The second part of the act has reference to jurisdiction and law, and sets forth the business to be conferred on both courts and the transfer of pending business. The 24th section declares that, in every civil cause or matter commenced in the High Court of Justice, law and equity shall be administered by the High Court of Justice and the Court of Appeal respectively, according to the rules laid down.

The third part of the statute relates to sittings and distribution of business. The division of the legal year into Terms is to be abolished, so far as relates to the administration of justice. Vacations may be appointed, and in London or Middlesex during vacation provision is to be made, by rules of the Court, for the hearing of cases in London or Middlesex. There are to be "five" divisions, called the Chancery Division, the Queen's Bench Division, the Common Pleas Division, the Exchequer Division, and the Probate, Divorce, and Admiralty Division. Rules of Court are to provide for the distribution of business, and there are to be divisional Courts. There is a provision in the act as to Crown Cases Reserved to be heard by the Judges of the High Court.

The fourth part refers to "Trial and Procedure," and the appointment of referees, a new feature in legal jurisprudence. The fifth part relates to "Officers and Offices," the sixth to the "Jurisdiction of Inferior Courts," and the seventh contains "Miscellaneous Provisions,"

in addition to an interpretation of terms used in the act.

The schedule as to the rules of procedure is an important part of the new law, and will effect considerable alteration in the practice of the Courts. New rules are to be prepared to regulate the sittings of the Courts, and at Chambers, and for other matters not expressly determined, and these rules will be published some time before the operation of the act.

Another act, whose justice has been long acknowledged, was that to abolish tests in Trinity College and Dublin University. The act recites that it is expedient that the benefits of Trinity College and the University of Dublin, and of the schools in the said university, as places of religion and learning, should be rendered freely accessible to the nation: that by means of divers restrictions, tests, and disabilities, many of her Majesty's subjects are debarred from the full enjoyment of the same: and it is expedient that such restrictions, tests, and disabilities, should be removed. It is therefore enacted that from and after the passing of this act no person shall be required, upon exercising, or to enable him to exercise, any of the rights and privileges exercised by students or graduates in the said university, or upon taking or holding any office in the said university or college, or upon teaching within the said university or college, to subscribe to any article or formulary of faith, or to make any declaration or take any oath respecting his religious belief or profession, or to conform to any form of public worship, or to do any act in connection with any form of public worship, or belong to any specified church, sect, or denomination; nor shall any person be compelled in the said university or college to attend the public worship of any church, sect, or denomination, to which he does not belong; and no person elected to a fellowship or any other office shall be deprived of his office by reason that he is not or does not become ordained in holy orders. It is provided that the word "office" shall not, so long as the University of Dublin shall continue to teach and to grant degrees in the Faculty of Theology, apply to any Professor of or Lecturer in Divinity; but save, as aforesaid, the word shall include every professorship, assistant or deputy professorship, public readership, prelectorship, lectureship, assistant lectureship, provostship, fellowship, studentship, tutorship, scholarship, and exhibition, and also any office or emolument not in this section specified, the income of which is payable out of the revenues or income of the said university or college, or any of the schools therein, or which is held and enjoyed by any member of the same.

The only event of British legislation of special importance to us as a nation was the issue of the order for the payment of the Geneva award in the Alabama case, and the transfer of the amount, in the month of September,

into the United States Treasury. The relations of the two countries during the year were very cordial, and negotiations were pending at the close of the year for some modifications in the interests of humanity in regard to the passages of emigrants, and the treatment of sailors on merchant-vessels. The two nations acted in harmony in the vigorous protests against the barbarous massacre of the passengers and crew of the *Virginus* at Santiago de Cuba, and in insisting on the delivery and indemnification of the survivors. The final revision of the census of 1871 increases the number of inhabitants of the United Kingdom to 31,857,388, or 40,280 more than at first reported. Of this addition 8,158 were in England and Wales; 1,405 in Scotland; 8,657 in Ireland; 208 in the Channel Islands; and 21,802 in the army, navy, and merchant service abroad. The number of paupers reported in England for the year ending March 31, 1878, was 909,986, an increase of 8,604 over the preceding year, notwithstanding the general prosperity of the year and the efforts to promote emigration of the poorer classes. The poor rate was £11,979,741 = \$59,898,705, an increase of \$2,380,000 on the preceding year. The number of paupers in Wales has slightly decreased, being 71,106 in 1872-'73, instead of 71,462 in 1871-'72, but the poor rate, £629,197 = \$3,145,985, was an increase of about \$60,000 on that of the previous year. Large as the proportion of paupers to the entire population of England and Wales is (one in less than 24 in the former, and one in 27 in the latter), it is exceeded in Ireland, where the total number of paupers in 1872-'73 was 296,256, and the amount of the poor rates £894,888 = \$4,474,440, the paupers being about one to 18 inhabitants. Scotland has fewer paupers, but we have no returns for 1872-'73. The local taxation of the United Kingdom direct and indirect, for 1872, was £25,414,100 = \$127,070,500, and receipts for local purposes from other sources swell the total to £27,751,100 = \$188,755,500. The general taxes and imposts for 1872-'73 amounted to £77,289,280 = \$386,196,400, making a grand total of local and general taxation of \$574,951,900. To sustain this enormous burden of taxation, the property-owners of the United Kingdom have lands and real estate of an assessed valuation of \$804,181,115 (very much below its actual value), which yields a national revenue of \$26,038,340, and, in poor rates, about \$67,500,000. There are also the *Imports and Exports* of each year, representing an immense volume of business—the total imports for the year ending January 1, 1878, having been £354,698,624 = \$1,773,468,120, of which £79,872,858 = \$396,864,265 were the production of British colonies or possessions, and £275,820,771 = \$1,376,603,855 from foreign countries. The exports for the same period were £314,588,884 = \$1,572,944,170, of which £65,609,218 = \$328,046,090 were to British colonies and possessions, and £248,979,616 =

\$1,244,898,080 were to foreign countries, making an aggregate of imports and exports of £669,282,458 = \$3,346,412,290. The greater part of this pays tax or duty in some shape. There are, beyond these, the great volume of manufactures, partly represented in the exports, but to at least an equal extent in the home consumption; the mining products, which are also partly represented in the exports; and the agricultural products, which are mostly consumed at home, and indeed are insufficient, in some directions, for home supply.

The British Navy had in November, 1873, 226 ships in commission, 58 of these iron-clads and generally of large size, 28 of the number ranging from 6,000 to 11,000 tons, and several of the remainder rating over 5,000 tons. There were also at that time 20 new ships building, four of these of the largest class and iron-clads. The 62 iron-clads in commission and building have an aggregate horse-power of 95,178, and an aggregate tonnage of 151,279 tons. The amount estimated for the naval service for the year 1873-'74 was £9,872,725 = \$49,868,625, an advance of about \$1,200,000 on the year preceding.

The British military forces (exclusive of the Indian army) consist of the regular forces, numbering 128,968 effective officers and men; 129,000 militia, officers and men; about 18,000 yeomanry cavalry; volunteers, 160,750 effective officers and men, together with 113,300 extra efficient; and 85,000 army reserve in two classes, including pensioners. The army estimates for 1873-'74 were £14,416,400 = \$72,082,000.

The Coal-Trade of Great Britain.—It appears, from the evidence taken before the Committee on Coal in 1873, that the total production of the coal-fields in Great Britain was, in 1872, 128,866,758 tons; and the number of persons employed in this production was, as nearly as could be estimated, 898,344. On the average, the production for each person employed was nearly 314 tons. There was a considerable increase in the number of persons employed in and about the mines in 1872, but the precise numbers for previous years cannot be accurately given. The production in 1872 was an advance on that of 1871, which may be represented as 117,186,278 tons. This is 7,000,000 tons more than the output of 1870, which exceeded that of 1869 by 3,000,000. The number of tons of coal exported was, in 1872, 12,712,281; in 1871, 12,212,000. The rise in the price of coal began toward the end of 1871. The average price of six qualities of coal at the Manston Collieries, in West Yorkshire, at the pit's mouth, was, in 1871, \$1.41 (gold); in 1872, \$2.31 (gold); in the first six months of 1873, \$3.27 (gold). The price at Pease's Adelaide Colliery, in Durham, was \$1.85 (gold), in 1870; \$3.37 (gold), in 1872; and in June, 1873, \$3.75 (gold). These prices were for all qualities of coal. The wholesale

prices in London of the best household coal were, in 1870, \$4.62 (gold); in 1871, \$4.81 (gold); in 1872, \$6.22 (gold); in the first six months of 1873, \$8.25, (gold), the highest price being \$11.25 (gold). The highest price of coke for the iron-trade, put in truck at the oven at Pease's West Collieries in Durham, was, in 1870, \$3.12 (gold); in 1873, \$10.63 (gold). Coal which was practically unsalable before, found a brisk demand at from \$1.87 (gold) to \$3.12 (gold).

Colonial Produce.—The imports of cotton into the United Kingdom from the British possessions abroad amounted in the year 1872 to 444,873,520 pounds, an increase of nearly 11,000,000 over the preceding year. The quantity imported from the West Indies fell off, but British India, with Ceylon, increased the supply sent thence to 443,284,736 pounds, being 12,000,000 more than in 1871. The import from the United States was somewhat more than double this, being 928,696,040 pounds. This was, however, a decided falling off from the import of the preceding year. The total import from all quarters was 1,408,837,472 pounds. The total import of wool was 306,379,664 pounds, of which $\frac{1}{2}$ was from the colonies. The import of cocoa from the colonies also increased in 1872 to 8,294,975 pounds, being 1,000,000 more than the preceding year. But the import of coffee from India and the colonies fell from 181,000,000 pounds in 1871 to 114,220,843 pounds in 1872, the decrease being in the supply from India, Ceylon, and the Straits Settlements, which was nearly 127,000,000 pounds in 1871, but only 107,606,483 pounds in 1872. The import of colonial rum also declined from above 7,000,000 gallons in 1871 to 6,208,653 gallons in 1872; the decrease was chiefly in the supply from British Guiana. The import of colonial sugar and molasses did not quite keep up to that of the preceding year, being 5,801,085 cwt. in 1871, and 5,224,461 cwt. in 1872; but this was more than made up by the increased consumption of beet-root sugar from the continent.

Post-Office and Trustee Savings-Banks.—The annual return from the trustee savings-banks of the United Kingdom shows that at the end of their year, on the 20th of November, 1872, the amount due to depositors was £39,680,652 = \$198,403,260—namely, in England and Wales, £32,546,401 = \$162,732,005; in Scotland, £4,452,492 = \$22,262,480; in Ireland, £2,221,852 = \$11,109,260; and in the Channel Islands, £459,907 = \$2,299,535. To this is to be added £19,818,839 = \$96,591,695, due at the end of 1872 to depositors in post-office savings-banks; making the total deposits, in round numbers, £59,000,000 sterling = \$295,000,000. The deposits increased in 1872 by upward of \$15,000,000; in the post-office savings-banks by more than \$11,250,000, and in the trustee savings-banks by \$4,800,000. The number of accounts open was nearly equal

in the two classes of savings-banks; in the trustee banks, 1,425,147, and in the post-office banks, 1,442,448. The number of accounts will soon reach 3,000,000, for those in the trustee banks increased by 21,069 in the past year, and in the post-office banks by 138,956. There were 484 trustee savings-banks in the United Kingdom at the end of the year, but the post-office banks had risen to 4,607 in number.

Railways in 1872.—The number of miles of line open at the end of 1872 was 15,814. The total paid-up capital (shares and loans) was £569,047,846 = \$2,845,236,730. The number of passengers conveyed (exclusive of season ticket-holders), 422,874,822, averaging 26,740 to the mile. The traffic receipts were £51,304,114 = \$256,520,570, or £3,244 = \$16,220 per mile.

Postal and Telegraph Statistics.—The gross revenue from the post-offices for 1872 was £5,208,922 = \$26,044,610; the cost of management, £2,754,764 = \$13,773,820; and the net revenue, £2,454,158 = \$12,272,790. The number of letters delivered is not stated in exact figures, but did not differ far from 900,000,000. The number of post-offices was 12,200, besides more than 8,000 road and pillar letter-boxes: 30,617 persons were employed on postal duties alone. The number of telegraph-messages sent in 1872, exclusive of press and news messages, was 14,858,000. The press and news messages contained upward of 28,000,000 words. There were 5,400 telegraph-offices, of which 3,598 were postal offices also. The length of telegraph-wires was 105,200 miles.

The Rt. Hon. BENJAMIN DISRAELI, D. C. L., Premier of England, and First Lord of the Treasury in the new cabinet of February, 1874, one of six commoners who within the last hundred years have attained to that exalted position, has been a prominent figure in British politics for nearly thirty-seven years. He is the eldest son of the late Isaac Disraeli, the author of "The Curiosities of Literature," and "The Amenities of Literature," and the grandson of an Italian merchant who migrated to England in the last century. The family are of Jewish extraction, and his ancestors were expelled from Spain by the Inquisition in the fifteenth century, and found refuge and protection in the Venetian Republic. Benjamin Disraeli was born in London, December 21, 1805, and carefully educated under his father's superintendence in private schools. At about the age of seventeen he was articled to a solicitor with the view of qualifying him for a government office, which had been obtained for him by his father. The drudgery of a lawyer's office being distasteful to him, he gave it up after three years, to engage in literary pursuits. In 1827 he published his first novel, "Vivian Grey," which was succeeded at intervals by other brilliant works of fiction, including "The Young Duke," "Contarini Fleming," "The

Wondrous Tale of Alroy," and "Henrietta Temple." He wrote also the "Rise of Iskander," a "Vindication of the British Constitution," and an epic, ridiculing revolutions, which was universally considered a failure. After visiting Italy and Greece, and extending his travels to Turkey and Syria, he returned to England to find the country involved in the Reform Bill agitation. He entered into politics with great zeal, at first taking the radical side; contesting the borough of Wycombe in 1832, and again in 1835, against the Conservative or Tory candidates, he was in both cases unsuccessful; but in April of the latter year he contested Taunton, on the Conservative side, against Mr. Labouchere, with no better success. In 1837 he was invited by the Conservatives to stand for Maidstone, having Mr. Wyndham Lewis for a colleague. On this occasion he was elected; but his precipitation in addressing the House of Commons, his *outré* manner, and extravagant gestures, brought upon him the laughter and ridicule of the House, which so disconcerted him that he sat down, but not without uttering the remarkable prophecy, "I have begun many things several times, and have often succeeded at last. I shall sit down now, but the time will come when you will hear me." In 1838 Mr. Wyndham Lewis died, and in the following year Disraeli married the relict of his late colleague, thereby acquiring considerable property. At the general election in 1841 he did not seek the suffrages of his former constituents, but obtained a seat for Shrewsbury. He had up to this time supported Sir Robert Peel, but when that statesman avowed himself a convert to free trade Mr. Disraeli opposed him, and, having already attained a considerable influence in Parliament, he became the leader of the "Young England party," a Conservative organization, composed mainly of the landholders and landed aristocracy. His denunciation of Sir Robert's change of views was scathing, for he had already become a master of brilliant and polished invective, but, though his energy and eloquence excited great hopes in his party, and saved it more than once from utter rout and defeat, they did not avail to overthrow the measures or the administration of the Whigs.

On the death of Lord George Bentinck, in 1848, Disraeli succeeded to the leadership of the Protectionist party in the Commons, and in the year following called the attention of Parliament to the burdens on land and the depression of the agricultural interest. He bore generous testimony to the political consistency and private worth of his predecessor in his "Lord George Bentinck: a Biography," which had an extended circulation. In 1852, the Earl of Derby, having undertaken the construction of a cabinet, offered him the post of Chancellor of the Exchequer. His second budget, in 1853, failed to find acceptance with the House of Commons, and, the Government being outvoted upon it, the Derby cabinet ceased

to exist. Disraeli resumed the undisputed leadership in the Lower House, and was again summoned, in 1858 to fill the post of Chancellor of the Exchequer in the second administration of the Earl of Derby. In 1859 he introduced, on the part of the Government, a measure of parliamentary reform which, being thrown out, was followed by the resignation of the Government. In 1860, after distinguishing himself by brilliant assaults upon the policy of the Palmerston ministry, he became for the third time Chancellor of the Exchequer in the ministry formed again by the Earl of Derby. He was mainly instrumental in carrying an important measure of electoral reform, and in March, 1868, on the retirement of the Earl of Derby, became Premier of England. He now offered in the House an ineffectual resistance to the movement for the disestablishment of the Irish Church, but refused to resign, and awaited the approaching elections for the popular verdict. These took place in November, and gave the Liberals a majority of about 112. Without waiting for the assembling of Parliament, the usual course, Disraeli tendered his own resignation and that of his colleagues, December 2, 1868, and was succeeded by Mr. Gladstone. He declined a peerage, but his wife was created Countess of Beaconsfield. He pursued in regard to the Gladstone ministry the parliamentary tactics of an opposition leader, assailing its Irish policy, and availing himself of every blunder it made to indulge in scathing criticism. On the 15th of December, 1873, his wife, who was some fifteen years his senior, died; his married life had been happy, and this bereavement elicited many testimonies of sympathy. Since he has been in Parliament he has written "Coningsby," "Sybil," "Tancred," and, more recently, "Lothair," novels in which politics, social questions, and fiction, are curiously but not unsuccessfully mingled. He is said to have been engaged for some time past on another novel of somewhat similar character. In March, 1878, when Mr. Gladstone resigned, Mr. Disraeli attempted in vain to organize a cabinet, and was under the necessity of consenting to the resumption of power by Mr. Gladstone. When Parliament was dissolved by proclamation, January 24, 1874, Mr. Disraeli was very bitter in his denunciations of the Liberals, declaring it a trick and an outrage, though he had pursued the same course five years before. This time, however, he seems to have experienced no great difficulty in forming a cabinet, though the Conservative majority of only about fifty, and many of them not especially friendly to him, indicates the possibility of a brief lease of power. Mr. Disraeli is, however, so audacious, so fertile in resources, and so skillful in forcing upon his party even ultra measures of reform, if they can thereby gain a longer tenure of power, that no man can confidently predict either his measures or the duration of his administration.

useless for cultivation from being subject to summer drought is 50,000 square miles; the prairie-lands, with occasional scattered groves and belts of timber on the margin of rivers, well adapted for agriculture, cover 120,000 square miles; the timbered lands, in which occasional prairies are interspersed, as in the Peace River district, and which are suitable for the growth of wheat and other grains, cover 466,225 square miles. There is a belt of land, comprising 928,200 square miles, lying outside the prairie and timbered portions, which, though beyond the agricultural zone, properly speaking, is sufficiently supplied with timber, and may be utilized for the growth of barley and grass. Rock and swamp, in which the timber of the more southern regions gradually disappears, occupy 642,800 square miles. In other terms, we may set down 875,184,000 acres of agricultural land, yet to be brought under cultivation, outside the limits of the organized provinces, the greater part of which is well adapted to the growth of wheat. The population in 1861 was 3,090,561; in 1871 it was 3,906,810, exclusive of Indians in the Northwest and Hudson Bay Territories, distributed as follows: Ontario, 1,620,842; Quebec, 1,191,505; Nova Scotia, 387,800; New Brunswick, 285,777; Manitoba, 13,000; British Columbia, 85,586, including Indians. The nationalities comprised, were: 1,082,940 French, 846,414 Irish, 706,869 English, 549,946 Scotch, 202,991 German, 29,622 Dutch, 23,085 Indian, 21,496 African, 7,773 Welsh, 2,962 Swiss, 1,623 Scandinavian, 1,085

586,523; exports, \$90,610,573, showing a total trade of \$217,197,096, an increase of \$26,848,817 over that of the preceding year. The growth of the commerce during the four years is shown in the following statement:

YEARS.	Total Trade.
1868-'70.....	\$148,387,829
1870-'71.....	170,266,589
1871-'72.....	194,070,190
1872-'73.....	217,197,096

The exports for the fiscal year ending June 30, 1873, as compared with those of the previous year, were as follows:

PRODUCTIONS.	Fiscal Year ending June 30, 1872.	Fiscal Year ending June 30, 1873.
Produce of the mine.....	\$3,938,172	\$5,108,979
Produce of the fisheries.....	4,249,671	4,746,215
Produce of the forest.....	23,638,246	28,705,562
Animals and their produce.....	13,238,089	13,788,147
Agricultural produce.....	13,390,560	14,869,358
Manufactures.....	3,434,799	3,860,017
Other articles.....	925,384	1,784,324
Ships built at Quebec.....	882,268	782,900
Total produce of the Dominion	\$61,377,376	\$72,829,583
Gold and bullion.....	\$4,010,256	\$3,846,373
Goods not the produce of the Dominion.....	12,845,840	9,843,483
Estimated amount short returned at inland ports.....	2,608,541	3,000,000
Total	\$80,842,015	\$88,519,388
Add—Exported from British Columbia.....	\$1,912,107	\$1,792,347
Exported from Manitoba..	58,541	298,988
Grand total	\$82,689,663	\$90,610,573

The receipts for the year ending June 30, 1873, were \$20,133,576, and the expenditures \$19,951,119. The receipts for 1873 embraced the following items: Customs, \$12,747,042; excise, \$4,453,671; post-office, \$882,198; public works, including railways, \$1,229,988; bill stamps, \$199,356; miscellaneous, \$671,824. The gross revenue and expenditure of the Dominion for six years, since Confederation, have been as follows:

Receipts.....	\$103,348,699 41
Expenditure.....	96,408,851 87

Surplus receipts for six years.. \$6,949,747 54

The expenditure during these years includes payment toward sinking fund and several items which were formerly charged to capital accrued. During four of these years there was an expenditure on capital account out of income of \$6,101,027.68.

The total debt of the Dominion, in 1873, amounted to	\$122,400,179 32
The total assets to	40,213,107 33

Net debt..... \$82,187,072 04

The average rate of interest is 5.41 per cent. At the date of the last census the net debt of the Dominion amounted to \$21.72 per head, and the interest to \$1.2 per head.

The really magnificent public works of Canada represent its public debt; and the interest represents the rent the present generation pays for them. The country owes its present great development of wealth to these works, and the policy of Parliament is now to extend them.

Seal of Canada.

Italian, 679 Spanish, 607 Russian, 125 Jews, and 39 Greeks. There were 1,492,029 Roman Catholics, 494,049 belonging to the Church of England, 567,091 Methodists, and 544,998 Presbyterians; also 5,146 not professing religion, 1,886 pagans, 534 Mormons, 409 Deists, 20 atheists, and 13 Mohammedans.

The above statistics of population do not include Prince Edward Island, which has recently been admitted into the Dominion, and which had, in 1871, a population of 94,021.

The total value of imports into the Dominion during the fiscal year 1872-'73 was \$126,-

GREECE, a kingdom of Southeastern Europe. Reigning King, George I., King of the Hellenes, born December 24, 1845, second son of the reigning King of Denmark, elected King of the Hellenes by the National Assembly at Athens, March 18 (30), 1863; accepted the crown June 4, 1863, declared of age by a decree of the National Assembly, June 27, 1863; married October 27, 1867, to Olga, daughter of Grand-duke Constantine, of Russia, born August 22, 1851. Issue of the union are three sons and one daughter: Constantinos, Duke of Sparta, born August 2, 1868; George, born June 25, 1869; Alexandra, born August 30, 1870; and Nicholas, born February 2, 1872.

The area of the kingdom amounts to 19,353; the population, according to the census of 1870, to 1,457,894. The country is divided for administrative purposes into 18 nomarchies,* which are subdivided into 59 eparchies, and 351 communes; the heads of the latter, called demarchs, are chosen for a term of four years; the heads of the eparchies and nomarchies, called eparchs and nomarchs, are appointed by the King. Nearly the entire population (1,441,810) is connected with the Greek Oriental Church, which is governed by a permanent Holy Synod at Athens, consisting of 5 members, who are appointed by the King from among the bishops and other high clerical dignitaries. The Church has one metropolitan at Athens, 15 other archbishops, and 16 bishops. With other Christian denominations, only 12,585 souls are connected; most of them belong to the Roman Catholic Church, which has archbishops at Naxos and Corfu, and 4 bishops. All creeds are tolerated, and there is entire freedom of religious worship.

Every child is expected to attend school from the fifth to the twelfth year of its age. Nevertheless, the attendance at the public schools is small. In 1869 the 1,141 public and private elementary schools numbered only 60,634 pupils. For secondary instruction, there were, in 1870, 15 gymnasia and 144 Hellenic schools (corresponding to the German Realschulen), with 7,780 pupils, and 23 private institutions, with 1,589 pupils. The University at Athens, which has the four faculties of theology, law, medicine, and philosophy, was, in 1869, at-

tended by 1,205 students. Of special schools, there are 1 polytechnical school at Athens, 4 theological schools of the Greek Oriental Church, 6 nautical schools, 1 agricultural school, and 1 military academy at the Piræus.

In the budget for 1873, the revenue was estimated at 35,927,000 drachmas; the expenditures at 35,443,000 drachmas; the surplus at 484,000 drachmas. The actual budgets of the kingdom differ, however, widely from the budget estimates. Since the establishment of Greece as an independent kingdom, there have been few financial terms without a deficit. The funded debt of Greece amounted in July, 1872, to 337,000,000 drachmas. The floating debt, according to semi-official returns, amounted to 40,000,000 drachmas on January 1, 1870. According to other statements from Greek sources, it was above 166,000,000 drachmas. A royal ordinance, dated January 17, 1869, authorized the Minister of Finance to issue 15,000,000 drachmas of notes, with compulsory circulation.

The army of the kingdom is formed by conscription, with the general privilege to procure substitutes, which is done to a very large extent. The strength of the army on the peace footing was, in 1873, 12,897 men. The contingent for the year 1873 was 1,500 men.

The navy, in 1871, consisted of 2 iron-clad frigates, 8 screw steamers, and 11 sailing-vessels. It was manned by conscription from the inhabitants of the sea-coast; the number of officers and men was, in 1873, 1,078.

The general commerce in 1871 was as follows, in drachmas:

COUNTRIES.	Imports.	Exports.
Great Britain.....	33,594,000	45,492,000
Turkey.....	16,501,000	6,906,000
Austria.....	14,544,000	8,620,000
Russia.....	16,118,000	4,507,000
France.....	13,476,000	6,282,000
Italy.....	7,624,000	1,625,000
Other countries.....	6,690,000	2,951,000
Total, 1871.....	108,537,000	76,383,000
" 1870.....	97,021,000	52,908,000
" 1869.....	94,380,000	62,559,000

The movement of shipping in 1870 and 1871 is shown by the following table:

ENTERED AND CLEARED.	Year.	Vessels.	Tons.	Year.	Vessels.	Tons.
Ocean navigation.....	1870..	16,757	2,564,964	1871..	21,758	3,205,619
Coast navigation.....	1870..	94,991	2,985,520	1871..	105,612	3,960,790

The merchant navy on December 31, 1871, consisted of 6,135 vessels, of 419,350 tons; among them there were 7 steamers, of about 3,000 tons, and over 4,000 coasting-vessels.

The first Greek railroad, which connected Athens with the port of Piræus and Phalerits, was opened in 1869, and is 12 kilometres long (1 kilom. = 0.62 in.). In 1872 the railroad

from the Piræus to Lamia, which is to be in length 220 kilometres, was begun, and a charter was granted for another road, which is to connect Athens with Kalamate, a distance of 275 kilometres. The aggregate length of the electric telegraph-lines is 1,600 kilometres, that of the wires, 1,800 kilometres.

In January the Greek Government declared its readiness to submit the Laurion question*

* The ANNUAL CYCLOPÆDIA for 1873 gives the population of every nomarchy and every eparchy for 1860 and 1870.

* For a full account of the Laurion question, see ANNUAL CYCLOPÆDIA for 1872.

to arbitration if all the great powers should declare it to be an international question, that was not to be decided by the courts of Greece. The Austrian ambassador, Baron von Pottenburg, had accordingly several conferences with the Greek minister, without, however, obtaining any satisfactory results.

In February new elections took place for the Chamber of Deputies. The Government obtained a large majority. The new Chamber was opened on February 26th, by the King, who did not mention the Laurion question, represented the relations to foreign countries as satisfactory, and declared that brigandage was now wholly extirpated. Soon after the Laurion question was definitely settled by the French-Italian Society Roux-Serpieri transferring all its assets and liabilities to the banker Syngros at Athens and the Ottoman bank in Constantinople for 12,500,000 drachmas. The new Laurion Company completed its organization on April 26th.

In March, the Greek Government concluded a treaty with the Porte for the joint extirpation of the bands of robbers infesting the frontier of the two countries.

On April 12th the ministry adjourned the Chamber of Deputies to May 22d, because the ministerial majority had shrunk to 73 members, while the Opposition had increased to 93 members. All the Greek embassies in foreign countries, except that of Constantinople, were abolished, and the Greek Government declared that it would carry on its transactions with the three protecting powers through their ambassadors in Athens. When the Chamber reassembled on May 28d, it elected the ministerial candidate, Deligannis, President, by a majority of 8. The ministry had, however, no real majority in the Chamber, and only the division between the two sections of the Opposition, which are headed by Zaimis and Bulgaris, prevented the passage of a vote of want of confidence which had been moved by Zaimis.

On August 2d the Chamber almost unanimously ratified the treaty which the Government had concluded with the new Laurion Company. A charter was given in August to a company for constructing a canal across the isthmus of Corinth.

GREEK CHURCH. The excommunication of the Bulgarians (*see* ANNUAL CYCLOPEDIA for 1872, article EASTERN CHURCHES), by the Holy and Grand Council of Constantinople, in September, 1872, was enthusiastically indorsed by the Greek bishops and people in Turkey and Greece. The Patriarch of Jerusalem, who had refused to sign the decree, was soon after deposed from his office by a synod of the patriarchate of Jerusalem. The following is a translation of the official decree of deposition:

To-day, Tuesday, November 7th, of the year 1872, in the twelfth hour, all the episcopal members of the Holy Synod of Jerusalem, after assembling in the hall of the synodal sessions of the monastery of the Holy Sepulchre, and after taking into consideration the last definite answer of his Holiness the Patriarch Ky-

rillos II., relative to the acceptance of the resolution of the Grand and Holy Council legally and canonically convoked at Constantinople—by which resolution phyletism (that is, the distinction of races and nationalities in the Church) was rejected and condemned, and all who approved this phyletism, and who, inspired thereby, have held up to this day illegal and clandestine meetings, were declared to be schismatics—have unanimously decreed and do decree as follows:

In consideration that his Holiness—trampling under foot all that he had written in his synodal letter of January 24, 1869, to the Grand Church—not only acted arbitrarily in Constantinople and refused to join in the recognition of the Grand Council, but that he also, in Jerusalem, obstinately, and without sufficient reason, opposed to the invitations and prayers addressed by us to him the refusal to submit with us to the resolution of the Grand Council:

In consideration of all this, we consider him as having incurred the ecclesiastical censures which are expressly contained in the said resolution of the Grand Council, and as being, *de facto*, schismatic. And we find ourselves in the sad and painful necessity to take back the oath of submissiveness and obedience taken by us toward him, and henceforth to break off all connection and communion with him, and we shall never more perform any function with him, or in any respect act with him, and we shall no longer recognize him as head, and as our lawful and canonical shepherd. In confirmation of which the present act has been compiled and entered into the great book of the Patriarchal Throne of Jerusalem. Moreover, copies of this act have been sent to the Grand Church and to all independent orthodox Churches.

Both the Patriarch of Constantinople and the Turkish Government recognized the deposition as valid, and gave permission for the election of a new patriarch. Before the election took place, Jerusalem was the scene of grave disorders. The patriarch refused to recognize the decree of deposition, and, aided by the consuls of Russia and Greece, celebrated vespers in the Church of the Holy Sepulchre. The Governor of Jerusalem was intimidated from acting against the patriarch, while the consul-general of Germany, and the diplomatic agents of other Powers, took side with the clergy. An appeal being made to the Turkish Government, the Porte, in agreement with the Patriarch of Constantinople, instructed the Government of Jerusalem by telegraph to protect the clergy, and no longer to recognize Kyrillos as patriarch. The deposed patriarch was ordered to take up his abode in the little island Prinkipo, in the Sea of Marmora. The decree of deposition had been signed by the Archbishop of Gaza, and the Bishops of Lydda, Napolis (Nabulus), Sebasta, Tabor, Philadelphia, Jordan, and Tiberias. They now elected the Archbishop of Gaza Patriarch of Jerusalem. Those bishops and archimandrites who at first had sided with Kyrillos, soon deemed it safest to declare their submission, which they did in the following letter to the Archbishop of Constantinople:

To his Holiness the Ecumenical Patriarch Anthimos, Jerusalem, December 10 (N. S. 22), 1872. We, the undersigned, the Metropolitans Agapios of Bethlehem and Niphon of Nazareth, and the Archimandrites Yussuf, Chrysanthos, Joseph, Gregorios, and the Protosyngels Daniel, Gabriel, and the others of

our party among the monks of Mar Saba (a monastery not far from the Dead Sea), have for a moment sided with the ex-Patriarch Kyrillos, and have, by our telegram of November 27th (N. S. December 9th), protested against the resolution of the Synod of Jerusalem. But, having already repented, we implore the indulgence of the Church, and humbly pray for pardon, as we recognize all the resolutions of the Synod of Jerusalem, and turn away from Kyrillos.

The Russian Government, which had constantly favored the Bulgarians and Patriarch Kyrillos, gave another proof of its sympathy by laying an embargo upon all the property of the patriarchate of Jerusalem which is situated within the territory of Russia. This property embraced about thirty estates, situated in the best districts of Bessarabia, and yielding an annual rent of 200,000 rubles. At the same time the Russian ambassador at Constantinople must have interceded in behalf of the deposed Kyrillos with great energy, for the Turkish Government not only set him free after a few weeks, but also asked his pardon for the injury done him.

The new Patriarch of Jerusalem was in January enthroned amid great festivities. The frequent disturbances which occurred in mixed districts inhabited by both Greeks and Bulgarians, induced the Turkish Government to threaten, in February, 1873, with heavy punishments all who might disturb the public peace. The Bulgarians, who, it appears, have the sympathy of the Slavic churches of Russia, Austria, Roumania, Servia, and Montenegro, complained of the partiality of the new Minister of Justice, Midhat Pasha, in favor of the Greeks.

On June 25th the Patriarch of Constantinople refused to join the other dignitaries of the country in congratulating the Sultan upon the twenty-fifth anniversary of his accession to the throne, because the Turkish Government declined to exclude, in accordance with his request, the Bulgarian exarch from the official reception. The Turkish Government expressed to the patriarch its decided disapproval of his conduct. In September, the Synod of Constantinople expressed to the patriarch their want of confidence in him, whereupon he resigned his office.

In December, a new Patriarch of Constantinople was elected in place of the deposed Anthimos. The Turkish Government did not exercise its right of striking out one or several names of the ten candidates whom the electoral synod had chosen, the Grand-Vizier, Raschid Pasha, declaring that all of them were acceptable to the Government. The synod, which consists of priests as well as delegates of the laity, then elected the former patriarch, Joachim II., as Patriarch of Constantinople.

The interest throughout the Greek Church in favor of establishing closer relations with the Episcopal Church of the West is on the increase. Like the Patriarch of Constantinople, the Patriarchs of Alexandria and Antioch have fully expressed their views in the follow-

ing letter, in which they recognize the receipt of the resolutions of the general convention of the Protestant Episcopal Church in the United States:

Sophronius, by the mercy of God, Pope and Patriarch of the great city Alexandria, and of all Egypt.
† Most Reverend Presbyter of the Church of St. John, Auburn, New York, our beloved son in the Lord, Charles R. Hale, Grace to your Reverence, and Peace from God.

With great joy and Christian interest we received, toward the close of the month of February, the packet sent by your esteemed Reverence, in which were inclosed your own letter to us, written on parchment, with the resolutions of the great synod of the Church in the United States of America, assembled the 12th-24th of October, 1871, in the city of Baltimore, and the privately printed report of the proceedings of the same synod, written in the English tongue. Translating this into our Greek language, and studying altogether with close attention and care, we were truly delighted, and celebrated, with praises of the Church, the God-inspired zeal, and pious longing, which, following in the footsteps of the English Church, your particular church also in the United States of America shows for the unity of all the holy churches of God, which, by God's inscrutable decrees, are now dissevered one from another, and more especially for unity with the holy Orthodox Church. For indeed we are justly persuaded that such manifestations of fraternal sympathy, and of tendencies toward fellowship, increasing and being mercifully made to work effectively, surely cannot but reach, as time goes on, the wished-for goal of Catholic unity. On the other hand, it deceives or escapes the observation of no one, that until the Lord vouchsafe the fulfillment of the great work of unity, many inconveniences and stumbling-blocks will exist among us, and many misconceptions on either side, and misrepresentations will arise, as also your venerable committee sets forth in its report sent us, but mutual patience and forbearance, enkindled and inflamed by Christian love, and by the inestimable importance of the great and God-pleasing object at which we aim, can remove all such. We consider, then, as efficient toward the longed-for unity and foreboding auspicious things, such manifestations of brotherly sentiments in Christ, and of tendencies to fellowship toward the strengthening and nourishing of the existing good relations between the Orthodox Church and your own, and also investigations and discussion in brotherly love, such as, on the happy occasion of the consecration of the Orthodox Church in Liverpool, the conference and discussion between the reverend Archbishop of Syra and Tenos, our beloved brother in Christ, Alexander Lycourgas, and the Bishop of Ely, and those with him. But toward a firmer and surer attaining of what is desired, there seems to us, speaking for ourselves, needful the organization of a committee to this end from either part, of skilled and well-instructed theologians, for the examination and accurate inquiry into existing differences in the basis of the Catholic Orthodox Church before the great schism, for thus the mutual relations of sympathy are bound together more closely by a nearer mutual fellowship and acquaintance between the two Churches, and we come with greater spirit and more respect to those things which concern Catholic unity. For the speedy organization of such a committee, in the part also of the Orthodox Church of the East, we both pray and hope.

On this happy occasion, it seems to us superfluous to tell your most beloved Reverence, and through you the whole Church of the United States of America, of the great longing with which we have ever been inflamed to see one day completed the great work of unity, and on account of this, from the time that, by the Divine mercy, we received three years since the spiritual presidency of the most holy Church

of Alexandria, we have never omitted to direct the priests subject to our patriarchal and apostolic throne, that if any members of the Anglican Church should depart this life within the city or district committed to their charge, when called upon they should freely go to attend to them, and render the proper rites.

Concerning the extension of this beginning of the burial of Anglicans by Orthodox priests, and *vice versa*, to baptism, marriage, and the holy communion, we speak our private opinion, that it is necessary concerning this, that there should first be a distinct request from the Archbishop of Canterbury, as in the case of burial, and then all the patriarchs, considering it together, can give their answer in common. For the Orthodox Church having once decided any part of its dogma or canon, no particular church in the Orthodox communion can ever, by itself, and of its own judgment, change or transgress any thing of what is settled, however small a thing it may be.

Finally, giving the blessing of peace in Christ to the holy Church of the United States of America, and especially our church prayers and blessings to your most wise Reverence, we pray that "the God of Peace, which brought again from the dead our Lord Jesus, that Great Shepherd of the sheep, through the blood of the everlasting covenant, make you" all "perfect in every good work to do his will, working in you that which is well pleasing in his sight, through Jesus Christ, to whom be glory forever and ever. Amen."

Of your esteemed Reverence the fervent and earnest well-wisher in Christ,

† SOPHRONIUS, of Alexandria.

ALEXANDRIA, April 20, 1873.

Hierotheus, by the mercy of God, Patriarch of the great divine city Antioch, and of all the East.

To the Most Reverend Charles B. Hale, Presbyter of the Church of St. John, Auburn, New York, our patriarchal and apostolic blessing in Christ Jesus our Saviour.

The most valued letter of your Reverence, and the copy of the three resolutions of the joint committee, bishops, presbyters, and laymen, adopted in the great synod of the Church of the United States of America, the 12th-24th of the month of October, 1871, with the report of the correspondence which passed the three preceding years between the most holy authorities of the Russo-Greek Church and those of the Anglican Communion, we have recently received, and with great interest have read what is decreed in the afore-mentioned resolutions, and more especially what is said concerning making inquiry as to friendly relations with the holy Eastern Orthodox Church, and the taking "further steps for the communication of such information as may be mutually important and interesting to this Church and to the holy Orthodox Church of the East."

Considering with attention what has been written on both sides, we rejoiced at the brotherly kindness and peacefulness of the great aim of the fellowship between the Churches through friendly writings and deeds of true brotherliness and kindness. For truly our Saviour, through the holy Gospels and the Epistles, bids us "love one another" and "bear one another's burdens," that so may be fulfilled the law of God. For love is both that which draws together things divided, and strengthens all human fellowships, and prepares for bliss in respect to both. So Christian teaching and philosophy being beneficent, philanthropic, and inclined to fellowship, the Orthodox Eastern Church, steadfast on these Godlike principles, continually prays "for the union of all" in the confession of the faith, never overlooking any peaceful occasion for consultation and discussion with all nations of the earth concerning love one toward another, praying that "all may be one" (St. John xvii. 21) in Christ Jesus the Saviour of all, and that with one heart we may glorify his blessed name.

On account of these things, what has been resolved by the great synod of the United States of America has been a cause of heart-felt joy to us, concerning fellowship with the Orthodox Eastern Church in brotherly love, whose pure results promise the greatest moral benefit to each Church. Wherefore, responding thus by this present letter, we ask your Reverence to report these things also to the great synod of the United States. Now may the grace of our Lord Jesus Christ and our patriarchal blessing be with your dear Reverence. Given in Damascus, March 10, 1873, the first year of the Indiction.

† HIEROTHEUS,
of Antioch, your brother in Christ.

The Church of Russia has had, since the beginning of the year 1872, a religious society specially devoted to the establishment of closer relations with the other Episcopal Churches of the world, especially with the Anglican and the Catholic Churches. The society calls itself the "Association of the Friends of Ecclesiastical Enlightenment," and contains among its most active members the young theologians who have studied at the German universities, and who on that account take a special interest in the religious movements of the Roman Catholic and the Protestant Churches.

The Grand-duke Constantine, the brother of the Emperor, is the patron of the Association, and takes often an active part in its proceedings. The society officially states its objects to be as follows: 1. To promote the intercourse between our clergy and the secular society, and the exchange of opinions on questions concerning the Orthodox Church. 2. The diffusion of correct views on the true doctrine, the history, and the present wants of the Orthodox Church, by means of books and lectures, both scientific and popular. 3. To entertain communications with the champions of orthodox truth in foreign countries, to give to them a moral support, and to contribute to the enlightenment of the public opinion of foreign countries concerning the Orthodox Church. With regard to the first and second points it is said: "One of the chief public calamities of our time is the indifference of the laity with regard to the questions and wants of church-life. In our country also society derives too little advantage from the enlightening of the Church. The clergy has assumed the organization and the habits of a caste, and the Russian Church itself is exposed to attacks upon its pretended lethargy, though this is by no means an inherent quality of orthodoxy. Our first and most important task consists, therefore, in our activity at home. According to our programme, we must endeavor to awaken in the orthodox society an interest in religious questions, and as much as possible to bring the laity and the clergy nearer to each other." As regards the third question, the secretary of the society, Alexander Kiriye, in his report on the year 1872-1873, remarks: "No one who watches public opinion can have failed to see the interest which Russia has taken in the great religious events of the Western countries. The intense attention with which the whole

Russian society has followed these events and the religious questions of the age in general, which formerly were regarded as the exclusive domain of the clergy, proved the advantage and the necessity of founding a society which can serve as a centre for all who take an active interest in religious questions, and as a bond of union for clergy and laity, giving to both an opportunity for common action. We can no longer think of separating ourselves from the remainder of the Christian world by a Chinese wall; for we must not forget that the community of interests among civilized nations is not on the decrease, but steadily on the increase. No, we are not indifferent to what happens in the remainder of Europe; it is not the same to us what other Christians think of us. It is true, we have been for ten centuries without the sympathy of the West, which was arrayed against us in hostile opposition; it blamed us because it did not know us. But at present, when the most educated representatives of the Catholic Church loudly express their hopes for reconciliation between the Orthodox East and the separated West, indifference toward this cause would be a crime; it would prove that we pray for Christian union with our lips, but not with our hearts." In the third meeting of the Society, Prof. Katanski delivered an interesting address on the former attempts to reunite the Greek Oriental and the Roman Catholic Churches. He distinguishes three periods in the history of these attempts. The first, from the eleventh century to the downfall of the Byzantine Empire, is the period of the official attempts, mostly proceeding from political combinations. In the second period the Popes and the Jesuits endeavored to bring about a union, as a means to draw the Greek Oriental Church over to a "pure Latinism." In the present age, for the first time, the conviction is gaining ground that the religious reunion of the Western world with the East cannot be effected by coercive measures of a political character, not by dialectic discussions and shrewd Jesuitic schemes, but that it must be the fruit of the quiet work of religious ideas and the progress of religious life in the West. On the other hand, the speaker admits that the East also must have its revival, on the character of which he expresses the following views: "The East must previously be born again, both politically and intellectually, must emancipate itself from the external fetters which now oppress it, must raise the level of its education, produce a rich theological literature, compel the Western nations to read and respect it, and in this way enable the West to arrive at a correct understanding and appreciation of the East, which is first requisite for bringing the two parts of the Christian world nearer to each other. The regeneration of the East has begun, but it is not yet complete. The whole of the East is not yet politically free (Turkey); and the intellectual regeneration is still far

from being accomplished; therefore the East is not yet regarded by the West as its peer, nor can it regard itself as a peer; and in its oppressed condition it keeps aloof from the proud brother who feels his superiority. It has not yet reached that condition of security from abroad and vitality within which would enable it joyfully to entertain the idea of sharing with its brother the old treasure which it has kept inviolate."

From the annual report of the Chief Procurator of the Holy Synod of Russia, for 1869, it appears that the Russian Church had 1,322 ecclesiastical schools, with 31,925 pupils; 51 seminaries, with 730 teachers and 14,846 pupils; 4 academies, in Kiev, Moscow, St. Petersburg, and Kazan, with 90 teachers and 395 students. There were eight theological periodicals, among which the *Orthodox Companion*, published by the Ecclesiastical Academy of Kazan, is prominent. Theological literature has of late made considerable progress in Russia. Macarius, Archbishop of Lithuania (who resides at Wilna), has repeatedly offered rewards of one thousand rubles for new textbooks for the theological seminaries, which the Committee of the Holy Synod on Instruction awards. In 1870 two prizes were awarded to professors of the Ecclesiastical Academy of Kazan; one, for a new "Manual of Russian Church History," to Prof. Snamensky, and the other to Prof. Porfiry, for his "History of Russian Literature." Archbishop Macarius, of Lithuania (formerly Bishop of Winnoze, and rector of the Ecclesiastical Academy in St. Petersburg), is the most learned Church historian, and probably the greatest theologian of Russia now living. He has written the ablest Russian work on systematic theology (dogmatics), which has also been translated into French, and has begun a comprehensive history of the Russian Church, which by far surpasses in literary merit the work of Philaret. The sixth volume of this work, which appeared in 1870, carries the history of the Church to the establishment of the patriarchate in 1587.

The Greek Church in cis-Leithan Austria had had, hitherto, only 8 bishops, 1 in the Bukowina, and 2 in Dalmatia, but no archbishop. In order to complete the hierarchical organization of the Church, the Austrian Government, in January, 1873, appointed the Bishop of Czernowitz, in the Bukowina, as archbishop of the entire Greek Church in cis-Leithan Austria. The Church had, in 1870, 219 parishes in the Bukowina, 2 in Austria, below the Ens, 3 in the Littoral province, and 92 in Dalmatia; the total number of clergymen, including the candidates for the priesthood in the theological seminaries, was 433. The number of monasteries was, 3 in the Bukowina, and 11 in Dalmatia. There are 2 theological schools, at Czernowitz, in the Bukowina, with 8 teachers and 62 students (11 Ruthenians and 51 Roumanians), and at Zara, in Dal-

matia, with 4 teachers and 18 students (Slovenes). In the Bukowina there is also a Greek Oriental gymnasium at Suczawa. The total number of students in the gymnasia of cis-Leithan Austria was 394, in the Realgymnasia 19, in the Realschulen 85, in the universities 126. Of all the churches of cis-Leithan Austria, the Greek Oriental Church has the smallest percentage of students at the universities, gymnasia, and other high-schools. The population connected with the Greek Oriental Church in cis-Leithan Austria in 1869 was, 376,118 in the Bukowina (73.4 per cent. of the total population), 78,805 in Dalmatia (17.1 per cent.), 3,609 in the Littoral province (0.5 per cent.), 1,745 in Upper Austria, 14 in Lower Austria, 4 in Salzburg, 145 in Styria, 6 in Carinthia, 311 in Carniola, 88 in the Tyrol, 441 in Bohemia, 400 in Moravia, 6 in Silesia, 1,369 in Galicia; total, 461,511, or 2.3 per cent. of the population of cis-Leithan Austria. In the lands of the Hungarian crown, the Greek Oriental Church has for the Servian nationality an archbishop, who has the title patriarch, at Carlowitz, and bishops at Carlstadt, Parrae, Neusatz, Buda, Arad, Temesvar; and for the Roumanian nationality an archbishop at Hermannstadt, and bishops at Versecz and Karansebes. According to a Hungarian law of 1868, the members of both Churches are authorized to hold periodical church congresses (the Servian and Roumanian) for the independent regulation of all subjects relating to religion, education, and church property. The congresses are composed of the archbishop, the bishops, and clerical and lay delegates. The aggregate number of parishes of the Greek Church in the lands of the Hungarian crown was, in 1869, 2,981; of local chaplaincies, 117; of priests, 3,434. The population connected with the church was, in Hungary proper, 1,414,282, or 12.3 per cent.; in Transylvania, 652,945, or 31.1 per cent.; in Croatia and Slavonia, 511,821, or 27.6 per cent.; in the army, 10,271; total, 2,589,319, or 16.7 per cent. In the entire Austro-Hungarian monarchy, the population connected with the Greek Church is 3,050,880, or 8.5 per cent.

GUATEMALA (REPÚBLICA DE GUATEMALA), an independent state of Central America, extending from 13° 50' to 18° 15' north latitude, and from 88° 14' to 93° 12' west longitude; and bounded north by the Mexican State of Chiapas, east by Belize and the Gulf of Honduras, south by Honduras, San Salvador, and the Pacific, and west by the ocean just named. It has an area of 40,777 square miles, and a population (in 1873) of 1,200,000 approximately; some 20,000 of whom are whites descended from the early colonists, 750,000 Indians, 420,000 ladinos, or mestizoes (from whites and Indians), 2,000 foreigners of various nationalities, and the remainder negroes. The republic is divided into seven *corregimientos*, or departments: Guatemala, Sacatepeque, Sololá, Quezaltenango, Totonicapán,

Chiquimula, and Vera Paz. The population of the capital, Guatemala la Nueva, is computed at 42,000.

The government, though republican in form, is, and has long been, in effect, but a military power, headed by a President who is invested with absolute authority. Universal suffrage in the different departments is an empty form; for, whenever it occurs that members inimical to the existing administration are returned, their election is declared illegal or informal, and new elections ordered, for the forcible return of government favorites.

The President of the republic is Lieutenant-General Rufino Barrios, and his substitute (corresponding to Vice-President), Miguel García Granados.

The President of the Ministry is Y. M. Samagoa, who is also Minister of War and of Public Works; Minister of Foreign Affairs, Ramon Rosa (January 18, 1872); Minister of Finance, F. Alburez; and Minister of the Interior, of Instruction, and of Public Worship, M. A. Soto.

The Metropolitan Archbishop is Don Francisco Espinosa; coadjutor, M. T. Barrutia y Croquer, Bishop of Caristo in part.

The strength of the standing army is 3,200 men, and that of the militia 13,000.

Among the chief articles of exportation may be mentioned coffee, cochineal, India-rubber, sugar, indigo, hides and skins, cedar, ebony, mahogany, and other precious woods, as well as logwood, Brazil-wood, etc. The articles most extensively imported are silk, linen, woolen, and cotton fabrics, machinery, hardware, cutlery, arms, ammunition, and military stores, bags and sacs, beer, ale, etc.

The value of the four great staple products exported in 1871 was as follows:

Coffee.....	\$1,312,000
Cochineal.....	876,000
Hides and skins.....	121,000
India-rubber.....	76,000
Total.....	\$2,385,000

The total value of the exports for the same year was \$2,716,000. The amount of the imports for 1871, and the countries from which they proceeded, are as follows:

COUNTRIES.	Amounts.
Great Britain.....	\$1,285,000
France.....	240,000
Germany.....	210,000
United States.....	105,000
Switzerland.....	42,000
Belgium.....	38,000
Spain.....	36,000
China.....	25,000
Other countries.....	29,000
Total.....	\$2,010,000

The total exports and imports in the six years, 1866 to 1871, were:

YEARS.	Exports.	Imports.
1866.....	\$2,036,225	\$1,699,300
1867.....	1,996,405	1,074,615
1868.....	2,133,400	1,634,840
1869.....	2,497,060	1,481,030
1870.....	2,446,925	1,672,840
1871.....	2,747,784	2,010,000
Total.....	\$13,897,799	\$9,552,485

The value of the exports for 1873 will be found to be far in advance of any year preceding, the single article of coffee standing, it is said, for \$2,500,000; the crop of this article and of sugar yielded a profit of 300 per cent.

As a result of this prosperous state of things, agriculture is becoming the object of much care, and an unprecedented augmentation of cultivated lands has already been observed; insomuch that Guatemala will probably next year ship more coffee than all the rest of Central America.

Here follows a statement of the finances of the Republic for the year 1873:

REVENUE.	
Balance from 1871	\$26,300
Import duties	836,200
Export and stamp duties, post-office, etc.	233,700
Spirit-tax	350,630
Mint	100,000
Sundries	85,500
Loan	85,700
Total	\$1,798,000
EXPENDITURE.	
Army, etc.	\$771,000
Salaries	273,400
Public works	14,200
Legations	15,000
Sundry expenses	137,000
Public schools	21,600
Roads, hospital, etc.	169,600
Drawback on exports	21,000
Mint	133,500
Amortization of debts	141,400
Interest on loans	64,500
Interest on British loan	22,600
Surplus balance at the end of 1873	13,000
Total	\$1,798,000

The public debt was as follows at the beginning of 1873:

Floating debt, Treasury bonds	\$293,000
Arrears of salaries	185,000
Unpaid premium on merchandise exported.	79,000
Voluntary loan of Guatemala	490,000
Recognized old debt	308,000
Foreign debt of 1823	430,000
British debt of 1869	2,500,000
Total	\$4,320,000

Remittances were constantly made to the London bankers on account of the loan of 1869; and the Federal English debt was also provided for punctually; while the converted home debt was paid off rapidly, and the paper taken freely as an investment.

The port movements at San José, in the year 1871, were:

ENTERED.			CLEARED.		
NO.	Flag.	Tons.	NO.	Flag.	Tons.
9	German	2,855	11	German	3,419
8	British	3,096	7	British	2,693
4	United States	516	5	United States	706
3	French	650	3	French	1,000
2	Danish	490	2	Danish	480
25		7,587	28		8,298

Guatemala, in common with other Spanish-American countries, suffers incalculably from the want of suitable roads and means of transporting its natural productions from the cultivated districts to the coast. There are no railways, so far, in the country; but the Gov-

ernment has begun to bestow a considerable share of attention to the making of new roads, and the improvement of such as already exist.

Telegraphic communication was established, in 1873, between the capital and the port of San José, on the Pacific.

It will be remembered that, in 1872, a contract had been made with a Mr. Kelly for a railway from San José to Guatemala la Nueva; but no steps have since been taken toward the realization of the project.

The Government, however, after adopting several energetic measures for securing peace, began seriously to consider what might be done to most advantage for the development of the natural resources of the country, and called for proposals for the construction of four different lines of railway: one from the capital to the Pacific; another from the same point to the Atlantic; the two others to connect the republic with Mexico, and establish communication with the new Pacific port of Champerico.

Guatemala has a larger number of schools, and a more effective system of teaching, than any of the other republics of Central America, many of the wealthy families of which send their children there to be educated. Extensive appropriations were made in 1873 for the development of the school system throughout the republic; and the Government agents in the United States, France, England, and Germany, were instructed to select and send to the Department of Public Instruction samples of the best and most popular text-books used in these countries.

The municipality of Chiquimula returned a vote of thanks to the President for several useful measures he had adopted for that city, prominent among which was the establishment of a college, in which the higher branches of learning will be taught.

The school for the instruction, at the expense of the Government, of telegraphic operators for the public lines, was opened according to the terms of the contract of the year before with Mr. McNidel, who constructed most of the telegraph-lines in Central America.

Don Manuel García Granados, *chargé d'affaires* of Guatemala in Mexico, was instructed to negotiate for a postal and an extradition treaty between the two republics.

In its session of December 6, 1872, the Constituent Assembly passed the following bills: One relating to the national boundaries; a second, to the effect that the republic was sovereign, free, and independent; a third, decreeing that the sovereignty resides exclusively in the people; and a fourth, that the Roman Catholic is the religion of the country, and that it should be sustained and supported by the Government.

On the following day it was resolved that all persons born in the territory of the republic, and those born in foreign countries, but of Guatemalese parents, or one of whose parents

should be Guatemalese, should be citizens; the natives of other parts of Central America should become citizens by the mere fact of residing in the country; and natives of any other Spanish-American state by a residence of one year.

The qualifications of voters were decided to be as follows: to have completed twenty-one years of age, and to know how to read and write, or possess a capital of not less than \$1,000. Married citizens, with either of the last two qualifications, might vote at the age of eighteen.

The sixty-sixth session of the Constituent Assembly was held on the 7th of January, forty members and the provisional President, attended by the Ministers of the Interior and of the Treasury, being present. Señor Granados, after returning thanks for the vote of confidence accorded to him, delivered a lengthy discourse on the political condition and prospects of the republic.
